"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 3RD, 1897.

SUMMARY OF NEWS.

THE *Golden Hind* won the "Mary Cup" on Saturday.

PRINCE ARISUGAWA's reception in England has been very cordial.

COL. BUCK, the new U.S. Minister to Japan, has arrived in Tokyo.

It is proposed to establish a Japanese Consulate at Lima, Peru.

ON Monday a royal salute was fired by the warships in port, it being Coronation Day.

AMERICAN Independence Day will be celebrated in Yokohama on the 5th July this year.

MR. VON TREUTLER, *Chargé d'Affaires* for Germany, was robbed of a valuable watch and chain in a railway carriage while travelling to

Kyoto the other day. The thief was caught subsequently and the property recovered.

THE *Albatross* won the Jubilee Gold Cup offered by the Y.C.C. for the 26-raters, on Saturday.

THE Nippon Kangyo Ginko (Japan Industrial Bank), commenced business in Tokyo on the 24th ult.

THE Jubilee review at Spithead was a wonderful affair, the ships extending along a distance of 20 miles.

THE Russian ironclad *Gangoot* has been wrecked on a reef in the Baltic Sea; all hands were saved.

RAIN has fallen in Yokohama every day this week: the weather is very cold for the season of the year.

A CHARTER has been granted to a company to construct and run an electric railway between Osaka and Kobe.

It is reported that War Loan Bonds sold to foreign merchants in Japan now amount to over yen 7,000,000.

THE work of constructing a telephone between Tokyo, Osaka, and Kobe will be commenced during the current year.

A farewell dinner was given to Mr. E. Dun, the retiring U.S. Minister, by the members of the Tokyo Club, on June 28.

THE U.S. Government has replied in a very guarded manner to Japan's protest against the Hawaiian Annexation Treaty.

THE steamer *Shin-Kochi Maru* ran down and sank a coal-laden junk off Himejima on the 25th ult. All the crew were saved.

THE Yokohama Five Staples Exchange is expected to pay a dividend of 25 or 30 per cent per annum for the past half-year.

It is rumoured that the Portuguese Government is about to appoint the Governor-General of Macao to the post of Minister to Japan.

MR. AND MRS. FRANK GILLET of Yokohama, and their little girl, were among the passengers by the P. & O. steamer *Aden* who were saved.

It is proposed to build a detached palace for the Crown Prince at Akashi, on the site of the old palace, which is situated in the midst of beautiful scenery.

THE Nagasaki Shipbuilding Yard, under the management of the Mitsubishi firm, is to be greatly enlarged, with a view of making it the most extensive dock in the East.

MR. H. KESWICK's yacht, *Stella*, broke away from her moorings in Yokohama Bay, during a squall on the night of the 30th ult., and drifted on to the sea wall of the Bund, receiving considerable damage.

A TELEGRAM received from Mr. Kurino, Japanese Minister to France, is to the effect that the revised treaty between France and Japan is likely to pass the Senate, as a majority of the members are in favour of it.

THE ports of Shimizu in Suruga Province, Yokkaichi in Ise Province, and Nanao in Noto Province, have been opened as special import and export ports, and Customs offices will shortly be established there.

THE P. & O. steamer *Aden* was wrecked on the east coast of Socotra on the 9th June. Nine passengers, two engineers, and a steward, and 27 of the crew, were saved and taken to *Aden* by the Lighthouse tender *Mayo*. Sixteen passen-

gers and 34 of the crew, who took to the boats, are missing. Captain Hill and eight passengers were washed overboard and drowned, and the remainder of the crew are missing.

ON the 24th ult. a collision took place at the mouth of Nagasaki harbour between the steamer *Fukuoka Maru*, of the Osaka Shosen Kaisha, and the junk *Sumiriki Maru*. The latter was cut in two and sank.

AMONG the extraordinary expenditures in the Foreign Office Budget are sums for the establishment of Japanese Legations in Spain, Belgium, and Turkey, as well as several Consulates in various countries.

It is estimated that the cost of the works requisite to prevent the copper poison passing from the Ashio mines to the neighbouring valleys and plains will amount to 800,000 yen. Over 9,000 men are employed in the work.

A CRICKET match was played at Kobe on the 30th ult. between a team from H.M.S. *Narcissus* and eleven ladies of Kobe, the gentlemen using their left hands only and base-ball clubs instead of bats. The ladies were defeated, making 53 runs to their opponents' 76.

A TELEGRAM from Niigata Prefecture reports that a conflagration occurred at Sanjo-machi, Minami Kambara-gun, Niigata Prefecture, on the afternoon of the 30th ult. Another telegram received by the Meiji Fire Insurance Company states that the losses sustained by the Company will amount to about yen 10,000, while a telegram that reached the Tokyo Fire Insurance Company announces the loss to that Company of about yen 20,000.

ACCORDING to information received by the Authorities from London, the treatment extended by the British court towards H.I.H. Prince Arisugawa was equivalent to that tendered a reigning Emperor. The Hotel Cecil, the finest hostelry in London, was guarded by the Royal troops and the Prince was provided with carriages specially sent by the Court. Whenever His Imperial Highness left the Hotel an escort of the Guards attended him. The treatment extended to the suite of His Highness was far more cordial than could have been expected.

No change has occurred in the Import market during the week, dullness being still the prevailing feature in nearly all branches. A few transactions on a small scale have taken place in piece goods, and some business has been done in yarns at former rates. Fancy goods and woollens are stagnant. In metals there has been a small daily business, principally in tin plates and nails, but the tightness in the money market prevents any transactions in this and other lines of imports, except for actual requirements. In sugar, some sales of brown have been effected at slightly lower rates, and some business has been done in white at previous quotations, holders being firm. The kerosene market continues dull, only small orders being placed to fill immediate requirements. In exports the tea market remains *in statu quo*. A fair amount of business has been done at fairly good prices. The *Doric* took 28,387 chests on the 29th ult. for San Francisco, and the *Pelican* 12,806 chests for Tacoma. On the 2nd inst. sales in Yokohama amounted to 204,300 catties, a good day's business, while in Kobe the daily sales averaged about 180,000 catties. In silk there is not much doing. Some new filatures, perhaps 250 bales, have been received, principally from Kofu and neighbouring provinces, but so far there is no real stock in the market, which however, is expected to open next week or thereabouts. At present, prices are very firm and likely to be still higher. Exchange remains weak.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The opening of Japan to foreign intercourse was in the nature of an accident. No outside nation regarded her in the light of a new market. It was known merely in a vague kind of way that on the confines of the Far East lay a little island, the inhabitants of which were stoutly opposed to contact with the outer world, and did not hesitate to drive away by force of arms any intruders from abroad. When Commodore Perry first visited Japan in 1853, his purpose did not extend beyond procuring water and provisions. At that time, however, kerosene oil had not been discovered and candles were the chief means of procuring light. For the manufacture of candles large quantities of sperm oil were needed, and the pursuit of whales constituted an important industry. American seamen engaged in it with special activity, and American seamen had learned that great schools of whales frequented the seas northward of Japan. Hence it became an obvious convenience that whalers should be able to call at Japan for provisions and water. That was the motive of Commodore Perry's second coming; he desired to arrange that the Japanese islands might be available as places of call for his country's whalers. If England and France followed America's example in this matter, it was principally because the talk about opening Japan had become international, and enterprising States did not care to be behind the fashion of the hour. Japan as a centre of commerce was an idea that did not yet present itself to any intelligence. When the foreigners arrived, however, and began to look about them, they found unlooked-for conditions. The Japanese were a civilized, refined people, with progressive tastes waiting and willing to be catered to. Very soon foreign goods, cloth, camlets, shirtings, and such things, began to find a market, and within five or six years after the signing of the treaties, the country was carrying on transactions with the Occident to the value of some two million dollars annually. Thereat foreigners changed their minds, and saw that Japan possessed new and unexpected interest. They therefore paid increased attention to her condition, and endeavoured to promote the introduction of Occidental civilization. That they were more or less instrumental in effecting great reforms can not be doubted. That they contributed to the overthrow of the Tokugawa Government is also matter of history. The English especially are associated with the latter event. Sir Harry Parkes, the British Minister, lent no little aid to the cause of the Restoration, but if we look closely at the motives that actuated him, we find that the interests of his country's trade were his paramount, though not his only aims. It is true that the Bakufu had concluded treaties opening the country to foreign trade, and that the Bakufu officials posed as the advocates of foreign intercourse. But in reality they were strongly adverse to the new order of things, and if the clans had been classed according to their sentiments, the Tokugawa would have stood at the head of the list as the *Fu* (foreign-expelling) clan *par excellence*. Sir Harry Parkes appreciated the state of affairs. If he lent his influence to further the Restoration, it was not in the interests of Japanese civilization, but because he hoped to find in the new Government less inveterate foes to Western contact. Events marched as he desired, but with much greater rapidity and thoroughness than he had expected. The people engaged in a race for the introduction of foreign things and foreign fashions. Whatever foreigners said was counted oracular; whatever advice they gave was adopted. Undoubtedly Japan derived benefit from the advice and assistance that foreigners tendered, yet it is not to be concluded that they concerned themselves much about her benefit. They did indeed, as has been said, come, after a time, to regard her as a market that might be worth fostering, but there was also another project influencing them, a project not recognised by the public at large, but very clear to us (the

Fiji Shimpō, which we are epitomizing). Japan after all, was a petty country. Her commercial capacities could easily be gauged. There was no hope of really great profit by trading with her. But she might be made to serve another and a very much larger purpose: she might be converted into a lever for prising China out of the groove of conservatism. The huge Chinese empire had long presented itself to Occidental imagination in the light of an Eldorado, waiting to pour its wealth into the lap of anyone that could gain access to its stores. Innumerable efforts had been made to exploit the *Crossus*, but every endeavour had been shattered against the vast bulk of the inert mass. Japan offered a fresh chance. If her little neighbour could be induced to adopt Western civilization, the necessary shock might at last be given to China. Actuated by such motives, foreign nations regarded Japan first as a mere market for their commodities, and secondly as a mere instrument for the prosecution of their purposes with respect to China. Her independence did not present itself to them in the light of a tangible reality. Innumerable indications of their mood might be adduced, but one will suffice. At the outset, when the commercial-market theory alone received attention, the Foreign Legations were situated at such places as *Tozen-ji*, *Tempuku-ji* and *Koun-ji*; within the limits of the city of Tokyo, it is true, but at points far removed from the Castle. When, however, the China-lever project entered the field of practical politics, the British Minister insisted on choosing, as a site for his Legation, the high ground at the back of the Castle—a district from which the *Tosama Daimyo* had invariably been excluded by the Bakufu Government, *Hatamoto* and *Fudai Daimyo* alone being permitted to reside there. On that site the British Legation was constructed. It was an extensive pile of buildings, surrounded by a strong wall; comprising quarters for troops, and furnished with a large oven for baking bread. The Minister himself, whenever he moved about the city, was attended by a numerous guard of cavalry with naked lances. Nothing could exceed the laughty defiance of his goings and comings, or the imposing mien of his retinue. He aimed at nothing less than the control of the city and the bending of the Government to his will. No indication of Japan's independence might have been gathered from his methods. Ordinary Japanese, ignorant of diplomatic canons, probably supposed that such doings were not out of the common. But to discerning folks their significance was apparent enough, and among the conservative *Samurai* of the time the *Kojimachi Kamado* (Kojimachi bread-oven) became a by-word. Happily the Government of the Restoration succeeded so soon in introducing order into its affairs, that the designs of the British Minister proved abortive. But the fact established by the story of that time remains undeniable, namely that Japan was regarded merely as a commercial mart, or as a lever to move China, and that she was not counted an independent State. She has reason indeed, to be grateful for the civilization that thus came to her, but she should recognise its origin. Her own aptitude stood her in good stead. No sooner did she become acquainted with foreign ships, than she developed the art of ship-building. No sooner did foreign military systems come under her observation, than she organized and trained an army in Western style. Nothing daunted her, and before twenty years had passed, foreigners began to rub their eyes, and gaze with some surprise at this phenomenon of a nation's birth. Then followed the war with China. Its results gave sudden and definite form to the impression that had been growing for some time. Occidental observers were loud in their praises of the new Power in the Pacific, its resources, its spirit, and its organization, but there was something of bitterness, a note of jealousy, in their applause. No sooner did they see cause to admire Japan, than they found reason to dread her also. The fact is that in its intercourse with the rest of the world the Occident is guided primarily by religious and racial prejudices. Never for an instant

has it been able to shake itself free from the poison of that ancient malady. An example is now before our eyes. Turkey has conquered Greece, and demands the ordinary fruits of victory, an indemnity and the possession of the territory arrested from her enemy. But the Powers of Europe can not endure the idea of Turkey's absorbing so much as a square mile of Grecian soil. Why? Simply because difference of religion and difference of race stand in the way. That is the trouble in Japan's case also. It is owing to that difference that her national development is viewed with uneasiness. She was deprived of the Liaotung Peninsula because she is Oriental and non-Christian. That happened in a time of war, but there are Liaotung incidents in times of peace too. A country, owing to racial and religious prejudices, may be deprived not only of prospective gains, but of profits which it is actually enjoying. An example is the attitude of the United States towards Japan. Japanese products are to be weighted with a prohibitive tariff; Japanese immigrants are to be discriminated against, and Hawaii is to be annexed lest too many Japanese should find a home there. Occidentals protest that they regard it as a sacred duty to spread the light of civilization throughout the globe, and that their intercourse with conservative nations is governed by that high aim. They are doubtless quite sincere in the main, but it seems totally impossible for them to divest themselves of their traditional prejudices as to race and religion. It is a universally recognised principle of political economy that men should buy whatever articles are cheapest and best, and that they should not prefer costly and inferior things. Occidentals are very keen in such matters. They know well how to promote and safeguard their own material interests. Yet when they are required to choose between white labour, as Irish and Italian, which is expensive and scarce, and Japanese labour, which is cheap and plentiful, they choose the white, and legislate to expel the Japanese from their midst. It is a case of racial prejudice, a religious prejudice. In the competitive struggle upon which Japan has entered, Japan has those two great factors ranged against her. It is impossible to foresee what embarrassments they may entail. Even her possession of Formosa may be called in question, and it is certain that the enterprise of her people beyond her borders will encounter serious obstacles. Such is the trend of the time. The duty of all far-seeing men is to lay the facts plainly before their nationals, in order that Japan may at least escape the error of being unprepared for what is before her.

An expression made use of by Count Okuma in a recent speech to the Local Governors furnishes the theme of a long article in the *Nichi Nichi Shimbun*. Count Okuma said that the Cabinet approves the policy of free industry; in other words, the policy of leaving industrials to their own resources, and not extending to them any measure of State aid. Now that, according to our contemporary, is a complete reversal of the policy adopted by the Cabinet when it came into office, and since Count Okuma is undoubtedly the leader of the Cabinet, his utterances must be interpreted as an expression of the whole Administration's views. It is true that when the Cabinet was formed, Count Okuma's functions were connected with foreign affairs only. He had not yet acquired the direction of agricultural and commercial matters. But he must have been a consenting party to the programme that found expression in the last Budget. The Government's financial arrangements showed provisions for aiding the direct export of silk, deep sea fishing, railways, steam-ship services, the export of tea and so forth. The Ito Cabinet's Budget embodied aids aggregating 2,948,199 yen; the Okuma Cabinet's Budget swelled the amount to 8,691,869 yen; There is no room to mistake the tendency of the policy originally adopted by the present Cabinet in this field. Now, however, it has suddenly performed a *volte-face*. Its leader declares for the abandonment of State aids. The question whether

official protection works advantageously or disadvantageously is open to much discussion. But there can be no discussion about the impropriety of a Cabinet's suddenly departing from the policy unmistakably adopted by it at the outset in such matters. Manufacturers and men of enterprise have been misled, and will probably suffer heavy losses. The *Nichi Nichi* insists that the Government's new departure is the outcome not of conviction but of necessity. They find that their State-aid policy has provoked most inconvenient opposition abroad, and that to carry it out they must have recourse to foreign capital.

The same journal has another article on the general subject of foreign relations. It points out that the value of military preparations is somewhat misunderstood by the Japanese of to-day. The prime purpose of military preparations is to preserve peace. Diplomacy must have armaments behind it, but armaments are to diplomacy what his swords were to the *Samurai* in former times. He carried two blades in his girdle as a symbol of his title to respect, but he never bared them except in cases of emergency, and he never bared them without using them. Armaments are the bulwarks of tranquillity; diplomacy is the instrument. Each is absolutely essential to the other. Every civilized nation talks of peace as the prime object of its existence, but every civilized nation behaves as though war were the one thing that it anticipated. If A organizes an army of a million men, B hastens to collect eleven hundred thousand. If C gets together a fleet of a hundred ships, D builds a hundred and ten. Yet, all the while, diplomacy exerts every artifice of ingenuity and foresight to avert recourse to these engines of destruction. France and Germany have been glaring at each other for twenty-six years, but never a shot has been fired between them. Their diplomats have managed that. The Franco-Russian *entente* confronted by the *Dreibund*—that array of forces imposed quiet by its very vastness. How ready the enemies were to clasp hands even for a moment over the Liaotung peninsula! It is thus that diplomacy and military preparations work together for the preservation of peace. The Occident has grown very wise. It knows how to cast up an exact estimate of balances. It understands that the enormous losses entailed by a single war constitute an ocean in which drops of yearly expenditure to preserve military efficiency disappear incontinently. It never for an instant grudges great annual outlay on account of its armies, its navies, and its diplomats, but neither does it mistake for a moment the ultimate purpose of such financial efforts. Japan must tread the same path. She is spending freely on account of her army and navy. She must spend freely on account of her Foreign Office also, recognising that her diplomats are the means of putting her army and navy to their highest uses. She must choose the very best intellects at her command and entrust to them the conduct of her foreign affairs, supplying them liberally, at the same time, with funds adequate for the work they have to do.

The country's foreign trade is discussed by the *Mainichi Shimbun* in five articles, especially with reference to the remarkable development shown during the present year. The following comparative figures are added:—

JAPAN'S FOREIGN TRADE FROM JAN. 1ST TO MAY 31ST.

	1894. Yen.	1895. Yen.	1896. Yen.
Exports	30,576,100	33,756,300	41,305,300
Imports	38,180,700	33,141,600	46,372,000

Judging from the above figures, the trade for the whole of the current year will probably amount to,

	Yen.
Exports	176,650,000
Imports	211,120,000
Total	387,770,000

Of course account must be taken of two facts; first that owing to the prospect of a heavy increase of import duties in America, Japanese goods are being hastily poured into the States so as to escape the impost; and, secondly, that owing to the starting or increase of many industries during the early months of the present year in Japan, large imports of machinery and raw material have taken place. Moreover, the tightness of the money market may presently exercise an injurious effect upon newly started enterprises, with the result of diminishing imports for the uses of those enterprises. From such points of view, the estimate set down above may not prove an accurate forecast of the year's trade. A disquieting feature is the excess of imports over exports. Last year's experience and this year's indications go to show that Japan must expect an excess of some forty or fifty million yen annually on the side of imports. The *Mainichi Shimbun* has no belief in protection, and is not concerned theoretically about any development of the import trade. But it fears lest the drain of hard money resulting from the want of equilibrium between exports and imports may impair the country's ability to carry out its gold-monometallic programme. The rate of the yearly increase of the foreign trade is very remarkable. Taking the first five months of each year, we find these results:—

PERCENTAGE OF INCREASE IN EXPORTS AND IMPORTS DURING THE JANUARY-MAY PERIOD.

	1893.	1894.	1895.	1896.	1897.
Exports	10.4	22.4	19.4	Decrease	38.0
Imports	17.7	30.0	5.8	3.50	24.7

There are some general remarks to be made about the development of Japan's foreign trade. The war with China marks an epoch. Before the war, the principal factor operating for development was the fall in the silver price of gold. Since the war, six factors have been at work. First, a quantity of material has had to be imported in connexion with the expansion of the national armaments. Secondly, the purchasing power of the middle and lower orders has been greatly increased owing to the large sums of money that came into their possession during, and subsequently to, the war. Thirdly, there has been a sudden growth of industrial enterprise since the war, accompanied by an import of machinery and raw material. Fourthly, the Government has undertaken various productive enterprises on a large scale. Fifthly, the export of Japanese productions to silver-using countries has increased appreciably since last year. Sixthly, the export of articles to gold-using countries has increased greatly during the present year. It is to be noted that the development of the trade will henceforth depend mainly upon Japan's own exertions. Before the war, the chief impulse came from without (*tado-teki*); but now that the factor of currency fluctuation has been eliminated, the impulse must come from within (*jido-teki*).

The *Kokumin Shimbun* writes about the connexion between diplomacy and foreign trade. The rapid growth of the latter invests the subject with special importance, and the dangers threatened by America's tariff legislation, as well as by the annexation of Hawaii, serve to illustrate the part that diplomacy plays in the field of commerce. We need not follow our contemporary's arguments. Their character will easily be conceived.

The *Fumiuri Shimbun* suggests that the engrossing character of the questions which have recently arisen on the east of Japan may have unduly diverted the attention of her diplomats from affairs on the west, namely, the affairs of China and Korea. It compiles a long catalogue of matters that demand treatment in Korea, and expresses a hope that the Cabinet will not neglect them.

In Saga and Kochi Prefectures the farmers are quarrelling over the water-supply, owing to the drought. Here in Yokohama people are getting bad-tempered owing to the too liberal and persistent downpour of rain.

RISE IN PRICES OF COMMODITIES.

From the year 1873 to the year 1893, remarks the *Shogyo Shimpō*, every commercial and trading company in the Empire had to send in reports regarding the average prices of commodities. These reports were afterwards digested by the Committee that enquired into the Coinage System, but when that body was dissolved, the custom was allowed to pass from official hands. The work then devolved upon the Bank of Japan which has succeeded in tabulating the average prices of commodities from the 20th year (1887) up to the present day. The commodities taken were limited to the following:—Coal, copper, iron, cotton, cotton thread, muslin, silk floss, timber, charcoal, wood, kerosene oil, *saké*, soy, dried bonito, sugar, barley, salt, rye, wheat, white cotton stuffs, oil cake, manure, rice, bran, wax, foreign spun thread, eggs, Japanese tobacco, tea, matting, *miso*, raw lacquer, domestic fowls, oil, flour, foreign nails, foreign paper, Japanese paper, skins and leather, lining stuffs, silk thread, window glass, hemp, and white silk *crêpe*. In the following table the prices for January in the 20th year (1887) are represented at 100. The list for the 30th year (1897) extends only to May:—

Year.	Maximum.	Minimum.	Average.
20th (1887).....	105.....	99.....	103
21st (1888).....	109.....	104.....	107
22nd (1889).....	121.....	106.....	112
23rd (1890).....	120.....	111.....	117
24th (1891).....	114.....	104.....	109
25th (1892).....	118.....	110.....	115
26th (1893).....	123.....	115.....	119
27th (1894).....	132.....	121.....	126
28th (1895).....	140.....	131.....	135
29th (1896).....	153.....	140.....	145
30th (1897).....	161.....	146.....	153

Another table gives the following details:—

	1887.	1894.	1896.	1897.
January.....	100.....	123.....	140.....	146
February.....	102.....	123.....	142.....	147
March.....	100.....	120.....	140.....	152
April.....	100.....	125.....	142.....	161
May.....	99.....	123.....	143.....	161

It will easily be seen that prices rose twenty-six per cent. from January 1887 up to the war; forty-three per cent. after the war; and sixty-one per cent. by May this year.

VLADIVOSTOCK.

Vladivostock is at length about to shake off the great disadvantage under which it has laboured from time immemorial: it will no longer be ice-bound in the winter months. Considering the magnitude of Russian interests at Vladivostock, the size of the garrison, the fact that the port is the rendezvous of the whole Russian fleet in the seas of China and Japan, and the immense inconvenience of being cut off from maritime intercourse with the outer world during a long period every year, and considering, also, that devices for ice crushing have been developed to a remarkable extent in recent years, it is strange that the Russian Authorities have not hitherto provided for their Pacific port any of the powerful ice-clearing engines that are at work in the Baltic and elsewhere. For quite a number of years—we can not at present recall exactly how many—communications have been successfully kept open between Denmark and Sweden throughout the whole winter, and that is a task far more difficult than the problem to be solved at Vladivostock. At length, however, steps have been taken to procure an ice-crushing steamer from Denmark. She arrived recently in Vladivostock, having been brought out from Europe under the command of three Danish naval officers. We are not in possession of details as to her power, but inasmuch as they now build steamers in Denmark capable of cutting a path through 28-inch ice at a rate of 4 knots an hour, there can be no question that Vladivostock's maritime communications with the outer world will henceforth be open all the year round.

JAPANESE NOTES.

We observe that a device more ingenious than ingenious is employed to discredit what we wrote on Monday last with reference to the comments of the vernacular press on the question of Hawaiian annexation. The device is to translate notes and articles published subsequently to Monday the 21st, and to adduce them in refutation of what we wrote about notes and articles published prior to Monday the 21st. That is a very nice manoeuvre. A corresponding procedure would be to denounce as inaccurate a precis of a book issued a month ago because it did not also constitute a precis of a book issued to-day. Our weekly summaries of the vernacular press refer to the week just ended. They do not refer to the week just opening. We have no faculty for summarizing the unpublished ideas of journalists. During the week ended June 20th 1897, we found nothing in vernacular newspapers—with one or two insignificant exceptions—that could be called "bellicose" or "violent," on the subject of the annexation of Hawaii. We said that we found nothing. If anything bellicose or violent has since appeared, it does not affect our statement, since we did not write prophetically.

As to what has appeared in the Tokyo newspapers during the week just ended, we fail to perceive that it is so very intemperate. However, that is a matter of opinion. What some vernacular newspapers certainly have been doing is publishing plainly exaggerated accounts of the attitude assumed by the Government towards the United States. We have already stated our own convictions with regard to that attitude. There is no occasion to repeat them. But we may refer to an extraordinary inference drawn by one of our local contemporaries, namely, that the "latitude permitted to the hostile comments of the vernacular press is certainly suggestive" when compared with the circumspection imposed upon them in connexion with the Liaotung affair. We repeat that the comments are not "hostile." They show indignation but they do not show hostility. However, the point is that our contemporary seems to forget that journalistic conditions have changed materially since April, 1895. The Government has no longer any responsibility for the contents of vernacular newspapers. Suspension by administrative order is a thing of the past. There is now no method of restraining the utterance of a Japanese newspaper except by prosecution in a court of law. One might as well say that the British Government's foreign policy was aggressive because one or two London journals "talked tall."

Another surmise propounded by the same local English journal is that Prince Arisugawa, when he calls at a Spanish port in the *Fuji*, will arrange with Spain to declare war against the United States in the event of the latter's persisting in recognising the Cuban insurgents and annexing Hawaii. The ingenuity of that surmise is really quite admirable. The world would have been in ruins long ago if even a moiety of the awful events predicted by the *Japan Gazette* during the past two years had come off.

The annual produce of Japanese mines, says the *Mainichi Shimbun*, has risen to

20,129,000 *yen*. There are 45 mines that yield a hundred thousand *yen* and upwards, and among them 5 give returns of half a million *yen* and upwards. Of these 5, Mr. Furukawa owns 2; the Mitsui family, 1; the Tanko Railway Company, 1; and Mr. Sumito, 1. Altogether, out of the 45 principal mines, Mr. Furukawa owns 7, the aggregate yield of which is 3,140,000 *yen* annually, and the Mitsubishi family own 2, the aggregate yield of which is 3,080,000 *yen*. It is evident that the *Mainichi's* statement is defective, so far as concerns mines yielding five hundred thousand *yen* and upwards, since the Mitsubishi mines ought to be included in that category. Mr. Furukawa and the Mitsubishi between them own mines producing a third of the total mineral yield of the empire. Coal, of course, heads the list of products; copper comes next, and then follow gold and silver.

Count Okuma, in an interview reported by the *Yomiuri Shimbun*, said:—"It has been stated in some quarters that the Foreign Office was surprised and perturbed about the Hawaiian annexation question. Nothing of the kind. Annexation has long been on the *tapis*. It was brought forward by the Republican Party when Harrison was President, and that it would come up again after McKinley's election went without saying. The Japanese Government paid attention to the matter when it opened negotiations with Hawaii about the immigration complication, and was therefore in no way disturbed, but at once approached the Cabinet in Washington on the subject. The fact is that the annexation project has derived much of its force on the present occasion from the inroads that Japanese subjects have been making upon many branches of trade hitherto carried on by American citizens in Hawaii, and from the fact that whereas there are only some three thousand Americans in the islands, there are over twenty thousand Japanese. In short, the Japanese constitute about one-fourth of the whole population, and their great and increasing numbers have inspired an apprehension that they may ultimately get possession of the islands. The dilemma in which the Hawaiian Administration finds itself with reference to the immigration affair has consequently been seized as an occasion to renew the agitation for annexation. Another reason is that the United States Government has revised its Tariff, and proposes to put an import duty of some thirty dollars a ton on Hawaiian sugar, which has hitherto entered America free of all impost. The margin of profit on the duty-free sugar is only twenty-three dollars. Thence a duty of thirty dollars is prohibitive. That great duty is imposed in order to protect about a hundred and fifty thousand sugar manufacturers in America, on whose account tens of millions of people are to be obliged to pay a high price for their sugar. It is an absurd idea. The planters in Hawaii see no way of escaping the duty except by getting the islands incorporated in the dominions of the United States, and they are therefore doing everything in their power to compass that end. As for us, if we have approached the American Government on receipt of the news that the Annexation Treaty was concluded, our reasons are simple. Hawaii lies in the middle of the Pacific Ocean 2,100 miles from San Francisco, 2,300

miles from Canada, and 3,000 miles from Japan. It is a place of call for ships travelling from the Occident to the Orient and to Australia, and it will possess great importance should the Nicaraguan and Panama canals be cut. Its independence is consequently most desirable, and as its inclusion in the territories of the United States would materially affect the interests of the Powers in the Pacific, we are constrained to oppose that contingency as strenuously as possible. Further, annexation would injuriously affect the rights and privileges that Japan has acquired by Treaty in Hawaii. On these two grounds we have approached the American Government. After Japan, England is most interested in the matter, and it is scarcely probable that she will keep silence. Germany and France, too, are not unlikely to make their voices heard. Apart from other countries, however, Japan has approached the American Government and the question arises, what course will she adopt should annexation become imminent. She will oppose it to the end. England has been several times on the point of annexing Egypt, but owing to the determined opposition of France, has been obliged to desist. In the same way Japan must persist in not recognising the annexation of Hawaii. When a question of foreign policy can not be settled by one country alone, there is such a thing as a combination of two or three countries. If all the States interested in the matter join together and insist on what is right, they are not likely to fail. Of course we have communicated to the British, German, and French Governments the fact of our having approached America on the subject, and we may have an answer from them soon. There is nothing to make a fuss about."

We do not believe that Count Okuma has been correctly reported by the *Yomiuri Shimbun*. It is most improbable that he ever spoke of England's having repeatedly tried to annex Egypt, and having been prevented by French representations (*shiba shiba Egypt wo sokoku ni shiyo to shita keredo Futsukoku wa hantai da kessh'te mitomenai to itlôsh'ta sono tame Eikoku mo heikô shite yanda*). That is very defective history, and Count Okuma is eminently accurate in his history. The *Yomiuri* has spiced the Minister's remarks liberally out of its own pepper-box.

The "deadly parallel" is always entertaining. Here is an example:—
Japan Gazette, June 26. *Japan Gazette*, June 28.

It is very significant that at this juncture the *Fuji* with Prince Arisugawa on board, is to call at a Spanish port, and that the Prince is to present the King of Spain with a decoration. The United States Senate has repeatedly given to Spain deliberate provocation to declare war. By herself Spain would inevitably be defeated, but a combination between Spain and Japan would be for America a more serious matter.

There was no intention on our part to say that Spain and Japan would declare war, which is nonsense, but that community of interest might lead to unity of diplomatic action.

An Imperial Ordinance published in the *Official Gazette* of the 28th instant, provides that Shimizu in Suruga, Yokkaichi in Ise, and Nanao in Ise shall be added to the list of ports of export.

The *Fiji Shimpô* reports that the Premier, Count Matsukata, on a recent visit

to Kobe, expressed himself very strongly about the insufficient character of the harbour facilities at that place. A survey made of the port shows, according to His Excellency, that in view of the development of the trade and the increase of shipping, the accommodation is quite inadequate. The Count added that he desired to take advantage of his visit to make arrangements for extending the anchorage, improving the landings, and establishing better connexion between the railway and the wharfs.

Count Matsukata, on the same occasion, denounced the unwisdom of a number of small banks working independently with petty sums of capital. They ought to combine, and conduct business on a larger scale. He also condemned the system of securities, and said that advances ought to be made as far as possible on credit notes. With reference to that suggestion he added that the Government was endeavouring to effect such reforms as would secure greatly increased celerity of judicial procedure in matters connected with banking.

The compilation of the Budget for next year is said to be causing the Cabinet considerable trouble. The *Mainichi Shimbun* alleges that the increases demanded by the various Departments aggregate about 30 million *yen*, of which the Communications Department wants 15 million and the Educational Department six millions. The result is that the ordinary and extraordinary expenditures for 1898-9 amount to 280 million *yen* at least, and the question is whence revenue can be obtained to cover such an outlay. The *Mainichi* enters into some details, but they are exceedingly vague. We can not conjecture the purposes to which either the Department of Communications or the Department of Education intend to apply such sums. No indication has been furnished by their proposals hitherto.

According to the *Yomiuri*, the Japanese Government has ordered nine torpedo-boats in Germany, their contract speed to be twenty-eight knots.

It is stated that sweeping reforms will be made in the Formosan administrative system after consultation with Governor-General Baron Nogi, whose return to Tokyo is expected to take place soon. Mr. Okuda, Chief-Secretary of the House of Representatives, will probably be appointed Head of the Civil Government, and extensive changes of *personnel* will take place. It is to be hoped that some tangible results will be achieved on this occasion.

Kikugoro, the great actor, who ranks next to Ichikawa Danjuro on the Japanese stage at present, has just had a very sad experience. His son, Kikunosuke, an actor of much promise, died on the 28th ultimo while Kikugoro was playing in the "Forty-seven Ronin" at the Shintomi-za. Kikunosuke had been ill for some time, and no hope of his recovery was entertained, but his father's sorrow was not lessened by that fact, and he has given to a representative of the *Fiji Shimpō* a simple but pathetic account of his parting from the dying man at 10 a.m. on the 28th, and the feelings that oppressed him while acting his rôle, with the ever-present knowledge that at that very moment his son's eyes

might be closing in death. Kikugoro had to play the part of Hangwan, and in the fourth act, where, as he commits suicide, a prayer for his soul is said by Yuranosuke, he keenly realized the fact that he himself ought to be praying for the repose of his dying son's soul. It was just then that he received news that all was over, and hurrying home between the acts, saw the face of his dead son. He returned to the theatre to finish his part, but in the scene where Fukusuke, personifying Okaru, points to Kampei's mortuary tablet and laments the untimely fate of one who had only entered his thirtieth year, Kikugoro saw that Fukusuke, who had been like a brother to Kikunosuke, was shedding real tears, as was the bereaved father also. "Never," said Kikugoro, "did an audience witness more genuine sorrow in the seventh act of the 'Chiushingura.'"

According to the *Mainichi* and other vernacular journals, a telegram received from Mr. Hoshi Toru in Washington says:—"The clause in the Tariff relating to *Dantsu* (cotton rugs) was passed on the 19th of June without alteration. On the 25th of the same month, the clause relating to Japanese silk fabrics was passed, the rate being 3 dollars per pound. The clause referring to silk handkerchiefs was passed without amendment." The newspapers add that, according to the above information, the tax is 5 cents and an *ad-valorem* duty of 35 per cent. per square yard on cotton rugs valued up to 15 cents per square yard, and 10 cents with the same *ad-valorem* duty on carpets valued at over 15 cents per square yard. As for silk handkerchiefs, the tax is the same as that on silk fabrics in general, except that there is an additional ten per cent. *ad-valorem* according to the quality of the goods.

THE RATIO.

A writer in the *Investors' Review* for April, discussing the question of Japan's adoption of gold monometallism, says:—

The ratio decided upon by Government is Gold 1=32.34 Silver. Such a ratio is unknown as the basis of any currency law in any civilized country, and is an entire departure from anything existing at the present time or known to have existed, so far as history goes. Is it possible to believe that the Japanese statesmen responsible for the change have solved a problem that has baffled the keenest intellects of the financial experts of the civilized world?"

It seems to us that this critic has not looked very deeply into the ratio problem. With much of what he writes on the general phases of Japan's recent legislation we are disposed to agree, but it is pretty evident that when he comes to talk of ratio he has allowed himself to be confused by bimetallic notions. So soon as Japan's new system goes into operation, silver coins are relegated to the place of subsidiary tokens. It really matters very little whether the silver they contain is linked to the gold of the principal coins by a ratio of 32 to 1, or of 20 to 1 or of even 16 to 1. From a theoretical point of view, it is desirable, of course, that the ratio between the two metals for currency purposes should approximate, as closely as possible, to the ratio between their market prices in terms of each other. But in actual practice that desideratum ceases to possess paramount importance. The silver in Great Britain's subsidiary coins is rated at one-fifteenth, approxi-

mately, of the gold in her principal coins weight for weight, whereas an ounce of the white metal will buy only one-thirty-third of an ounce of gold in the open market. Certainly that can not be called a sound system in which silver is over-valued more than a hundred per cent. Of course English financiers did not originally plan a programme of coinage in which the nominal ratio of the two components should vary so largely from the real ratio. On the contrary, they took the utmost care to adjust the weights of pure gold in a sovereign and of pure silver in a shilling so that twenty shillings should be intrinsically worth exactly one sovereign. But the course of events has established such a greatly different relation between the precious metals that the subsidiary coins are now worth less than one half of the gold price at which they circulate. Japan, when she decided to adopt gold monometallism, was at liberty to choose any ratio that suited her convenience for the purpose of connecting her subsidiary silver tokens with her gold standard coins, but she naturally chose what seemed to be the "natural" rates; that is to say, the ratio agreeing most closely with the indications furnished by market quotations. She had no "problem" to solve. She had nothing to do with matters that had "baffled the keenest intellects of the financial experts of the civilized world." Had her object been to establish a bimetallic system, the question of ratio would indeed have been a hard nut to crack, but her object being gold monometallism, pure and simple, ratio presented no difficulty whatever. Bimetallicism is an immense subject. It has exhausted the grey fibre in many brains, and the writer in the *Investors' Review* seems to be one of its victims.

THE BLIND LEADING THE BLIND.

It is much to be desired that a guide of some kind should be provided for the evening journals of the Settlement, so as to save them from falling into the ditch that gapes proverbially for the feet of the blind leading the blind. No question of journalistic disgrace or controversial catastrophe is involved. It is an affair of pure pity, for truly the most flinty-hearted individual can not but compassionate the plight to which the *Japan Herald* and the *Japan Gazette* have been reduced by blundering in the dark against each other and with each other. The former newspaper, anxious to prove that Japanese ire had been strongly aroused by the prospect of Hawaiian annexation, and finding, in the columns of the *Japan Times*, certain translations from the vernacular press that seemed to constitute evidence of such a mood, reproduced them "inadvertently" as the Irish pick-pocket observed of his fifteen watches, without reference to the source from which they were extracted. The *Japan Gazette*, anxious to prove that the English evening journals of Yokohama can alone be trusted to publish conscientious translations of the vernacular press, and finding, in the columns of the *Japan Herald*, certain translations which seemed to constitute evidence of that fact, reproduced them, with these comments:—"Needless to say, the *Japan Times* does not translate these warlike effusions, confining itself to reproducing the more pacific essays. Of course, the real test of Japanese public opinion is not

to be found in the *Japan Times*, a paper specially prepared for foreign consumption, but in papers written by Japanese for Japanese. Our evening contemporary, the *Japan Herald* has culled some of the flowers of rhetoric and we make no excuse for reproducing them here." What a coil it is, to be sure! The *Japan Gazette*, in its attempts to establish the disingenuousness of any paper written in English by a Japanese, has accidentally convicted the *Japan Herald* of theft and itself of not even reading the columns that it traduces. The *Japan Herald*, in its attempt to convict the *Japan Mail* of misrepresenting the utterances of the vernacular press, has convicted itself of literary larceny, and has betrayed the *Japan Gazette* into quoting intelligence stolen from the *Japan Times* by way of proof that the *Japan Times* had concealed the very same intelligence. Even a daddy-longlegs becomes an object of pity when it gets tied up in a spider's web. The horrible entanglement that these two journals have woven about each other is too distressing to be funny, and if we can help to extricate them, our services are at their disposal.

FAREWELL DINNER TO MR. DUN.

On the evening of the 28th ultimo the members of the Tokyo Club gave a farewell dinner to Mr. E. Dun, United States Minister to Japan, who resigns the charge of the American Legation in consequence of the change of Cabinet in Washington. Few men have ever been so popular in Tokyo as Mr. Dun. The affection and respect entertained for him by all that have been brought into contact with him are too well understood to need any comment in these columns. Practically all the members of the Club now in Tokyo attended to bid a good-bye which happily is only temporary, as it is understood to be Mr. Dun's intention to return again to a country where he has spent so many years and made so many friends. The Foreign Representatives and the Staffs of the various Legations were present, without exception, as were also a number of Japanese officials and private gentlemen of position. Some seventy covers were laid, and the chair was taken by Mr. G. Lowther, H.B.M. *Chargé d'Affaires*, Vice-President of the Club. After the toast of the Emperor of Japan had been drunk, Mr. Lowther rose and said:—

GENTLEMEN,—A few months ago there was offered to a retiring Ambassador of the United States to England a banquet in the Guildhall, at which all the flower of the governing and other classes were present, and no pains were spared to do honour to the departing guest. I allude to the occasion of the departure from London of Mr. Bayard, Ministers of the Crown, a Lord Chancellor, a Lord Mayor, Members of Parliament, and others were present. In fact, it had the character of a spontaneous outburst not only of regret at the imminent departure of the Ambassador, but of an appreciation of the efforts he had made to cement a friendly feeling between his own country and the country he was leaving. We cannot to-night lay claim to compete with that function in grandeur of display. There are no Prime Ministers, no Lord Chancellor, no Lord Mayor, no gold plate, no turtle soup, and no Toast-Master, but yet, in spite of the absence of that important functionary, I am called upon to say a few words to you in proposing Mr. Dun's health. That I do very willingly, for without all that outward display I do not believe that our regret at losing Mr. Dun is one whit less than that of the English people in losing Mr. Bayard, and we cannot help feeling that Mr. Dun has done much to cement the friendly feeling between Japan and the country he was serving. His approaching departure is the out-

come of a system, a system which in this instance we certainly deplore, but one which we cannot criticize, as every country is privileged to know what is best for itself. Many of you have known Mr. Dun very much longer than I have myself. Indeed, I think no foreign Minister has ever left Japan with a wider knowledge of the country than he has, and during his service if he had any reproach to make to himself I am convinced that no one has ever been entitled to make one to him. He has seen many changes in this country, but he has always readily found the way to adapt himself to altered circumstances and altered surroundings. But it is not so much of the part he played in diplomacy that I should speak here in this Cosmopolitan Club, but rather of him as a Club man; and I think he has been essentially a Club man. Reading not very long ago an article on Clubs, the following passage struck me:—"A Club should be a focus of the superficial interests of the day—not of its serious convictions, and the best Club conversation is the foam of keen minds acting and reacting on each other." Well, Gentlemen, I think our guest has contributed very much to introducing that kind of tone into this Club. I have never heard him within the precincts of this building giving vent to his opinions on politics and ponderous diplomatic problems, but I have heard him discussing with an impartial mind the subjects that interested every one, bringing his weighty opinion to bear on them. He has been Vice-President of the Club and has been moreover a strong supporter of the sport of the Club—if I may call it so—a finished billiard player, a master at whist, and I believe, amongst our community here a Champion at Chess. These are qualities that go to make up a pleasant Club companion, and that he has certainly been. Fortunately, to night we only take leave of him as United States Minister and we shall see him again here as a Private Individual. I shall only be expressing the feelings of all here to-night when I say that we hope his return to this country will be prompt and his stay a permanent one. I ask you to drink to Mr. Dun's health.—(Cheers.)

Mr. Dun, who, on rising, was received with loud and long-continued applause, said:—

I cannot find words to express to you, gentlemen, my thanks for the honour and compliment you are paying me this evening. I can only assure you of my grateful appreciation of your kindness. I am also sincerely grateful to Mr. Lowther for the very flattering remarks he has made, all the more so as I am fully aware of the heavy draft on his imagination those remarks have called for. Many of you here this evening know the delight I take in making after dinner speeches; know that in season and out of season my inclination urges me to get upon my feet and talk to my friends.—(Laughter.) Such being the case, you can appreciate in a small degree the restraint I put upon myself in refraining, on an occasion like this, from giving free run to my inclination and talking to you by the hour.—(Loud laughter.) But as I grow old in years I believe I have improved, in one respect, in judgment. This wisdom of experience enables me to appreciate the fact that a speaker's views in regard to the merits of a speech and the views of his audience in regard to the same thing do not always coincide. Such being my belief, gentlemen, I shall refrain from running the risk of having a difference of opinion with you.—(Laughter.) But before sitting down, I wish to say that I feel that I am here this evening under somewhat false pretences. It was a final leave taking of my dear friends of the Tokyo Club, I could not speak to you as I have. It would be too sad a parting for me to speak of lightly. But as the bad penny has the intention of returning to you within a very few months, I can add to the pleasure I have in being with you to-night the hope of soon meeting you all again. I again thank you heartily, gentlemen, for the honour you have done me.—(Loud applause.)

The healths of Captain Barber, U.S.N., and Mr. P. May, Secretary of the Belgian Legation, who are about to leave Tokyo, were subsequently proposed by Mr. Lowther, who said:—

GENTLEMEN,—I will ask you to join me in drinking the healths of two other members of the Club who are present this evening, but who, I regret to say, and I know that you all share my regret, are about to leave us. I mean Captain Barber and Mr. May. Captain Barber, as a naval officer often entrusted by his Government with important duties, has been accustomed to sail under sealed orders, and has acted in such strict conformity with his habit on the present occasion that his friends are entirely in the dark as to the exact time of his departure, what he intends to do,

or whether we may cherish the hope of seeing him again. I sincerely trust that we may, however, for though his stay among us has not been long, we have learned to look upon him as one of the pleasant features of our life in Tokyo. Especially in this Club he has come among us constantly, and we shall miss him very much when he goes away. Mr. May, too, has won many friends during his short stay among us, and it is satisfactory to think that we are not losing him, as he is only going home on short leave. You will join me, I am sure, in wishing him a pleasant voyage and a happy time at home.

Captain Barber, who was heartily cheered on rising, said:—

MR. PRESIDENT AND GENTLEMEN—I am sure that I thank you most sincerely; Mr. Lowther for his kind remarks and you all for the hearty manner in which you have drunk my health. I am reminded, at this stage of my address, of a very apposite remark made by a well known orator. He said:—"If the length of my speech were to be measured by my knowledge of the subject I am speaking about, I have already said too much." That is my case in a nut-shell. Yet I should like to make you one promise before I sit down. It is that I will tell you all about my plans whenever I know anything about them myself. That is the best I can do, except to repeat my sincere thanks.—(Cheers.)

Mr. May said:—

MR. PRESIDENT AND GENTLEMEN—This is the very first time I have ever had to speak in public; the very first time my health has ever been drunk; the very first time I have ever had to return thanks, and the very first time I have ever made a speech in English. I feel that on such an occasion I should try to be witty, and as brevity is the soul of wit, I will say, thank you.

IN HAWAII.

The latest Hawaiian newspapers to hand—namely, of June 11th—contain no allusion whatever to the negotiations with Japan. That incident of their international experience seems to have faded completely out of the repertoire of everyday topics. Even the questions of reciprocity and annexation are scarcely noticed. The *Hawaiian Gazette* contains an article on the subject of annexation, but the writer gives no indication of anticipating speedy action on the part of the Government in Washington. He devotes himself simply to showing that, if the islands were included in the dominions of the United States, the uncertainty that now deters American settlers and emigrants would disappear, and a large white population would soon be built up. The article is only an expression of opinion.

ASHIO COPPER MINE.

The cost of the work undertaken at the Ashio Copper Mine for the prevention of the outflow of poisonous matter, as directed by the authorities, was, according to the *Yorodsu Choho*, estimated at four hundred thousand yen. But as the undertaking is required to be completed within a short space of time, the expenditure will, it is said, be nearly double that amount, or about eight hundred thousand yen. The general progress made may be judged from the following brief account: The men now employed on the works are:—Coolies, 1,880; masons, 240; miscellaneous employes, 1,800; brick-layers, carpenters, and other artisans, over 1,000. These men have been chiefly supplied by Kajima & Co., and other contractors in Tokyo; but the number being still insufficient, some six thousand men, formerly employed in the working of the copper mine, have been called in to aid. The scheme, therefore, for the present monopolises the services of no less than ten thousand men.

WRECK OF THE P. AND O. "ADEN."

DISTRESSING LOSS OF LIFE.

SAFETY OF MR. AND MRS. F. GILLETT.

Private telegrams received in Yokohama on Wednesday convey news of the loss of the P. and O. steamship *Aden*, Captain Hill, R.N.R., on the east coast of the island of Socotra. The disaster took place on the 9th of June, but it was not until the 28th of June that the survivors, including Mr., Mrs., and Miss Gillett, of Yokohama, reached Aden. The telegrams are very meagre, but we learn that the Indian Lighthouse tender *Mayo* found the wrecked people, where is not stated, and brought them off in her boats. The Captain, deck officers, and most of the crew are missing. Two engineers have been landed at Aden with some thirty of the crew.

Mr. Alfred Woolley, the local agent of the P. & O. Company, has received, through Hongkong, a fuller telegram from Aden, under date the 28th instant. This telegram, which was in code, states that the *Aden* went ashore on the east side of Socotra at 3 a.m. on Wednesday the 9th June. Of the passengers and crew the following were rescued by the Government steamer *Mayo*:—Mr. F. W. Velpy, from Perak; Mr. and Mrs. Pearce, from Shanghai, and their eldest child; Mr. and Mrs. Gillett and child, from Yokohama; two amahs, two engineers, and one steward. The following were swept overboard and drowned:—Mr. and Mrs. Strain and two children, from Tientsin; the Misses Lloyd Weller, missionaries from Foochow; Mrs. Pearce's second child, and amah, and Captain R. E. M. Hill. The following escaped from the wreck in boats, but as the weather was bad and no news has been received of them, it is feared they have been lost:—Mrs. Collins and two children; and Miss Margaret Hogan, nurse, from Foochow; Mrs. Smythe (Smythe), from Ningpo; Mrs. Riley and two children, from Singapore; Mrs. Sanderson, from Siam; Mrs. Robertson and three children, and Mrs. Suttie and infant, from Singapore; Mrs. Hewett, from Perak, and 34 of the crew, foreign and native. The remainder of the crew are missing or drowned. The wreck was fast breaking up.

The *Aden*, as most of our readers will recollect, was one of the recently built "intermediate" boats of the P. & O. Company. She was of 3,925 tons register, having a horse-power of 3,000 indicated, and a speed of 14 knots. Her late commander, Capt. Hill, was known to a many of the community as a conscientious and careful master mariner. Among the officers, Mr. Miller, the second mate, was well-known here, having been on the *Ancona* for some time. He was a genial, whole-souled companion, and friends will mourn his loss sincerely. Doctor Forman, also, was familiar to many, having come up on the *Ancona* on several trips, before he changed to the *Aden*.

The meagre particulars thus far received as to the loss of the *Aden* suggest that the boats were, for the most part, destroyed before they could be utilized to take off the passengers and crew. Only thirteen people, including two ladies, two amahs, and two children, were found on board when the *Mayo* reached the scene of the disaster. It was known that nine, including three ladies, an amah, and three children, had been swept overboard, and that seven ladies, a nurse, eight children, and thirty-four of the crew, foreign and native, had gone off in boats. Why thirteen should have remained by the ship is not easy to conjecture, especially as none of the deck officers stayed with them. It is conceivable that the perils connected with entering the boats, exemplified by the death of nine persons, deterred some from making the attempt. Those that are said to have taken to the boats number exactly fifty, which would be just about the complement for one life-boat. Apparently these were independent of the two engineers and thirty members of the crew who are said to have landed at Aden, but the point is not very clear. The interval of seventeen days spent upon the wreck by those whom the *Mayo* rescued must have been a terrible experience.

The island of Socotra at present has a melancholy interest for many residents in the Far East, as the scene of the wreck of the P. & O. steamer *Aden*. It lies about 220 miles south of the Arabian coast. To the Ancients of Herodotus' and later times the island was known as Dioscorides and was subject to the King of the "Incense Country." In the sixth century the people of the land spoke Greek and were largely Christian, having a Persian bishop over them,—so travellers relate. During the Middle Ages the Socotrans remained to all intents and purposes Christian, but by this time intercourse with the outside world had grown very infrequent, and when next history condescends to take note of the lonely island, it was found that the inhabitants had lapsed, in a religious sense, and were practising a form of the old Arabian moon worship. For many years, according to the handbook published by Messrs. John Walker & Co. of London, Socotra was dependent on some Arabian Sovereign, and it was at one time occupied by the Portuguese, those early pioneers of Occidental annexation in Oriental lands. But by a treaty with the Sultan of Keshin, the island was ceded to Great Britain in 1886. It has one big town, Samarida. The island is mountainous and sterile; and as many a passenger coming out to the East can testify, is most uninviting in appearance when viewed from the sea. It is said that the climate is equable and by no means unhealthy, though moist. With an area of 3,000 square miles, it supports a population of 4,000, the people being a mixed race of Arabs, Indians, Africans, and Portuguese. The language used is a dialect of Arabic. An administrative officer belonging to the government of Aden is in charge, visiting the island from time to time, and report says that he finds his subjects well behaved and hospitable. The chief products are gum and aloes.

IMPORTS OF GOLD AND SILVER.

Owing to the receipt of a large portion of the Chinese Indemnity, imports of gold and silver this year and last have been very great. The import figures for the past five years, and for the past five months from January to May this year, are as follow:—

Year.	Gold Coin and Bullion. Yen.	Silver Coin and Bullion. Yen.
1892	8,149,030†	21,303,033*
1893	1,805,949†	703,240*
1794	2,997,172†	4,604,287†
1895	1,762,039†	19,665,494†
1896	8,220,883*	19,322,443*
January, 1897 ...	6,567,066*	2,084,196*
February, 1897 ...	6,599,688*	1,488,689*
March, 1897 ...	7,976,275*	480,195*
April, 1897 ...	8,283,939*	194,804†
May, 1897 ...	15,117,793*	152,452*
Total for five months ...	44,544,763*	4,010,738*
* Imported. † Exported.		

Silver was occasionally imported until 1895, but in no case was gold exported without an excess of silver. In 1896, however, things took an entirely different turn, the import of gold having considerably increased. That was due not only to the receipt of the indemnity, but also to special purchases of gold as a reserve for the enforcement of the new Coinage System. Now that the enforcement of gold monometallism is at hand, further imports of the precious metal may be expected.

THE FOURTH OF JULY.

The Committee in charge of the Fourth of July celebrations have decided to bring off the festivities on Monday, the fifth. A baseball match will be held in the morning, on the cricket field, which will be between the U.S. Flag-ship *Olympia* and the Y.C. & A.C. It begins at 10 o'clock, and a band will be in attendance. In the afternoon a cricket match will take place, while after dark fireworks will be discharged from floats in the harbour.

ARRIVAL OF THE U.S. MINISTER.

The Hon. A. E. Buck, of Georgia, U.S.A., the newly appointed United States Minister to Japan, arrived on Monday morning by the P. M. steamer *Peru*. Mr. Buck was accompanied by his wife and by Mr. Baker, his Private Secretary, Col. Rice, the new military attaché, and his wife, and Mr. Wilson, the new second Secretary of Legation. Mr. Herod, Secretary of Legation, and Commander Barber, Naval Attaché, came down from Tokyo and proceeded on board the *Peru* on her arrival, together with Flag-Lieut. Reamey, of the *Olympia*, to receive the new Minister. Upon landing in the Admiral's steam launch at the English Hatoba, Mr. Buck and his party were met by Mr. McIvor, U.S. Consul-General at this port, and Mr. Scidmore, Deputy Consul, and were conveyed in carriages awaiting them to the U.S. Consulate-General, where an unofficial reception was held by the new Minister, and a number of American residents, including Mrs. Scidmore, Dr. Eldridge, Consul for Hawaii, Messrs. Varnum, Stone, Rogers, Abel, Wheeler, &c., were introduced by the Consul-General. After tiffin with Mr. and Mrs. McIvor, Mr. and Mrs. Buck and party proceeded to Tokyo by rail. On Friday Col. Buck proceeded to Kyoto, accompanied by Mr. Edwin Dun, the late U.S. Minister to Japan, to present his credentials. He was received in audience this morning.

THE FANCY MATTING TRADE.

Japan finds her best market for fancy matting in America, says the *Fiji Shimpō*. Immediately upon the introduction of the tariff question in the United States, last April, the foreign firms engaged in the trade in Kobe bought up all the stock upon the market in order to secure its admission into America before the new tariff became operative. A roll of matting formerly worth three yen or so, suddenly rose to 5.50 yen. The various mat producing districts, however, could not keep pace with the pressure of the time, and subsequently the merchants suspended their operations, until the fate of the tariff bill was decided. A telegram received on the 20th instant, announced the rejection by the Senate of the revised rates on matting and this completely restored activity among manufacturers and buyers, despite the fact that no orders have yet been received from the States to any considerable extent. The amount of matting exported during the four months—February to May this year—was as follows:—

	Rolls.	Value. Yen.
February	44,239.....	267,741
March	78,668.....	540,475
April	84,224.....	342,970
May	10,054.....	668,821
Total	217,185.....	1,820,007

Of this amount about 86 per cent. was exported to America, and 14 per cent. to other countries.

PORT WINE FROM MALT.

When the guileless farmer drops his grains of barley into the cold earth, remarks a home paper, he has not hitherto been led to expect that after its reaping it will be manipulated, and its results vended as the fruit of the grape, and it will no doubt be news to most people that port wine can be made from barley. The British Consul at Naples says the barley is first malted, "then the bacilli of port wine are introduced into the mead, where they fecundate incontinently, and transform it from immature beer into the richest port. When the animalculæ have done their work they can be sterilised, a sufficient stock of microbes being preserved in the laboratory for further use." To what further maladies shall we be indebted to the ubiquitous bacilli?

FOREIGN COMMERCE DURING MAY.

According to reports compiled by the Finance Department, the figures of foreign commerce during May, as compared with the corresponding period of last year, are as follow:—

	May, 1897. Yen.	May, 1896. Yen.
Exports	24,528,243.....	9,370,757
Imports	20,354,495.....	14,432,383

To al 34,882,738..... 23,803,143

The figures for five months, from January to May, compared with those for the corresponding period of last year, are:—

	From Jan. to May, 1897. Yen.	From Jan. to May, 1896. Yen.
Exports	63,982,581.....	46,363,329
Imports	82,548,225.....	66,182,741

Total 146,530,806..... 112,535,771

Excess of imports.. 18,565,643..... 19,829,711

It is clear that foreign trade has of late made extraordinary progress, the exports and imports for the five months showing figures never before reached in the history of the open ports.

The causes of this extraordinary increase are various, but there can be no doubt that the new tariff now under discussion in America, with the high duties it proposes, has been a great influence. Foreign merchants have endeavoured to secure for Japanese goods the benefit of the old rates and have been hurrying forward all possible shipments. Among staples of export which have considerably increased during the past five months those sent to America occupy a conspicuous position, as compared with the corresponding period of last year. The figures are:—

	For the 1st five months, 1897. Yen.	For the 1st five months, 1896. Yen.	Increase.
Raw silk.....	18,049,412	10,791,077	7,258,335
Habutsu.....	4,189,558	2,704,053	1,485,505
Cotton fabrics.....	4,682,170	1,460,533	3,221,637
Mating.....	2,226,513	1,321,185	905,328
Wheat straw braid.....	1,129,334	807,441	321,893
Manufactured tea.....	2,252,721	936,832	1,315,889
Crude and heated copper.....	2,604,120	2,021,215	582,905
Coal.....	4,239,048	3,486,167	752,881

The reason for the increase in imports is due in great measure to the organization of various new enterprises, the expansion of spinning and manufacturing industries, the increased demand for sugar and kerosene, and the rise in the price of rice. The following figures may be taken as evidence of these assertions:—

	1st five months, 1897. Yen.	1st five months, 1896. Yen.	Increase.
Cotton.....	20,000,220	15,172,650	4,827,570
Machinery.....	5,728,138	2,378,604	3,349,534
Railway cars.....	1,903,121	493,704	1,409,417
Steel and iron rails.....	3,533,416	278,770	3,254,646
Materials for railways.....	715,917	179,110	536,807
Rice.....	7,020,667	1,317,185	5,703,482
Peas and beans.....	2,524,092	921,200	1,602,892
Kerosene oil.....	3,119,587	2,399,167	720,420

THE RESCUE FROM A WELL IN KOBE.

We take the following from the *Kobe Chronicle* with reference to the saving of a lady from a well into which she had fallen during the Jubilee celebrations on the night of the 22nd June:—

Further particulars of the accident on the Bund on Tuesday night, which might so easily have been fatal, show how very much credit is due to the coolie who jumped into the fire well to rescue Mrs. Clarke. It certainly required no small amount of courage to go down a well the depth of which must have been quite unknown to the man, but he did it unhesitatingly, though how he managed to scramble down he is unable to tell himself. The water was about ten feet from the surface at the time, and the well is about twenty feet deep, yet the man managed not only to keep Mrs. Clarke afloat but to climb up by means of the fire hose sufficiently high to enable the arm of the lady to be seized by Mr. Sim from above. The coolie, who belongs to the local Fire Brigade, has been rewarded by the husband of the lady whose life he saved and by Mr. Sim for the pluck shown, and he will also receive a present from the Fire Brigade, which, it must be admitted, he well deserves. We are glad to hear that Mrs. Clarke has quite recovered from her unpleasant experience.

SOSHI DOINGS IN NIIGATA.

The *Yomiuri Shimbun* publishes the following account of some reprehensible doings of *soshi* lately in Niigata:—Two citizens of Niigata, named Nunokawa and Tatsumi, appear to have circulated a prospectus opposed to the general views of the people, with regard to the site of a railway station in the town. On the night of the 24th June, an alarm bell rang out, and at once more than one hundred *soshi* advanced towards the *Yiyo Shimpō* office, where the prospectus in question was alleged to have been printed. They there made a strong demonstration and tried to ascertain if Mr. Nunokawa was on the premises or not. Not finding him, they departed, but on their way back, met Mr. Tatsumi, one of the persons who had signed the prospectus, and, having bound him with ropes, dragged their victim along until he fell in descending the steps in front of the Niigata Commercial Company's office. This accident, however, was regarded by the ruffians as an attempt to escape, and the unfortunate man was severely beaten with a club and finally wounded on the head and arm with a sword. At last the police interfered, and upon examination it was found that the sword cuts had penetrated dangerously deep into the skull of Mr. Tatsumi, and that his arms were broken. One of the *soshi*, Tachikawa Torakichi, the principal leader in the brutal attack, made confession at the police station, and it is to be hoped he will meet with his deserts.

KOBE LADIES AT CRICKET.

The Ladies' cricket match against H.M.S. *Narcissus*, was held in Kobe on Tuesday afternoon in rather unpropitious weather. The *Herald* says:—The Ladies won the toss and sent their rivals in to bat. For this baseball bats were used, an additional disadvantage—*vis à vis* their fair opponents—being found in the penalty restricting them to left-handed play. Miss Ellerton and Miss Smithers undertook the bowling, while Mrs. Lightfoot, with the regulations gloves on, went behind wicket. Mrs. Matt. Smith acted as wicket-keeper at a later stage. Not all the batsmen succeeded in scoring, the bowling being fairly good under the circumstances, and having the merit of being straight if "all along the ground" as a rule. With the score at 62 Mrs. Skinner was directed to relieve Miss Smithers at the Pavilion end and the change proved a wise one, for, after the first over, made up of wides for the most part, the new bowler proved very deadly, taking two wickets in quick succession. The gentlemen's innings closed for 76. The ladies wore white costumes with red belts and hat bands, and neckties of the same colour. Their innings were opened by Mrs. Lightfoot and Miss Nankivell but the latter retired early, being run out. Miss Smithers and Miss Sowter got into double figures and the innings, which afforded an immense amount of fun to the bystanders—the want of practice being very evident in several cases—closed for 53. The Navy men then commenced their second innings and ran up 54 for seven wickets before time was called. Three of their number were run out.

Referring to the recent Ladies' cricket match, the *Kobe Chronicle* says:—With a little more training the ladies' team might give a good account of themselves. Yesterday they only succeeded in giving the spectators a deal of fun, though indeed a lady—Miss E. Smithers—made the highest individual score of the day. The lady bowlers did not do badly at all. Miss Ellerton took four wickets in 11 overs at a cost of 27 runs. Mrs. Skinner took three wickets for 12 runs; Miss Smithers three for 37 runs, putting all the men out for 76. It will be noticed the ladies made no catches, for in truth—we say it softly—the ladies seemed rather afraid of the ball. The photographer was on the ground, but we believe it is not a fact that he secured a snap shot of a group of ladies gazing with astonishment at the ball descending in their midst.

SENDAI NEWS.

On Sunday, 27th ult., the Miyagi Ken Education Society held a meeting at the Municipal Hall, Sendai, which was attended by over 500 persons, all the schools in the Prefecture and the Military and Municipal authorities sending representatives. Speeches were delivered by the Directors of various schools and by others engaged in educational work. Among the latter was Mr. Walter Denning, who took for his subject "The Urgent Educational Questions of the Day." In the course of a speech in Japanese, which lasted over an hour, Mr. Denning, while urging on school teachers the advisability of preparing the way for mixed residence by insisting on the importance of treating foreigners with due respect, commented fully on the Yokohama Baseball match episode and other displays of rudeness on the part of Japanese students. Mr. Denning's remarks were well received by the audience and the notice accorded to them in the local press is equally favourable. This shows the wisdom of calling the attention of school authorities to acts of rudeness towards foreigners. Mr. Denning said that he had been associated with Japanese students for over twenty years, and could testify that as a class they were characterised by extreme politeness, and that it was unfair to take the behaviour of the rowdies who attended the baseball match as a specimen of the kind of lads met with in the great schools of Japan. If, in some such way as the above, the Elementary School teachers of every Prefecture in Japan could be approached, we should hear no more complaints of insolent conduct on the part of the striplings who attend these schools. The Japanese proverb *Wasawai wa shimo kara* (Calamities come from below) is very applicable in the present instance. The first impressions of Japanese youths, after those made by their parents, are received in Elementary Schools.

On Tuesday, the 29th ultimo, the Miyagi-jogakko held their Fifth Graduation Ceremony. The attendance was large, consisting of representatives from all the schools of Sendai and the foreign residents. No praise is too high for the manner in which, under the management of Miss Zuffuh and Miss Hollowell, the Miyagi-jogakko is managed. The girls, while receiving an excellent foreign education, are not Occidentalised in any way. Their whole demeanour is that of refined Japanese ladies. Their dress, speech and carriage display no signs of the marring and vulgarising that go on in some schools that we have visited. Nothing could have exceeded the grace and delicacy with which every girl who took part in the exercises of the day conducted herself. The manner in which the whole ceremony was performed was a conclusive answer to the charge that the general effect of Western education on Japanese ladies is to rob them of their greatest charm. Much of course depends on the character of the foreign managers of the school. It is they who give to such institutions their tone, whether it be vulgar or refined.

Though the object of the Miyagi-jogakko is to Christianise the girls who attend the school, the adoption of the Christian faith is optional, and it is a fact that not a few have benefited by the training received without joining the church, the teachers fully recognising the importance of what missionaries regard as the secondary benefits derived from Christian teaching.

CHINESE NOTES.

The *North-China Daily News* has justified its title of the leading journal of Shanghai by giving to its readers an illustrated chronicle of the principal events in Her Majesty Queen Victoria's reign. An excellently written and very interesting chronicle it is, too, though it has a defect common to so many similar essays that have appeared in connexion with the Jubilee: it fails to show the seamy side of English life and English manners fifty or sixty years ago. The material progress that the nation has made is, of course, immensely interest-

ing, but the moral progress seems to us to deserve more notice than it has generally received.

We are not yet in receipt of detailed news from Tientsin as to how the opening of the restored Roman Catholic Cathedral passed off on the 21st of June. The anti-foreign feeling in the native city was said to be still very strong at the date—June 18th—of latest advices. But the Chinese General in command had received orders to hold two battalions in readiness for immediate service, and the Consuls and other officials were believed to be thoroughly on the alert. No news in such a case is good news. The crisis, so far as dates are concerned, is now over, and possibly, the excitement among the Chinese may subside completely.

It is now possible to travel from Tientsin to Tungchow by rail. Tungchow is generally supposed to be 15 miles from Pekin, but we see that a writer in one of the Shanghai journals puts the distance at 60 to 70 *li*, that is to say, 30 to 35 miles. Tientsin to Tungchow by the railway route is probably 65 miles, and the train now takes 4 hours to cover that distance. The line seems to have been purposely carried through barren and sparsely populated districts; the constructors preferring the immediate convenience of getting the land cheaply to the ultimate advantage of tapping centres of production. An interval of about 10 miles separates each station from the other. The bridge across the Peiho is condemned from the point of view of the river traffic. It is so low that boats can not pass at high water, a serious blunder on the part of the engineer.

The following account of the latest anti-foreign outrage is supplied by a correspondent of the *N. C. Daily News*—

On Friday afternoon, June the 11th, the Rev. A. H. Smith and the Rev. H. D. Porter, wife, and two children left here for their home in P'angchia-chuang, Shantung, returning from the Annual Meeting of their Mission—the American Board—in Ch'ingchau. About dusk, they reached a place a third of a mile distant from the north gate of the city, and tied up for the night. They soon saw signs of excitement on the opposite side of the river in the gathering crowd, which began throwing brickbats, etc., at the boats. After the danger was past at 2.30 Saturday morning, Mr. Smith sent a report from which I quote. He says:—"At first, we supposed that this was a transient affair which would soon subside, which indeed it did for about an hour. At the end of that time, after we were in bed, and had supposed that everything was quiet, the crowd began to re-collect and in a short time the behaviour of the mob was much worse than before. We then sent a messenger with a card to the *yamen* of the river police to Yü Puyeh, to let him know what was going on. As the yells and the missiles were constantly on the increase, we ordered the boatmen to pull on ahead for a little space, which they were reluctant to do, but did at length begin to attempt. But as soon as the mob saw that we were in motion their fury was still more excited, and they said that we should neither go on nor go back. As we saw that they were getting furious and attempted to head us off, we tried to turn the boat about in order to drop down the river to the north gate. This they would not allow, but apparently several hundred men sprang on the grain boats to rush from them upon ours. As Dr. Porter's boat is clumsy and hard to manage it swung about till very near the line of grain boats, and many score of men, yelling like demons, prepared to board Dr. Porter's and mine. Just at this juncture Dr. Porter's servant found a Winchester rifle which he had bought at Tientsin, and loaded and discharged it into the air to frighten the mob. Dr. Porter ran on the grain boats and drove the men off for the moment, as they were not expecting any effort at resistance. After several hours of this state of things the mob, still yelling and reviling, followed us down the river a few paces, when just at this juncture three men sent by the Puyeh arrived, and began to yell back at the mob and discharged their weapons. It was not long till the crowd quieted down, and the soldiers remained with us. We learned from them that another boat just in front of us had been attacked at about the same time. This was a boat carrying passengers, but empty at the time, and for some reason the crowd had accused the boatmen of having kidnapped a child. The mob boarded the boat, and we learned that two persons were seriously injured and the

boat smashed. Had the soldiers arrived a few moments later there is every reason to believe that this would have been our fate. The time of the disturbance was about half-past nine."

THE GOOD CONDUCT OF THE OFFICIALS.

"Since then we have been visited by relays of officials, military and civil, from several *yamens*, whose desire is to learn what has happened and to protect us. We have determined to go on, and they have offered us all the escort we need and as far as we need. We are to start on early in the morning. Under their protection there is probably nothing more to be feared, but we heard that exciting rumours are prevalent for a long distance, so we have asked them to go as far the border of the prefecture of Tientsin, which they will do. Two officials are in my boat at this moment and I have asked them to send this note. Nothing could have been more prompt than the exertions which all the officials have made to put an end to the disturbance.

"P.S. The Taotai sent a Wang Laoyeh and 20 soldiers. The Governor-General has sent 40 soldiers and 2 gunboats from the *Hsinpu*, and the *Hsiang chia-chu-tsung-pan*, Pan. Li *tajen* also came with 20 soldiers. This will indicate not only their energy but their apprehension of the gravity of the situation."

(Signed) A. H. SMITH.

West suburb of Tientsin, 1 *li* from North Gate, 12th June, 2.30 a.m.

The French community in Shanghai showed a most friendly spirit on the occasion of the Diamond Jubilee celebrations. Our readers are probably aware that the French settlement in Shanghai stands apart from the general settlement, and consequently might have remained entirely outside the range of the festivities had not its inmates taken special steps to show their sympathy with the occasion. "Our French neighbours," says the *Shanghai Daily Press*, "have not been behindhand in their efforts to do honour to the ruler whom all nations respect for the way she has filled her high position for such a long span of years. There is the same profusion of bunting and lanterns there as in the larger concession, and at the Consulate corner there is an immense arch which fittingly seconds the ones on the English Bund, and this is backed up by another of the same character which spans the road at the first bridge. The new electric light system in our sister concession will add considerably to the brilliance of the illuminations here, as we understand they will be turned on to their full force for the first time on that occasion, and thus another pleasing memento of the day will be added."

NEW FOREIGN TELEGRAM RATES.

The *Official Gazette* of the 28th ultimo contains the following notification of the Department of State for Communications.

The Japanese Terminal Rates for Telegrams between Foreign countries and Japan are fixed as follow:—

Names of countries.	Rate per word.	
	From July After	1.77 to Oct. 1
Japan, Europe (except Russia), and America, and Africa (except all the places to the south of Egypt, as far as Cape Colony).....	sen.	sen.
Japan, Russia in Europe, and Asia (except Russia, China, Shanghai, and the offices in the interior of China), Oceania, and all the places south of Egypt as far as Cape Colony.....	Vladivostok.....	25.9 28
Japan and Russia in Asia.....	Vladivostok.....	11.2 13
Japan, China, Shanghai, and all the offices in the interior of China.....	Shanghai.....	13.5 16
Japan (except Tsushima) and Korea.....	Fusan.....	20 20
Tsushima and Fusan.....	Fusan.....	10 10

The Regulations provide that Japanese words occurring in foreign telegrams must be written in Roman letters; that for the purposes of Japanese telegrams between Japan and Korea, seven *katakana* syllables shall constitute a word, any fraction of seven syllables being also counted as one word; and that, in the case of such telegrams, the address of the recipient shall be transmitted free of charge. For the rest, the International Telegraph Convention and its annexed Regulations are to govern all matters connected with telegrams between Japan and Korea.

PROPOSED YOKOHAMA BOURSE.

The *Hochi Shimbun* states that a compromise has been arrived at between the Yokohama Four Commodities Exchange and Mr. Tanikawa's party, in regard to the several applications for the establishment of a Bourse. The principal officials of the Exchange held a conference on the 25th instant and resolved upon organising a Silver Bourse in combination with Mr. Tanikawa. The terms decided upon were as follow:—1. The Bourse shall be instituted with a capital of fifty thousand *yen*. 2. The capital shall be divided into two thousand five hundred shares of twenty *yen* each. 3. The amount of capital shall be equally subscribed between the two parties concerned. 4. The application for a charter shall be entrusted to the representatives of the Exchange. 5. In the event of official sanction being obtained, 1,250 shares allotted to the Exchange shall be offered for subscription among the shareholders on the 1st October.

THE TURKS.

A correspondent of the *New York Independent* gives the following interesting information about the Turks immediately after the declaration of war with Greece:—

Two days after the publication of the declaration of war, the second division of the Turkish fleet left for the Dardanelles. Fifty thousand people turned out to witness the spectacle from the bridges and from the shores of the harbour. For hours they stood patiently waiting to see the glory of the Empire pass by before them. For twenty years these ships, lying motionless in the inmost harbour, have deceived large colonies of shellfish into selecting the massive hulls as a nursery for their tender offspring, under the belief that the ships were as much a part of the natural riches of God's earth as the rocks or other permanent furniture of the harbour. Fens of these shellfish had to be removed before the propellers could be induced to revolve, or the ships dream of chasing the Greeks from the sea. Finally the ships came out through the draws of the two crowded bridges in imposing column, and with immense effect upon the gazing multitudes. First came the *Orhanie*, thinly armoured in the armour of anti-steel days, but gorgeous in new paint and brilliant bunting, and a display of soldiers lined on the bulwarks and on the yards. Next came a double-turreted monitor, somewhat younger than her predecessor, being only about twenty-five years old. A poor old wooden corvette followed, while four venerable coasting steamers warranted not to go more than eight miles an hour, but painted, decked in flags, and dubbed "Imperial cruisers" closed the procession. The only serious member of the squadron was a little black torpedo boat which silently slipped out unnoticed in the wake of the great vessels whose splendour of paint convinced the people that no other nation in the world has so mighty a navy. The sailors on the ship shouted at proper intervals: "*Padihim cok yasha!*" ("Long live the Sultan!"); and the people wondered and murmured "*Mashallah*," and prayed the prayer "God give them success!" and so the fleet went its way to the fate prepared for it. It is only fair to say in passing, that some better vessels than these exist among those already at the Dardanelles, for one of them has steel armour. But none on board the fleet have ever taken part in evolutions on the high seas, no officer or man in the fleet has ever fired a gun, on shipboard, larger than a six-pounder, and probably but few either of officers or men have ever been to sea at all.

The Turk is no strategist. He sees no use in recitals of the capture of unpronounceable villages on the Greek frontier. His teachers in inculcating the religious duty of military service have based their teaching less upon patriotism than upon the duty owed to God to slay every man who is an enemy of Islam. Of war his one idea is slaughter and loot. The popular idea as to the meaning and object of war has just been illustrated by a question telegraphed to the Porte this week by the Governor-General of one of the provinces of European Turkey. Two women of mature age presented themselves to the authorities of their town. They had dressed themselves in men's clothing, and they each carried a long, well-sharpened knife in their hands. They had felt impelled to serve God, and therefore they demanded to be sent to the army operating in Greece, believing that their strong arms and their long knives would do good service. The sex of these volunteers embarrassed the Governor; yet he felt that so sensible an offer should not be hastily rejected. So he referred it to his superior, and so the question has come before the Sultan's Cabinet for decision, while the Turkish newspapers publish editorials in praise of the spirit of the blood-thirsty ladies.

THAT PRESTIGE.

OUR recent remarks on the supposed disappearance of English-prestige are traversed by the *North-China Daily News*, which journal, being notably addicted to crying "Ichabod" in connection with the missing article, naturally objects to the idea that there has been no disappearance whatever. The Shanghai newspaper opens a loop-hole for our escape by assuming that we refer to the Japanese horizon only when we declare the prestige to be as much *en evidence* as ever. But we can not avail ourselves of that postern. We refer to China also, and we repeat our conviction that the prestige is likely to remain intact unless it has the misfortune to be manipulated by some of the many amateur diplomatists in the Far East who apparently think that unless England thrusts her fingers into every pie lying around, she will be deprived of sustenance altogether. That kind of fussy meddling is precisely the rôle adapted to a Power without any prestige to lose. A great State like England ought not to stretch out its hand unless there is something tangible to grasp, and unless it intends that its grasp shall be resolute and unyielding. What we observe about this outcry is its negative character. England's prestige is gone, we are assured, but how on earth it was lost, or how on earth it could have been kept, or how on earth it can be recovered—on all those points there is silence. Let us see what the position of the *North-China Daily News* is. It says that "England urged on Japan the acquisition of Formosa in order to prevent a European Power's getting possession of the Pescadores." Of course that is a pure phantasy, a ludicrous phantasy. No Power, or combination of Powers, could take or retain the Pescadores without England's acquiescence. England does not want Japan to stand between her and inconvenient aggression. It is only giddy Englishmen that venture to formulate such humiliating notions of their country's proceedings. When the annexation of Formosa by Japan entered the realm of probabilities, the Ichabod Chorus were insistent that England ought to prevent the transfer, since it would place a possibly hostile Power on one of her commercial highways. Now, a leader of the Chorus wants us to believe that England contrived the transfer through fear lest a worse thing should happen. Pshaw! The *North-China Daily News* then reverts to its ancient annals—the "Cassini arrangement," which it published in March 1896, and the "Cassini Convention" which it published in October of the same year. Concerning those remarkable documents our contemporary says:—"The British Legation at Peking unfortunately poolpoohed them. *The Times*, taking its cue no doubt from the Foreign

Office, also poolpoohed them. But now no sane person disputes their practical authenticity." Really! Has not the printer betrayed the Shanghai journal by dropping a syllable from its copy? Ought not the last clause to read:—"But now no insane person disputes their practical authenticity." In truth it is too much to have those bogus documents flaunted in our face again. They were consigned long ago to the waste-paper basket. Where are their results? Where are the symptoms of their being carried out? If England's prestige is to be maintained by opposing the conclusion of imaginary treaties, she had better entrust her Legations to the care of the Ichabod Chorus. However, there is one less nebulous count in our contemporary's arraignment. "China is hopelessly mortgaged to Russia. . . . When Prince OUH-TOMSKY with his suite arrived here a little while ago, the independent Chinese recognised that he had come out as the agent of China's chief creditors to have a look at their security." Well, now, that is really a dreadful thing. Prince OUH-TOMSKY coming out all the way from Russia to gloat over the big pound of Celestial flesh that is to fall presently into the maw of the Bear! Assuredly England ought not to have allowed that. The integrity of her empire will be gravely imperilled if Russian Princes are suffered to make such inspections. Neither should she have allowed China to become mortgaged to Russia. She should have insisted on lending those hundred million taels herself. It would have been a novel sensation for China to find herself threatened with pains and penalties unless she consented to accept a good round sum of British money, but what mattered the oddity of the thing when the prestige of the biggest empire the world has ever seen was at stake? It further appears that "English syndicates come away empty-handed from Peking," and that "the fault is not to be laid on any one in China, but on the Foreign Office in London." How can the Foreign Office in London secure Chinese contracts for English syndicates visiting Peking? There are certain traditions of British diplomacy that interdict meddling with such matters. They are called honourable traditions. There are certain traditions of Englishmen in general that deprecate official interference in trade affairs. They are called sound traditions. But it is by violating those traditions that British prestige is to be supported. We certainly do think that there are injurious influences operating against British prestige. But they are not influences that emanate either from the Foreign Office in London or from the British Legation in Peking.

BRIBERY IN JAPAN.

THE Editor of the *Kobe Chronicle* writes:—

We venture to say from evidence brought before us from time to time, that there is not a single contract for public works in Japan in connection with which bribery of some sort or another is not attempted. * * * We regret to say that, so far as our experience goes, bribery is rampant among all classes in Japan. Scarcely a single transaction takes place, from the sale of merchandise to appointment to an official position, without "squeezes" being expected and paid.

The question here approached by our contemporary is of an interesting character. Not, indeed, that very strong barriers against the spread of bribery seem to exist among any nation. We English flatter ourselves that in our official and parliamentary circles corruption has no existence, yet we have not to travel farther back than the days of WALPOLE and the second of the GEORGES to find an era when ability to slip a five-hundred-pound note under the ruff of his sleeve was counted a necessary accomplishment of an "honourable member" of the House of Commons, and a retrospect of ninety years confronts us with Captain HUXLEY SANDON, Colonel FRENCH and Mr. DONOVAN, gentlemen whose doings in Gloucester Place throw a lurid light on the men and manners of their time. Even in these closing days of the nineteenth century, many an American is ready to declare, with all the vehemence of apparent conviction, that the United States Senate can be bought and sold any day in the year, and is actually bought and sold every day during its session. Let us hope that such assertions have to be extensively pared down before the small kernel of truth that they enclose is laid bare. Let us hope, also, that the same correction has to be applied to the very radical generalization of the *Kobe Chronicle*. To what extent bribery is actually carried on in Japan, we ourselves have never been able to obtain any assurance. That there is a prolific field for the employment of such a device can not be doubted when we consider the wretched salaries paid to judges, procurators, and other public men, who, in the discharge of their functions, often find themselves entrusted with the control of large pecuniary issues. Within the past few years several instances of corruption among persons of these classes have been brought to light, and have been not only punished by due process of law, but also held up to public execration. It would appear, therefore, that to whatever degree bribery prevails, it certainly is not openly tolerated. What is called "a false public conscience" does not exist with regard to it. A modern historian, speaking of the Bill which, in 1867, deprived the House of Commons of the function of hearing and deciding upon election petitions, says:—"The one great and crying evil of our electioneering was then the bribery and

corruption which attended it. A Parliamentary Committee could hardly be expected to deal very stringently with bribery, seeing that most of the members of the Committee were sure to have carried on, or authorized, bribery on their own account. Few men held it really in hatred. * * * As in a former age no gentleman thought it wrong to seduce a woman, so in a very recent day no man with money thought it improper to spend some of his money in corrupting electors. What censure was it likely a country squire would have got fifty years ago if accused before a council of squires of having seduced some tenant's wife or farmer's daughter? Just so much would a rich man have got twenty years ago from a Parliamentary Committee if it were proved that he had allowed his agent to lay out money for him ingeniously in bribes." It can at least be confidently affirmed of Japan that public sentiment does not condone bribery. The newspapers hold it up to obloquy, and any whisper of its employment in the House of Representatives provokes stormy discussion. There is some satisfaction in that. But to what extent does the evil prevail? The experience of the editor of the *Kobe Chronicle* induces him to allege that scarcely a single official appointment is made without bribery. That appears to us to be a generalization betraying some rashness. We ourselves have had intimate knowledge of the exact circumstances attending a great many official appointments, and in no single instance was there any shadow of corrupt dealing. We venture to go further, and to affirm that no Japanese Minister of State could remain in office were his nominations procurable by bribes. Speaking broadly, there are two sources of office-conferring authority in Japan; the EMPEROR and the Cabinet Ministers. Practically the latter alone are responsible, for it is in accordance with their advice that HIS MAJESTY confers official posts of the *shinnin*, or *chokunin* grade. Has the experience of the editor of the *Kobe Chronicle* furnished evidence that bribes have been given to Cabinet Ministers, and are habitually given to them, by persons seeking appointment to offices of *sonin* grade? Has he discovered that men like Marquis ITO, Marquis YAMAGATA, Count KURODA, Count OKUMA, Count KABAYAMA, Marquis SAIGO, Marquis OYAMA, Marquis HACHISUKA and so forth are accustomed to exact "consideration" from young men to whom they grant appointments? We shall be greatly surprised to learn that he answers in the affirmative. If it were so, if a percentage of the already insignificant salaries received by officials had to be handed over to the Heads of Departments or of Bureaux, we can not but think that the fact would long ago have been proclaimed from the house-top by the phalanx of poli-

ticians who, ever since 1879, have been labouring to destroy the credit of "Clan Government." The expression *Joitsu Naikaku*, signifying "Cabinet of favouritism," has been freely bandied from mouth to mouth, but simply in the sense that appointments were influenced by clan considerations rather than by merit. During thirty years of tolerably intimate intercourse with Japanese of all classes, we have never heard the faintest suggestion that offices are bought and sold. Of course we do not pretend that our experience is conclusive. It is only the experience of an individual and must be taken for what it is worth. But we should greatly like to receive some more explicit information of the grounds upon which the editor of the *Kobe Chronicle* bases his wholesale accusation. We are well aware that sweeping charges in connexion with this subject are freely formulated by some foreign residents. Will any man give the precise reasons of his faith? Will any man tell us by whom he has known bribes to be administered, and by whom he has known them to be received? There can be no necessity to "cover up the tracks" of all the guilty persons. There should be no necessity to cover up any of them. Will the editor of the *Kobe Chronicle* commit himself to the clear assertion, "I have been directly assured by so and so many officials that they procured their posts by bribery;" will he indicate half a dozen, or only three or four, "contracts for public works" that have been secured by corrupt practices, and will he, or will any one else, inform us of such and such a number of cases of bribery that have come under his personal notice in any class of transaction? We are not denying that bribery exists. To do so on the strength of our own negative experience would be mere presumption. But, on the other hand, we can not be satisfied with vague general declamations, and never yet have we been able to obtain chapter and verse for conclusive reference. We have met men who readily assume a very sapient and a very shocked demeanour; who raise hands of horror over Japanese corruption, and speak with bated breath of the arcana of iniquity that their shrewd observation has penetrated. But not one of them could ever be induced to mention a name. If bribery is rife, there is a singularly successful conspiracy to conceal it.

GREECE'S BLUNDER AND ITS RESULTS.

IT appears to be becoming pretty clearly understood that Greece would not have rushed into war with the Turks had she not counted confidently on British assistance. Exactly what grounds she had for such confidence, there need not be any attempt to discover, but perhaps the most comprehensive explanation is

that she mistook the English people's displays of sentiment for reflections of the views of responsible statesmen. One imagines that history ought to have guaranteed her against such a blunder. She should have remembered Poland and she should have remembered Denmark. When the Poles rose in rebellion, they had no more hope of standing single-handed against the might of Russia, than the Greeks had of making head against Turkey. But the Poles imagined that if they could hold out for a time, some of the Great Powers would interfere in their behalf, and the Power that they reckoned on was England before all others. There is no doubt that the majority of Englishmen entertained the same view at the time. Denmark, too, when she allowed the question of the Duchies to be carried to the tribunal of the sword, firmly believed that she had England at her back. Her experience, and that of Poland, ought to have warned the Greeks. But it is with nations as with individuals: the experiences of another count for little in their calculations. Greece has almost extinguished herself. At the outset Europe's sympathies were certainly with her. Could she have persuaded herself to accept the terms originally proposed, and to rest content with the autonomy of Crete as the immediate outcome of the situation, she would have enlisted in her cause not only the good-will of Christendom, but also the aid of that infallible solvent of all dilemmas, time. Very different is the actual result. She has destroyed her hope of incorporating Crete in her dominions, and of obtaining such a rectification of her frontier as would have rendered her secure against Turkish aggression, and she has apparently given a new lease of life to the Power that Europe is longing to thrust back into Asia.

Apart from Greece's misfortunes, it is a singular historical fact that in all modern European complications involving small States, England and Germany have been ranged on opposite sides. When Poland was struggling for life, it was Prussia that concluded a treaty empowering Russian troops to cross the Prussian frontier in pursuit of fugitive Poles and arrest them within Prussian territory. When English sympathies were entirely with Denmark in the Schleswig-Holstein trouble, it was Prussia that annexed the Duchies in the sequel of a victorious war. And now, when Englishmen of all degrees are pitying Greece's misfortunes and bitterly regretting that some means of aiding her are not forthcoming, it is Germany that supports Turkey in a merciless policy towards the defeated little Kingdom. What makes this last case particularly incomprehensible is that the German EMPEROR has hitherto showed himself markedly apprehensive of the intrusion of Asia into Europe. Everybody remembers the celebrated picture painted by HIS

MAJESTY three years ago, showing the great Christian States of Europe leaguely to defend their territories against the incursion of Asiatic hordes, and everybody remembers the grim possibilities that he connected with the future of the Chinese nation. It is strange that a Potentate holding such convictions should assist in moving Turkey's landmarks farther into Europe, as the EMPEROR is now said to be assisting. That he should insist on the severe punishment of a State which, by wantonly drawing the sword, brought the peace of Europe into imminent peril, would be natural. With that attitude we can all sympathise. But punishing Greece is one thing, and helping to aggrandise Turkey is another. The explanation suggested is that the German Sovereign sees in Turkey a potential ally of very-useful capacities. Granting what seems to be now clearly established, that, as a fighting machine, Turkey is more efficient than ever, and that her efficiency can be raised to a very high degree by German military training, it is easy to conceive the uses to which she could be put in alliance with Germany. Still the EMPEROR must attach great importance to that forecast if it has sufficed to exorcise his bugbear of an Asiatic deluge. Meanwhile, Germany is once more in the opposite camp from England. The exigencies of her position in continental Europe drive her always farther away from the nation with which she has more natural affinities than with any other in the Occident.

SUMMARY OF CURRENT JAPANESE LITERATURE.

(CONCLUDED.)

In fulfilment of the promise we made last month, we now furnish a few more answers to the questions addressed to noted men by the *Sekai-no Nippon*. The questions were (1) What books exercised most influence on your mind when young in assisting you to form a purpose in life? (2) What books affected you most in after life? (3) What books possess a constant charm for you whenever you read?

Mr. Sakatani Yoshirō says:—(1) The "Analects" of Confucius. (2) do. (3) do. My father was an ardent Confucianist; hence the influence of the great Chinese Sage on my life.

Mr. Tsubouchi Yūzō says:—(1) When young I read novels indiscriminately and do not recollect that any one in particular made an impression on me. (2) I was not specially influenced by books in after-life. (3) Shakespeare's "King Lear."

Dr. Inouye Tetsujirō remarked:—(1) I was more influenced in early days by my parents, my teachers, my surroundings, and the natural earnestness of my own mind than by books; but if books must be mentioned, then the works of Confucius and Mencius rank first. (2) Kant's Critique of Pure Reason, Schopenhauer's Philosophical Works, Spencer's Synthetic Philosophy, and Hartman. Then Goethe, specially his "Faust," Rousseau, and various Buddhist works. (3) The books I read are very numerous and it is impossible for me to select a few that strike me as superior to all others. As my reading is that of an investigator I make it a rule to avoid novels. But there have been times when I have enjoyed Bakin. Perhaps I may say that among the books I most love are Goethe, Shakespeare, Byron, Shelley and Schiller. But these books I read for pleasure rather than for

serious study. I may say that the only books that have a constant charm for me are works on Philosophy and Religion. I am most careful as to the selection of books and always endeavour to master the greatest works on any subject I may be studying before reading minor productions. By a thorough study of Kant I derived the power of separating the wheat from the chaff in psychological works of all kinds. The study of a book of that kind enriches one with critical faculties not to be obtained elsewhere.

Baron Iwasaki Yanosuke says:—I spent my early youth in an unruly manner (*sohō ni hi wo kesu*) and when I reached manhood settled down to business; hence I have no recollection of any books that specially influenced me.

Mr. Miyake Shu says:—(2) I was not influenced in early youth by books. My thoughts were moulded by those who taught me. (2) I was not specially affected in after life by books. The works that I perused professionally were scientific works, and these I read with relish; but without preferring one to another. (3) I am specially fond of works on travel, whether foreign or native. The writings of explorers are of special interest to me.

Dr. Kitazato Shibaaburō says:—When a youth in the service of my *daimyō* (Hosokawa) I was sent to Nagasaki to study medicine under Dr. Mansfield*. I subsequently graduated at the Tōkyō Daigaku and then went to study in Germany and progressed from step to step till I reached my present position. It seems to me that in the case of most men who have distinguished themselves in the world it is impossible to attribute their success to the perusal of any special work. Nor did the men who have risen to greatness, as a rule, map out their careers beforehand. Bismarck, the wild, duelling student, had no idea of becoming the greatest statesman in Europe. Hideyoshi, the lad who stole 5 ryō, did not expect ever to be in a position to send an expedition to Korea. By diligence, perseverance, and patience, men rise to greatness imperceptibly step by step. I cannot say that any book in particular influenced my early life. And as for the later years of my life, no book has altogether satisfied me: that is I have not pinned my faith to any one book. Different works suit the different states of mind in which we find ourselves from year to year. Mental food, like that which nourishes the body, must be selected to suit our ever varying tastes and appetites. To the scientific mind objects of nature, material things of all kinds, have an endless interest, but what any one man has to say about these things can only have a limited and a short-lived interest.

Dr. Hozumi Yatsuka says:—I am unable to say with certainty what books have influenced me.

Mr. Sugiura Jūgō says:—(1) The 椿説弓張月, *Chinsetsu-yumiharizuki* (Bakin); the 水滸傳, *Suikoden*, the 西遊記, *Seiyūki*, the 先哲叢談, *Sentetsu-Sōdan*. (2) The lives of men who have died for their country. (3) This question I answered in the *Kokumin-no-tomo* a few years ago, to which I refer.

Dr. Nanjō Fumio:—(1) The 佛祖統記 *Butsu-tōki*. (2) The 佛說無量壽經 *Bussatsu-Muryōju-kyō*. (3) The history of Japan, China, Europe, and America and the lives of eminent Buddhist priests are to me the most entertaining of all books.

Mr. Taguchi Ukichi says:—(1). When young no book that I read assisted me in forming a purpose in life. I read books on Chemistry, Physics, and Physiology only. (2) The Poems of Ikkyū and Sorori and the writings of 莊子 Chowangsz. (3) History.

Dr. Motora Yūjiō says:—(1) Smiles' Self-Help. (1) Bacon's *Novum Organum*; Kant's Critique of Pure Reason; Hamilton's Lectures on Metaphysics; Tyndal's "Heat as a Mode of Motion." (3) No book invariably charms me.

* Dr. C. G. van Mansfeld, who was at one time in charge of the Nagasaki Medical School, founded by Dr. Tompe van Meerdervoort in 1857. Dr. Kitazato does not say whether he entered this school or received private instruction at Nagasaki.

Mr. Yokoi Tokiwo says:—(1) I remember nothing in particular as to the influence exercised by any special book unless perhaps it was Smiles' Self-Help. (2) The New Testament (3) The Analects of Confucius, 陽明 Yang-ming, Matthew Arnold's Poems, Tennyson, and Browning, and among novels those of George Elliot, Thackeray, Dickens, Victor Hugo, and Scott.

Mr. Kaneko Kentarō says:—(1) The Confucian "Analects," the works of Mencius. (2) Spencer and Burke's political Essays. (3) The Chinese Classics, the Shiki (史記), the *Nihon-seiki*, the *Gempei Seisuski*, &c.

Mr. Kanō Jigoro says:—(1) Nothing influenced my early days but the instruction I received from my parents. (2) The greatest impression made on me came from friends and society generally, and not from books.

Mr. Kōda Rohan says:—When young I had no such grand purpose in life as your question implies. At one time I thought of spending my life in whaling. No book helped to mould the course of my life. Once when in trouble I derived great consolation from the 報徳記 *Hōtoku-ki*, which gives the experiences of the aged Ninomiya Sontoku, and, for the sake of studying literary style, I perused the 三部抄 *Sambushō*.

Mr. Shimada Saburō says:—The 小學, *Shō-gaku*, the 名臣言行錄 *Meishin-genkō roku*, Self-Help, &c. (2) Other works of Smiles. (3) Mencius, the *Tsurezuregusa*. Brighi's and Cobden's speeches, &c.

The *Teikokubungaku* is publishing a long essay entitled *Indun-Shinkwa-ron*, "The Evolution of Poetry," from the pen of Mr. Tatebe Tongo. The essayist first deals with the evolution of poetical ideas and then proceeds to discuss the development of styles of poetry and the connection of poetry with music. He deprecates the notion that the progress of science and civilization imply the decline of poetry, and contends that the most sublime poetical thoughts are proof against the ravages of time—they renew their youth and retain their freshness from age to age. Mr. Tatebe is also averse to the idea that poetry is essentially retrospective, that it is a worshipper of the hoary past and hence in many cases checks progress.

A writer signing himself Kaishū Gyorō discusses Lyric poetry (抒情詩) at considerable length, in an essay that is still unfinished. Mr. Omachi Keigetsu continues his attack on Dr. Inouye Tetsujirō under the title of "The use of archaisms and colloquialisms in Poetry."

The *Teikoku-bungaku* prints another of Mr. Noguchi's English poems called the "Song of Songs," which for incongruity and oddness of language it would be hard to match. Here are a few lines as a specimen of the whole

"I love the undecorating sound of thousands of birds whose concord of song echoes on the rivulet afar—

"I muse on the solemn mountain which waits in sound content for the time when the Lord calls forth—

"I roam with the wings of high-raised phantasy in the pure universe—

"Oh! I chant of the garden of Adam and Eve."

The epithet *Kyōshi*, Mad Verses, has been applied to a certain class of poetical effusion in this country, and it seems as though Mr. Noguchi is determined that America shall not be without her *Kyōshi*. The last lines of the "Song of Songs" soar to a height of sublimity reached by few poets:

"Hark, the far-off fowl sings of the divine morn of light! I hail the glorious sun's ascent—

"I chant again of the complete order of the universe with the earth, with the heaven above."

The fowl that aspires to be considered a songster and the California Japanese poet are about on a level. But people are fond of eccentricities, and as Thackeray says somewhere, the

world loves the men whose weaknesses afford it constant mirth; hence Mr. Noguchi is encouraged to go on writing.

Among its miscellaneous items, the *Teikoku-bungaku* has a note entitled the "Cultivation of Thought," in which the writer observes that though modern writings are attractive in outward form, the thought expressed is too frequently shallow and illogical. He goes on to say that a foreigner once remarked that the beauty of a Shintô priest resembles the beauty of a *geisha*, and that there is truth in the remark, as in his, the writer's, opinion, there is in Japanese religion a marked childishness and much more is that the case with Japanese literature. (*Waga skûkyô sude ni jigi iwanya bungaku ni oite oya.*) We have been told, continues this writer, that before a foreigner writes a book he spends a long time in developing and moulding into proper shape the ideas he wishes to express, but too many of our writers rush into print without any adequate preparation.

Another note complains of the way in which the Mombushô manages the translation of standard foreign books. This work is too often entrusted to needy scholars for the sake of giving them a means of living, with the most unsatisfactory results. It is a cause of deep regret, says the *Teikoku-bungaku*, that the Diet during its Tenth Session did not come to a decision on the measure brought forward by certain professors of the University respecting the establishment of a translating bureau. It is earnestly hoped that this matter will be finally settled during the present year.

On the subject of the new-style verses the *Teikoku-bungaku* says that it is premature to pronounce decided opinions one way or the other. In literature this is an age of experiment, and it is desirable not to limit the experimenting to too narrow an area. The feeling that Japanese literature has defects that can only be supplied by striking out in new lines is a true one. To take a single example. It is well known that in ancient Japanese, personification is rare, but in the new-style verses, as well as in modern novels, we find such terms as 天人, 天女, 山ノ精, *Kumo no Sei, Ki no Sei, Hana no Sei*. "Heavenly beings, male and female, the spirit of the mountains, the spirit of the clouds, the spirit of trees, the spirit of flowers," &c. As to the depth of modern literature we cannot speak with certainty, says this organ, but of its breadth there can be no manner of doubt. All things are being proved with a view of holding fast what is good.

The long-wished for reform of the stage has begun. The Kabuki-za has consigned old plays to a back seat and has submitted to the guidance of the greatest of Japanese advocates of stage reform, Mr. Fukuchi Gen-ichirô, who is preparing new dramas, to be placed on the boards there.

The *Shinri* has an article entitled *Kyôiku-jigen*, "A word for the times on the subject of Education" contributed by a writer who signs himself "An Aged Teacher." The first part of the article criticises a German book called *Japanisches Schulwesen*, written by a German teacher in the First Higher School. The gist of the "Aged Teacher's" remarks is that the work under review, while doing justice to Japanese progress in educational matters in the past, somewhat misrepresents the present situation. There are no doubt many defects in the methods adopted by the present Department of Education; but the accusations of the *Japanisches Schulwesen* are too sweeping and do not sufficiently allow for the difficulties that have to be contended with. Even a tolerably perfect system of education is only to be obtained by years of experimenting and the expenditure of large sums of money. The most widely felt of all the weaknesses of our present system is the remuneration which school teachers receive. The "Aged Teacher" next takes up the subject of reform in the method of writing. It is clear, he argues, that the use of Chinese characters ought, to a large extent, to be abolished. But there are objections to the employment of

Romaji on national grounds. Just as Bismarck opposed the notion of the Germans discontinuing to make use of their archaic form of writing on patriotic grounds, so do the majority of Japanese object to the use of foreign letters. The Japanese *Kana* with a few additions, to represent sounds which are not heard in Japanese speech, might be made to answer every purpose. The Government ought to take the lead in this reform by publishing all its official notices in *Kana*. So argues the "Aged Teacher."

A new magazine called the 日本主義 *Nihon Shugi* has made its appearance. Its object, as stated in the first number, is to discuss all subjects from a purely national standpoint. It will aim at showing what are the elements which combined go to form the national mind. In the fulfilment of this object it purposes to traverse all subjects. Its tone is not, we take it, conservative, but progressive. It will aim at sketching an ideal nationality which it hopes to see reached at a later date. Whether its staff of writers are of sufficient calibre to play such a rôle is a question on which it would be premature to pronounce opinion, but on which doubts have already been expressed. There are those who represent the *Nihon Shugi* to be nothing more than an ordinary conservative organ.

Mr. Tanimoto Tami, of the Higher Normal School, after many years labour, has just published the first volume of a work on Mental Philosophy called 普通心理學集成 *Futsû Shinri-gaku Shû Sei*. The work is based on the most recent European treatises on the subject. It covers 420 pages, sells at 1 yen 10 sen, and is published by the Rokumei Kwan, Odemmacho, Nichôme, Nihonbashi-ku, Tôkyô.

The May number of the *Kokumin no-tomo* contains a number of interesting articles. Mr. Uyeda Bin is still discussing poetry and Mr. Katayama Sen writes on Sociology, while the subject of female education is treated with great fullness by the Editor. We have only space for a brief notice of the results of this inquiry. According to the statistics collected by the *Kokumin no-tomo*, out of every 100 boys that have reached an age to be sent to school, 77 are under instruction, but only 44 out of every hundred girls are being taught. The total number of boys in attendance at elementary schools is 2,400,000, that of girls only 1,200,000. There are 30,000,000 male students attending Middle Schools. But Middle Schools for girls do not exist. There are high class female schools, which are attended by 2,800 pupils. The parts of Japan where female education has been most neglected are Hokkaidô, O-U, Kyûshû and the Riukiu Islands, the place where it has received most attention is Kyôô and its vicinity.

The following items of literary information are culled from the pages of the *Kokumin no-tomo*:

(1) The Hakubunkan purposes starting a foreign Magazine under the editorship of Mr. T. Ishikawa, hitherto connected with the Yamaguchi-ken Chûgakkô. We learn from another source that the name to be given to the new publication is the "Gwaikoku Gogaku Zasshi."

(2) A translation of the "Arabian Nights" by Mr. Toyama Kanô is about to be published by the Shunyô-dô.

(3) A translation of the "Great Naval Battles of the Nineteenth Century," by Mr. Morita Shiken and Captain Kimotsuki is also to be issued from the press of the Shunyô-dô.

(4) Messrs. Miyake, Shiga, Kuga, Kokubu, and Kagawa are engaged on a work to be called 東大陸人物傳 *Tôdariku-jimbutsu-den*, which will consist of lives of Chinese heroes, 12 vols, one to be published every month.

(5) A giant work which has been in hand many years, the *Tôyô-setsugaku shi* (History of Oriental Philosophy), is to appear shortly. Dr. Inouye Yenyô is the editor. The work is to cover 3,000 pages. The Tetsugakushoin are the publishers.

(6) The Chinese Novel 十二樓 *Shih-rh-*

lau is being rendered into modern Japanese by Mr. Ozaki Kôyô and will appear in consecutive numbers of the *Yomiuri Shimbun*.

(7) The *Hakubunkan*, profiting by past experience, is placing its publishing department under new management and in future will only purchase manuscripts of real merit.

(8) The younger brother of the well-known novelist, Kôda Rohan, Mr. Kôda Nariotomo, is engaged in writing a history of modern Europe to be published by the Fuzambô.

The *Ritugô-zasshi* considers the publication of a small volume of new-style verses entitled 抒情詩, *Jofo-shi* (Lyric Poems) as a step in the right direction. This class of composition belongs to Lyric, rather than Epic, poetry. If Japanese composers will confine themselves to verses whose chief object is the expression of varied emotions, they will succeed, but any attempt to compose an Epic poem must end in failure, says the organ we are now quoting. It seems to us to be impossible to predict to what will succeed or what will fail in the case of a literature which is in a state of constant change, or to say what surprises in the form of epic poets the future may have for us.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for May, showing the foreign trade of the Empire for the month:—

	1896.	1897.
SILVER YEN.	SILVER YEN.	SILVER YEN.
Exports	9,370,757.160	14,528,243.800
Imports	14,432,386.280	20,354,495.120
Total exports and imports	34,882,738.920	58,262,251.320
Excess of imports	5,061,629.120	203,445.993
Imports	203,445.993	466,946.348
Miscellaneous	23,109.047	

Total

THE NEW PRESS TELEGRAPHIC RATES.

We have already published a portion of the new schedule of Press Telegram Rates between Japan and foreign countries, but as the rates to France and England were wrongly quoted, and in order that our readers may have the complete schedule without the trouble of piecing the parts together, we re-produce and supplement the translation.

FOREIGN PRESS TELEGRAM REGULATIONS

Art. I.—Telegrams sent by newspaper offices or newspaper agencies to newspaper offices or newspaper agencies, from Japan to foreign countries or from foreign countries to Japan, for publication in newspapers, shall be regarded as press telegrams under these Regulations, and shall be transmitted or received accordingly.

Art. II.—The places where press telegrams may be received and whence they may be sent, and the charges leviable in respect of them are detailed in the following Table:—

	From July 1st to Sept. 30th 1897.	From Oct. 1st 1897 and subsequent years.
Japan and Shanghai	22.2 sen	24 sen
Japan and Amoy	31.4 "	34 "
Japan and Foochow	31.4 "	34 "
Japan and Hongkong	40.7 "	40 "
Japan and Singapore	71.40 "	76.8 "
Japan and British India	77.7 "	84 "
Japan and England	1.0693 yen	1.156 yen
Japan and France	1.0693 "	1.156 "

Art. III.—The recipients of press telegrams must necessarily publish them in a newspaper.

Art. IV.—Press telegrams must be written in the ordinary English language. But Japanese press telegrams between Japan and Shanghai may be written in Romanized Japanese. Provided that trade marks or trade names expressed by means of numerals or letters, shall be regarded as ordinary words.

Art. V.—Postal or telegraph authorities may decline to handle telegrams which they judge not to be press telegrams, though purporting to be such.

Art. VI.—Press telegrams may not be accepted as "urgent," or as "reply paid," or as requiring notice of delivery, or for transmission in duplicate.

Art. VII.—Persons desiring to send a press telegram must first report to the post, or telegraph, office to which the duty of sending the telegram is to be entrusted, the name of the newspaper abroad by which it is to be published, or the newspaper agency, as well as the name of the place where such newspaper or agency exists.

Persons desiring to receive a press telegram must first report to the post or telegraph office by which the telegram will have to be distributed, the name of the newspaper office abroad, or the name of the newspaper agency by which the telegram is sent, as well as the name of the place where such newspaper or agency exists.

Art. VIII.—Recipients of press telegrams must hand to the post, or telegraph, office by which the telegram has been distributed a copy of the newspaper in which the telegram is published.

Art. IX.—In the cases mentioned below, the telegrams shall be regarded as ordinary messages and the difference between the press rate and the ordinary rate shall be levied according to the number of words. Further, according to circumstances, the privilege of transmitting press telegrams may be suspended in the case of persons connected with such acts for six months or under.

a. In the event of telegrams which are not press telegrams being sent as such, in contravention of these Regulations.

b. In the event of press telegrams not being published in the next issue of the newspaper by which they are received, provided that no proper explanation can be given.

Art. X.—The handling of press telegrams may be temporarily stopped if, owing to pressure of telegraphic business, they interfere with the dispatch of ordinary telegrams.

Art. XI.—Matters relating to press telegrams which are not dealt with in these Regulations shall be managed in accordance with the International Telegraph Convention and the Regulations appended to it.

Art. XII.—These Regulations shall go into force from the 1st of July, 1897.

NEWS OF THE WEEK.

Captain John Ingles has been appointed a Rear-Admiral on the Retired List.

Thirty-three prisoners were released from Victoria gaol, Hongkong, on June 19, by order of the Governor, this being an act of clemency in honour of the Jubilee.

The Kobe C. C. beat the *Narcissus* cricket team badly on Saturday. Kobe made 144 in the opening innings. H.M.S. *Narcissus* then went in and knocked up 53 and 32 in two innings.

The *Yomiuri Shimbun*, in a recent article, says that the most serious question now facing the medical profession in Japan, is the rapid increase of nervous diseases among the populations of the towns and cities.

The *Asahi Shimbun* reports that, on the night of the 24th June, a burglar broke into the house of Professor Divers, of the Imperial University, Tokyo, and made off with yen 120 in bank notes of the Mitsui Ginko, and War Bonds valued at yen 600.

Monday, the 28th June, being the anniversary of the Coronation of Her Britannic Majesty Queen Victoria, the men-of-war, and several merchant steamers in port dressed ship, and at noon a royal salute was fired from H.M.S. *Grafton* and the U.S.S. *Olympia*.

A cargo of fir lumber containing 200,000 feet has just left Tacoma for Yokohama, Japan. It is sawed half-inch thick, and, it is said, will be converted into tea chests. This is mentioned as a new use for such lumber and may be the means of opening a new field for coast produce.

A report from the Governor of Miyagi received by the Home Department announces that at 2 a.m. on the 16th June inundations caused by seismic waves occurred at Kameoka, Susaki, and Minami Nagahama in his prefecture, and damaged the salt fields to a considerable extent, but no persons or houses were injured.

Nagasaki enjoyed its Jubilee celebrations as heartily as the other treaty ports of Japan. The telegram to the Queen ran:—

Your Majesty's subjects in Nagasaki respectfully tender their most loyal and affectionate devotion and heartily celebrate this happy day.

A small steamboat named the *Nakamura Maru*, owned by the Ozaki Shipping Company, of Yokohama, while on the way from Boshu to Tokyo on the 24th June, struck a rock off Nanyu about 10 p.m. on that night, and sank immediately. It is reported that all the passengers and crew were saved by a fishing boat, with the exception of one woman, who was drowned.

The Nippon Yusen Kaisha's steamer *Fushiki Maru*, while on voyage from Tsuchizaki to Otaru, on the 25th ult., met with an accident to her engines when near Sutsu and for some time drifted helplessly about. She was, however, fortunately picked up by the steamer *Kannon Maru* and towed into Hakodate on the 27th ult. The repairs required will occupy five days at least.

Special information received by the *Yhi Shimpō* announces that in Matsuyama, Iyo province, Ehime Prefecture, there are at present five persons above the age of one hundred years, of whom two are women. The following are the number of men and women above eighty years of age in the same prefecture:—Men, above eighty, 3,675; women 4,798, making a total of 8,473; men of the age of ninety or over 263; women, 434, making a total of 697.

The school-boys of England are said to have taken a keen interest in the question that recently agitated Cambridge—the admitting of women students to the degrees. A London evening paper says that it has discovered one straw that shows how the wind of popularity doth blow. A small school-boy who was

enthusiastically "Cambridge" at the time of the Boat-race, and whose enthusiasm was not even damped by defeat, has now gone over to the enemy, and is "Oxford." No more pale blue for him: and why? "Oh," he says, "if you say you are 'Cambridge' the other boys call you 'Nellie,' because you want to go to a college where they admit girls."

On the 21st June, the Bank of Japan altered its rates of interest as follow:—

Private accounts	Interest on loans and discount on notes secured by goods.....	2 sen 9 rin
	Discount of commercial notes.....	2 sen 5 rin
Banks	Interest on loans and discount on notes secured by goods.....	2 sen 4 rin
	Discount on commercial notes held by the Bank.....	2 sen 1 rin
	Discount on commercial notes from other places; Temporary over-drafts and over-drafts through correspondence.....	2 sen 5 rin

Silver bullion, says the *Shogyo Shimpō*, has recently, under the heading of re-export, been sent from Japan to other countries to a very considerable amount, or has been bought up by Chinese merchants. Its price has also risen, one thousand *momme* being now quoted at 144 *yen*. Small exchange merchants have even raised the price to 144 *yen* 75 *sen*, in order to secure a profit through fluctuations in exchange. From the actual condition of the so-called "re-export trade," it may be noticed that the abnormal rise in the value of silver has originated in the competition for both internal and external commerce, on the part of dealers. The appreciation of silver has now reached a point at which no profit is realizable from export.

The *Osaka Asahi* thinks that the company-promoting mania is abating somewhat: at any rate the clamour for money does not appear so insistent as it did even a month ago. Fresh undertakings inaugurated in May involved some 4,085,000 *yen* for railways, 2,650,000 *yen* for banks, and 8,955,000 *yen* for industrial undertakings. If we add these figures to those published for January, February, March and April, we get the following totals:—

Railways	880,820,029
Banks	176,665,000
Industrial Companies	348,594,500
Total	1,326,079,790

It seems, says the *Yomiuri*, that foreign merchants are resolved to buy all the War Bonds that may be offered for sale in the market. The bonds in question were issued in the 27th or 28th year of *Meiji*, the period of redemption being five years. They are therefore to be redeemed from the 32nd or 33rd year of *Meiji*, at their face value. For this reason the foreign buyers have determined not to pay more than the face value. The sales effected up to the present amount to no more than seven or eight hundred thousand *yen*, and it may seem strange that a scarcity in the supply is already felt. The fact is that holders of the bonds are unwilling to sell at the ruling prices, being misled by the notion that the bonds may be sold to foreign countries at a higher rate than the face value.

As no convenient place of payment was specified in promissory notes and bills of exchange hitherto issued by Japanese, it has been customary to cash the same at the offices of their issuers or of their drawees. No little trouble was incurred by this method on both sides. Lately it was determined, at a general conference of the various banks in Tokyo and Yokohama, that from the 16th July instant the payment of promissory notes and drafts should be made on behalf of their issuers on a fixed date by the bankers of the drawees of such notes. This system is similar to one enforced by two or three of the principal banks until last year, but a panic having occurred then in the economic world through the insol-

veney of a number of dealers in piece goods, the operation of the system was suspended for a time. It is satisfactory, says the *Nippon*, that the system, which largely contributes to the development of commercial credit, is to be revived.

On the night of the 25th ult., we learn from the *Yomiuri Shimbun*, the Osaka Shosen Kaisha's steamer *Shin-Kochi Maru*, while on a voyage from Osaka to Moji, ran down a junk named the *Koshu Maru*, off Himejima, Bungo Province. The junk, with a cargo of 163,280 catties of coal, sunk at once, but the crew were picked up by the boats of the steamer.

The *Hochi Shimbun* is responsible for the following tale of the sea. On the 23rd June, a party of men, who had, according to all accounts, passed through some unusual adventures, arrived in Yokohama by the N. Y. K. steamer *Suminoye Maru*. The sailors landed by the *Suminoye* numbered five, and on the 13th January last, had sailed from Tokyo in the junk *Shitoku Maru*, owned by Mr. Kurota, of Nihonbashi, Tokyo. After passing a point in Izu province, a strong squall, or as it is described, a hurricane, was encountered, in which the rudder of the junk was carried away. After this the vessel drifted at the mercy of the wind and waves, but on the following day, the storm having subsided, a mountain in Mikawa province was sighted and attempts were made to reach the land. But before this could be accomplished, on the 16th January, another storm arose, followed by heavy rain. The crew of the junk were exhausted by their labours, and were driven far out to sea where they lost all reckoning. It was not until the 18th of April that they sighted land, a mountain, and on the following morning they launched a boat and deserting their junk, landed on a small uninhabited island of the Ogasawara group. After staying there some time, the crew succeeded in reaching the main island in their boat, and remained there till the 14th instant, when they were taken on board the *Suminoye Maru*.

The *Yomiuri Shimbun* has been studying the criminal records of Japan and has found confirmation of the old saw that "the boy is father to the man." In early youth the criminal classes in Japan, as elsewhere, exhibit the traits of depraved character that eventually lead them on to the perpetration of serious crimes. Beginning as pick-pockets and sneak-thieves, the youthful criminals gradually slip into the company of gamblers: the descent is then swift to the strata of greater crimes, highway robbery, incendiarism, and murder. Of course the larger percentage of criminals is found in great cities. Statistics gathered during the period 1882-1894, show that 221,658 crimes were committed by persons under twenty years of age. Of these 196,304 were the acts of lads, and 25,354 the wrong-doings of girls. As the population has increased, so have its criminal classes, if these figures speak aright. The rapid increase in the cost of living has caused a similar increase in the activity of criminal circles, whose numbers are naturally swelled by an influx from the indigent and starving folks of the big towns. One favourable thing has to be noticed—that is a decrease in cases of incendiarism.

Another disgraceful coolie disturbance is reported from Kobe. The *Chronicle* gives the following account of the affray:—On Tuesday, June 29th, about 120 men went out to the *Pakling*, but on account of the weather they were unable to work. They were kept on board, however, in the hope that the weather might clear up, and while they were waiting the Blue Funnel steamer *Orestes* came in. About half the men were required to work the cargo of the *Orestes*, and the stevedore's boatswain (a Japanese) started to tell off the men. Discipline, however, is one of the last things that the Japanese workman learns, be he coolie, seaman, or artisan, and consequently the men who were told off preferred to remain in idleness on the *Pakling*. Lots were then drawn among the twenty stevedoring men for the ten to go aboard

the *Orestes*; three of the men upon whom that duty fell refused to go. The boatswain insisted on their going. Words came to blows; the three coolies drew their knives and savagely stabbed the boatswain about the body. The man bled profusely. He was brought to the American hatoba in a boat with six other men. A policeman stood by, and we are informed asked no questions; the wounded man was taken away to the hospital, where he still lies. His wounds, though serious, are not, we understand, considered to be dangerous.

Mr. James Payn has made an interesting comparison between the state of affairs that existed in London on a great occasion one hundred years ago, and the state of affairs that existed in connexion with the Jubilee celebrations. When the Royal Procession to St. Paul's was about to take place, to return thanks for Admiral Duncan's victory over the Dutch fleet, the following advertisements appeared in *The Times* of December 8th and December 12th, 1797:—

"PROCESSION TO ST. PAULS."

"To BE LET, a DRAWING-ROOM, about 20 feet long, the windows nearly level with his Majesty's Carriage. Twenty persons may be comfortably accommodated. It is wished by the Proprietor of the above Premises, that the Party may be of their own selection: a strange mixture of Company on these occasions is unpleasant to most Families who wish to enjoy their own Society. Price 20 Guineas. Enquire at Salmon's, Goldsmith, No. 49, facing Old Round Court, Strand, between York buildings and the Adelphi."

"ROYAL PROCESSION."

"One of the grandest sights since the days of Queen Anne, and in all probability we shall never see the like again. Those ladies and Gentlemen who are desirous of being accommodated with one of the best views in the City to see the procession (not only as it passes by, but of seeing the Company go into Church) will apply to No. 28 Ludgate-Street, the corner of Ave Maria-Lane, next the Churchyard. The Front Seats in the Dining Room are only 2 Guineas, the second seats one and a half guinea, third seats one guinea: seats in the shop, which is very pleasant, 1 guinea each: a two pair front room, with 3 windows, for large party, at 20 guineas for the day, an excellent prospect."

The 20-guinea dining-room of the first advertisement would be 500 guineas now, and the 2-guinea seats of the second would be 10 guineas. Probably the ratio is fairly typical of the change in the times.

It is now the season, says the *Mainichi Shimbun*, for the various silk producing districts to absorb an enormous amount of capital, for working expenses. The demand for money increases day by day, and it is not to be wondered at that stringency in the money market has already been felt. The banks which issued loans at an interest of two *sen* and seven or eight *rin* at the beginning of this month will not now do business at a lower rate than three *sen* per *dien*. The scale of interest has been raised by all banks in spite of the fact that no shortage is noticeable in the supply of capital. So far as the actual condition of the economic world is concerned, it may safely be alleged that the market enjoys perfect tranquillity. Yet there are various sources of anxiety for the bankers who, it would seem, are destined in future to fall into a vortex of bewilderment through their inability to correctly predict the course of events. Two or three points in connection with this assertion may be cited for reference:—(1.) The excess of imports for five months has reached 18,570,000 *yen*, showing a difference of 1,250,000 *yen* as compared with the corresponding period of last year. The total excess for this year may therefore be expected to exceed fifty millions of *yen*. What will be the consequences of this? (2.) What will be the future financial policy of the Government, and what effect will it produce upon the economic affairs of the country? (3.) Will the prices of commodities fall after the enforcement of the gold monometallic system, or will they rise from other circumstances? (4.) What will be the future of shares? Any further fall in their value may lead to the bankruptcy of the smaller banks. (5.) Success in enterprises depends upon the circulation of money and on popular sentiment. Unless

these two conditions are favourable, all undertakings must decay and perish. If so, what will be the consequences? The above questions require the fullest consideration. Panic is ever in the minds of thinkers, and every banker ought to take warning for the future, in spite of the apparent tranquillity of the economic world regarding the supply of capital. It appears to us (*Japan Mail*) that any one competent to answer the *Mainichi's* questions confidently, ought to get an *omphalos* and an *adytum*, and set up an oracle at once.

Mr. Von Treutler, *Chargé d'Affaires* for Germany, appears to have had an unpleasant experience while travelling by rail to Kyoto on the 23rd ult. for the purpose of presenting to the Emperor the decoration recently conferred upon him by the Kaiser. According to the *Yiji*, Mr. Von Treutler left Shimbashi Station in company with a Mr. Kawakatsu, of Kobe, and two other passengers; another entering the compartment at Yokohama. On arriving at Nagoya, Mr. Von Treutler stopped for the night at the Shinachu Hotel, and on resuming his journey in the morning, found the same three passengers, two from Tokyo and one from Yokohama, in his compartment. Mr. Von Treutler and Mr. Kawakatsu appear to have afterwards dropped off to sleep, and while enjoying their nap were quietly relieved of their jewellery by, it is said, the passenger from Yokohama. The German *Chargé d'Affaires* was robbed of a gold watch and chain said to be worth \$400, and Mr. Kawakatsu of a gold watch valued at \$180. The thief was proceeding to ransack Mr. Von Treutler's and his companion's hand-bags when the two sleepers awoke and caught him in the act. The man pleaded for mercy and nearing Samegayemura jumped from the window and took to the woods. The culprit was, however, arrested by the police during the night and the stolen goods recovered and returned to their owners. The two other passengers from Shimbashi who travelled in the same compartment were arrested on suspicion of being confederates of the thief, but what has been done with them since is not reported.

TEA INSPECTION AT PUGET SOUND PORTS.

The Seattle *Post-Intelligencer* of the 4th inst. had the following to say with reference to the recent alleged difficulty in the inspection of Japan tea at Seattle:—

Tacoma, with her usual business foresight, unhampered by scruples of conscience, endeavoured to make capital of the fact that United States Tea Inspector John R. Palmer, appointed for the customs district of Puget Sound, was a resident of that city, by sending a report to Japan to the effect that tea shipped to any ports save Tacoma and San Francisco would not be allowed to enter, as at these ports only was there a government tea inspector. The success of this ruse was evident in the manifest of the Japanese steamship *Yamaguchi Maru*, which arrived from Japan on Wednesday night, June 2nd, with but 900 cases of tea, while the Northern Pacific steamer *Pathan*, which left Yokohama four hours ahead of the *Yamaguchi*, but has not yet arrived at Tacoma (June 4th), is loaded down with it.

The lie sent from Tacoma to Japan did most effective work to the detriment of Seattle. It accomplished by foul means what was impossible by fair. The shippers who had contracted, or were about to contract, with the Nippon Yusen Kaisha, considered themselves justified in refusing to ship to Seattle, where, they were informed, tea could not be entered. In response to a cable received recently from the Company, Local Manager James Griffiths sent an emphatic denial.

The tea inspector was appointed for the Customs district of Puget Sound; for Tacoma no more than for Seattle and Port Townsend.

Mr. Palmer was in the city yesterday for the purpose of sampling and testing tea received by the *Yamaguchi Maru*. He anticipates quite a busy season when tea begins to arrive freely, as it will during the months of July and August. With the frequent arrivals of tea vessels at Seattle and Tacoma he will be kept going constantly between the two cities.

LAWS THAT WILL AFFECT FOREIGN RESIDENTS AFTER THE ABOLITION OF CONSULAR JURISDICTION.

It appears desirable to publish translations of the Laws that will have financial concern for the foreign residents after they pass under Japanese Jurisdiction. We proceed to do so:—

REGISTRATION REGULATIONS.

LAW No. 27.

Art. I.—Registration fees shall be levied and collected in accordance with this Law.

Art. II.—Any person desiring to have his estate or buildings registered shall pay fees as classified below:—

1. Purchasers: $\frac{1}{1000}$ of the value of purchase.
2. Successors of a family (in the case of the death or loss of whereabouts of the head; or of succession caused by divorce): $\frac{1}{1000}$ of the market value of the property.

Note.—After the lapse of sixty days from the time of succession $\frac{1}{1000}$ of the market price will be collected.

3. Successors to the estates of the deceased: $\frac{1}{1000}$ of the market value of the property.
4. Recipients of gifts either by will or otherwise: $\frac{1}{1000}$ of market price.
5. Mortgagers or pledgers: $\frac{1}{1000}$ of the amount contracted.
6. Applicants for sale by auction under compulsory execution by law; $\frac{1}{1000}$ of the value.
7. Applicants for the control of property under compulsory execution by law or for temporary distraint or process of dealing with it: $\frac{1}{1000}$ of the value.
8. Applicants for the withdrawal or alteration of registration: 10 *sen* per application.
9. Applicants for registration for consolidating the previous rights of ownership; $\frac{1}{1000}$ of the market price of the property.

When value is not determined in cases of (6) and (7), the market price shall be taken as the standard.

Art. III.—With regard to the registration of vessels, fees must be paid as classified below:—

1. Purchasers: $\frac{1}{1000}$ of the price of purchase.
2. Successors of a family (in the case of the death or loss of whereabouts of the head of family, or of succession caused by divorce): $\frac{1}{1000}$ of the market value of property.
3. Successors to estates left by the deceased: $\frac{1}{1000}$ of the market price.
4. Recipients of properties sent as gifts or left by will: $\frac{1}{1000}$ of the market value.
5. Mortgagers or pledgers: $\frac{1}{1000}$ of the loan contracted.
6. Applicants for the sale of properties by auction under compulsory execution of law: $\frac{1}{1000}$ of the value.
7. Applicants for the withdrawal or alteration of registration: 10 *sen* per application.
9. Applicants for registration to certify former rights of ownership: $\frac{1}{1000}$ of the market price.

When the value is not determined in cases (6) and (7) the market price shall be taken into consideration.

Art. IV.—Any person desiring to have his vessels registered in the Shipping List must pay fees as specified below:—

1. For new registration—
Vessels below 15 tons, 50 *sen*.
Vessels above 15 tons, 10 *sen* per 10 tons.
2. For alteration of registration—
Vessels below 15 tons, 10 *sen*.
Vessels above 15 tons, 10 *sen* per 10 tons.
3. For withdrawal from registration—
Vessels below 15 tons, 5 *sen*.
Vessels above 15 tons, 5 *sen* per 10 tons.
4. Alteration in specific items of registration, 10 *sen* per item.

In the registration of vessels above 15 tons as mentioned in (1) and (2), any fractions below ten tons shall be calculated as ten tons.

Art. V.—If any of the following items are to be registered in the estate ledger, the proprietors of land are required to pay fees as specified below:—

1. New registration, $\frac{1}{1000}$ of the value of land.
2. Settlement of the value of land, $\frac{1}{1000}$ of the value of land.
3. Alteration in the value of land, $\frac{1}{1000}$ of the value of land.
4. Reclamation, $\frac{1}{1000}$ of the value of land.
5. Grant of hoeing term, $\frac{1}{1000}$ of the value of land.
6. Grant of a term for the maintenance of the same value of land, $\frac{1}{1000}$ of the value of land.
7. Grant of a period for the continuation of a hoeing term, $\frac{1}{1000}$ of the value of land.

8. Grant of a continuing period for exemption from tax on account of reclamation, $\frac{1}{1000}$ of the value of land.

9. Increase or decrease in the extent of land, $\frac{1}{1000}$ of the value of land.

10. Separation or combination of land, $\frac{1}{1000}$ of the value of land.

The above items are to be added to Article V. under (10).

11. Grant of a period for law appraisal, $\frac{1}{1000}$ of the value of land.

12. Settlement of the value of land according to Article XXII of the Land Tax Regulations, $\frac{1}{1000}$ of the value of land.

13. Restoration of the former value of land, $\frac{1}{1000}$ of the value of land.

Land of which the value is not settled as mentioned in the foregoing article shall be determined at the rate of the value of similar land in the neighborhood.

Art. VI.—Any commercial company which desires to effect registration in regard to the following items shall pay fees as specified below:—

1. Organization of Companies by a combination of several persons or capital: $\frac{1}{1000}$ of the amount of capital.
2. Increase of capital for companies as organized above: $\frac{1}{1000}$ of the amount of increased capital.
3. Organization of branches of such companies: $\frac{1}{1000}$ of the amount of capital.
4. Establishment of a joint stock company: $\frac{1}{1000}$ of the capital paid up for the first term of organization.
5. Payment of capital after the establishment of a joint stock company: $\frac{1}{1000}$ of each payment.
6. Organization of branches of such company: $\frac{1}{1000}$ of the capital actually paid.
7. Supplementary alterations in specific items of registration (items concerning the increase or payment of capital being excepted) 3 *yen* for each item.
8. Dissolution, 1 *yen* for each time.

Art. VII.—Applicants for registration in the List of Councillors at Law shall pay fees as classified below:—

1. New registration..... 20 *yen*.
2. Alteration in registration..... 10
3. Application for withdrawal..... 1

Art. VIII.—In the entry of the following items in the Official Register, fees must be paid as below by physicians, pharmacists, veterinary surgeons, and horse-shoeing smiths:—

1. New registrations.—
Physicians..... 20
Pharmacists..... 12
Veterinary surgeons..... 12
Horse-shoeing smiths..... 5
Physicians commencing practice *pro tempore*..... 5
Veterinary surgeons holding temporary licences..... 3
2. Alteration in the specific items of registration: 50 *sen* for each item.

Art. IX.—For the registration of the following items in the Official Register, mariners are required to pay the following fees:—

1. New registrations.—
Captains of class A..... 15
First mates of class A..... 10
Second mates of class A..... 6
First engineers of class A..... 15
Second engineers of class A..... 10
Captains of class B..... 10
First mates of class B..... 6
Second mates of class B..... 4
First engineers of class B..... 10
Second engineers of class B..... 6
Mates of small vessels..... 4
Pilots..... 20
2. Alterations in the specific items of registration: 50 *sen* for each item.

Art. X.—Applicants for copyright shall pay fees as specified below:—

1. Ordinary writings and pictures, 5 *yen* each.
2. Writings and pictures to be published in successive numbers, 2 *yen* 50 *sen* per copy.
3. Magazines (all sorts), 50 *sen* per copy.
4. Dramatic works involving rights of performance, 50 *yen* each.
5. Musical compositions involving rights of performance, 20 *yen* each.
6. Photographs, 5 *yen* for each publication.

Art. XI.—For the registration of patents the following fees shall be paid:—

1. New registrations.—
Patent for five years..... 20
Patent for ten years..... 30
Patent for fifteen years..... 40
2. Sale, transfer, or possession in common 10
3. Contract of distraint..... 5

Art. XII.—With regard to designs, fees shall be paid as specified below:—

1. New registrations:—
For exclusive use for three years..... 5
For exclusive use for five years..... 5
For exclusive use for seven years..... 7
For exclusive use for ten years..... 10
2. Sale, transfer, or common ownership..... 2
3. Contract for distraint..... 1

Art. XIII.—The following fees shall be paid in regard to trade marks:—

1. New registration or registration for continued use, 20 *yen* per article.
2. Sale, transfer, or common ownership, 10 *yen* per article.

Art. XIV.—In the entry of the following items in the Official Register with regard to mining enterprises the following fees shall be paid by persons under registration:—

1. Trial Working..... 50 *yen*.
2. Chartered working..... 100
3. Increase in the limits of trial working and alterations as to the increase or decrease of limits..... 25
4. Increase in the limits of chartered working and alterations as to the increase or decrease of limits..... 50
5. Purchase or transfer..... 50
6. Distraint of the right of working or postponement of the term for trial mining..... 15
7. Alterations towards the decrease of limits..... 5
8. Combination or separation of mining district..... 10
9. Relinquishment..... 5

Art. XV.—(Rescinded.)

Art. XVI.—Applicants for the registration of national loan bonds shall pay fees as classified below:—

1. New registration:— $\frac{1}{1000}$ of the face value.
2. A fee of $\frac{1}{1000}$ of the face value is to be collected for the following:—

Alteration of the name registered.
Alteration in the number of bonds.
Withdrawal of the name registered.

Art. XVII.—Registration fees shall be paid in stamps. The same, however, may also be collected in cash in case of an Imperial Ordinance being issued for that purpose.

Art. XVIII.—Registration fees must be above one *sen*, and fractions thereof shall be calculated as one *sen*.

Art. XIX.—(Rescinded.)

Art. XX.—This Law shall go into operation from the 1st April of the 29th year of Meiji (1896).

Art. XXI.—Any registration fees prescribed by existing Laws and Ordinances, which may be repetitions of the present Law, are to be rescinded from the date of the enforcement of the latter.

CRICKET.

On Saturday afternoon a match was played between teams chosen and captained respectively by Messrs. Walford and Bugbird. The former opened the batting and put together a total of 130 runs, the captain, in a well played innings, contributing 52 to the score, and W. Goddard, not out, 17. Bugbird's eleven were disposed of for 116, of which F. E. White contributed a capital played 52, and Murray 27. The full scores were as follows:—

MR. WALFORD'S TEAM.				
S. H. Morse, b. F. E. White	9
D. Tyng, c. Murray, b. Bugbird	7
G. S. Alcock, b. F. E. White	5
R. S. Edwards, b. Murray	5
F. Owen, b. Murray	3
A. H. Walford, c. F. E. White, b. W. J. White	52
A. Kingdon, c. Lea, b. Murray	10
I. Schurr, c. Tyng, b. Murray	6
W. Goddard, not out	17
K. V. Smith, b. W. J. White	0

CORRESPONDENCE.

THE "MARITANA" PERFORMANCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me the use of your columns to protest against the unjustifiable, impertinent and malicious letter that appeared in the *Japan Herald* on Saturday evening addressed to Mr. Twinning. Such a gratuitously insulting attack on a gentleman who had just given us a great musical treat after weeks of hard work, is, in my opinion, deserving of the severest censure, and were the writer known, I feel sure he would be ostracised by the entire community. The tone of his letter suggests the idea that he was the leader of the hissing movement on Friday evening, a proceeding happily hitherto unknown in Yokohama at a performance in which amateurs were taking part.

Yours truly,
Yokohama, June 28th.

JUSTICE.

"YAMAGUCHI EXPULSION CASE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The counter currents of Education and Christianity, which have been growing more antagonistic in the last decade of the *Meiji* Era, lately found another vent in the "Expulsion Case of Yamaguchi Normal School," that took place on the 24th of January last.

Remarks on the event being still confined to some of the local papers and a few Christian periodicals, among which the *Gokyo* stands as a champion for the case, it does not as yet attract the wide attention of the public. But we fear that the fact itself is too stubborn to be cast into oblivion. It is like a mustard seed thrown into the soil, which looks very small at first sight, but shall not fail to grow so big some day, that birds of the air will come and rest their wearied wings upon the spreading branches.

Let me state the true features of the case. Oritake Juro was the only Christian among the students of the Normal School at Yamaguchi, which is quite a famous place for having produced several of the modern able statesmen of Japan, among whom Marquis Ito, the author of the Imperial Constitution, is to be counted.

As Christianity is, as a rule, looked upon unfavourably by the Government schools throughout the empire: especially by the Normal Schools, so Oritake was constantly exposed to the scorn and contempt of the rest of the students. They were always ready to find fault with him. But Oritake is rather an excellent student, both in scholarship and deportment. And therefore they could find no opportunity to exclude him from their community.

On the evening of January 24th last, he came into the common study hall. Nishiyama and Tsukamoto, both of whom belong to higher classes than his own, began to address him with repeated questions as follows:—

N. & T.—"Which is superior, God or His Majesty the Emperor?"

O.—"As a matter of course, God is superior to the Emperor."

N. & T.—"Which is inferior then, God or the Emperor?"

O.—"That's rather an inappropriate word; but compared to God who reigns above, the Emperor, it might be said, is inferior to him."

Oritake's answer is a plain, self evident truth. The Creator of heaven and earth is not King or Emperor, for he is infinitely superior to any human being. Do you say that it is a Christian view? Very well, what will you say of those admirers of Darwin and Spencer, who are rather inclined to think with them, that man is evolved out of the monkey? Are they not more deserving accusation, allowing that an Emperor is a man too? I fear that such theorists are not few in our educational circles.

Thereupon, the two anti-Christian students became mad, and declared that Oritake blasphemed against the Emperor. Then a succession of class-gatherings followed,—first the second year class, to which he belongs, met; the third year class had another meeting; and the fourth year class, which is the highest, had also its own meeting. At last, he was called into one of their meetings to confess his thoughts before them. He committed all things into the hand of God, as he expresses it, thinking not what and how to speak, but expressed what he believed; and meanwhile he spent his time in the usual way.

After this, he was summoned twice before the dormitory managers to speak of his religious conceptions, and yet was never charged with wrong. On the 28th, he was summoned into the presence

of the President, Principals, and two dormitory managers; and was told to speak of his ideas concerning the Imperial Rescript of Education. He did not shrink, but gave it in a proper and polite manner, and retired. The next day, a sentence fell upon him, pronounced as follows:—

"Owing to something wrong in you, you are dismissed from the school. The whole amount of money given to you heretofore for your support, should be paid back at once."

He asked them what reasons they had for expelling him so unexpectedly from the school, and for demanding of him the immediate repayment of the money expended for his support. But all was in vain, and he was driven from the school.

In the meantime, Oritake found these following six items, that were collected by the students with the malicious object of rejecting him from the schools.

1. He says, "God is superior to His Majesty the Emperor."
2. He tries to transform the Imperial Rescript on Education into his own ways.
3. He reads the Bible oftener than he reads his text books.
4. He said that he became more anxious to enter the Normal School after he was converted to Christianity.
5. He talked to the Sunday School Children at Yoshioka during the last summer vacation.
6. He said that he has a great responsibility to lead others to the true religion. He is very blindly led astray into the Christian religion, and so forth.

These six points were the grounds for the appeal presented before the school authorities by the students, with which they insisted urgently for the expulsion of Oritake.

As for our part, we find no candid reason whatever in these things, so as to justify the expulsion of the young man, who was fairly acknowledged even by the school authorities as a good pupil in his student life.

Rev. Y. Nishimura, of the Methodist Episcopal Church, South, at Yamaguchi felt much sympathy towards Oritake in his distress. He wanted to look into the case, and, if possible, try to open in his behalf the way for his returning to school. But if he could not get a satisfactory reason for the expulsion, he and his friends decided to go to the bottom of matter, in order that any obstacle like this should be removed from the path.

He called upon the President of the school, as the temporary guardian of Oritake, and asked him for an explanation of the matter. He only replied that "a certain criticism made by Oritake upon the Imperial Rescript was the cause of his expulsion, and that there is no seeming hope for his re-admission into the school."

It is evident, as Oritake himself says, that the school authorities were reminded of the fact that the rest of the points for rejection go into the sphere of religion, one's belief in which is safely guaranteed by the Imperial Constitution; and that the President was constrained to confine the reason of expulsion only to the second item of the data collected by the students as before mentioned.

What serious criticism did he make then? Nothing except as far as we know, that he remarked that the Imperial Rescript says nothing about God; and that it may, or may not, lack in some things in the sight of God. And, it is distinctly to be remembered that he gave his opinions only in answer to the demand made upon him by the students and others. It is very clear that no human being, however wise and great he may be, can claim to be absolutely perfect in all that he says or does. "Fear God, and honour the King" is the teaching of the Bible. Therefore every true Christian is always ready to serve his earthly sovereign with a clear conscience. But no rational man can conceive that the Emperor is not a man; and to think of him as a man does not lessen, even in the least degree, the majesty and power of the throne.

To return to the story, several other calls were made upon the local authorities. But no clear and definite answer was given to any of the callers. Their effort is, however, not to be idle until they shall see a proper end of it.

Deem not that it is a trifling matter. Indeed, this is a sign of the times, portending the great moral strifes between Reason and Prejudice, Conscience and Hypocrisy, and Light and Darkness. Behold! the Mighty Twentieth Century is now approaching with her tremendous billows to sweep everything before her course. How mistaken the man who would have a fancy to stand on the shore, and spread his arms to stop her onward career!

HEIJI HISHI-NUMA.

Kobe.

N.Y.K. SAILINGS FROM SHANGHAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There is a possibility that a grievance made public in your columns may find redress at the hands of the controlling power which, in this case, is in Tokyo. Residents of Shanghai are confined very closely to the settlements. There are no places of suburban resort; no pleasant spots like Kamakura, Enoshima, or Miyanoshita within easy access; the only escape from the heat of a fierce summer is to fly to Nagasaki or Cheloo; and in such expeditions time is of the utmost importance. Formerly, two or three years ago, the excellent passenger-steamers of the Nippon Yusen Kaisha were timed to leave Shanghai generally, if not always, on Friday; arriving in Nagasaki on Sunday morning and there connecting with another steamer leaving Nagasaki for Shanghai on Sunday evening, enabling the "tipper" to be back at his business some time during Tuesday; or giving him a most pleasant and refreshing change, including one thousand miles of sea, in the short space of less than one hundred hours. This agreeable sail is now impossible, because the weekly sailings from Shanghai are on Saturday, the steamer arriving in Nagasaki twelve hours after the departure of the sister vessel to Shanghai, and therefore necessitating a week's delay. The Company, occasionally, announces a sailing to connect; the support they receive should encourage them to make Friday sailing from June to September inclusive; and so confer an immense boon upon hard-working men of business who would take several trips of 100 hours each, but are unable to take one involving a week or more of time.

This subject has been treated before in the local press; but apparently without success; perhaps this appeal may have more effect. If the directors of the Company were to pass a summer in this densely populated place they would agree with me in the reasonable character of the suggestion.

I have been told that one objection against the adoption of this course urged upon the Company is, that Friday sailings involve two days' detention of the vessel in Nagasaki or a Sunday sailing thence, which latter means, in turn, Sunday work for our friends there. Well, in reply to this, or as a comment upon the objection itself, I will say that my experience is that the only day on which much work is done in Nagasaki is Sunday!

I am, &c.,
Shanghai, June 24th.

MUNICEPS.

MRS. CAHUSAC'S SCHOOL.

On Wednesday afternoon, in response to invitations issued by Mrs. Cahusac, Principal of the Girls' High School, 48 Bluff, a number of ladies and gentlemen, parents of the pupils and friends of the institution, assembled at the School to witness the presentation of prizes and certificates to the successful pupils. At the close of afternoon tea—partaken of in Mrs. Cahusac's drawing room, where Miss Burdett Leach and Miss Wilkin acted as hosts in the unavoidable absence of Mrs. Cahusac through indisposition—the guests and pupils assembled in the school-room, and the Rev. E. Champneys Irwine introduced Mrs. J. A. Fraser, who had kindly consented to present the prizes. Before this pleasing ceremony was entered upon, however, Mr. Cahusac addressed those present to the effect that though he himself had no *locus standi* in the School, Mrs. Cahusac had commissioned him to give a few particulars as to the working of the School during the past term. Mrs. Cahusac had usually written out a report, but had been unable to do so on this occasion. She had expressed herself as much pleased with the general work of the School, the prizes were given to the hardest workers and those pupils who had most distinguished themselves, but there were others who had also done well, but had been unable to obtain the necessary number of marks, either through temporary absence from school or from not having joined it in time to obtain such number of marks. Mrs. Cahusac was also glad to note an improvement in the general tone and discipline of the School; the teachers had worked well and the pupils had pulled well together with them.

Mrs. Fraser then presented the prizes and certificates as follows:—

PRIZE LIST JUNE, 1897.

CLASS PRIZES—Class I. 1st in examination, Ethel Fraser; 1st in Term, Hilda Watson; Class II. 1st in Examination and Term, Alice Mendelson; Class III. 1st in Examination, Dorothy Tocque; 1st in Term, Edith Bunting; Class IV. Div. A. 1st in Class, Berthe Cahusac; and Class IV. Div. B. 1st in Class, Elsie Edale.

FRENCH PRIZES (Presented by Miss E. Burdett

LAWS THAT WILL AFFECT FOREIGN RESIDENTS AFTER THE ABOLITION OF CONSULAR JURISDICTION.

It appears desirable to publish translations of the Laws that will have financial concern for the foreign residents after they pass under Japanese Jurisdiction. We proceed to do so:—

REGISTRATION REGULATIONS.

LAW No. 27.

Art. I.—Registration fees shall be levied and collected in accordance with this Law.

Art. II.—Any person desiring to have his estate or buildings registered shall pay fees as classified below:—

1. Purchasers: $\frac{1}{100}$ of the value of purchase.
2. Successors of a family (in the case of the death or loss of whereabouts of the head; or of succession caused by divorce): $\frac{1}{100}$ of the market value of the property.

Note.—After the lapse of sixty days from the time of succession $\frac{1}{100}$ of the market price will be collected.

3. Successors to the estates of the deceased: $\frac{1}{100}$ of the market value of the property.
4. Recipients of gifts either by will or otherwise: $\frac{1}{100}$ of market price.
5. Mortgagers or pledgers: $\frac{1}{100}$ of the amount contracted.
6. Applicants for sale by auction under compulsory execution by law; $\frac{1}{100}$ of the value.
7. Applicants for the control of property under compulsory execution by law or for temporary distraint or process of dealing with it: $\frac{1}{100}$ of the value.
8. Applicants for the withdrawal or alteration of registration: 10 *sen* per application.
9. Applicants for registration for consolidating the previous rights of ownership; $\frac{1}{100}$ of the market price of the property.

When value is not determined in cases of (6) and (7), the market price shall be taken as the standard.

Art. III.—With regard to the registration of vessels, fees must be paid as classified below:—

1. Purchasers: $\frac{1}{100}$ of the price of purchase.
2. Successors of a family (in the case of the death or loss of whereabouts of the head of family, or of succession caused by divorce): $\frac{1}{100}$ of the market value of property.
3. Successors to estates left by the deceased: $\frac{1}{100}$ of the market prices.
4. Recipients of properties sent as gifts or left by will: $\frac{1}{100}$ of the market value.
5. Mortgagers or pledgers: $\frac{1}{100}$ of the loan contracted.
6. Applicants for the sale of properties by auction under compulsory execution of law: $\frac{1}{100}$ of the value.
7. Applicants for the withdrawal or alteration of registration: 10 *sen* per application.
8. Applicants for registration to certify former rights of ownership: $\frac{1}{100}$ of the market price.

When the value is not determined in cases (6) and (7) the market price shall be taken into consideration.

Art. IV.—Any person desiring to have his vessels registered in the Shipping List must pay fees as specified below:—

1. For new registration—
Vessels below 15 tons, 50 *sen*.
Vessels above 15 tons, 50 *sen* per 10 tons.
2. For alteration of registration—
Vessels below 15 tons, 10 *sen*.
Vessels above 15 tons, 10 *sen* per 10 tons.
3. For withdrawal from registration—
Vessels below 15 tons, 5 *sen*.
Vessels above 15 tons, 5 *sen* per 10 tons.
4. Alteration in specific items of registration, 10 *sen* per item.

In the registration of vessels above 15 tons as mentioned in (1) and (2), any fractions below ten tons shall be calculated as ten tons.

Art. V.—If any of the following items are to be registered in the estate ledger, the proprietors of land are required to pay fees as specified below:—

1. New registration, $\frac{1}{100}$ of the value of land.
2. Settlement of the value of land, $\frac{1}{100}$ of the value of land.
3. Alteration in the value of land, $\frac{1}{100}$ of the value of land.
4. Reclamation, $\frac{1}{100}$ of the value of land.
5. Grant of hoeing term, $\frac{1}{100}$ of the value of land.
6. Grant of a term for the maintenance of the same value of land, $\frac{1}{100}$ of the value of land.
7. Grant of a period for the continuation of a hoeing term, $\frac{1}{100}$ of the value of land.

8. Grant of a continuing period for exemption from tax on account of reclamation, $\frac{1}{100}$ of the value of land.

9. Increase or decrease in the extent of land, $\frac{1}{100}$ of the value of land.

10. Separation or combination of land, $\frac{1}{100}$ of the value of land.

The above items are to be added to Article V. under (10).

11. Grant of a period for law appraisal, $\frac{1}{100}$ of the value of land.

12. Settlement of the value of land according to Article XXII of the Land Tax Regulations, $\frac{1}{100}$ of the value of land.

13. Restoration of the former value of land, $\frac{1}{100}$ of the value of land.

Land of which the value is not settled as mentioned in the foregoing article shall be determined at the rate of the value of similar land in the neighborhood.

Art. VI.—Any commercial company which desires to effect registration in regard to the following items shall pay fees as specified below:—

1. Organization of Companies by a combination of several persons or capital: $\frac{1}{100}$ of the amount of capital.
2. Increase of capital for companies as organized above: $\frac{1}{100}$ of the amount of increased capital.
3. Organization of branches of such companies: $\frac{1}{100}$ of the amount of capital.
4. Establishment of a joint stock company: $\frac{1}{100}$ of the capital paid up for the first term of organization.
5. Payment of capital after the establishment of a joint stock company: $\frac{1}{100}$ of each payment.
6. Organization of branches of such company: $\frac{1}{100}$ of the capital actually paid.
7. Supplementary alterations in specific items of registration (items concerning the increase or payment of capital being excepted) 3 *yen* for each item.
8. Dissolution, 1 *yen* for each time.

Art. VII.—Applicants for registration in the List of Councillors at Law shall pay fees as classified below:—

1. New registration..... 20 *Yen*.
2. Alteration in registration 10
3. Application for withdrawal 1

Art. VIII.—In the entry of the following items in the Official Register, fees must be paid as below by physicians, pharmacists, veterinary surgeons, and horse-shoeing smiths:—

1. New registrations:—
Physicians 20
Pharmacists 12
Veterinary surgeons 12
Horse-shoeing smiths 5
Physicians commencing practice *pro tempore* 5
Veterinary surgeons holding temporary licences 3
2. Alteration in the specific items of registration: 50 *sen* for each item.

Art. IX.—For the registration of the following items in the Official Register, mariners are required to pay the following fees:—

1. New registrations:—
Captains of class A 15
First mates of class A 10
Second mates of class A 6
First engineers of class A 15
Second engineers of class A 10
Captains of class B 10
First mates of class B 6
Second mates of class B 4
First engineers of class B 10
Second engineers of class B 6
Mates of small vessels 4
Pilots 20
2. Alterations in the specific items of registration: 50 *sen* for each item.

Art. X.—Applicants for copyright shall pay fees as specified below:—

1. Ordinary writings and pictures, 5 *yen* each.
2. Writings and pictures to be published in successive numbers, 2 *yen* 50 *sen* per copy.
3. Magazines (all sorts), 50 *sen* per copy.
4. Dramatic works involving rights of performance, 50 *yen* each.
5. Musical compositions involving rights of performance, 20 *yen* each.
6. Photographs, 5 *yen* for each publication.

Art. XI.—For the registration of patents the following fees shall be paid:—

1. New registrations:—
Patent for five years 20
Patent for ten years 30
Patent for fifteen years 40
2. Sale, transfer, or possession in common 10
3. Contract of distraint 5

Art. XII.—With regard to designs, fees shall be paid as specified below:—

1. New registrations:—
For exclusive use for three years 5
For exclusive use for five years 5
For exclusive use for seven years 7
For exclusive use for ten years 10
2. Sale, transfer, or common ownership. 2
3. Contract for distraint 1

Art. XIII.—The following fees shall be paid in regard to trade marks:—

1. New registration or registration for continued use, 20 *yen* per article.
2. Sale, transfer, or common ownership, 10 *yen* per article.

Art. XIV.—In the entry of the following items in the Official Register with regard to mining enterprises the following fees shall be paid by persons under registration:—

1. Trial Working 50
2. Chartered working 100
3. Increase in the limits of trial working and alterations as to the increase or decrease of limits 25
4. Increase in the limits of chartered working and alterations as to the increase or decrease of limits 50
5. Purchase or transfer 50
6. Distraint of the right of working or postponement of the term for trial mining 15
7. Alterations towards the decrease of limits 5
8. Combination or separation of mining district 10
9. Relinquishment 5

Art. XV.—(Rescinded.)

Art. XVI.—Applicants for the registration of national loan bonds shall pay fees as classified below:—

1. New registration:— $\frac{1}{100}$ of the face value.
2. A fee of $\frac{1}{100}$ of the face value is to be collected for the following:—

Alteration of the name registered.
Alteration in the number of bonds.
Withdrawal of the name registered.

Art. XVII.—Registration fees shall be paid in stamps. The same, however, may also be collected in cash in case of an Imperial Ordinance being issued for that purpose.

Art. XVIII.—Registration fees must be above one *sen*, and fractions thereof shall be calculated as one *sen*.

Art. XIX.—(Rescinded.)

Art. XX.—This Law shall go into operation from the 1st April of the 29th year of Meiji (1896).

Art. XXI.—Any registration fees prescribed by existing Laws and Ordinances, which may be repetitions of the present Law, are to be rescinded from the date of the enforcement of the latter.

CRICKET.

On Saturday afternoon a match was played between teams chosen and captained respectively by Messrs. Walford and Bugbird. The former opened the batting and put together a total of 130 runs, the captain, in a well played innings, contributing 52 to the score, and W. Goddard, not out, 17. Bugbird's eleven were disposed of for 116, of which F. E. White contributed a capital played 52, and Murray 27. The full scores were as follows:—

MR. WALFORD'S TEAM.				
S. H. Morse, b. F. E. White	9
D. Tyng, c. Murray, b. Bugbird	7
G. S. Alcock, b. F. E. White	5
F. B. Edwards, b. Murray	5
F. Owen, b. Murray	8
A. H. Walford, c. F. E. White, b. W. J. White	52
A. Kingston, c. Lea, b. Murray	10
G. C. Murray, b. Morse	6
W. Goddard, not out	17

CORRESPONDENCE.

THE "MARITANA" PERFORMANCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me the use of your columns to protest against the unjustifiable, impertinent and malicious letter that appeared in the *Japan Herald* on Saturday evening addressed to Mr. Twinning. Such a gratuitously insulting attack on a gentleman who had just given us a great musical treat after weeks of hard work, is, in my opinion, deserving of the severest censure, and were the writer known, I feel sure he would be ostracised by the entire community. The tone of his letter suggests the idea that he was the leader of the hissing movement on Friday evening, a proceeding happily hitherto unknown in Yokohama at a performance in which amateurs were taking part.

Yours truly,
Yokohama, June 28th.

JUSTICE.

"YAMAGUCHI EXPULSION CASE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The counter currents of Education and Christianity, which have been growing more antagonistic in the last decade of the *Meiji* Era, lately found another vent in the "Expulsion Case of Yamaguchi Normal School," that took place on the 24th of January last.

Remarks on the event being still confined to some of the local papers and a few Christian periodicals, among which the *Gokyo* stands as a champion for the case, it does not as yet attract the wide attention of the public. But we fear that the fact itself is too stubborn to be cast into oblivion. It is like a mustard seed thrown into the soil, which looks very small at first sight, but shall not fail to grow so big some day, that birds of the air will come and rest their wearied wings upon the spreading branches.

Let me state the true features of the case. Oritake Juro was the only Christian among the students of the Normal School at Yamaguchi, which is quite a famous place for having produced several of the modern able statesmen of Japan, among whom Marquis Ito, the author of the Imperial Constitution, is to be counted.

As Christianity is, as a rule, looked upon unfavourably by the Government schools throughout the empire: especially by the Normal Schools, so Oritake was constantly exposed to the scorn and contempt of the rest of the students. They were always ready to find fault with him. But Oritake is rather an excellent student, both in scholarship and deportment. And therefore they could find no opportunity to exclude him from their community.

On the evening of January 24th last, he came into the common study hall. Nishiyama and Tsukamoto, both of whom belong to higher classes than his own, began to address him with repeated questions as follows:—

N. & T.—"Which is superior, God or His Majesty the Emperor?"

O.—"As a matter of course, God is superior to the Emperor."

N. & T.—"Which is inferior then, God or the Emperor?"

O.—"That's rather an inappropriate word; but compared to God who reigns above, the Emperor, it might be said, is inferior to him."

Oritake's answer is a plain, self evident truth. The Creator of heaven and earth is not King or Emperor, for he is infinitely superior to any human being. Do you say that it is a Christian view? Very well, what will you say of those admirers of Darwin and Spencer, who are rather inclined to think with them, that man is evolved out of the monkey? Are they not more deserving accusation, allowing that an Emperor is a man too? I fear that such theorists are not few in our educational circles.

Thereupon, the two anti-Christian students became mad, and declared that Oritake blasphemed against the Emperor. Then a succession of class-gatherings followed,—first the second year class, to which he belongs, met; the third year class had another meeting; and the fourth year class, which is the highest, had also its own meeting. At last, he was called into one of their meetings to confess his thoughts before them. He committed all things into the hand of God, as he expresses it, thinking not what and how to speak, but expressed what he believed; and meanwhile he spent his time in the usual way.

After this, he was summoned twice before the dormitory managers to speak of his religious conceptions, and yet was never charged with wrong. On the 28th, he was summoned into the presence

of the President, Principals, and two dormitory managers; and was told to speak of his ideas concerning the Imperial Rescripts of Education. He did not shrink, but gave it in a proper and polite manner, and retired. The next day, a sentence fell upon him, pronounced as follows:—

"Owing to something wrong in you, you are dismissed from the school. The whole amount of money given to you heretofore for your support, should be paid back at once."

He asked them what reasons they had for expelling him so unexpectedly from the school, and for demanding of him the immediate repayment of the money expended for his support. But all was in vain, and he was driven from the school.

In the meantime, Oritake found these following six items, that were collected by the students with the malicious object of rejecting him from the schools.

1. He says, "God is superior to His Majesty the Emperor."
2. He tries to transform the Imperial Rescript on Education into his own ways.
3. He reads the Bible oftener than he reads his text books.
4. He said that he became more anxious to enter the Normal School after he was converted to Christianity.
5. He talked to the Sunday School Children at Yoshikawa during the last summer vacation.
6. He said that he has a great responsibility to lead others to the true religion. He is very blindly led astray into the Christian religion, and so forth.

These six points were the grounds for the appeal presented before the school authorities by the students, with which they insisted urgently for the expulsion of Oritake.

As for our part, we find no candid reason whatever in these things, so as to justify the expulsion of the young man, who was fairly acknowledged even by the school authorities as a good pupil in his student life.

Rev. Y. Nishimura, of the Methodist Episcopal Church, South, at Yamaguchi felt much sympathy towards Oritake in his distress. He wanted to look into the case, and, if possible, try to open in his behalf the way for his returning to school. But if he could not get a satisfactory reason for the expulsion, he and his friends decided to go to the bottom of matter, in order that any obstacle like this should be removed from the path.

He called upon the President of the school, as the temporary guardian of Oritake, and asked him for an explanation of the matter. He only replied that "a certain criticism made by Oritake upon the Imperial Rescript was the cause of his expulsion, and that there is no seeming hope for his re-admission into the school."

It is evident, as Oritake himself says, that the school authorities were reminded of the fact that the rest of the points for rejection go into the sphere of religion, one's belief in which is safely guaranteed by the Imperial Constitution; and that the President was constrained to confine the reason of expulsion only to the second item of the data collected by the students as before mentioned.

What serious criticism did he make then? Nothing except as far as we know, that he remarked that the Imperial Rescript says nothing about God; and that it may, or may not, lack in some things in the sight of God. And, it is distinctly to be remembered that he gave his opinions only in answer to the demand made upon him by the students and others. It is very clear that no human being, however wise and great he may be, can claim to be absolutely perfect in all that he says or does. "Fear God, and honour the King" is the teaching of the Bible. Therefore every true Christian is always ready to serve his earthly sovereign with a clear conscience. But no rational man can conceive that the Emperor is not a man; and to think of him as a man does not lessen, even in the least degree, the majesty and power of the throne.

To return to the story, several other calls were made upon the local authorities. But no clear and definite answer was given to any of the callers. Their effort is, however, not to be idle until they shall see a proper end of it.

Deem not that it is a trifling matter. Indeed, this is a sign of the times, portending the great moral strifes between Reason and Prejudice, Conscience and Hypocrisy, and Light and Darkness. Behold! the Mighty Twentieth Century is now approaching with her tremendous billows to sweep everything before her course. How mistaken the man who would have a fancy to stand on the shore, and spread his arms to stop her onward career!

HEIJI HISHI-NUMA.

Kobe.

N.Y.K. SAILINGS FROM SHANGHAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There is a possibility that a grievance made public in your columns may find redress at the hands of the controlling power which, in this case, is in Tokyo. Residents of Shanghai are confined very closely to the settlements. There are no places of suburban resort; no pleasant spots like Kamakura, Enoshima, or Miyanoshita within easy access; the only escape from the heat of a fierce summer is to fly to Nagasaki or Cheloo; and in such expeditions time is of the utmost importance. Formerly, two or three years ago, the excellent passenger-steamers of the Nippon Yusen Kaisha were timed to leave Shanghai generally, if not always, on Friday; arriving in Nagasaki on Sunday morning and there connecting with another steamer leaving Nagasaki for Shanghai on Sunday evening, enabling the "tipper" to be back at his business sometime during Tuesday; or giving him a most pleasant and refreshing change, including one thousand miles of sea, in the short space of less than one hundred hours. This agreeable sail is now impossible, because the weekly sailings from Shanghai are on Saturday, the steamer arriving in Nagasaki twelve hours after the departure of the sister vessel to Shanghai, and therefore necessitating a week's delay. The Company, occasionally, announces a sailing to connect; the support they receive should encourage them to make Friday sailing from June to September inclusive; and so confer an immense boon upon hard-working men of business who would take several trips of 100 hours each, but are unable to take one involving a week or more of time.

This subject has been treated before in the local press; but apparently without success; perhaps this appeal may have more effect. If the directors of the Company were to pass a summer in this densely populated place they would agree with me in the reasonable character of the suggestion.

I have been told that one objection against the adoption of this course urged upon the Company is, that Friday sailings involve two days' detention of the vessel in Nagasaki or a Sunday sailing thence, which latter means, in turn, Sunday work for our friends there. Well, in reply to this, or as a comment upon the objection itself, I will say that my experience is that the only day on which much work is done in Nagasaki is Sunday!

I am, &c.,
Shanghai, June 24th.

MUNICEPS.

MRS. CAHUSAC'S SCHOOL.

On Wednesday afternoon, in response to invitations issued by Mrs. Cahusac, Principal of the Girls' High School, 48 Bluff, a number of ladies and gentlemen, parents of the pupils and friends of the institution, assembled at the School to witness the presentation of prizes and certificates to the successful pupils. At the close of afternoon tea—partaken of in Mrs. Cahusac's drawing room, where Miss Burdett Leach and Miss Wilkin acted as hosts in the unavoidable absence of Mrs. Cahusac through indisposition—the guests and pupils assembled in the school-room, and the Rev. E. Champneys Irwine introduced Mrs. J. A. Fraser, who had kindly consented to present the prizes. Before this pleasing ceremony was entered upon, however, Mr. Cahusac addressed those present to the effect that though he himself had no *locus standi* in the School, Mrs. Cahusac had commissioned him to give a few particulars as to the working of the School during the past term. Mrs. Cahusac had usually written out a report, but had been unable to do so on this occasion. She had expressed herself as much pleased with the general work of the School, the prizes were given to the hardest workers and those pupils who had most distinguished themselves, but there were others who had also done well, but had been unable to obtain the necessary number of marks, either through temporary absence from school or from not having joined it in time to obtain such number of marks. Mrs. Cahusac was also glad to note an improvement in the general tone and discipline of the School; the teachers had worked well and the pupils had pulled well together with them.

Mrs. Fraser then presented the prizes and certificates as follows:—

PRIZE LIST JUNE, 1897.

CLASS PRIZES—Class I. 1st in examination, Ethel Fraser; 1st in Term, Hilda Watson; Class II. 1st in Examination and Term, Alice Mendelson; Class III. 1st in Examination, Dorothy Tocque; 1st in Term, Edith Bunting; Class IV. Div. A. 1st in Class, Bertie Cahusac; and Class IV. Div. B. 1st in Class, Elsie Edale.

FRENCH PRIZES (Presented by Miss E. Burdett

Leach)—Div. I., Ethel Fraser; Div. II., Alice Mendelson; Div. III., Gerald Irwine; and Div. IV., Pauline Cleveland.

GERMAN—Class I., Ethel Fraser; and Class II., Alice Mendelson.

GOOD CONDUCT PRIZES (Presented by Miss Wilkin)—Class II. neg., Gladys Howard and Alice Mendelson; Class III., Charles Fraser; Class IV. Div. A, Una Brockelbank; and Class IV. Div. B, Sybil Howard.

MUSIC—Florence Wales; Winifred Mitchell.

SPECIAL PRIZES, Class I.—Examinations (proxime accessit), Lily Preston; History and Literature (proxime accessit), Mabel Moulton; Best Stories in School Magazine, Ethel Fraser. (Voted by the girls themselves).

CERTIFICATES.

FRENCH Div. I.—Hilda Watson; Div. II. Vera Irwine; Div. III. Bertie Cahusac; Div. IV. George Neville; GERMAN—Class I. Bessie Burns; Class II. 2nd in Examination, Alice Fraser; 2nd in Term, Gladys Howard; Class III. 2nd in Examination, Una Brockelbank; 2nd in Term, Edna Mendelson.

Mr. Irwine, after the prizes had been distributed remarked that it was a happy precedent to see the mother of several of the most successful prize-winners among the pupils officiate in the presentation, and he hoped that other parents would follow the precedent. He then called upon Mr. J. A. Fraser, who was present, to make a few marks.

Mr. Fraser said he considered it was unfair to call upon him to make a speech, but as he had been called upon, he might express a few words of sympathy with those pupils who had not received prizes, and also regret that Miss Cahusac had been unable to be present, but he was glad to see Mrs. Cahusac's able lady assistants among them—Miss Burdett Leach, Miss Wilkin, and Miss Griffin. Mr. Fraser then called for three cheers for the teachers.

Mr. Irwine paid a well merited tribute of praise to one of the late teachers—Miss Lillie Bourne—and after three cheers had been given for the parents and pupils the proceedings terminated.

BONDED WAREHOUSE CHARGES.

Under the Bonded Warehouse Law promulgated on the 23rd June, the fees for storage per month, are:—

CLASS I.—TEXTILE FABRICS.

Per Cubic Shaku.

	Per Cubic Shaku.

THE CHEVALIER DE KONTSKI.

We find in the *Hongkong Daily Press* the following notes about our old friend the Chevalier de Kontski:—

The Chevalier de Kontski, whose pianoforte playing afforded so much pleasure to Hongkong audiences some months ago, is again in Hongkong, but, we understand, will not on his present visit give any concert. Since leaving Hongkong he has visited India and the Netherlands Indies, and he is now on his way to Vladivostok, whence he returns to Europe by the Siberian route. The Chevalier has placed at our disposal some notes on his wanderings, from which we make the following extracts:—

"Our best thanks are due to Mr. Plowden, Resident of Hyderabad, and Mrs. Plowden, who not only entertained us in a most hospitable manner but also granted us their Steinway concert grand, which was carried by thirty coolies from Hyderabad to Secunderabad (five miles) for my concert. The renowned English hospitality was so marked at Hyderabad that we received on one day invitations from two families. We accordingly left the hotel and went to stay with Mr. Feridonji, First Secretary of the Prime Minister. Our visit was one long round of festivities, our host being the embodiment of true nobility. He rendered our stay with him so delightful that we still treasure the remembrance of it. The Prime Minister took two hundred tickets for my concert. "From Hyderabad we went to visit the gold mines at Kolar, in the State of Mysore, where we met with extreme kindness, generosity, and enthusiasm. We enjoyed the hospitality of Mr. R. Hancock at his bungalow; and his friends, Messrs. Brown and Mancejji, the superintendent of the Calicut Mine, moved to tears by my performance, took advantage of the ten minutes' interval in the programme to suggest that we should not be allowed to leave India without a souvenir. The suggestion was accepted with shouts of applause, a sheet of paper was passed from hand to hand and was soon filled with subscriptions amounting to several hundred rupees. On my arrival at Hongkong I was informed by Mr. Von Looper, the German Consul, that there was waiting for me a silver bowl, of an estimated value of 600 rupees,

sent by Mr. Hancock, of Marikuppam, Mysore. This bowl is a true masterpiece and represents the finest class of Indian work. It bears the following inscription:—"Presented to the Great Master the Chevalier de Koutski, a little souvenir and token of esteem, by his admirers, to commemorate a most enjoyable evening spent at the hospitable bungalow of Mr. R. Hancock, the Mysore Mine, Marikuppam, 20th February, 1897."

"On leaving for Burmah my heart ached to leave so many excellent and sincere friends, but such is the destiny of a true globe-trotter. In Rangoon and in Mandalay we again met people of noble and elevated feelings, Messrs. Misquith Brothers, Mr. Charles Orr, Captain and Mrs. Grant, and so many others that we could with great conviction answer yes to the philosophical question 'Is life worth living?' From Burmah we went to Penang, and from Penang to Ajeh, an extremely interesting spot between Penang and Sumatra. That it was a possession of Holland was enough to ensure us a hearty and excellent reception. The Dutch are men of honour and men of heart and in spite of attention being absorbed by the fighting going on there I was able to give three concerts within five days. From Ajeh, passing through Singapore, we came to Saigon. I must admit that this city is exceedingly pretty, full of action, and rich in resources, but a great artist should not venture to places like Saigon or Haiphong, or he will lose his time and his money."

The Chevallier here makes some remarks concerning an amateur pianist at Haiphong which we need not reproduce, and concludes by saying that fortunately at Hanoi he met with such highly cultivated people and excellent musicians that the Haiphong amateur and his intrigues disappeared from his memory.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE DIAMOND JUBILEE.

London, June 25.

The Jubilee festivities have not yet abated, and the weather is glorious.

The members of the House of Lords, together with those of the Commons, went in procession to Buckingham Palace, to present their respective Addresses of congratulation to the Queen.

A reception was given by the Queen to the various Mayors of the United Kingdom. In all 400 were present.

Following this, the Queen reviewed 10,000 children in Hyde Park, after which she returned to Windsor Castle, not in the least fatigued and feeling quite well.

The Italian Chambers have adopted a motion to present an address to Queen Victoria.

London, June 26.

The Jubilee Festivities still continue. The illuminations were repeated on Wednesday night, when the crowds of sight-seers exceeded those of Tuesday.

A brilliant State Opera performance took place at the Covent Garden Theatre, all the Royal guests being present. The Colonial and Indian representatives were also present, occupying nineteen boxes. It was a most brilliant spectacle.

Colonel Sir E. R. C. Bradford and Lieutenant-Colonel H. Smith, Commissioners of the Metropolitan and the City Police forces respectively, have been decorated with the Grand Cross of the Bath.

UNITED STATES AND HAWAII.

London, June 25.

The question of the Hawaiian treaty has been referred to a sub-Committee to consider what complications are likely to arise, now that it appears that Japan's protest is almost of the nature of an ultimatum.

BRITAIN AND HAWAII.

London, June 27.

The Hon. G. N. Curzon, M.P. (Under Secretary for Foreign Affairs), has made a

statement to the effect that Great Britain is not called on to give any expression of opinion with regard to the proposed annexation of Hawaii by the United States, but should any question arise involving the necessity, Britain will maintain her rights.

JUBILEE DINNER FOR THE POOR.

In accordance with the scheme inaugurated by Her Royal Highness the Princess of Wales, a dinner was given to 310,000 poor people in London, by subscriptions raised specially for that purpose.

THE HAWAIIAN ANNEXATION TREATY.

London, June 29.

In reference to Japan's protest against the Hawaiian Annexation Treaty, the United States Government has replied in a very guarded and diplomatic manner, which is calculated to lead to further protracted parleying.

WRECK OF A RUSSIAN IRONCLAD.

The Russian ironclad *Gangoot* has struck on a reef in the Baltic Sea. The crew was saved.

Brassey's "Naval Annual" gives the *Gangoot* as a steel turret-ship, of 6,593 tons, length 278 feet, beam 62 feet, draught 21 feet; twin-screw engines 8,300 indicated horse-power; composite hull, with partial belt 17 inches thick, and armoured casemate; armament, one 12-inch, four 9-inch, four 6-inch, and ten quick-firing guns, besides five torpedo-tubes. She was built in 1890, and her speed was given as 14.7 knots per hour.

BRITISH NAVAL REVIEW.

H.R.H. the Prince of Wales, on board the Royal yacht *Victoria and Albert*, escorted by ocean liners conveying the members of the Houses of Lords and Commons and the Jubilee guests, reviewed the Fleet at Spithead. There were 167 ships assembled, including the *Campania* and *Teutonic*, both fully armed as merchant cruisers. The ships were ranged in five lines, of which four were each five miles long. Successive salutes were fired right along the twenty-odd miles of vessels, followed by simultaneous cheers from the whole fleet.

PRESIDENT KRUGER AND THE QUEEN.

President Kruger personally telegraphed his good wishes and congratulations to Queen Victoria.

THE WRECK OF THE "ADEN"

London, June 30.

The P. & O. steamer *Aden* was wrecked on a reef off Socotra at 3 o'clock on the morning of the 9th instant and was totally lost. Nine passengers, three of the European crew, and thirty-three of the native crew were rescued by the Government steamer *Mayo*, last Saturday, as the wreck was breaking up. These were landed at Aden; the names given are Valpy, Mr. and Mrs. Pearce and eldest child, Mr. and Mrs. Frank Gillett and daughter, two amahs, Engineer White, Steward Cave, and Seaman Kelt. The remainder of the passengers and crew are drowned or missing.

(GOVERNMENT DISPATCH.)

THE AMERICAN TARIFF.

Washington, June 26.

The schedule relating to rugs was carried through without amendment on June 19th. The duty on Japanese silk goods, carried through the Senate on June 25th, is at the rate of \$3 per pound, and \$3.50 for those dyed in the piece or printed. The duty on handkerchiefs was carried through without amendment.

MOVEMENT AGAINST THE TEA DUTY.

New York, June 30.

The American tea dealers are agitating in favour of the exemption of Japanese tea from the duty.

(FROM THE "CHINA MAIL.")

ANTI-FOREIGN RIOTS IN THE YANGTSE VALLEY.

NARROW ESCAPE OF FIVE LADY MISSIONARIES. Shanghai, Saturday, June 19, 4.40 p.m.

There has been a renewal of the Anti-foreign riots in the Yangtse Valley.

The English Plymouth Brethren Mission premises at Wuchen, near the Poyang Lake, has been destroyed; also the Rev. Mr. Blandford's house. Five English lady missionaries barely escaped with their lives.

The French mission at the same place was also attacked by the Chinese, but the Mandarins interfered and prevented the destruction of the property or the molestation of the missionaries.

The only reason assigned for the outrages is the old one of allegations against the missionaries of kidnapping Chinese children.

TERRIBLE FATALITY AT CANTON.

Canton, June 18.

Last night an accident happened to some of the lofty "flower boats" anchored off Kuk Fau, involving a serious loss of life. About midnight, a cable snapped, and four of these boats were overturned in the river. It is said that at least a hundred persons were drowned. The accident is attributed to the force of the river current, and to the top-heavy nature of the boats.

(FROM THE "N.-C. DAILY NEWS.")

THE CELEBRATION IN HONGKONG.

Hongkong, 23rd June, 4.35 p.m.

The Governor's reception was brilliant, though rain was falling heavily. Addresses were presented to Sir William Robinson from the Colony, the Chinese, and the Freemasons.

The afternoon was fair, but dull. The review, in which over three thousand troops took part, was a magnificent spectacle, though the mud was ankle-deep.

The musical festival was a grand success. The illuminations were splendid, especially in the harbour. The launch procession was good.

The memorial stones of the Hospital and the new Road were laid on Wednesday, in fine weather. The Gymkhana is postponed.

(FROM THE "BRISBANE COURIER.")

NAVAL OFFICERS DROWNED.

London, May 31.

Six petty officers belonging to H.M.S. *Collingwood* have been drowned in Bantry Bay through the capsizing of a boat.

(FROM "TONGKIN PAPERS.")

THE SHAH OF PERSIA.

Paris, June 12th.

The Shah of Persia has left Teheran and proceeds to France for his health.

(FROM JAPANESE PAPERS.)

KOBE TEA SALES.

Kobe, July 1.

Yesterday 176,400 catties of new tea changed hands. Prices ranged from yen 33.50 to yen 17.50.

FIRE IN KARATSU.

Maratsu, Hizen, July 1.

Last night about twelve o'clock fire broke out at the offices of the Karatsu Railway Company, now in course of construction, and the entire buildings were destroyed.

CHOLERA AT KOBE.

Kobe, July 1.

Yesterday a case of cholera was reported here and the patient is now under treatment.

THE PREMIER'S RETURN TO TOKYO.

Kyoto, July 1.

Count Matsukata, Premier, will leave here for Tokyo to-morrow afternoon.

THE HOKURIKU RAILWAY CO.

Niigata, June 30.

In order to prevent the opening of a special general meeting of the Hokuriku Railway Company convened in Tokyo for the 5th of July by Mr. Watanabe Kaichi, a director of the Company, Mr. Makiguchi Yoshikata and others of the rival party, applied to the Niigata Local Court for the prevention of the proposed meeting in Tokyo, and the Court issued an order prohibiting the meeting. The leading shareholders in Niigata gave an entertainment to their advocates in honour of the event.

MORE TROOPS FOR VLADIVOSTOCK.

Nagasaki, July 1.

A Russian Volunteer steamer conveying 1,888 soldiers arrived here to-day from Odessa en route to Vladivostock.

POST OFFICE OFFICIALS ARRESTED.

Shizuoka, July 1.

Last night a Public Procurator, accompanied by police, proceeded to the Hamamatsu Post Office and arrested several of the officials. Mr. Kawaguchi Eizaburo, the Post-master escaped.

THE NEW U. S. MINISTER.

Kyoto, July 2.

Colonel Buck, the new United States Minister, and Mr. Dun, the late Minister, arrived here from Tokyo to-day at 9 p.m., together with Mr. Komura, Vice-Minister of the Foreign Office. To-morrow they will have audience of the Emperor.

SEVERE DROUGHT IN KOREA.

Soul, July 1.

An extraordinary continuance of drought is reported in Kyong-kwi-do and Chhung-chung-do. Numbers of people are dying on the roads. The district being in a disturbed condition a detachment of troops was dispatched there to-day.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following are the solutions of Problems 323 and 324:—

SOLUTION OF PROBLEM No. 323.

WHITE.	BLACK.
1—Kt to Q 4	1—B takes P
2—Q to Q B 5, ch	2—K to B 5
3—Kt to K 2, mate	
	if 2—K to B 3
3—Q to K 7, mate	1—P to K 6
	2—K takes Kt
2—Q to K B 5, ch	1—B to B 5
3—P to B 3, mate	2—K takes Kt
	1—P to B 4
2—Q to K B 5, ch	2—K to Q 3
3—Q to K 6, mate	
	if 2—K takes Kt
3—Q takes P (B 5), mate	

We have received correct solutions of No. 323, from W.H.S., and J.W.E.

SOLUTION OF PROBLEM No. 324.

WHITE.	BLACK.
1—Q to K 3	1—P takes P
2—Q takes B, mate	
	1—B takes P
2—Kt takes P, mate	1—Kt to B 4
	1—Kt to B 6
2—P takes Kt, mate	1—Kt any other
	1—R to Q 4
2—K takes Kt, dis mate	1—R to Q 2
2—K to Q 3, dis mate	
2—R to K 7, mate	
2—R to B 6, mate	
	1—Moves Q or R
2—K to Q 3, dis mate	(R to Q)

W.H.S., sends us a correct solution of Problem No. 324.

PROBLEM No. 327.

By P. G. L. F.

(Second prize *Manchester Weekly Times* Eighth Problem Tourney.)

WHITE.

White to play, and mate in three moves.

AMERICAN CHESS.

GAME No. 733.

English chess critics were enamoured with the beautiful games played in the Pillsbury & Showalter match for the championship of America. We reprint from the *Field* the following lovely little game, which was the 8th of the match.

WHITE.—J. W. Showalter.	BLACK.—H. N. Pillsbury.
1 P K4	14 B Q6
2 Kt KB3	15 B B2
3 B K5	16 BxR
4 Castles	17 Q Q6 ch
5 P Q4	18 K Ksq
6 B R4	(e) P KKt3
7 P QB3	19 Q Q2 (f) Q R4
8 KxP	20 Kt Q5
9 Kt Q5	21 Q B3
10 R Ksq	22 KxP
11 B B4	23 KixQP ch, and mates
12 R Kt	in 4 moves (g)
13 KtxP	

NOTES.

(a) As Showalter, with 6—B to R 4, appears to have discovered the correct reply to 5..... Kt to Q 3, no doubt Pillsbury will fall back upon the customary 5..... B to K 2.

(b) Hazardous to the point of recklessness.

(c) 9..... P to Q Kt 4 seems the best of a bad selection.

(d) A protecting move (against 12—Kt takes P) that guards nothing as White immediately shows.

(e) The B queen was driven to K Kt 5 in view of this brilliant continuation.

(f) Far better than 19—R takes B, Kt takes R; 20—Kt to Q 5, Q to K 3; 21—Q takes R, Q takes Kt, and the attack is over.

(g) A magnificent game. Though White's play is in strict accordance with the modern school, it everywhere suggests an old master.

A RUY LOPEZ TRAP.

GAME No. 734.

WHITE.—T. Fulford, Ibis.	BLACK.—E. Jukes, Hastings.
1 P K4	8 R Kt ch
2 Kt KB3	9 Kt Q5
3 B K5	10 KixB ch
4 Castles	11 Q R5 (b) P Kt3
5 R Ksq	12 Q R6
6 Kt B3	13 R R5
7 KtxP	Resigns

(a)

NOTES.

(a) Black falls into a well-known trap. Kt takes Kt loses, but if he plays B to K 2 instead, Black obtains a good defence, i.e., B to K 2; 8—Kt to Q 5, Castles; 9—Kt takes Kt, Q P takes Kt; 10—Kt takes B ch, K to B sq; 11—Q to R 5, B to K 3; 12—R takes B, P takes R; 13—Kt to K 6 ch, K to Kt sq, and there is nothing in it.

(b) Threatening mate in two by 12—Q takes P ch, K takes Q, 13—R to R 5 mate.—*Daily News*.

OVER THE CHESS-BOARD.

Tschigorin has now won his match against Schiffers. It will be remembered, says Isidor Gunsberg, that in the Hastings Tournament Schiffers beat Tschigorin, thereby depriving him of the first prize and giving it to Pillsbury. Yet, in the match between the two, Schiffers stood but little chance. This clearly shows that tournament play is greatly affected by chance, and that match play is the only reliable test of a player's real strength.

It is now asserted with greater positiveness that there will be an international tournament in Berlin in August, and that a definite programme may be looked forward to as soon as a reply has been received from the German Emperor, who has been solicited to give a special prize.

The *London Times* asks:—"When and how should a player resign? We have noted various methods, not all of a graceful character....." Dr. Tarrasch, referring to the indignation felt by the other competitors at the Hastings Congress with Von Bardeleben because of the singular way in which he surrendered lost games, says that he but followed the advice given in a German couplet:—

Liegt Deine Partie aber ganz darnieder.

Dann geh' mal raus und komm' nicht wieder.

This may be freely translated:—

If altogether hopeless be the game you play

'Tis time to run away and stay away.

"Von Bardeleben," again remarks Dr. Tarrasch, "simply vanished, and left the Committee to declare the game lost by time limit. Therefore he acquired the merit of adding one more to the many analogies between chess and war—the flight before an enemy."

One of the "Experts" who sized-up the great masters says:—"The great position players are Lasker, Siemitz and Lapschütz. The great combination players are Tschigorin, Pillsbury, and Blackburne. Dr. Tarrasch is a cross between the two."

The British Chess Company have made quite exceptional efforts to produce a Chess Code of the laws of the game which shall be deemed acceptable by all nations. They have met with success in England, and now it is announced that the Manhattan Chess Club of New York have likewise given adherence to their rules.

A Washington telegram, dated June 1, says:—The international chess match between members of the House of Representatives and the English House of Commons resulted in a draw, each side having won and lost two games, and one being a draw. When the match was concluded by Mr. Shafroth of Colorado winning his game and tying the score, hearty cheers were given on each side of the water for the President and her Majesty, the Queen.

The Moscow Chess Club proposes to hold a Russian National Handicap Tourney this summer. Prizes of 2000, 1000, 500 and 300 roubles will be offered. Count Tolstoy and his wife are the latest converts to the game and both are said to be playing "as if their lives depended on the results."

Mr. Steinitz is reported to be engaged on a work entitled "Das Judentum in Schach" (the Jewish Element in Chess).

For the first time in the history of Australian chess, four colonies tried conclusions by telegraph on one day, the occasion being the Queen's Birthday, May 24th, when New South Wales played Victoria, and Queensland played South Australia. This is evidence of the increase of interest in the cause of Chess in Australia.

LATEST COMMERCIAL.

IMPORTS.

The market, generally, has not improved much since last week. A few transactions in piece goods have taken place, for the most part to fill country orders, and there has been a fair business in yarns, at former rates. Little has been done in woollens or fancies.

COTTON PIECE GOODS.

	PER YARD.	PER PIECE.
Grey Shirtings—8 1/2 yds. 36 inches	\$2.50	to 3.80
Grey Shirtings—9 yds. 45 inches	2.80	to 3.50
T. Cloth—7 1/2 yds. 36 inches	1.60	to 1.90
Indigo Shirtings—12 yds. 44 inches	1.95	to 2.90
Prints—Assorted, 24 yards, 50 inches	2.00	to 3.75
Cotton—Italians and Salts and Blacks, 36 inches	0.20	to 0.25
Volants—Black, 35 yards, 21 inches	7.75	to 9.00
Victoria Lawns, 12 yards, 42 1/2 inches	0.75	to 1.00
Turkey Reds—2.0 to 2.4 yds, 24 1/2 yards, 30 inches	1.50	to 1.70
Turkey Reds—2.8 to 3 yds, 24 1/2 yards, 30 inches	1.75	to 2.10
Turkey Reds—3.8 to 4 yds, 24 1/2 yards, 32 inches	2.40	to 2.70
Turkey Reds—4.8 to 5 yds, 24 1/2 yards, 32 inches	3.00	to 3.50

WOOLLENS.

	PER YARD.	PER PIECE.
Flannel—	\$0.30	to 0.50
Italian Cloth, 30 yards, 32 inches	0.35	to 0.41

RAW COTTON.

	PER POUND.
American Middling	\$24.00 to 24.50
Indian Broach	21.00
Chinese	21.50

METALS.

The business of the week has amounted to very little. Holders do not appear inclined to lower

prices and only absolute requirements are filled. Tin plates and nails are the lines in which, whatever business was doing, has been effected. Quotations remain nominally the same.

PER PICUL.	
Flat Bars, 1 inch.....	4.00 to 4.10
Flat Bars, 1 inch.....	4.20 to 4.30
Round and square up to 1 inch.....	4.00 to 4.30
Iron Plates, assorted.....	4.00 to 4.40
Sheet Iron.....	5.10 to 5.30
Galvanized Iron sheets.....	10.00 to 10.50
Wire Nails, assorted.....	6.00 to 6.50
Tin Plates, per box.....	5.70 to 5.80
Pig Iron, No. 3.....	1.95 to 2.00
Hoop Iron (1 to 1 1/2 inch).....	4.80 to 5.00

KEROSENE.

No change in quotations, and little business doing, while stocks are gradually increasing.

American.....	\$2.00 to 2.05
Russian.....	2.00 to 2.05
Langkat.....	—

SUGAR.

Sales of Brown at current prices still continue, but it appears probable these rates will have to fall a few points before stocks can be reduced to any considerable extent. White continues steady at old quotations, but sales have been only for immediate requirements.

PER PICUL.	
Brown Takao.....	\$3.50 to 3.55
Brown Manila.....	4.20 to 4.40
Brown Daitong.....	2.80 to 2.90
Brown Canton.....	3.30 to 4.20
White Java and Penang.....	6.60 to 6.70
White Refined.....	7.00 to 9.00

EXPORTS.

RAW SILK.

Not much doing but prices firmer, and the market will presently open in earnest at higher rates. There is no stock of new silk yet, but Filatures are coming in from Kofu and the nearer provinces. Probably next week there will be regular quotations again. At present prices are more or less nominal until the regular course of trade is resumed.

QUOTATIONS.	
Filatures—Extra 9/11, 10/12 den.....	—
Filatures—Extra 13/15, 14/16 den.....	—

TEA.

The market is still quiet, with a fair amount of business at, for the most part, former prices, though some parcels of choicest have been disposed of at rates a trifle in advance of those of last week. The *Doric*, leaving on the 29th ult. took 28,389 chests for San Francisco and the *Pelican*, for Tacoma, 12,806 chests. The tariff question in the United States is still unsettled.

QUOTATIONS.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAXEN, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unimpaired purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. CHURCH, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 10TH, 1897.

SUMMARY OF NEWS.

COUNT GOTO is seriously ill.

THE Emperor's and Empress' return from Kyoto to the capital has been further postponed.

A JAPANESE afflicted with *hakke* attempted suicide in Yokohama Bay on Wednesday.

THE cable between Formosa and Japan will be opened for public service on the 16th inst.

MR. LAFFIN's Yacht *Mary* won the United States Minister's prize on Independence Day.

THE P. & O. steamer *India* has arrived at Suez with the survivors of the *Aden*, all doing well.

FIFTEEN hundred contract emigrants are to leave Kobe for Brazil by the *Tosa Maru* next month.

THE Kobe Ladies won the return cricket match against the *Narcissus* on Tuesday, by 12 runs.

THE re-opening of the Roman Catholic Cathedral at Tientsin, on the 22nd June, passed off quietly.

THE Osaka Shosen Kaisha will pay a dividend of 5 per cent per annum for the first half of the current year.

RAIN has fallen on four days this week in Yokohama. Severe floods are reported from some parts of the country.

THE list of Chinese subscribers to the Diamond Jubilee Fund in Hongkong contains 166 names, with total subscriptions amounting

to \$24,685, or an average of over \$148 per subscriber.

THE ports of Mok-pho and Chempum-pho in Korea are to be opened to foreign trade from 1st October next.

THE presentation of diplomas to the graduates of the Tokyo Higher Commercial School took place on the 6th instant.

THE plague is still prevalent in Amoy and neighbouring districts, but the foreign residents have escaped the contagion.

THE north of England was visited by very heavy gales on the 15th June. Glasgow and Liverpool suffered severely.

THE Hawaiian Government have decided to enforce the increased duty on saké imported from Japan from July 1st.

H.M.S. *Grafton's* cricket team offered very slight resistance to the Yokohama Club on Saturday, the bowling being weak.

PRINCE ARISUGAWA, accompanied by Mr. Kato, Japanese Minister to England, left London for Paris, en route for Spain, on the 5th inst.

COLONEL BUCK, the new United States Minister to Japan, and Mr. Dun, late U.S. Minister, returned from Kyoto to the capital on the night of the 4th instant.

It is reported that the Emperor of Russia will attend the assembly of the International Medical Conference to be held in Moscow in August next.

DURING the month of June, the Kanagawa Kencho issued 53 passports to Japanese for travel abroad. The passports issued to foreigners for travelling in the interior numbered 194, for 250 persons.

THE *Empress of Japan*, which arrived at Yokohama on the 7th instant, made the record passage from Victoria, B.C. in 10 days, 3 hours 39 minutes, beating the best previous passage by fourteen hours and a half.

THE Tedzuna coal mine in Taka-gun, Ibaraki Prefecture, one of the principal mines in the Kwanto district, caught fire on the 20th ultimo and the flames are still raging, in spite of desperate efforts to extinguish them.

ABOUT four hundred coolies employed by the Yokohama Cargo Boat Corporation, who went on strike the other day, have gained their point and have had their wages raised 20 per cent. They resumed work on the 5th inst.

THE annual meeting of the Yokohama Engine and Iron Works was held on the 6th instant. The accounts and report were passed and Messrs. Fraser and Lowder re-elected Directors, Mr. Kirby also joining the Board.

THE Embassies of the Powers at Constantinople have insisted on a prompt decision by the Porte on the question of the delimitation of the new frontier. The Turkish Ministers in Council have resolved to maintain Turkey's right in Thessaly.

CANADIAN papers received by the *Empress of Japan* contain graphic reports of the grand pageant furnished by the procession and the decorations in London on Diamond Jubilee day. Eight million people are said to have been assembled in the metropolis on the occasion.

A FAREWELL dinner was given by the President and Directors of the Nippon Yusen Kaisha at the Imperial Hotel, Tokyo, on the 5th instant to

Mr. E. Dun, the late U.S. Minister to Japan, and to Mr. Blabon, a Director of the Great Northern Railway Company of America.

A CONFLAGRATION occurred at Sanjo-machi, Echigo Province on the 30th ult. in which 376 houses and six temples were destroyed and sixteen persons injured.

THE U.S. Secretary of State has replied to Japan's protest, that the annexation of Hawaii will not prejudice the legitimate interest of Japan or other Powers, but the United States cannot entertain any suggestions as regards the *status quo*.

A CONFERENCE of Chief Jailers was held at the Home Department on the morning of the 3rd inst., when the Home Minister delivered a speech as to the necessity of reformation in the gaol system when the new treaties come into operation.

THE *Yorodzu Choho* reports that the Foreign Department received a telegram on the 5th inst. from Mr. Shimamura, Japanese Minister in Hawaii, to the effect that no hindrance will be exercised hereafter in the landing of Japanese contract immigrants in Hawaii. The Department has wired to all the Local Governors to that effect.

THE steamer *Tamsui Maru*, of the Osaka Shosen Kaisha, which left Kelung, Formosa early in June for coast ports of the Island, has not been reported or heard from since and much anxiety is felt as to her safety. The steamer *Katsuyama Maru*, in the Government service, is reported to have started from Kelung on the 30th ult. in search of the missing vessel.

NATIONAL taxes to be collected during this month are, according to the *Hochi Shimbun*, estimated at 10,616,481 yen. The details are as follow:—

Classification.	Amount. Yen.
Houses and land, for the 1st period	400,483
Saké, for the 1st period	7,150,960
Mixed tax (<i>kousei sonri</i>), for the 1st period	23,740
National Banks, for the 1st half of the year	58,548
Patent medicines, for the 2nd half of the year	48,996
Trades, for the 1st half of the year	2,937,084
Total	10,616,481

BUSINESS prospects in Yokohama were brighter this week, and a more wholesome tone pervades the various markets than we have noted for some time past. Piece-goods are moving off better than usual, the demand from up-country causing buyers to come in and take up goods at higher rates. Yarns also have looked up a bit. In metals, importers have been obliged to raise prices, owing to further advances in laid-down cost, yet in spite of this dealers have purchased largely of bars, plates, sheets, and pig-iron. The kerosene market, after months of depression, now promises brighter times, both American and Russian moving off briskly this week. A good business has been done in sugars, browns having risen slightly, while white sorts remain unchanged. In raw silk a re-action has to be noted, holders having overstood their market, and all is naturally in suspense. Samples of the new waste crop are coming in, but no business has yet been done. A steady demand has continued throughout the week just passed for tea, a fair business being put through at former rates. The quality of the second picking is said to be below that of last year, but the crop will be fair. Total settlements to date for this season are 140,367 piculs. Exchange closes weak.

SPRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The *Fiji Shimpo* has a remarkable article which will probably offend the susceptibilities of many Japanese conservatives. Briefly stated, our contemporary's contention is that although Japan is on the eve of being legally recognised as the equal of Western States, her equality will be practically unreal unless she seeks to assimilate not merely her codes but also her customs to those of the Occident. It is of little use to abolish distinctions of a judicial and Conventional character, if distinctions of costume, social fashions, and other externals that immediately force themselves on the attention are preserved. There can be no half-way house on the road to civilization. A nation must make up its mind to travel the whole way. Tradition and hereditary practice endear certain habits to a people, and if those habits are not opposed to the canons of enlightened progress, there is no theoretical reason for their abolition. But in so far as they interfere with freedom of international intercourse and the levelling of racial distinctions, they ought to be ruthlessly remodelled. From that point of view Japanese conservatives who advocate the preservation of old fashions in the realm of art, tea ceremonials, music, and so forth, must be called *bummei no soku* (traitors to civilization). Every salient difference of custom is an obstacle to unembarrassed association. No one understood that fundamental principle better than Peter the Great. A reformer of immense moral breadth, he nevertheless descended to such a detail as the question of men's beards, and by imposing a tax on those appendages, sought to check a habit which imparted to his people the aspect of animals in the eyes of strangers. Legislation of that kind may seem trivial, but the principle that dictates it is beyond cavil. Peter the Great saw clearly that if the Russian nation was to take its place in the ranks of civilization, it must not merely seek to develop the moral attributes of civilization, but also lay aside all externals that differentiated it from civilized peoples. Had his policy been steadily pursued by succeeding generations, Russia's moral status in Europe would be different to-day. Japan must make up her mind to let go the old and open her hands unreservedly to the new, imposing upon her liberalism only one restriction, namely, that of not adopting what is manifestly hurtful, or discarding what is plainly beneficial. She will have to carry her radicalism even into the field of the four great ceremonies—the *Kwan-kon so sai* (coming of age, marriage, funeral rites, and religious celebrations). Her own advantage is at stake. It is not a question of abandoning any revered custom in deference to foreign opinion or foreign example. It is solely a question of abolishing everything that tends to preserve racial prejudices, and thereby to handicap her in the struggle towards progress.

The same journal reverts to a topic already discussed by it in previous issues, namely, the true purpose of military preparations. There are not wanting critics, even among foreigners, who allege that Japan might very well have been content with her *ante-bellum* armaments, and who ask what nation she regards as a potential enemy, since she devotes herself to making such large expansions of her Army and Navy. Arguments and questions of that kind are shallow. They indicate ignorance of the true object of military preparations. That object is, not to fight, but to avert the necessity of fighting. A country whose strength is too well known to be underestimated, can count on immunity from the embarrassments that involve an appeal to the sword. Had China known Japan's strength, there never would have been any war between the two countries. Had Japan clearly appreciated China's weakness, the war would have been brought to an end much sooner, and many lives would have been saved. But it is not to be denied that up to the moment of fighting the battle of the Yalu, the Japanese felt much nervousness about the issue. The bulk

of their opponent deceived them, just as she was deceived by Japan's comparative insignificance. Unquestionably if the Chinese had gauged Japan's fighting capacities, they would never have entered upon the route of insulting impracticability that led to war. Moreover, if Japan had been strong, and if her strength had been appreciated, she would never have been subjected to the humiliation of having to retrocede Liaotung. The Japanese are not fools. Their eyes are not blind, nor are their memories unretentive of instructive experiences. They see the enormous financial sacrifices made by European Powers to avert the stupendous calamity of war, and they remember the calamities that they have themselves suffered by shrinking from these sacrifices. They may have to put their hands deeply into their pockets, may have to increase the burden of taxation, or resort to other inconvenient expedients to complete their programme of armament expansion. But it must be completed, in order to ensure the country in the enjoyment of the greatest of all blessings, the blessing of peace. Only what the public must understand thoroughly and never forget is that the unique purpose of national armaments is to avert the necessity of using them.

The *Kokumin Shimbun* discusses the question of the national armaments in much the same strain as that adopted by the *Fiji*, but carries the argument into somewhat different routes. It calls the Army and Navy "bulwarks of the country's wealth" and also instruments for increasing that wealth. As to the latter point, it reminds the public that one direct result of the war with China was the receipt of a large indemnity, constituting so much addition to the national capital; and one indirect result was the development of a spirit of enterprise which promises to produce, in its turn, an immense development of the national resources. The industrial and commercial Japan of to-day is conspicuously different from the industrial and commercial Japan of *ante-bellum* days, and the difference is due almost entirely to her victory over China. It is a mistake, therefore, to describe the money spent upon armaments as unproductive expenditure. There are folks that lament the strain to which the nation's finances are subjected by the effort of carrying out the armament-expansion programme. Do such persons consider what would be Japan's present condition had she suffered defeat at China's hands? She would have had to pay a large indemnity and would now be saddled with the double task of finding money for that purpose, as well as for the purpose of making to her Army and Navy such additions as should suffice to restore her prestige. Moreover, she would have been performing that heavy labour amid industrial and commercial circumstances showing nothing of the elastic development that now renders her financial burdens comparatively light. If any one seriously estimates the sufferings she would now have been enduring had she not made some sacrifices in *ante-bellum* days, and if any one, with that estimate before him, shrinks from the sacrifices now required to prevent still greater sufferings, he may be a Japanese in appearance, but he is not a Japanese at heart.

Criticism of the police force furnishes a topic of discussion in the columns of the *Nichi Nichi Shimbun*. The article is long and somewhat prolix. Its gist is that the methods of the police are slack in some directions and over-strict in others. As to their slackness, we find no very tangible evidence in our contemporary's columns, except that, after allowing the advertisement and sale of "Virgin Cigarettes" to proceed uninterrupted for several weeks, they suddenly awoke to the illegality, or supposed illegality, of the business, and instituted judicial proceedings. As to their over-strictness, our contemporary is even less explicit. It refers to the rumours that cruelties are occasionally resorted to for the purpose of extorting confessions; rumours to which it does not attach much importance, but which, nevertheless, must have some foundation. Whatever truth there may be in the stories, or

to whatever extent they may have been exaggerated, the mere fact that they are circulated is more or less a reproach to the police. It can not be too strongly impressed upon them that the days when such doings were permissible have long passed, and that the slightest reversion to them would be a national disgrace. The *Nichi Nichi* thinks that something should be done to attract a better class of men to the ranks of the police, and to keep them there when once enlisted. In that context its advice is that the task of providing pensions for them should be undertaken by the Central Treasury, instead of being left to the charge of the localities.

That the encroachments of foreign Powers upon China threaten the preservation of peace in the East, is a proposition upon which the *Yomiuri Shimbun* descants at some length. Russia from the north, England from the West, and France from the south, are all pressing upon the ancient empire. Germany's hand has not yet been very plainly shown, but that she is playing the same rôle as the other Great Occidental Powers can not be doubted. The *Yomiuri* details, at considerable length, the doings of Russia, of France, and of England, and draws the inference that the balance of power in the Far East must soon be seriously disturbed. There is only one remedy, our contemporary thinks, namely, that China should abandon her conservative attitude and frankly adopt Occidental civilization. Notably in three directions reform is called for: military organization, finance, and education. There is a show made at present in the matter of military improvement. Foreign drill instructors are engaged and their efforts appear to be attended with results more or less successful. But there is nothing like army organization; nothing like provision for uniting the scattered forces of the empire into one homogeneous whole. A similar defect is observable in the field of finance. There is no organization. The country has immense resources, but they are not available for national purposes. The only certain asset possessed by the Central Government, namely, the Customs yield, is pledged on account of a foreign debt which, though insignificant in dimensions, weighs heavily on the empire. As for education, there is practically no organization whatever. That most important of all factors of national progress is totally neglected. The *Yomiuri* thinks that Japan should set before herself the duty of getting China out of the conservative groove. The task should be undertaken, not in China's interests alone, but in the interests of the peace of the East.

The *Shogyo Shimpo* urges the advisability of combination on the part of marine insurance companies. Heavy and repeated losses have been incurred by the various companies of late, and the very existence of some must be threatened. Union is their only resource. As to the cause of such numerous misfortunes, the *Shogyo* thinks that the recent acquisition of large numbers of old vessels is more or less responsible. During the war, ships were purchased hastily, to meet the urgent need of the moment, and many of them, after a brief period of use, were found to be in want of repairs for the execution of which sufficient means were not forthcoming. But the chief cause doubtless is to be found in the fact that the development of the mercantile marine has not been accompanied by a corresponding development of skilled personnel. Expert navigators and trained sailors are not procurable, and until that want is supplied, losses must be anticipated. The insurance offices must recognise the facts and combine to remedy them as rapidly as possible.

Reference has already been made to the fact that a German decoration has just been presented to His Majesty the Emperor, and that the German Representative proceeded to Kyoto for the purpose of making the presentation. We may explain that the decoration was the Crown of Wurtemberg, sent by the King of that country.

JAPANESE TOPICS.

In referring to the rumour that the Department of Education would ask for an additional appropriation of five or six million *yen* next year, we stated that the objects of such an increase of expenditure were not plain. The *Yomiuri Shimbun* now sets them forth. It says that they are these:—First, to establish Higher Middle Schools in the provinces; secondly, to add a dendrological section to the present Second Upper School; thirdly, to add a marine architectural section to the Osaka Industrial School; fourthly, to establish a central education inspection bureau; fifthly, to organize in the Education Department a bureau for practical instruction; and sixthly, to purchase plant and engage instructors for the Industrial School. All these projects commend themselves. There is undoubtedly a general feeling in Japan that the progress of educational affairs is not commensurate with the progress made in other directions, and the public will welcome a resolute advance on the part of the *Mombusho*.

Another of the perennially recurrent rumours about secret surveys by Russian officers is ventilated in the columns of the *Chuo Shimbun*. The place of the performance is said to be the neighbourhood of Banshuzan in the southern Tsugaru district of Aomori Prefecture. A Russian officer recently came there, and having taken up his quarters, applied himself to survey the ground. It is added that the War Office recently caused a survey of the same place to be made with the intention of making it a coast artillery station. The police, our contemporary says, have been instructed to look after the Russian officer. We imagine that the story must be received with much reserve.

It appears to be pretty generally agreed that next year's Budget will show an increase of some thirty million *yen* on the side of expenditure, and many views are expressed as to the devices that will be adopted to obtain a corresponding increment of revenue. One rumour is that the Government proposes to sell the State Railways, a step that would bring forty or fifty million *yen* into the Treasury. The calculation seems to be very vague. Judging by the net revenue now obtained from the State Railways, we should say that they ought to sell for at least a hundred million *yen* in the open market. Even at that price, a return of seven or eight per cent. might be confidently anticipated. But, in truth, we believe that the rumour does not deserve credit. The Railways are now an important source of regular annual revenue, and to dispose of them for the purpose of meeting a temporary expenditure would be very questionable finance. A different and much more credible forecast is formulated by the *Mainichi Shimbun*. We there read that there is no intention of resorting to increased taxation or any other exceptional measure. Owing to the prosperous condition of the nation and the development of foreign trade, it is confidently expected that from railways, telegraphs, and customs an additional revenue of ten million *yen* may be anticipated. Further, the fears that the yield from the Trades Tax would be much below the official estimate are not likely to be realized. The total collection may

fall short of the $7\frac{1}{2}$ million *yen* originally anticipated by four or five hundred thousand *yen*, but that will be about the limit. Now the revenue derived from the Registration Tax, the *Saké* Tax, and the Tobacco Monopoly during the current fiscal year is set down as $6\frac{1}{2}$ million, less than the total yield ultimately expected from these taxes. Hence, assuming that the Trades Tax and Registration Tax give $\frac{1}{2}$ million less than the original estimate, there still remains an additional income of five millions to accrue from these four sources next year. Thus an increment of 15 million *yen* altogether is fairly within sight. But where to get the other 15 millions required to meet the total additional expenditure of 30 millions? There is talk, the *Mainichi* says, of increasing the Income Tax, and of revising the Tax upon Building Lands. Public opinion, however, is likely to be somewhat exacting with regard to such a prospect, so that, on the whole, it will probably not be carried out. Nothing remains, then, except to reduce the expenditures, and the easiest way to effect that would be to extend the period of Army Expansion. There may be some difficulty in getting the Minister of War to consent, but the attempt will be resolutely made. Such is the gist of the *Mainichi's* information, at any rate.

It is to be hoped that the above information is correct. In these columns it has been pointed out, more than once, that there seem to be grounds for criticising the Government's armament expansion scheme from one point of view alone, namely, that the arrangements for increasing the Army are precipitate. The country has no need of an army of half a million men at home. Such a force can not have any logical *raison d'être* except the contingency of service abroad. But for service abroad, troops must be carried over the sea, and there is no discernible prospect that by the year 1904, when, according to the present programme, the Army will attain its full strength, a transport service capable of conveying even a moiety of such a force can be expected to be available. Instead of fixing the Army-expansion period at 8 years, the Government might extend it to 12 years without any inconvenience. But even if that were done, we can not see that any large measure of financial relief would be secured. The Army-expansion programme involves a total expenditure of 79 million *yen*, in round figures, of which $37\frac{1}{2}$ millions will have been paid out in the years 1896-7 and 1897-8, leaving only $41\frac{1}{2}$ millions to be paid between 1898-9 and 1903-4. The latter sum is divided thus, omitting fractions, for the 8-year period:—

1898-9	$13\frac{1}{2}$	million <i>yen</i> .
1899-0	10	do do
1900-1	8	do do
1901-2	6	do do
1902-3	$2\frac{1}{2}$	do do
1903-4	$\frac{1}{2}$	do do

Were the period extended to 12 years, the annual appropriations would stand thus:—

1898-9	$9\frac{1}{2}$	million <i>yen</i> .
1899-0	7	do do
1900-1	5	do do
1901-2	4	do do
1902-3	$3\frac{1}{2}$	do do
1903-4	$3\frac{1}{2}$	do do
1904-5	3	do do
1905-6	$2\frac{1}{2}$	do do
1906-7	2	do do
1907-8	$\frac{1}{2}$	do do

Thus the relief in the approaching fiscal

year would be only 4 million *yen*, when the relief required is 15 millions. We suspect that the *Mainichi*, also, has only a fragmentary conception of the financial programme. Possibly the Cabinet itself has not yet mapped out anything final.

The first newspaper prosecution under the new Press Law has been inaugurated, the Public Procurator being the accuser, and the *Nichi Nichi Shimbun*, the *Tokyo Shimbun*, the *Chuo Shimbun* and the Tokyo News Agency, the defendants. The incriminated matter is a marching song (*Shinko-ka*) supplied by the News Agency and published by the above journals. The song is supposed to be sung by the Liberal Party in grand procession from the Office in Shiba to Ueyeno Park, and the author is said to be Mr. Komuro—a somewhat vague designation. The song runs thus:—

Senriyaku mubō musaku no hatushin wa
Tada kensei wo musaboorite kimi no tame
Mata kuni no tame nasu-beki jutsu wo shirasu
Zaisei funran shi kokken hoka ni kutsujyokushi
Senshō-koku no kungyō wa kiye use
Rikken seiji no tanamono wa horobi
Seme-yo togame yo daijin wo
Shiken ifuku wo senō shi
Kōron seigi wo fumi-yaburi
Kokuji wo ayamaru mono wa
Mina waga kokumin no hōtekiso
Fumpatsu seyo waga tomo yo
Atsumari kiteare shonin yo
Tiyu no hata wa nabiku nari
Tenchī ni hibiku hataraki wa
Imi ni koso ari okururu na.

Ministers without political project or plan,
 Grasping only at power and knowing naught
 Of the duty they owe to their Country and their
 Prince;
 The finances in disorder, the national prestige
 disgraced;
 The achievements of the victor-country marred
 and effaced;
 The gift of constitutional Government destroyed.
 Attack, accuse the Ministers!
 Assault, overthrow the Cabinet!
 Glorifying only in personal power and luxury,
 Trampling under foot public opinion and right,
 Blundering in every national affair—
 They are all the public foes of our people.
 Stir yourselves our partisans!
 Assemble, come together one and all!
 The flag of liberty waves;
 Delay not! Now is the time
 To do a deed that shall sound to the skies.

A pretty tall kind of ditty, it must be confessed. The foreign public will find it silly and hot-headed, but what the law will say remains to be seen.

The *Nichi Nichi Shimbun* confidently alleges that arrangements have been almost concluded for the sale of a long stretch of State Railways to the Japan Railway Company. The lines concerned are the Aomori-Igaraseki (35 miles 40 chains) and the Igaraseki-Fukushima (262 miles 46 chains), a total length of 297 miles 86 chains. The price is said to be about twenty million *yen*; a figure which seems scarcely credible since it represents over sixty-seven thousand *yen* a mile. The reason assigned for the sale is financial necessity, the Government not finding it desirable to float any part of the Public Undertakings Loan at present. We are in a position to say that the statement is erroneous. No such arrangement has been effected, and seeing that it could not be effected without the consent of the Diet, we find it surprising that the *Nichi Nichi* should have published it.

The Hawaiian question continues to be discussed by the vernacular press, the *Mainichi* especially professing to be in a position to state the arguments advanced by the Japanese Government in its last communication to Washington. We have

already explained clearly the attitude that we believe to have been assumed by the Foreign Office in Tokyo, and nothing subsequently published by vernacular newspapers appears to be as accurate as our own version. There is, consequently, no occasion to reproduce the *Mainichi's* note, above all in view of the fact that the American Senate is not likely to take any action with regard to the annexation question before next December.

With reference to the above, a strange statement is made by the *Chuo Shimbun*. It is to the effect that before the Annexation Treaty was sent by the President to the Senate, the Secretary of State asked Mr. Hoshi Toru, the Japanese Representative in Washington, what view he entertained on the subject. Mr. Hoshi replied that, in his private capacity, he had no objection to offer, but if he were required to speak in his capacity as Japanese Representative, he must await the instructions of his Government. The *Chuo* adds that so soon as the above conversation was telegraphed to the Foreign Office in Tokyo, Mr. Hoshi was instructed that he had been very injudicious, and he is now in bad odour at the Foreign Office, Count Okuma being much annoyed about the line taken by him. We (*Japan Mail*) do not think that the slightest faith can be placed in the *Chuo's* story. Not only would Mr. Hoshi have been most unlikely to commit himself to such a declaration, but the incident is altogether inconsistent with the intelligence already published about the communications that passed between the Secretary of State and Mr. Hoshi on the subject of the Treaty.

The idea that the rate of the Land Tax should be doubled seems to be gaining ground. We find it now advanced by the *Nichi Nichi Shimbun*. The argument is that the present rate was fixed on the basis of the price of rice, when the ratio between gold and silver was 1 to 16.17. The system of national currency was then gold monometallic. Subsequently it became bimetallic, and finally silver monometallic, and now gold monometallism has been once more adopted, the ratio being fixed at 32.34 to 1. In short, the original tax, assessed in gold, was exactly twice the tax now levied under the new gold system. There would, therefore, be nothing harsh or unjust in doubling the rate of the tax. The result to the Treasury would be an additional income of about 38 million yen annually, which would, of course, make everything very easy and pleasant. It must be confessed that the times have greatly changed if the project of doubling the rate of the Land Tax can be calmly mooted. Six years ago, the cry was all for reducing the rate. That was the great bone of contention between the Diet and the Government in the early days of parliamentary institutions. Is it conceivable that the House of Representatives could be induced to vote for doubling the rate? We doubt it. If such a project be pressed, it will probably constitute a new line of cleavage in political circles.

The following items of intelligence are contained in a report from the Governor-General's office in Formosa, dated the 24th of June at Taipeh:—

On the 9th of June, a detachment from the garrison of Chin-keuk-ching, numbering 23 of all ranks, and a gendarme, pro-

ceeded to Lo-tin-hang and killed six rebels.

On the 11th of June, Ensign Yamamoto Shogoro, belonging to the second Regiment, now garrisoning Fat-lai, was returning from She-hang, whither he had proceeded to make a search, when he was drowned in a flood.

On the 15th of June, news having been received that 30 rebels were assembled at Fak-tak-kong, in the house of one of the inhabitants, Lieut. Yamada marched from Tau-wei with thirty-three men, killed 3 of the rebels, scattered the remainder, and took three field-pieces and 130 rounds of ammunition.

On the 19th of June, Captain Morita, who commands the garrison at Tau-wei, attacked 30 rebels at Tai-chok-wei, killed 5 of them and took 23 prisoners.

On the 19th of June, Ensign Ban Kihachi marched with 56 men from the Tai-faham garrison, and relieved the detachment at Sam-kok-chung.

On the 19th of June, Sergeant-Major Takeda, with a party of police, drove out twenty-odd rebels who were in hiding at Hau-liu-an, killing one of them.

It is stated that the Emperor has given the name "Shin-taka-yama" to Mount Morrison in Formosa. "Shin-taka-yama" means "new high mountain."

We read in an exchange that the building of Bartlett Hall in Knoxville has brought into prominence the name of Mr. Takahashi Kin, a Japanese student. Here is what the *Knoxville Daily Journal* has to say about him:—

"The scheme for the building was proposed by Mr. Kin Takahashi, a student from Japan. The scheme was that the students begin making practical demand for the desired building by burning their own bricks. The scheme was adopted and the students went to work. They burned 300,000 and this summer they will burn 150,000 more. In this manner they will have saved some \$2,000. Where there is such demand for a good cause there is some supply. The boys continued to work and pray and to give and ask others to give. Thus beginning without one cent they laid the foundation for the building they need, one modern and sufficient in all its apartments, and when the foundation was finished they were not one cent in debt.

To the generosity of kind friends in Chicago, New York, Wilkesbare, Philadelphia, Cleveland, and many other cities, this is largely due. The students and college faculty are deeply appreciative of this fact and it gives them great pleasure in thankfulness send them reports of the triumphant laying of the corner stone and of the cordial support given to the movement at home.

Kin Takahashi is one of the most picturesque characters of Maryville college, and his many excellent qualities stamp him as a man of sterling worth. Certainly the launching of the present scheme and the direction of his energies with so telling effect in its execution distinguish him as a leader among the Christian college men of the south. He entered this great work in faith and in that faith he yet abides. None who know him doubt his sincerity in the cause or his gratefulness for assistance rendered. He was a senior two years, yet he has remained after graduation to see the building stand complete. When it is finished he will return to his home, which he left years ago. Across the seas great things await Kin. A Christian education and a son of the Orient his people will hear him and he will surely take them only the best. He is prepared for the work and they prepared to receive him, while friends here in America are demanding much for him and are united in wishing him every good thing. Kin is appreciative of this latter fact, but because he is devout you can read in his face his trust and know his strength and tenderness are in that he knows in whom he has believed because the Lord is his shepherd.

The Minister of Home Affairs is reported as having delivered a speech on the subject of prison improvement to the Council of Prison Authorities. Among

various necessary reforms Count Kabayama found none so urgent as the reconstruction of prison buildings. The expenditure involved would be very great, but the reform must be undertaken, not alone in the interests of the prisoners themselves, but also in view of the near approach of the time when the Revised Treaties will go into operation. The Government was determined to put the matter through. Another point was the distinction that should be made in the treatment of prisoners according to their age and physical condition, and also in view of the great difference between the habits and customs of foreigners and those of the Japanese. Count Kabayama then referred to the effect of prison discipline in turning men from their evil ways. He did not think that any success was achieved in that direction in Japan, and in proof of his assertion he adduced the case of the prisoners released at the time of the recent amnesty. Instead of appreciating the generosity shown them and mending their ways, many of them had again violated the law. The money granted by the Emperor to the localities after the death of the Empress Dowager ought to be made the nucleus of a prison-gate fund, to save time-expired convicts from lapsing again into evil ways.

With reference to the Council of Authorities, which commenced its sittings on the 3rd instant, it is stated that twenty points have been submitted for its consideration by the Government, of which the principal relate to the manner of dealing with foreigners arrested after the Revised Treaties go into force. Three of these points are said to be:—(1) The question of providing for foreign prisoners clothes and food different from those provided for Japanese prisoners. (2) The question of the kind of labour to which foreign convicts should be put. (3) The question whether prison officials should study a foreign language. Attention is also to be given to the problem of making an appropriation from the Treasury in aid of prison reconstruction, seeing that the local funds available for that purpose are insufficient. The Diet will probably be asked, next session, to pass a vote for that purpose.

According to the *Yamiori Shimbun*, the long mooted problem of appointing Counsellors of *Chokunin* rank in the Departments of State is likely to be solved immediately after the Premier's return from Kyoto. The following nominations will be made in a few days, adds our contemporary:—Mr. Ozaki Yukio to the Department of Foreign Affairs; Mr. Shiba Shiro to the Department of Agriculture and Commerce; and Mr. Gamo Sen to the Department of Colonization. These three gentlemen are prominent members of the House of Representatives.

Hisshi undo no nochi are the words employed by the Central Tea Guild's New York Agents to describe the nature of their fight against the proposed import duty of fifty cents a pound. A Japanese uses *hisshi* when he speaks of "fighting for bare life." We wonder what is implied by the expression "life-and-death agitation." What have the agents been doing, and is there a big bill coming by post?

The *Fiji Shimpō* publishes a telegram from Söul, dated the 5th instant, to the effect that the Korean Government, inde-

pendently of its treaty with Japan, intends to open Mokpho and Chinnampho to foreign trade from the 1st of October next. An intimation in that sense has been conveyed to the Foreign Representatives. The opening will be effected by royal ordinance, and the rules relating to the Settlements will be compiled after consultation with the various Legation.

The recent rapid rise in the price of rice has produced a degree of excitement that threatens to push men to lawless measures. On the 5th instant the first sales of September rice commenced in the Tokyo market, and before long things grew very lively. About fifty desperate characters arrived upon the scene, led by Messrs. Deko-iwa and Hirano, of Nippon-bashi notoriety. They declared that they intended to assist the "bears" at all costs, and it was understood that each carried a dirk which he was quite prepared to use, the intention being to spring in and put to the sword any buyer, friend or foe, that ventured to bid thirteen *yen* and a half (per *Aoku*). The buyers, intimidated by this demonstration, started the price at twenty-six *sen* lower than the quotation of the previous day, so that the market opened at 12.84 *yen*, and gradually declined to 12.80 *yen*. Thereat the leader of the "bulls," Mr. Shima Kei, grew excited, and began to bid up, until 12.89 was reached, when a *soshi* "danced" out of the crowd, and calling out "Hold on, Shima Kei," sprang upon the latter and dealt him three or four blows. The assailant was promptly arrested by the police. He declared that he had not acted at anybody's instigation, but had merely been prompted by a feeling of pity for the sufferings that such prices must entail. Meanwhile a party of men with a band and a flag assembled near the offices of the brokers, and called out that the "bulls" ought to be attacked. It was a hot scene, but nothing serious resulted.

A point is raised in connection with the general election of members of the House of Representatives, which takes place next year. The term of membership is four years full, and the present members having been elected on September 1st, 1894, retain their right of membership until September 1st, 1898. But the law provides that the ordinary general election shall take place on July 1st. There is thus an evident difficulty. It will be overcome, says the *Miyako Shimbun*, by holding the elections at the time indicated by law, but allowing the old members to remain nominally members until Sept. 1st.

Mr. Kawashima, President of the new Industrial Bank, has been expressing his views about the new taxes that will have to be imposed for budgetary purposes. He speaks, first, of what he calls *Buppin Shōhi-zei*, or "tax on articles of consumption." This he divides into two classes, namely, a tax on retail transactions in alcoholic beverages, and a tax on wholesale houses dealing in sugar, oil, candles and paper. As to the former impost, it would be levied on clear *saké*, beer, claret and all alcoholic beverages, the rate being from 5 to 10 per cent. the cost of each bottle or cask sold by a brewer or wholesale dealer to a retailer. The method of collecting would be by means of stamps. Mr. Kawashima insists that such a tax would be quite distinct from the impost on brewers of *saké*, since it would fall entirely on

consumers, but we fail to appreciate that difference. He thinks that, if properly manipulated, the tax would yield a revenue of from five to six million *yen* annually. With regard to the tax on the consumption of sugar, oil, candles, and paper, his plan is to have middle-men dealing in those articles alone, whether of foreign or of domestic production, and to make them all pay a fixed amount. In levying the tax, he would follow the methods prescribed in the Alcohol Tax. An income of ten million *yen* might easily be obtained, he thinks. His next project is a large extension of the stamp tax. Thus the shares of all companies, acknowledgements of debt, schedules of the property of nobles, documents relating to the leasing or renting of houses, publications, and advertisements, would have to be stamped. So also would have to be railway and steam-ship tickets, and tickets for the carriage of goods, for admission to theatres, and all places of public entertainment. Finally Mr. Kawashima proposes to increase the tax on urban building lands, as suggested by the Diet last session. Two millions are procurable from that source.

The Commencement Exercises of the Academy of Music in Ueno Park are announced to take place on Saturday at 3 p.m. The following is the programme:—

PROGRAMME.

- I. Report by Mr. Uehara, Manager of the Academy.
- II. Presentation of Diplomas.
- III. Address to the Graduating Class by Mr. Kanō, Director of the High Normal School.
- IV. Address by His Excellency the Minister of State for Education.
- V. Response by the Representative of the Graduating Class.
1. Chorus:—
 - a. Der alte Barbarossa, ("O-tō no Miya" by M. Kurokawa, *Bungakuhakushi*) Friedrich Silcher.
 - b. Segen des Wortes Gottes, ("Megumi" by Mr. Hatano).....Ludwig Hellwig.
2. Piano Solo:—
 - a. WiegenliedchenSchumann.
 - b. TarantelleLoeschhorn.
 Mr. Hashimoto, *Graduate*.
3. Chorus:—
 - a. Waldstille, ("Sanchyū Yūkan" by M. Kurokawa, *Bungakuhakushi*)Boenicke.
 - b. Das Vaterland, ("Amatsu Hitsugi" by Mr. Owada).....Reichardt.
4. Organ Duet:—Sonata I.....Bach. Messrs. Kōyama and Amaya, *Graduates*.
5. Chorus:—Seasons, ("Okuno no Karikura" by Mr. Torii)Haydn.
6. Violin:—
 - a. Lied, (with Organ)Schubert.
 - b. Kleine Fantasie über eine russischen Melodie, (with Piano)Blumenstengel. *Graduates* and others.
7. Chorus:—
 - a. Robert der Teufel, ("Hashiki waga tomo" by Mr. Nakamura)Meyerbeer.
 - b. Es ist das Glück ein plüchtig Ding, ("Shōnen oi yasushi" by Mr. Hatano).....Dürner.

We referred in a recent issue to the fact that the increased import duty on Japanese *saké* entering Hawaii had been levied from the 1st of July, despite the protests of the Japanese Government. A paragraph in the *Mainichi Shimbun* explains the matter, and it seems desirable that the facts advanced by our contemporary should be made known to our readers. The imposition of the increased duty in question was duly discussed by the Hawaiian Legislature some time ago, and the proposal having been approved, was embodied in a law and promulgated. Not until after the promulgation of the law was any objection raised by the Japanese Government, and it could scarcely have been expected that the law would be at

once suspended or modified in consideration of that objection. Had a protest been lodged before the project of law was submitted to parliament, the situation would be different. But that precaution not having been taken, nothing remains now except to pay the tax. The Hawaiian Government has been approached on the subject, and may possibly agree to reduce the tax to the old figure—15 cents a barrel—in which event the surplus will be returned to importers. But in the meanwhile there is no just cause of complaint, nor can Hawaii be said to have disregarded Japan's protest, inasmuch as the law in question was promulgated before any protest had been made.

Even the *Fiji Shimpō* has a paragraph about the projected purchase of coal mines by foreigners. The particular firm to which the intention is attributed by our contemporary is the Pacific Mail S.S. Company, which is supposed to have conceived the programme of supplying its own steamers from its own mine and placing the remaining output on the market. A very sensible enterprise, doubtless, but we are not disposed to place any credit in the rumour. Possibly, in view of the recent rise in the price of coal, the P.M. Company is taking some special steps to obtain a supply on reasonable terms, but between that and buying a mine there is a wide interval. Mines in Japan can not be bought by foreigners—or, to speak more accurately, can not be lawfully held by foreigners in their own names—and the idea of acquiring a mine and working it under nominal Japanese ownership is not likely to commend itself to any prudent foreigner.

A mysterious paragraph appears in the *Yorodzu Choho* to the effect that a plot is on foot to undermine the influence of the Mitsubishi Company. The chief plotters are said to be Mr. Nakano Buyei in Tokyo and Messrs. Kimura Riyemon and Hirayama Senzo in Yokohama. These gentlemen are credited with the singular belief that the days of the Nippon Yusen Kaisha are numbered, and that public opinion being hostile to the Bank of Japan, the latter's power of issuing convertible notes may be withdrawn, by some process or other. The paragraph says that in Osaka the scheme has some five hundred supporters, who intend to apply themselves zealously and vigorously to the accomplishment of their aim. We do not understand the thing in the least, and the *Yorodzu Choho* is obviously not more enlightened, but it calls the affair a very "interesting secret plot," so perhaps our readers will be entertained by hearing of it.

It is stated that the Nobles' School (*Gakushuin*) is to be moved to Takata, the south-western suburb of Tokyo, and that the Nobles' Club will put up seven hundred hundred thousand *yen* by way of endowment. Prince Konoye, the President of the Club, submitted the project for the new building and the educational divisions to the Imperial Household Department on the 6th instant, and it is expected that the Emperor's sanction will be obtained immediately after His Majesty's return to Tokyo. The programme includes a university connected with the School, and the work of building is to commence from February next.

FAREWELL DINNER TO MR. E. DUN AND MR. BLABON.

On the evening of the 5th instant the President and Directors of the Nippon Yusen Kaisha entertained a large party at dinner in the Imperial Hotel by way of farewell to the ex-Minister of the United States, Mr. E. Dun, and Mr. Blabon, a Director of the Great Northern Railway Company. Their Excellencies Count Okuma and Viscount Nomura were among the guests, as were several of the leading business men of the capital. Twenty-six sat down to dinner in the Western dining-room, which was beautifully decorated with a mass of greenery and lanterns of various colours. Mr. Kondo, President of the Nippon Yusen Kaisha, who occupied the chair, proposed the toast of the evening, speaking with all the ease and polish that distinguish Japanese orators. His remarks were rendered into English by Mr. Hayashi, the Yokohama Manager of the Company, whose pronunciation and elocution elicited much applause. Mr. Kondo said:—

YOUR EXCELLENCIES AND GENTLEMEN.—Mr. Blabon, who has been visiting this country, representing Mr. President Hill, of the Great Northern Railway, having just returned from a flying visit to Shanghai and Hongkong, is now about to return to his own country, and at the same time H. E. Mr. Dun, late resident Minister of the U.S., being also about to proceed to America, I took the liberty of asking these gentlemen to give us the pleasure of their company at dinner this evening, to let us have the opportunity of saying farewell, and I must thank these gentlemen and their Excellencies the Minister of Foreign Affairs and the Minister of Communications, and all the other gentlemen present who do me the honour of attending here this evening in spite of their many pressing engagements. The idea of opening an American route by the Nippon Yusen Kaisha with the co-operation of the Great Northern Railway Company, was first broached several years ago. Since then the negotiations were step by step proceeded with, until in July, last year, we were enabled to close the contract with the Great Northern Railway Company, and to open our American line. The Great Northern Railway Company, which was first established in 1890, is a large and influential Company of forty million dollars' capital, and although it is barely seven years since its establishment, the Company possesses not only over 5,152 miles of Railroads now working, but also to steamships on the American Lakes averaging about 4,000 tons, under its control, the whole concern being under the able and experienced direction of Mr. President Hill, and his able staff, of which Mr. Blabon is a prominent official. The future advancement and prospects of such a Company are assured, and I consider it to be a great honour for N.Y.K. to be able to share the business interests with such a Company in undertaking the Trans-Pacific connection. Although scarcely a year has elapsed since that event, the connections between the Great Northern Railway Company and the Nippon Yusen Kaisha have grown far closer than before, and judging from our past experience, the line seems to be making most encouraging progress, when we consider the short time it has been in operation, and I firmly believe that if this state of things can be maintained in the future, the most favourable results will before long be obtained. As you are well aware that as one of our national undertakings, resulting from the late war with China, our Company has, since last year, opened new steamship lines to Europe and Australia, in consequence of which our business transactions both at home and abroad have suddenly and greatly increased, preventing us, I regret to say, from putting our whole energy into the working of our American business, which in turn hindered us from gaining complete satisfaction, not only from the Great Northern Railway Company, but also from the people of the United States; and I feel sincerely sorry that as regards the object of Mr. Blabon's mission we have not been able to entirely meet the views conveyed by him as we should have wished. However, as the Great Northern Railway Company are sparing no effort in the development of our trade since opening the line, for which we are very grateful, and upon which we place our great reliance, we shall also gradually further our efforts, and I sincerely

expect that there will soon be a time when we shall mutually share good results through the development of the trade. The present visit to this country of Mr. Blabon is one that we had always hoped for, and has enabled us to go fully into all the business details of importance. It is also most satisfactory that Mr. Blabon has personally seen the real state of our Company as well as that of Japan's finances at the present juncture, and I trust that his present visit will be productive of great effects upon the trade of the U.S. of America and Japan, not to mention increasingly improved relations between the G.N.R. Co. and the N.Y.K. The inauguration of our American service having taken place during H.E. Mr. Dun's residence in this country as United States Minister, I have now the great pleasure in communicating to His Excellency the results so far obtained by the said line on the eve of His Excellency's return to his country. Mr. Dun has been a resident in this country for the last 25 years, during which time he has ever been attentive to the maintenance of the warm relations between the two countries, and the fact of our having opened the American line being one that will tend to bring about such results, I trust it has given much satisfaction to him. While we feel sincere regret at losing Mr. Dun from this country we are in great hopes that when he returns to the United States he will be so good as to diffuse amongst the American people a knowledge of the true state of this country, and also the real circumstances of the minds of our people in regard to the United States, so that the intercourse between the two countries will henceforth become more free and sympathetic even than hitherto. I must express my great regret in my not having been able to show Mr. Blabon a proper reciprocation of the courtesy and kindness, which our Mr. Iwanaga and his party had the fortune of meeting while in the United States last year. I now sincerely and respectfully hope that Mr. Dun and Mr. Blabon will ever preserve the best of health, and conclude by wishing both gentlemen a safe and expeditious voyage to their respective homes.

Mr. Dun, who, on rising to respond, was received with loud cheers, said:—

MR. PRESIDENT, YOUR EXCELLENCIES AND GENTLEMEN.—Your great kindness in drinking my health has taken me somewhat by surprise. Owing to my absence from Tokyo, I failed to receive Mr. Kondo's kind invitation until this morning, and it did not occur to me even then that I should be called upon to speak this evening. I am, therefore, quite unprepared, and unfortunately preparation is most essential to one so deficient as I am in the faculty of after-dinner speaking. For your sakes, therefore, I shall limit myself to a few very brief remarks. I need scarcely say how much I feel, and how fully I appreciate, your goodness. It is in accord with all my experiences during my lengthy residence in Japan, to which Mr. Kondo has alluded, and concerning which I can assure him that it has been the happiest epoch of my life. I have heard, with much satisfaction, Mr. Kondo's description of the relations established between the great steamship company of which he is President and the Great Northern Railway Company, represented here this evening by Mr. Blabon. Nothing would please me better than to be able to preach upon such a text, but the technicalities of railway and steamship management are matters with which I can not claim any familiarity, and I have no doubt that Mr. Blabon will tell you all that is necessary. I should like to say, however, that in so far as the connexion between the two companies tends to promote closer relations between Japan and the United States, it is a matter of sincere congratulation and from that point of view I trust that Mr. Kondo's predictions of success will be more than justified by results. You have asked me, Mr. President, to contribute, as far as lies within my power, to a wider and better understanding of the kindly sentiments entertained towards my countrymen by the people of Japan. That is a task to which I shall devote myself with the utmost heartiness, for I have seen many evidences of those sentiments during my residence in Japan, and I can speak as one that knows. I thank you again very sincerely for the honour that you have paid me.

Mr. Blabon said:—

MR. PRESIDENT, YOUR EXCELLENCIES AND GENTLEMEN.—Permit me to thank you for the very kind manner in which you have drunk my health, and for the terms in which it was proposed. Mr. Kondo has been good enough to express regret that circumstances have prevented him from showing me all the attention and hospitality he could have wished. Well, I do not know by what standard these things are measured in Japan, but I do know that I have lived in a

perfect shower of hospitalities during my stay here. Entertainment has succeeded entertainment, and attention been heaped upon attention, so that, although I had heard a great deal about Japanese courtesy before I came to the East, the reality has far surpassed any expectation I might have founded on report. I am sorry that my stay has been so short, for I should have liked to look around a little more and examine the many subjects of interest that present themselves here. But I have seen enough to show me that you are an industrious people, an enterprising people, and a self-reliant people. I think I have seen, too, that while you are ready to adopt whatever good things foreign nations have to offer, you do not take any one country for your model. You do not propose to be a second Germany, or a second England, or a second United States. Your ambition is to go beyond any of these in your own way, and I think you are right to entertain independent hope of that kind. I should like it to be clearly understood that I did not come out here to make any investigations, or to carry an any scrutiny. It is true that the Company of which I am a humble official does not want to be associated with any failures. Had it not been well assured that no danger of that kind need be apprehended, it would not have entered into the association which this pleasant meeting helps to cement. We knew that we were dealing with the strongest shipping company in the Far East, and we were quite satisfied that the results would be good. So I did not come here to spy out the land. I came here simply to convey to you the good wishes of the Great Northern Railway Company. President Hill and the Directors thought that some such means should be adopted to show their appreciation of the connexion. It is true that I have made various business propositions to Mr. Kondo, and that he has made various propositions to me, and it is true that we have not entirely agreed upon every point. Mr. Kondo has his own standpoint for looking at things, and I do not by any means say that he is not right. At any rate I have learned a good deal from him. But what I want to make plain is that matters of that kind were not the purpose of my coming. I am here to convey to you an expression of the pleasure that our Company feels in the connexion with yours, and I beg you to accept my assurances on that point. At the same time, from what I have seen during my brief stay, I have formed an impression very different from the crude ideas that I had of Japan before I left the United States, and I carry away a strong conviction that you are going to succeed in what you undertake, not merely because you have succeeded thus far, but because, if I may be allowed to say so, you have the elements that ensure success. I only wish that I could see similar energy and enterprise exercised in the cause of my own country's trade in Japan, but I am bound to say that there appears to be great room for improvement in that field. I thank you again for your kind hospitality, not only on my own account, but also on behalf of the Company that I represent.

HIGHER COMMERCIAL SCHOOL.

The graduating exercises of the Higher Commercial School took place in the Lecture Hall of the above institution last Tuesday and eighty-four students were graduated. In the course of the Director's address he drew the attention of the audience to a life-size portrait of Mr. Shibasawa Eiichi that hung upon the wall, which had been "unveiled," so to speak, on that day in commemoration of that gentleman's constant and earnest interest in behalf of the institution ever since its foundation in the 8th year of *Meiji*. Mr. Shibasawa, at the close of his usually fluent and interesting address, in a few apt words, said that he would feel reluctant to have such an honour done to him personally but would accept it most gratefully on behalf of the cause of commercial education in Japan. Mr. Masuda Takashi then made an instructive address, in the course of which he said that he regretted the almost universal desire of the graduates of the institution to go either to Europe or America, for in his opinion China was, from more than one consideration, the field of operation for Japanese traders. The Minister of Education, Marquis Hachisuka, also read an address. Addresses were expected from Count Okuma, Minister of Agriculture and Commerce, and Mr. Takashima Kayemon, but both gentlemen were unavoidably prevented from taking part in the

exercises. The guests present were Marquis Kuga, Mayor of Tokyo, H.E. K. Tsuzuki, Vice-Minister of Education; President A. Hamano, and several professors of the Imperial University; Mr. R. Kondo, President of the Nippon Yusen Kaisha; Mr. S. Takata, Director of the Bureau of Commerce; President Sameshima, of the Naval Academy; President Harada of To-yama Gakko, and others.

SILK FROM CHINA.

Japan has hitherto received a very considerable amount of imports from foreign countries, but she had to a very small extent supplied her market with commodities from China. Before the war with the Celestial Empire the public scarcely knew anything of the import trade of Japan with China. After the war, however, things began to present a different aspect. The import of silk textiles from China suddenly and considerably increased. The following table shows the amount of silk imported from China at various ports of Japan, during the past two years:—

IMPORTED AT KOBE.				
	28th year, 1895.		29th year, 1896.	
	Tan.	Value, Yen.	Tan.	Value, Yen.
Crépe	2,824...	20,118...	7,932...	50,662
Pongees	26,384...	59,350...	56,666...	130,638
Satin	2,077...	49,202...	4,089...	79,668
Silk Damasks ...	1,748...	22,825...	2,293...	21,402
IMPORTED AT YOKOHAMA.				
Crépe	54...	551...	101...	1,254
Pongees	4,070...	11,954...	5,795...	18,543
Satin	1,298...	27,083...	1,877...	42,219
Aya	997...	1,167...	1,800...	1,598

IMPORTED AT NAGASAKI.			
Crépe.....	2,100...	20,962...	2,635... 28,932
Pongees.....	1,902...	5,571...	4,245... 15,331
Satin	2,997...	63,063...	4,444... 101,899
Aya	1,002...	4,514...	4,164... 11,124

Comparing the figures for the 28th or 29th year with the quantity imported in the 26th or 27th years of Meiji, it will be found that the trade has more than trebled, and the import for this year is supposed to have increased to a still greater amount.

With regard to this steady increase in the import of Chinese fabrics, it is alleged that the durability and delicacy of the goods, as well as their comparatively low cost, are among the chief causes of their popularity.

THE GERMAN REPRESENTATIVE AND THE TRAIN ROBBERS.

It turns out that the detailed accounts published by the vernacular press and reproduced in these columns with reference to a robbery of which Major von Treutler was said to be one of the victims, while en route by train from Tokyo to Kyoto, was made out of the whitest of whole cloth. Nothing of the kind occurred. The through journey was performed without mishap of any kind, so far as Major von Treutler was concerned. It is a quaint instance of the tales manufactured from time to time by newspaper reporters. Somebody else may have been robbed, perhaps, but even on that point we are now doubtful.

JAPANESE IN KOREA.

According to investigations completed at the end of May, Japanese residents in Seoul, says the *Nichi Nichi*, numbered 2,003, of whom 1,191 were males and 812 females, constituting altogether 482 families. These figures show an increase of 67 in population and 8 in families, as compared with the previous month. The Japanese population in Inchon aggregated 4,026, with 2,410 males and 1,616 females, in 748 families; showing an increase of 16 in population but a decrease of one family as compared with the previous month. Wonsan contains 4,034 Japanese, including 917 men and 517 women, constituting 318 families. The Japanese population had increased in this town by 48 (five families) as compared with the previous month.

JAPANESE SHIPS OF THE LINE.

The following table gives the names and tonnages of the war-vessels of Japan, their armaments and the year in which they were launched:—

	Tonnage.	Guns.	When launched.
<i>Fuji</i> (battleship) steel.....	12,649	38	1896
<i>Yashima</i> do do	12,517	38	1896
<i>Chinyen</i> * do do	7,335	20	1881
<i>Itsukushima</i> (coast defence) steel	4,278	33	1889
<i>Matsushima</i> (coast defence) steel	4,278	30	1890
<i>Hashidate</i> (coast defence) steel	4,278	31	1891
<i>Takasago</i> (cruiser) steel.....	4,227	30	1897
<i>Yoshino</i> do do	4,216	36	1892

Vessels now building are:—

Name.	Tonnage.	Guns.
<i>Shikishima</i> (battleship) steel	15,037	50
<i>Kasagi</i> (cruiser) steel	4,978	30
<i>Chitose</i> (cruiser) steel	4,836	30
<i>Akashi</i> (cruiser) steel	2,800	24
<i>Miyako</i> (despatch boat) steel	1,800	12

The *Akashi* and *Miyako* are to be launched this year. The other three vessels will be completed by the 32nd year of Meiji (1899). The *Shikishima* will be the largest battleship in the world. Besides the vessels enumerated above, there are torpedo-boats running from No. 1 to No. 29—with the exception of Nos. 16 and 22, the former having sunk off the coast of the Pescadores in 1895, and the latter having been destroyed at the time of a night attack on Weihai-wei. The number of vessels that have sunk or fallen into disuse is twenty-six in all.

* These were captured from China during the war. The *Kaikyo* is a vessel captured near Port Arthur. It is pretty old and is now undergoing repairs and re-armament.

COLLISION IN THE HARBOUR.

Shortly after the steamship *China*, Captain Seabury, had arrived at her moorings on Monday afternoon, the *Hakata Maru*, Captain Nivison, entered the harbour, and the fairway being blocked by men-of-war and merchant vessels, the only way for the *Hakata Maru* to pass in order to reach her moorings, was close under the stern of the *China*. In attempting this, with a strong flood tide setting in, she drifted against the *China's* stern, damaging her own port side slightly, from midships aft, and carrying away the *China's* stern railings and flag pole. When is the long talked of Harbour Master, or berthing officer, to be appointed?

SCHOOL OF THE MORNING STAR.

The annual ceremony of graduation and distributing prizes at the School of the Morning Star in Tokyo took place on the afternoon of the 7th instant. These affairs seem to assume greater importance year by year in the capital. Not merely the precincts of the school but also the vicinity presented a most busy scene on Wednesday, crowds of visitors attending from all parts of the city, as well as from Yokohama. The new buildings of the School, which are of spacious dimensions and excellent plan, were available for the occasion; a fortunate conjuncture, for even the large gymnasium in which the ceremony was held, barely sufficed to accommodate the throng of visitors, and assuredly the old school-room would have been quite inadequate. The buildings have not yet been ceiled or freed from scaffolding, and their interiors are still in a rough state, but the Director acted wisely in utilizing them for Wednesday's purposes. Sa Grandeur Mgr. Archbishop Osonf presided. The exercises performed by the students—of which we append the programme—evinced even more than the usual degree of industry and zeal on the part of the lads, and patience and high capacity for imparting instruction on the part of their teachers.

PROGRAMME.

Chœur d'Ouverture : *Que tout s'anime !*
Rogueries of Scapin, (Adapted from Molière).
Characters:—
Gérondo..... D. Ailion.
Leander..... R. Meiklejohn.
Uncle Tom..... S. Yamaguchi.
Scapin..... K. von Fallot.
Karl..... K. Thompson.
Les joyeux bandits. (Symphonie par F. von Suppé). Orchestre de l'Ecole.
Extraits du Cid. (P. Corneille).
Personnages:—
Don Diègue..... A. Jourdan.
Comte de Gormas..... M. Tsuchiya.
Don Rodrigue..... K. von Fallot.
Don Arias..... J. Gray.
Le Convoi du Rossignol. (Romance par Ch. Gounod). P. Harmand.
Die Raizenichen. (X. * * * *).
Personen:—
Dahlman..... I. Jesselsen.
Gimrod..... Cr. Esdale.
Der Mirth..... R. Baillod.
La Fille du Régiment, (Solo de violon par Donizetti). L. Rischow.
Ninjabakama. (Un "hakama" pour deux).
Takasago Hyôe..... Hong-Chow.
Umanosuke..... Y. Okuno.
Sumiyoshi Saemon..... Y. Kawamoro.
Dontarô..... J. Watanabe.
Valse de Faust. (Ch. Gounod)... { D. Ailion.
Le Lièvre et la Tortue. (W. Moreau)... Chœur.
Distribution des Prix.

INDIAN FAMINE RELIEF FUND.

Kobe papers print the following letter that Mr. J. C. Hall, H.B.M.'s Consul, has received in acknowledgement of the subscriptions sent from Kobe for the Indian Famine Relief Fund:—

Indian Famine Charitable Relief Fund,
Royal Exchange Building, Calcutta.
27th May, 1897.

DEAR SIR,—I beg to acknowledge your letter of the 29th April last received to-day. On behalf of my Committee and myself, and the famine stricken people of India, I tender our most grateful thanks to your subscribers, and though in these cases it is invidious to make any distinctions, I hope I may be allowed to thank specially those of Japanese nationality. Their sympathy and generosity has been deeply appreciated.

I have the honour to remain

Yours very faithfully,

FRANCIS W. MACLEAN,
Chairman,
Central Executive Committee.

RELIGIOUS FUTURE OF JAPAN.

MR. ARTHUR MAY KNAPP, in his recently published work, "Feudal and Modern Japan," expresses the opinion that the Japanese nation will never be converted to Christianity. The *Japan Times* endorses the prediction. The Rev. E. SNODGRASS disputes it. Mr SNODGRASS wants to know the reason why. So do we. So does everybody. Why should there be anything inherently impossible, or even improbable, in the idea of Japan's becoming Christianized? Mr. KNAPP and the *Japan Times* make the very suggestive assertion that "religiously and politically Japan will remain the unconquered Island Realm." If that statement is to be interpreted according to the rules of ordinary intelligence, it drags the question into the dust: it announces the victory of national prejudice over the forces of reason. We do not suppose that Japan's honour is concerned in upholding the cause of error. We do not imagine that she expects a crown of glory for clinging to her own creed without regard to its superiority or inferiority. Political independence is a very fine thing, but moral independence is a much finer, and moral independence does not signify slavish obedience to a form of faith merely because it is national. There are no distinctions of race where truth is concerned. If the truth is embodied in Christian doctrine, Christian doctrine will win the day. It would be a rational contention to deny that Christianity has any moral advantages over Buddhism or *Shinto*, and to take pride in its rejection by the Japanese from that point of view. But to sing a psalm because Christianity, being an alien creed, is kept at arm's length, is as rational as it would be to take pride in living in a wooden house because one's ancestors were unacquainted with the building uses of brick or stone. We do not intend to speak of Buddhism or *Shinto* as a false faith. We do not intend to institute any comparison whatever between the creeds in question. What we insist on is that racial prejudice, not reason, dictates the assertion, "religiously and politically Japan will remain the unconquered Island Realm," and racial prejudice is as much out of place in the field of moral philosophy as charcoal would be in a loaf of bread. Besides, it is historically false to say that Japan is religiously an unconquered realm, unless, indeed, the title "religion" be denied to Buddhism. Japan was "conquered" by Buddhism twelve centuries ago; conquered by an alien creed. It is true that RYOBEN, GYOGI, SAICHO, KUKAI and other propagandists of Buddhism paid Japan the compliment of adopting their doctrine to her traditions. They preached the identity of the tutelary deities and the Buddhist god, describing the former as successive manifestations of the latter. That facilitated matters per-

ceptibly, and very possibly formulators of the prophecy that Christianity must be re-modelled in order to suit the genius of Japan, may find a warrant for their contention in the eclecticism displayed by great teachers like DENGYO-DAISHI and KOBO-DAISHI in the ninth century. Still there is no getting over the fact that Buddhism invaded and conquered Japan, and that the creed which now holds the national fortress against the assaults of Christianity is no more indigenous than the doctrine of the Nazarene. Why, then, should not Japan receive the tenets of CHRIST as readily as she received those of TATHAGATA? The acceptance of the latter subjected her nationalism to a strain incomparably greater than that to which the acceptance of the former would subject it. At the time when the first image of AMIDA and the first *sutra* came to Japan, the nation worshipped only the terrestrial and celestial divinities, and, regarding the *Tenshi* as their incarnation, held him in supreme reverence. But the new creed imported from Korea taught that BUDDHA was the one supreme being, and that even the *Tenshi* must pay him homage. That was a complete subversal of the traditional cult. If ever patriotism should have been enlisted against an alien religion, that was the time. Patriotism, however, remained indifferent to the threatened invasion; a plague of boils proved a much more potent "defender of the faith." Christianity demands no sacrifice of any national sentiment. One of its mandates is "Fear GOD, honour the KING." There is a record that when the Emperor KIMMEI consulted his prime minister about the propriety of opening the doors to Buddhism, SOGA-NO-NAME replied that, since all nations in the West worshipped TATHAGATA, there seemed to be no reason why Japan should reject the doctrine. To-day we are told, in effect, that since Christianity is the creed of all Western nations, Japan must reject it. The spirit of enlightened liberalism has not grown, apparently, since the year 555 A.D. No one living in the times of OTA NOBUNAGA and KONISHI YUKINAGA could have pretended to think that Japan would never be converted to Christianity. On the contrary, every intelligent observer must have admitted that there was an imminent prospect of the Christianization of the whole people. Has Christian doctrine become tainted since that time? Has it lost anything of the truth that then made it powerful? Or have the Japanese themselves changed? They were persecuted, indeed. Many of them died the martyr's death. Many of them lost their worldly possessions. Many were condemned to misery or exile. But to have vindicated truth by suffering for it has never begotten bigotry in error. We can not believe that because the Japanese of the seventeenth century were driven, at the point of the sword, to trample on the Cross, they

developed a hereditary desire to set their feet on the sacred symbol. Neither can we believe that the "Bateren" prejudice, which grew out of the blunders of Christian propagandists and out of the real or pretended association of politics with religion, blinds the eyes of modern Japanese. Why, then, we repeat, should there be anything inherently impossible, or even improbable, in the Christianization of Japan? One of the latest teachings of wisdom is embodied in the saying that the nearer a man believes himself to the truth, the farther he is from it. The moral attitude of all should be one of frank inquiry. Japan has not reached the goal. She can not retire into a shell of self-complacency, and close her ears to the echoes of the great controversy in which all the intellectual earnestness of the civilized world is engaged. It is either pitiable bigotry or a most insulting libel to say that this country in beyond the reach of any religious influence coming from without.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

We now fulfil the promise made in our last summary respecting Mr. Sakamoto Seitoku's *Shinkyō Tetsugaku*. There have been many attempts to revive Shintō during the Meiji era. This of Mr. Sakamoto and his fellow-thinkers is not only the latest but the most philosophical. The author of the treatise under consideration fully realises that if a religion is to hold its own in the last decade of the nineteenth century, it must be capable of being stated in terms sufficiently rational to invite the respect of intellectual men. That Mr. Sakamoto contends is the case with Shintō, properly understood and interpreted. But we will allow our readers to judge for themselves by placing before them the chief ideas insisted on in the monograph. There are three things essential to the prosperity of a nation: (1) Morality; (2) Industrial and commercial activity; (3) Naval and Military power. In the two last Japan is making rapid progress, but in the first, the most important of all, she is gravely deficient in these modern days. Buddhism and Confucianism, both of which in former times contributed largely to moral enlightenment, have become corrupt and have lost their influence over men's minds. Christianity has elements which are anti-national and its doctrines are by no means of a class to commend themselves to our minds. As for Shintō, as hitherto understood, it would not be true to say that it is of a character to exercise adequate control over men's lives. The Shintō of our sacred books, according to which Japan is the chosen country of the gods and her people are the objects of their care, is little known. That learned men who are versed in our national history should turn atheists is utterly astounding. It can only be accounted for by considering how neglectful Shintoists have been in expounding the doctrines of their religion. With a view to remedying this defect, it is proposed to found a new Society to be called the 大覺神教協會 *Taigaku-Shinkyō Kyōkai** (An association for the attainment of a thorough knowledge of Shintō). To this body should be entrusted the task of compiling books on practical morality designed for popular use. The doctrines which it is important to teach by means of these books may be stated as follows:—(1) The universe is without beginning and without end and extends through all space. In it there is one supreme god only:—Ame-no-mi-nakanushi-no-kami,

* The terms 大覺 and 神教 are used by Shintoists, the first as the equivalent of a thorough knowledge, and the second as the equivalent of partial knowledge, of the religion.

(*Kami no Tet to wa ni (=) ni shite itsu; itsu ni shite ni (=)*). The attributes of this God are intelligence, valour and love (智 *chi*, 勇 *yū*, 愛 *ai*). (2) By means of his spirit (靈 *rei*) and vital energy (氣 *ki*) the god Takami-musubi and the goddess Kammi-musubi were created. These forming a trinity in unity and unity in trinity. From these gods came a variety of other deities and the parents of the human race, Izanagi and Izanami. Man's spirit was derived from God's spirit and hence is immortal. His body was made by means of God's vital energy, but did not receive a sufficient quantity of it to be capable of existing for ever. This original nature was neither good nor bad. The union of spirit with flesh has given rise to a number of feelings, which contend with each other for supremacy in man's heart. (4) Man's duty lies in cultivating the three divine virtues, intelligence, love, and courage. Derived from these are the seven virtues loyalty, filial piety, chastity, obedience to elder brothers, sincerity, truth in friendship, kind feeling (仁), and compassion for the unfortunate (*Megumi*). (5) The path of happiness is the path of virtue. (6) The lot of each man is settled by the gods. There is a law of cause and effect extending over two worlds, this one and the next. (7) By repentance even the greatest criminals may merit God's favour and forgiveness. (8) The actions of men are closely observed by the gods and rewards and punishments are meted out.

So far Mr. Sakamoto. Some of our readers will no doubt be aware that the system which is proposed as the basis of Twentieth Century Shinto is composed of elements by no means new. Not a few Japanese authorities are of opinion that the Shintō Cosmogony has been borrowed from China as well as its system of ethics. The very name Shintō (神道) is derived from the Chinese Classic called *易* *Yeki*, and to the same source may be traced the chief features of the account of creation furnished by Shintō authorities. Mr. Sakamoto's seven virtues are of Confucian origin, his doctrine of cause and effect (因果 *in-gwa*) comes from Buddhism, and his Trinity in Unity from Christianity. Hence Mr. Sakamoto's proposed system of Philosophical religion is essentially eclectic, and as such, if the history of similar attempts is to be a guide, cannot succeed.

In a report of a conference held at the Shokubutsu-en, Koishikawa, on April 21st, published in the *Nihon Shūkyō*, a curious fact is recorded bearing on the preparation of the translation of the *Yeki* 易 for exhibition at the Chicago World's Fair by Mr. Zumoto (of the *Tokyo Times*), and Mr. Sugiura. As is well known, the greatest living Japanese authority on the meaning of the *Yeki* 易 is Mr. Takashima Kayemon. Some four or five years ago, while staying at Ikao, Mr. Takashima became acquainted with a shampooer who had a most remarkable memory, whom he taught to repeat by heart the whole of *Yeki* 易 together with explanations of the difficult passages. Of that shampooer Mr. Zumoto made use in preparing his translation, thus obtaining an explanation of the meaning of obscure passages.

The *Nihon Shūkyō* publishes an article from a writer signing himself 東根, Tōkon, which discusses the contest now going on between Individualism, Nationalism and Cosmopolitanism. Nationalism has some very strong supporters. Not only is it advocated by magazines like the *Nihon-jin*, but it receives the support of scholars like Dr. Inouye Tetsujiro, Dr. Motora Yūjiro, Messrs. Yumoto Takehiko and Kimura Takatarō; and the Buddhists and Shintoists naturally favour the principle on religious grounds. In addition to this there is no doubt that the administration of the Mombushō under the late Viscount Inouye was intensely pro-national, the effects of which are still visible in various quarters. Tōkon is of opinion that neither Cosmopolitanism nor Individualism has much chance of asserting itself in this country. But there are journals like the

Rikugō Zasshi and the *Shūkyō* which maintain that the three principles are by no means irreconcilable and that it is desirable that they should modify each other.

In an article entitled *Dotoku-kai no Kinjō*, "The present state of the moral world," the *Tōyō-tetsugaku* observes that there is no doubt that the methods of teaching morality pursued by Shintoists, Confucianists and Buddhists are quite inefficient and out of date, and as for Christianity, its influence is not felt. There is no denying that men's minds have undergone great changes, and what is needed is moral teaching to suit the age; teaching that recognises and embodies the new ideas that have been adopted from the West. What we wish to recommend to religious teachers, says this organ, is more discernment in dealing with things as they actually exist. To attempt to get rid of many things that exist in the world is a fruitless task. The only course open to would-be reformers is to regulate and modify. It is customary to hear preachers denouncing riches, worldly power and reputation, the devouring of the weak by the strong (弱肉強食 *jakuniku-kyōshoku*), and warfare generally. But it is plain that, constituted as the world now is, these things are bound to exist, and hence the diminution of the evils incidental to them is all that can be accomplished.

The *Tōyō Tetsugaku* can see no good in the conferences between representatives of different religions that are taking place. For the sake of being friendly the discussion of points of difference is kept in abeyance, and hence nothing of permanent value is accomplished. That, we believe, is the opinion of a large number of Christian missionaries.

Under the heading of *Bukkyō-Kai no hyōsetsu Gakusha* (Buddhist thieving Scholars) the *Tōyō tetsugaku* accuses prominent Buddhists of the most flagrant plagiarism. It gives an instance of the publication of no less than ten volumes reprinted without any change from the works of various authors.

The *Shinri* has articles on "Meditation": "Do Christians know the position they now occupy?" (By the Rev. R. Minami); "Brahmanism" by Dr. Christlieb; "Do all living beings come from the same origin?" by the Rev. Heinrich Ritter. Mr. Minami takes a somewhat gloomy view of the position occupied by Christianity at the present day. The following is the gist of his remarks. Christians are far too apt to be lost in the contemplation of heavenly delights and to fail to realise the situation of things around them. No one well versed in the course of events during the past five or six years can deny that Christianity has lost ground. The nationalism encouraged by such leading scholars as Dr. Inouye Tetsujiro has done it very much harm. Dr. Inouye's book on the antagonism between the principles of Christianity and the principles which it is essential to insist on in Japanese education is read and discussed by school teachers and others throughout the length and breadth of the land. In former times, Christian schools were very numerous and no doubt exercised wide influence over the minds of the rising generation, but now Government schools have in most cases taken their place and these are anti-Christian. There are those that recommend combination with Shintō as a remedy for the present situation of affairs. But that is absurd. No union between two creeds is possible. The origin, history, and doctrines are all different. Christianity must be made to flourish on its own merits. In late years too much attention has been given to preaching and too little to education. In my opinion the most urgent duty to be undertaken is the opening of a number of elementary and middle schools where a religious as well as a secular education shall be imparted. Then more

* The full rendering would be *Yowai mono no niku wa tsuyoi mono no shokumotsu to naru*. We commend this term to the consideration of those who wonder why the Japanese are averse to the abandonment of Chinese ideographs.

should be done in the line of charity. The efforts hitherto made in that direction have been fitful and lacking in organisation. What is wanted is a system of charity that can be applied regularly and that can give relief to a great variety of sufferers.

The *Rikugōzasshi*, writing on the subject discussed above, says that Christians make a mistake in showing indifference to politics: the way to influence the thought and action of the nation is to take part in all public business. Christianity needs to identify itself more with Japanese national life. Christian ideas are to a large extent western ideas, and the progress of Western Civilisation and Christianity go hand in hand. Christians are as a rule versed in foreign ways, and hence, if they exert themselves, may play an important part in bringing foreigners and Japanese closer to each other. Intercourse between our people and foreigners ought to be rendered easy by the efforts of Japanese Christians.

The *Shūkyō* shows no signs of dearth of matter from month to month. In the number before us a great variety of subjects are discussed, all more or less connected with religion. There are articles on "Religion and the Spirit of the Time"; "Social Problems"; *Shintō*; "Mr. Murakami Senjō and the Otani Sect"; The attitude of school authorities to religion, and many others. On the last subject, the writer maintains that education without religion is a mistake, that there is no real opposition between the objects aimed at by education and those kept in view by the religious teacher. It is only a certain class of religious teaching that is opposed to the principles of educators in Japan. The majority of school teachers are ignorant as to what true religion consists of. It is the province of religion to furnish an ideal to education. Though there has been considerable discussion as to what is the ultimate object of man's existence, to me it appears plain, says the writer we are quoting, that man is destined to grow more and more perfect as time goes on till he becomes God-like. Those that have an ideal ever before them which they are striving to reach can afford to think lightly of the things of the world. That the youth of this country are being educated without a knowledge of such an ideal life is certainly a great calamity.

The new magazine, mentioned in a former summary, called the *Nihon Shugi*, is the organ of a small clique of scholars who aim at a revival of Shintō. Among them Dr. Inouye Tetsujiro, Dr. Motora Yūjiro, Messrs. Yumoto Takehiko, Kimura Takatarō, and Takenouchi Nanzō are the chief. They have formed an Association called the 大日本協會 *Dai Nihon Kyōkai*, and the above named magazine is an organ of the Society. The contention of these scholarly conservatives is that Japan is in danger of losing her nationality by wholesale borrowing from foreign countries; that an attempt must be made to exercise a strong influence on the sentiments of the masses, and that the best way to do that is to revive the worship of Japan's ancient gods. We cannot say that we follow the enunciation of principles published in the first number of the *Nihon Shugi*. In one sentence we are told that the members of the Nihon Kyōkai object to their body being called a religious body, as the term religion is associated with superstition (迷信); in another that they intend to encourage the worship of the national gods, who, as no doubt Dr. Inouye would admit, are no other than deified men. But we forbear from discussing these points and content ourselves with stating briefly the alleged objects of the new movement. The following heads are taken from the *Nihon Shugi*:—(1) The worship of the ancestors of the nation (*Kokuso wo sōhai su*). (2) 光明 *Kōmei wo mune to su*. The aim of the Association will in all things be publicity, openness, activity, enlightenment. (3) They will make much of this human life of ours and of its perpetuation and will discourage asceticism. (4)

They will endeavour to obtain the most perfect mental development attainable. (5) They will aim at purity and cleanliness of every kind. (6) The life of Society will occupy an important place in their thoughts. (7) National Consolidation will be one of their great objects. (8) Military power and skill will be held in honour. (9) They will endeavour to promote the cause of peace in every part of the world. (10) They will encourage friendliness of sentiment towards all men. Some writers complain, not without cause, of the vagueness of the above programme. In another part of the magazine we are informed that Christian morality is considered to be denationalising in tendency and hence must be rejected; that Buddhism encourages indifference to the things of this life and absorption of the attention on the future life, and consequently is injurious to the nation; and that Confucianism is altogether out of harmony with the spirit of the age and therefore can lend no assistance to the cause espoused by the new set of reformers.

The following items are from the *Kirisutokyo Shimbun*:—The President of the Meiji-gaku-in, the Rev. K. Ibuka, has gone to America to attend a great meeting of representatives of Young Men's Associations to be held in Northfield.

News from New York has been received announcing the arrival there of the famous Buddhist priest Shaku Kūen. As a traveller and investigator Mr. Shaku certainly has no equal in Japan. He is only 27 years of age, but has visited most of the great countries of the world. He went to India at the age of 15 and studied hard there for seven years. He then travelled through Afghanistan, Persia, Turkistan, Arabia, and various parts of Asia Minor; after visiting Palestine he went through Egypt, Turkey, Greece and subsequently traversed Italy, Russia, Austria, Germany, France, and England. The year before last, he set out on another tour, travelling through Mexico, Canada and America, and afterwards paying a second visit to Rome. He is now on his way home, but is engaged in certain religious investigations in New York.

Among students crime is on the increase. In Tōkyō alone, since the beginning of the year, more than 50 students have been arrested for theft. Suicides among this class are also becoming common. Mr. Matsumura Kaiseki has founded a society whose object it is to rescue students from a life of crime.

The *Kirisutokyo Shimbun* quotes Viscount Tani on the subject of conformation to the rites and ceremonies of other countries. Viscount Tani is of opinion that Christians are wrong in attempting to introduce Western religious ceremonies in the place of time-honoured Japanese rites. He calls attention to the fact that M. Boissonade, though a devout Christian, invariably took part in Shintō and Buddhist ceremonies when attending funerals and other public services, and that members of various nationalities have to compromise in the matter of outward forms. The refusal to do so often leads to great national discord. The Turks refuse to remove their turbans in deference to Russian custom, but it is said that a certain Chinese diplomat recognised the principle that when in Rome you must do as Rome does, and consented to do what in his own country would be considered humiliating. As long as the essentials of religion are retained, says Viscount Tani, liberty to leave national rites and ceremonies unchanged should be claimed by Japanese Christians.

The *Kirisutokyo Shimbun* perceives a worldly element in the various social schemes which have of late been set on foot by Christians. The essence of religion, says this organ, consists in the worship of God, in prayer and praise, and not in conducting bazaars, starting musical societies, or even in founding reformatories. The various works in which Christians are engaged, though their objects may be worthy, may, and often do, tend to divert the mind from those more spiritual duties on the performance

of which the development of their religious faculties depends.

We read in the *Seikyō Shimpō* that the Archbishop of Jerusalem has sent an image of Christ rising from the dead and certain relics to the Japanese Greek Church, the significance of which was explained in detail by Bishop Nicolai on the occasion of their first exhibition to the public. Portions of the wood of which the image is made were said to be taken from the remains of the wooden Church erected on the site of Christ's sepulchre many centuries ago. Bishop Nicolai observed that the Greek Church established in Jerusalem was to be regarded as the mother of the Japanese Greek Church, and that it was desirable that the closeness of their relationship should be recognised by Japanese converts. With a view of furthering that aim, the presents exhibited had been forwarded.

The *Bukkyō* pens some very severe strictures on the character of Buddhist priests in general. One thing it says is that the term priest may be regarded as a pronoun for the word fool—(*Sōryo wa baka no daimetishi to serare*). The charges brought are by no means new. Stated briefly, they amount to accusations of money-worship, place-worship, and general sycophancy. According to this authority, all that remains of Buddhism is its literature. Buddhists, in the true sense of the term, there are none. One great reason for the comparative success of Christianity in this country, says the *Bukkyō*, is the prominence given to the doctrine of the equality of all men—a doctrine that in Europe and America is carried into practice in a thousand ways. The poor are helped because they as human beings have equal claims on the Church with the rich. High and low, rich and poor are all alike to the heralds of the Cross. That is a doctrine which Buddhists sadly need to learn at the present time.

Foreigners interested in Japanese Buddhism will be glad to learn that at last the long promised Buddhist Encyclopedia, called the *Bukkyō Iroha Jiten*, has made its appearance. It covers 1,500 pages, contains one million ideographs, is published in 4 volumes, and sells at 2 yen 50 sen at the Keisei Shoin, Yoshinomachi, Asakusa, Tōkyō. The compiler is Mr. Wakahara Keikei and the revisor Dr. Nanjō, the famous Buddhist scholar. It contains biographies of all noted Japanese Buddhists, histories of the establishment of temples, sects, &c., explanations of obscure terms, Chinese and Sanscrit, and a great variety of other useful information.

The Shintō organ, the *Pui-itsu*, is very jubilant over the enterprise in which Dr. Inouye Tetsujirō and others have embarked—the revivification of Shintō by injections of philosophic elixir. The one thing that Shintō has lacked, says this organ, is a philosophy, and now we find a number of scholars, attracted by the solidity of the body known as Shintō, coming forward and undertaking to furnish it with a garment suited to the tastes of men in the last years of the nineteenth century. Hitherto Shintō has lived on from century to century without making any attempt to imitate Buddhism and Christianity in the adoption of attractive costumes or in assuming imposing attitudes, but she now makes this concession to the spirit of the age—she consents to clothe herself in philosophic dress!

Among Shintō sects the 實行教 *Yikō-Kyō*, of which Mr. Shibata Kei-ichi is the leading spirit, is by far the most liberally disposed towards alien religious bodies. In No. 55 of the magazine from which we have just quoted, mention is made of the umbrage caused among Shintoists generally by Mr. Shibata's overtures to Christian Ministers. The *Pui-itsu* defends the course adopted by Mr. Shibata, and adds that it ill-becomes earnest Shintoists to be slinging opprobrious epithets at Christians. The sect to which Mr. Shibata belongs dates from the closing days of the Ashi-

kaga Shogunate, when an earnest priest called Hasegawa Kakugyō, at the age of 18, felt so distressed at the civil strife and all its attendant evils under which the nation groaned, that he resolved to try what prayer and abstinence would do towards the deliverance of his fellow-countrymen from the miseries of their existence. He ascended Fuji-yama, entered the cave known as Hitoana, and there prayed that the land might be blessed with peace. Not long after, Japan's greatest hero, Hideyoshi Toyotomi, appeared, and the recluse lived to see his prayer answered. Since peace had been prayed for and peace had been granted, the sect which was founded by Hasegawa regarded it as its chief mission to preach peace to the world. Its object has ever been to pour oil on the turbulent waters of life, to promote concord between man and man, village and village and even between Japan and foreign countries. In fraternising with Christians at the Chicago Religious Conference, in extending the hand of friendship to men like Dr. Barrows, Mr. Shibata, says the *Pui-itsu*, is but acting up to the traditions of his sect, whose gospel is that of peace on earth and good-will toward men.

The great Daijingu festival held at Yamada, in Ise, which closed on May 18th, was attended by a vast concourse of people. The actual worshippers are stated to have numbered 250,000. Even the extra railway accommodation provided was not sufficient to meet the demand for seats. The takings of the tea-houses in the district are said to have exceeded the amount realised in three ordinary years.

The advice given to Christians by the *Seikai-no-nihon* is to make more use of lecturing and to publish better magazines than they now possess. There is a good deal of anti-foreign agitation going on among Buddhists and Shintoists. This can best be met by the establishment in Tōkyō of a thoroughly efficient lecturing society and the regular delivery in some large hall of Christian lectures.

The *Kokumin-no-tomo* observes that crimes of a thoroughly un-Japanese nature are largely on the increase, such as the murder of husbands by wives, parents by children, and the like. That is due to the general looseness of morality. The blow that science has dealt religion in this country, says this organ, is very serious. Religious doubt has resulted in an abandonment of the safe anchoring ground which in former times kept ships from going ashore. In proportion to the number of Buddhist and Shintō temples and the priests connected with them the moral results are lamentably poor. The following tables show the number of Shintō and Buddhist temples and priests, &c.

Year.	Shintō Temples.	Shintō Priests.
A.D. 1883	189,873	14,743
" 1885	192,176	14,670
" 1887	192,359	14,192
" 1889	193,291	14,665
" 1891	193,153	14,700
" 1893	193,430	14,751

Year.	Buddhist Temples (Tera).	Butsudō or Shrines.	Buddhist Priests.
A.D. 1883	72,017	32,194	56,803
" 1885	72,164	34,504	56,340
" 1887	71,988	35,334	56,280
" 1889	72,164	35,925	51,995
" 1891	71,859	35,959	52,511
" 1893	71,839	36,265	52,562

In addition to the above, there were in 1893 46 heads of sects, 143,375 instructors and 45,271 employes of various kinds. The maintenance of the foregoing, involves a large annual expenditure, for which the *Kokumin-no-tomo* maintains, there is no adequate return in the form of good received.

The *Kokumin-no-tomo* maintains that what passes as cosmopolitanism in this country is not the real article, but a clever counterfeit. To breadth of view and liberality of sentiment our contemporary has no objection, but to the scepticism to hide or excuse which cosmopolitan principles were professed by certain Japanese, it has a most decided aversion. The course of numerous young men is from ortho-

doxy to unitarianism and from unitarianism to secularism or atheism. There is nothing more injurious than the falsehood that resembles truth. Its speciousness causes it to retain a hold in the mind not possessed by errors that appear unmasked. The tendency on the part of professing Christians to join hands with Buddhists and Shintoists, to embark on a study of comparative religion, and the like, is not a healthy sign. It shows that religious zeal has cooled and that minds are seeking diversion outside the Christian church. That as an antidote to the intense nationalism displayed in some circles, the cause of cosmopolitanism should be championed is but right and proper, but the champions who have come to the front on this occasion are not working representatives of cosmopolitan principles as understood and practised in Western countries.

MISCELLANEOUS NOTES.

Whatever may be said in defence of protective tariffs, it is certain that they act like intoxicants: a nation that has once dosed itself with them finds that it can not overcome the habit. America makes an occasional break away from the pernicious system, but she comes back to it inevitably. She seems to be hopelessly pledged to the vicious principle that prosperity means the taxing of the many for the benefit of the few. The two great parties now stand on distinctly marked platforms: one is for high tariffs, the other for free silver on terms that represent a new and most perilous form of protection. Apparently the national mind has become imbued with protective doctrine. Of course the outcome of such a mood is socialism. From the theory that business should be protected against inconvenient competition by special artificial arrangements to the conviction that official power should be exercised in such a way as to make everybody happy and comfortable, the interval is not long. If the powers with which a Government is entrusted may be legitimately employed in the interests of producers, they must be legitimately employable in the interests of consumers also. The popular mind, slow to grasp great truths but sure to reach them in the long run, is plainly recognising that *sequitur*. And, of course, the recognition signifies socialism.

One of the Bryan Democratic organs writes in this quaint strain about President McKinley and Cuba:—"Apparently, he doesn't know whether a cyclone has struck Cuba, or whether the troubles of American citizens are caused by an earthquake or a tidal wave. But he admits that their condition is almost as bad as that of our own people will be as the result of the administrations of Cleveland and McKinley. Already in this country, where everything is peace, there are thousands of American citizens who are without work, food, or money. We know what has caused the trouble here, but what has caused it in Cuba? Mr. McKinley doesn't know. If he knew he would inform Congress and the country. But he's in the dark, and he doesn't want to commit himself to mere rumours. There has been, at odd moments, some talk of a war in Cuba. Mr. McKinley heard about it when he was in the West, but when he got to Washington, he met M. Dupeter De Lome, who informed him that the rumour of war in Cuba grew out of the fact that a warm bottle of sarsaparilla soda-water exploded in General Weyler's coat-tail pocket. The gist of Mr. McKinley's message is to the effect that certain American citizens in Cuba have become the victims of an unexpected train of circumstances, and he doesn't want them to be caught out in the rain. The action of Reed's House in refusing to consider Mr. Bailey's amendment to the Hitt resolution shows that the attitude of the Republican administration toward Cuba and Cuban liberty is precisely the same as that of Cleveland. The conclusion is inevitable that the same money syndicate which had a mortgage on Cleveland's views and acts owns the Republican Administration outright."

The *Inter-Ocean* of Chicago contains a sug-

gestive cartoon. On a highway stands a long-armed, decrepit looking individual, who seems to have just traced the word "Cuba" in the dust, and thrown down beside the device a flaming torch and a knife on whose broad blade is inscribed "massacre." Sweeping towards this diminutive figure is a huge waggon, labelled "aid for Americans in Cuba." It is drawn by an elephant and driven by Jonathan, who rings a big alarm bell as his immense equipage dashes towards the pigmy in the road. The picture bears the legend, "He will probably know enough to get out of the way."

Burns as a plagiarist is something new. He has, however, been convicted of plagiarism, and very flagrant plagiarism at that. It appears that the antiquary David Heard printed a miscellany when Burns was in his childhood, and that the book was probably in the hands of the poet as early as 1787. In its pages are to be found pieces which may be virtually called the originals of some of Burns' best known productions. For example the celebrated "Whistle and I'll come to you, my lad" appears in Heard's M.S. thus:—

"Whistle and I'll cum to ye, my lad!
Whistle and I'll cum to ye, my lad!
Gin father and mither and a' should gae mad,
Whistle and I'll cum to ye, my lad!"

The facts are brought out by Mr. Henley, in a new edition of Burns. *The Academy*, reviewing the work, divides Burns' songs into three classes; "first, those in which the song is written about a stanza or two from an older source; secondly, those which are more or less vamped from one or several other poems; and thirdly, the songs which are pure Burns, which is a small class." With reference to that exquisite ballad "My love is like a red red rose," the reviewer, says:—

Of the second class an admirable example is a poem into which Mr. Henley has gone minutely, with results so interesting that they would alone justify the value of his Notes. As this is a matter of closer comparison, we quote Burns' song entire:

'O, my love is like a red, red rose,
That's newly sprung in June;

'O, my love is like the melody
That's sweetly play'd in tune,

'As fair art thou, my bonnie lass,
Sae deep in love am I;
And I will love thee still, my dear
Till a' the seas gang dry,

'Till a' the seas gang dry, my dear,
And the rocks melt wi' the sun;
And I will love thee still, my dear,
While the sands o' life shall run.

'And fare thee weel, my only love,
And fare thee weel a while!
And I will come again, my love,
Tho' it were ten thousand mile!

This beautiful and famous song is almost entirely a cento from no fewer than four different sources, as Mr. Henley with great labour and clearness shows. The first stanza is from a black-letter, 'The Wanton Wife of Castle Gate':

'Her cheeks are like the Roses
That blossom fresh in June,
O, she's like a new-strung instrument
That's newly put in tune.'

The greater part of the second stanza is Burns (for anything yet known); but its last line and the whole of the third stanza are compounded from two different stanzas in a couple of songs, both in a collection which it is highly probable was in Burns' hands. (They are inscribed with his name in a boyish writing, says Mr. Henley, but the signature has not been authenticated.) One is:

'The Day shall turn to Night dear Love,
And the Rocks melt with the Sun,
Before that I prove false to thee,
Before my Life be gone, dear Love,
Before my Life be gone.'

The other runs:

'The seas they shall run dry,
And rocks melt into sands;
Then I'll love you still, my dear,
When all those things are done.'

The fourth stanza has a resemblance to one in the former of these two songs; but it appears to be derived more particularly from a chap-book poem in the British Museum, 'The True Lover's Farewell':

'Fare you well, my own true love,
And fare you well for a while,
And I will be sure to return back again,
If I go ten thousand mile.'

Here, then, thanks to Mr. Henley, we are able to show a perfect and undoubted example of our second class; a song which—except three lines—is entirely a

mosaic, as composite as the case of a caddis-worm. The piecing is done with admirable, even wonderful skill.

Mr. Henley's view of the matter is this:—

Here is Burns' chief claim to perennial acceptance. He passed the folk-song of his nation through the mint of his mind, and he reproduced it stamped with his image, and lettered with his superscription; so that for the world at large it exists, and will go on existing, not as he found, but as he left it. . . . No such artist in folk-song as he has ever worked in literature. But a hundred forgotten singers went to the making of his achievement and himself. He did not wholly originate those master-qualities—of fresh and taking simplicity, of vigour and directness, and happy and humorous ease, which have come to be regarded as distinctive of his verse; for all these things, together with much of the thought, the romance, and the sentiment for which we read and love him, were included in the estate which he inherited from his nameless forebears; and he so assimilated them that what is actually those forebears' legacy to him has come to be regarded as his gift to them. . . . He is thus national as no poet has ever been, and as no poet ever will, or even can be, again.

It is alleged that a new metal has been discovered. "In the island of Barbadoes, West Indies," says the *London Engineer*, "the discovery was made some months back of large quantities of a certain mineral—locally called 'Manjak'—which bids fair to outrival in point of utility all the similar substances that occur in various parts of the world. Manjak is of a black colour possessing high lustre, and having bright conchoidal fracture, an appearance closely resembling newly broken pitch. In Barbadoes it is found very near, and sometimes upon, the surface of the ground in seams varying from 1 foot to 2 feet in thickness, running usually at an angle of about 40° and in close proximity to rocks. It is supposed to have been formed by the drying up and consolidation of petroleum, which occurs in abundance in the same localities, and is often seen oozing out of the ground or floating down the streams. In composition it is not unlike Trinidad pitch, the Utah gilsonite, and the Canadian albertite, but is of superior quality to any of these. It is supposed to equal the Egyptian asphaltum in quality, but there is a doubt as to the correctness of this view. . . . Among the various uses to which Manjak has been successfully applied may be mentioned: 1. As insulation for electric wires. 2. As varnishes of the best quality. 3. As bituminous concrete in asphalt roads and pavements. 4. As patent fuel, mixed with peat or other organic matter. 5. In small percentages, as an intensifier of the illuminating power of coal gas. Such satisfactory results have been obtained by its use for insulation that it is expected by some experts that it will soon supplant rubber in all waterproof work."

The general view appears to be that the rebellion in Cuba is subsiding. Fighting is said to have come virtually to an end at the close of January, and the rebels, driven out of the four Western provinces, are now confined to Santiago, which has always been the final stronghold of insurrections in the island. Zarroga, who surrendered with the men under his command in April, is reported to have said that "the white insurgents were no longer in a position to carry on the struggle, and that, if Spain were to withdraw from Cuba at this date, the island would be completely at the mercy of the coloured section of the population." It is estimated that the Spanish losses throughout this long struggle totalled about twenty-two thousand, killed, wounded or died from disease, and that they had to invalid home some twenty thousand who could not stand the climate. The rebel losses aggregate sixteen thousand, and four thousand have been taken prisoners, or have surrendered.

H.M.S. *Powerful* was commissioned on 8th June by Captain the Hon. Hedworth Lambton, with a complement of 840 officers and men, for the China Station. H.M.S. *Aurora* was commissioned for this station the same day. These ships were present at the Naval review at Spithead, after which they were to proceed to their station.

INDEPENDENCE DAY.

Monday was generally observed as a holiday in Yokohama. The day was gloriously fine, but a breeze tempered the rays of an ardent sun. The ships in harbour were dressed at eight o'clock and presented a pretty sight. At half-past nine o'clock a baseball match was played on the Cricket ground between a nine from the Y.C. & A.C. and a team from the U.S.S. *Olympia*, which the home side won by the narrow margin of one run. At ten o'clock Mr. N. W. McIvor, Consul-General of the U.S. at Kanagawa, held a reception, and at 11 o'clock Admiral McNair and officers were at home on the flagship *Olympia*. At noon a salute was fired and day fire-works were discharged. In the afternoon a cricket match between the Y.C. & A.C. and H.M.S. *Grafton*—the former winning easily—and sailing races took place, while some amusing sports came off on the *Olympia*. *Mary* won the U.S. Minister's prize and the Weston Challenge Shield, in the Yokohama Yacht Club races. Admiral McNair and officers made delightful hosts during the afternoon and the large company assembled on the ship thoroughly enjoyed themselves. In the evening a grand display of fireworks was made from floats moored in the harbour opposite the Grand Hotel, which was crowded with spectators. The display included several very effective set-pieces—the dates 1776-1897, "Old Glory," etc.—with a grand fountain for a finale. Altogether, what with the glorious weather, the sporting contests, the decoration of the town in the day, and the illuminations at night, Independence day was most fittingly celebrated.

CHINESE NOTES.

On the 28th of June a laying on of hands took place at the Roman Catholic Mission of Kiangnan. Nine candidates for the priesthood were ordained, twenty-five priests taking part in the solemn ceremony. In its report of the ordination, the *N.-C. Daily News* gives the interesting particulars that the mean age of the candidates was 32½ years; that the time spent by them in the Jesuit Order had been 14½ years; and that they had averaged 6 years in China. It follows that a man joins the Jesuits at the average age of 18, and that he has about 14 years of religious training, study and college work before being admitted to the priesthood. Thereafter he has another year for the completion and general review of his theological studies, preparatory to a rigorous examination, and, finally, yet another year for religious exercises and the cultivation of spiritual perfection. Among the nine priests ordained, three were Chinese. Of them we read that two were 29 years of age and the third over 30. They had all had twelve years of seminary training and probation, the seminary course consisting of four years of Latin; two years of philosophy—namely, logic and metaphysics with the elements of mathematics, cosmography and physics—four years of divinity proper and two years of probation in missionary work.

The plague is still raging in Amoy and all the inland districts. It is said that scores of victims perish daily. But the foreign community seem to escape the contagion.

Chungking is suffering from an epidemic which seems to partake of the nature of famine fever. The distress is still terrible, but despite the want and suffering that pervade the city and province, expensive festivities have been held.

The anti-foreign feeling recently reported from Chêngtu has not yet calmed down completely, but the authorities are said to be showing such a bold front that no disturbance of the peace is likely to occur.

The re-opening of the Roman Catholic Cathedral in Tientsin passed off quietly on the morning of the 22nd of June. The fact is taken as an indication that the Chinese authorities are perfectly well able to preserve the peace and protect foreigners when they please to do

so. It is stated that there is much ill-feeling among the rowdies against the Viceroy, on account of his strenuous proclamation. He is suspected of having received bribes from foreigners, or of being afraid of them.

A little Japanese pet dog went mad last month, in Shanghai, and seems to have bitten some five persons, one of them a young lady. Two of the victims have left Shanghai to be treated at the Pasteur Institute in Saigon.

The native guilds in Shanghai have put up a sum sufficient to enable the wheelbarrow coolies to pay their extra license fee. Doubtless, therefore, the 1st of July, on which day the fee was levied, passed off quietly. But it is naturally asked, "how long will the guilds continue to find money for such a purpose?"

The Rev. Gilbert Reid's project for an international institute in Peking is discussed by a writer signing himself "Taw Sein Ko," and speaking as though he were really what his name implies, a Chinese. He advocates the scheme most enthusiastically, but declares that unless it has a more practical basis than the mere "promotion of friendliness between representative men of China and the West," and the "diffusion of enlightening and liberal influences among the Mandarins and educated classes," it will not be a permanent success. He suggests that it should take part in the actual examination and probationary training of candidates for the public service; that the governing body should include the leading members of the Chinese Government; that Sir Robert Hart—whom he calls "the Nestor of the Chinese Imperial Service"—should be President, and that the Foreign Representatives should be *ex-officio* members.

"It is reported from the newly opened port of Shasi," says the *N.-C. Daily News* "that a severe epidemic is raging there, and already a large number of people have succumbed to the disease. Whole families are reported to have been cut down within three or four days of the first attack. The epidemic is stated to have also spread across the river into Wuchang within the past week."

The Chevalier de Kontaki is in Shanghai, where he has given a highly successful concert assisted by Professor Merck, Mrs. Fried, and Commander Vela.

GERMAN NOTES.

The German Geographical Society have bestowed upon Dr. Nansen the Humboldt gold medal. The Emperor has also conferred upon the Arctic explorer the gold medal for science and art, "the highest distinction which can be bestowed in Germany for peaceful achievements." When Dr. Nansen lectured at Copenhagen before the Danish Geographical Society, he received from the King the gold medal of merit with the royal crown.

The possibility of helping the blind to see by means of the Roentgen rays is minutely discussed in the *Photographisches Archiv* by Dr. Czermat, who concludes that the feat can be accomplished in a very limited manner only. He calls attention to the fact that photographs have been produced without a lens—that is by the pinhole camera—so he proposes to employ such an instrument to project the Roentgen rays, making use of a disc of lead pierced with a small opening, and covered with an aluminum, or black-paper, plate so as to effectually exclude all ordinary light. By the application of such spectacles, Dr. Czermat thinks the blind might be made to see a little.

In the Annual Report of German manufacturers for 1896 it is stated that 2,800,000 pounds of needles were produced against 1,830,000 in the previous year. The factories of Aix-la-Chapelle alone produced 50 million needles a week, and their output is said to be for the most part of superior quality. As showing the rate at which the German export business has been growing, it is stated that in the eight

years, from 1880 to the end of 1887, the shipments were 11,615,000 pounds, and in the following eight years, ended 1895, 15,425,000 pounds. The best market was found in China, which in 1896 took 60 per cent. of the whole export, as compared with not more than 20 per cent. in 1894. Other markets of importance are:—British India, France, Great Britain, the United States, Austria-Hungary, Italy, and Turkey.

Prince Hohenlohe, the Imperial Chancellor, Baron Marechal von Biebrstein, Dr. von Boetticher, and Dr. Miquel were outvoted at a Cabinet meeting which fixed the wording of the bill for the abolition of the most liberal paragraphs of the old law of associations. Since it was certain that the measure would be overwhelmingly defeated in the Reichstag, it was decided not to introduce it there, but to place it before the Prussian Diet, where the Conservatives hold nearly half the seats. It would have required only three or four votes from the National Liberals to give the bill a majority. But these few Liberal votes could not be secured, and so the measure was defeated.

Another telegram sent by the Emperor Wilhelm, has caused considerable excitement in Europe; this time not on the part of the English, but of the Germans themselves. It appears that the Kaiser despatched a telegraphic message to his brother Prince Heinrich, who is in command of the battleship *Koning Wilhelm*, expressing his displeasure at being obliged to send such an unimportant ship to the Queen's Jubilee, owing to a set of "unpatriotic fellows" voting against an increase of the German Navy. This telegram was read out to the men on board the *Koning Wilhelm*, and from thence found its way into the press, where, needless to say, it met with strong comment. Meanwhile, several important journals have raised their voices in defence of the Emperor, declaring the whole story to be untrue.

Rumours were current in Berlin and elsewhere when the last mail left, of an approaching Reichskanzler and ministerial crisis. The Emperor is said to be so annoyed at the scanty sums voted for the enlargement of the navy—his pet project—that it is feared he will have nothing to do with the reforms of the military penal code, or the Prussian Civil Code, as planned by the Reichstag. In that case it is thought probable that Prince Hohenlohe and other Ministers will tender their resignations.

German shipbuilders, says *Das Echo*, are jubilant over the fact that last year and up to the end of April their output, so far as size of vessels in the course of construction is concerned, exceeds that of England. Never before did German shipbuilding yards produce so many large vessels, some of which are of previously unheard of dimensions. The most important of these floating palaces are the vessels ordered by the North German Lloyd in Bremen and intended for their New York Mail line. For this purpose two twin screw steamers of 21,000 tons each have been ordered at the Vulkan shipbuilding yards at Stettin and at Schichan, Danzig. They will be called *Kaiser Wilhelm der Grosse* and *Kaiser Frederick*. Besides these, four more twin screw steamers of 20,000 tons each are in course of construction, two of which are being built at Vulkan's, one at Blohm and Voss, of Hamburg, and one at Schichan's; and further, three twin screw passenger steamers of 3,500 registered tons each for the trade with Brazil. There are altogether, in eight German shipbuilding yards, twenty vessels in hand, and nearly completed—all for the German Lloyd. By the simultaneous construction of six of the first of these steamers, with an aggregate displacement of 121,000 tons, the German Dockyards have, as before stated, beaten the English record.

A wire was received on Wednesday morning by the local agent of the P. & O. Co. from Suez, desiring him to inform the friends of Mr. and Mrs. F. Gillett, that they and their child were all well. This should be comforting news to their numerous friends.

NEWS OF THE WEEK.

The "Abunai Cup"—in the Mosquito Yacht Club—was won on Saturday by *Kodoku*, the new boat; with *Nandaka* second, and *Sodeska* third.

It is a melancholy fact that Captain Hill, of the ill-fated P. & O. steamer *Aden*, intended retiring from the sea upon his return to England.

A Washington telegram, dated June 14th, states that the Senate that day confirmed the appointment of Mr. John F. Govey of Washington to be Consul-General at Kanagawa, Japan.

The Japanese community at Singapore gave an exhibition of fireworks in connection with the Diamond Jubilee, which seems to have been much admired.

Very alarming reports of the cholera epidemic in Java have reached the Singapore newspapers. All over the colony the disease is virulent amongst the natives, and many Europeans have died.

It is announced that the Government of British North Borneo is prepared to make a limited number of free grants up to 500 acres of land each for the cultivation of tapioca. The fact may be worth the consideration of some of our readers.

At the suggestion of Mr. John Carry Hall, H.B.M.'s Consul, the Japanese authorities have consented to institute a daily patrol of British shipping in Kobe harbour, to check the coolie ruffianism that has been increasing there so rapidly of late.

The *Times* says that if the Jubilee procession reminded those who may have forgotten the fact, of the unexhausted and virtually inexhaustible resources of the Empire, it has not the less clearly proved that the monarchy now rests on broader and firmer foundations than at any former period in the history of England.

The *London Chronicle* says:—The Jubilee procession was an Empire parade and one of which all the uncounted millions whose peace and freedom are guarded by the English flag may well be proud. We have a hundred faults. As makers of an Empire we are insolent, masterful and aloof, but we at least have done what the world never has seen before.

From the excellent Silk tables compiled by Mr. Geo. H. Allcock, Public Silk Inspector, we gather that 48,549 bales of silk were exported during 1896-97, against 54,774 last season. The United States took 25,382 bales against 29,284 bales in the previous season. Messrs. Siber, Brennwald & Co. did the largest business, exporting 10,722 bales.

The *Standard* says:—"It would be a most ungracious omission to forget to offer sincere thanks to all foreign countries that have participated in the Jubilee. They have added materially, to the pleasure of the Queen and her people by their never-to-be-forgotten kindness. So far as Americans are concerned, we believe they are almost as pleased and proud as though the Jubilee were their own."

Kobe beat the U.S.S. *Yorktown* at baseball on Monday by 24 runs to 10. The *Chronicle* says that among the features of the Kobe men's play was Putnam's excellent work as pitcher, and McGlew's as catcher. On the Kobe side there was a record of 11 struck out, 3-base hits by Ball and Lightfoot; 3-base hits by Putnam (2) and Wheeler (1). Edwards made two home runs. On the other side there were 5 base strokes, and 9 struck out. Martin was the naval team's pitcher and Ubelhoar the catcher.

The Queen has been pleased to give and grant unto Mr. Arthur Stanhope Aldrich, Her Majesty's Royal licence and authority that he may accept and wear the Insignia of the Order of the Sacred Treasure of the Second Class, and to Mr. Francis Henry Trevithick, the Imperial Order of the Sacred Treasure of the Third Class, which his Majesty the Emperor of Japan has been pleased

to confer upon them in recognition of their services whilst actually and entirely employed beyond Her Majesty's dominions in the Japanese Railway Department.

Details arriving from Calcutta since telegraphic communications were re-established indicate that the loss of life from the recent earthquake was fearful. It is believed that 10,000 people were killed in Assam. Eighteen feet of Calcutta's Cathedral spire were displaced. The shock occurred just before the hour when most people go out for an evening drive, consequently in the European quarters the great majority of ladies and children appeared on the streets in the scantiest attire.

Government and bank paper in circulation at the end of May and on the 1st of June aggregated 17,272,171 yen, showing a decrease of 206,224 yen in Government paper and 3,270,024 yen in bank notes as compared with the previous month. The following are the details:—

	1st May to 1st Jun.	1st Jun. to 1st May.	Increase.
Government paper of all denominations	8,617,900	8,824,124	206,224
Bank paper (including notes from closed banks)	8,654,271	11,935,215	3,270,024
Total	17,272,171	20,759,339	3,487,168

We learn from the *Nagasaki Shipping List* that a daring robbery was committed a few days ago at the house of a well-known resident of Nagasaki, Mr. Ringer. Prior to taking his bath, Mr. Ringer laid his gold watch and chain upon a table in the bed-room, but on returning to his room the articles were found to be missing. A strict examination of the servants was made, but as yet no clue has been found as to either the whereabouts of the watch and chain or the perpetrators of the daring theft.

The *Nagasaki Shipping List* of the 1st inst., appears under the editorship and management of Mr. H. O. Palmer, and contains a notification to the effect that the *Nagasaki Press* had that day taken over the business of the *Rising Sun* Printing Office, but that the publication of the *Nagasaki Press* was unavoidably postponed, owing to the non-arrival of a portion of the new printing plant from England. The *Rising Sun* and *Shipping List* will therefore continue in their present form for a few days longer.

The *Hongkong Daily Press* justly protests against the strange statement made by the *N.C. Daily News* that the honour bestowed by Her Majesty on Mr. Geo. Jamieson is marred by the simultaneous bestowal of the same honour on Mr. Chater of Hongkong, who "has done nothing to deserve the distinction beyond being a successful speculator." Mr. Chater is one of Hongkong's most prominent public men in the best sense of the term, and that Her Majesty has acted wisely in making him a C.M.G., no one that has watched the course of events in Hongkong for the past fifteen years, can doubt.

The Canadian papers are filled with column after column of Jubilee rejoicings. All over the world the day was celebrated, and nowhere more heartily than in the United States. On the morning of June 21st the Chamber of Commerce of New York State cabled the Queen as follows:—

Her Gracious Majesty, the Queen of England:—The Chamber of Commerce, of New York, which received its original charter directly from the hand of your illustrious ancestor, King George III., tenders its congratulations on this happy occasion, and, in the spirit of National amity, unites with your loving subjects in the earnest prayer that God may bless the Queen.

(Signed) ALEXANDER HECTOR ORR, President.

A discordant note was sounded in Ireland on June 21, at a meeting held near College Green in connection with the Jubilee. A black banner was displayed bearing the statement:—"During Victoria's reign, one and a half millions of people have starved in this Island, three millions have been evicted, and four millions have been compelled to emigrate." A body of undergraduates marched out from the grounds of Trinity College, carrying the Union Jack. It came into collision with the crowd, and there was considerable fighting. Phillip Callan

was severely wounded in the head, and several others were more or less injured. Only with difficulty did the police restore order. After the rumpus the crowd paraded the streets and destroyed the decorations.

According to the Canadian papers, Her Majesty the Queen looked very well indeed on Jubilee Day. She impressed all the Envoys with the sincerity of her thanks for the national compliments paid to her. All the Envoys presented their letters with the lowest obeisance. The Queen took each letter and smilingly addressed two or three sentences of thanks and compliments to each Envoy. Mr. Whitelaw Reid, Special Ambassador of the United States, was received in the most cordial manner possible. Her Majesty expressed her sincere thanks to President McKinley and to the "great nation of our kinsmen."

Mr. N. W. McIvor, Consul-General for the U.S. at Kanagawa, announces that until further notice the following tariff is established for the collection of fees at that Consulate. Invoices should be made out in silver yen, which, for the purpose of this notice, are estimated as equivalent to forty-seven and eight-tenths (\$0.478) cents, U.S. currency:—

For Invoice Certificate	yen 5.23
For Extra Copy of Invoice	2.10
Marriage Certificate	2.10
Landing Certificate	5.23
For Bill of Health	5.23
For Supplemental Bill of Health	1.05
For Personal Effects Certificate	1.05
For Emigration Manifest	53

According to investigations made by the Finance Department, coins in circulation at the end of May amounted to 81,038,509 yen, an increase of 1,587,041 yen as compared with the previous month, and of 12,250,824 yen as compared with the corresponding period of last year. The following comparative table gives details:—

	At the end of May.	Compared with previous month.	Compared with corresponding period of last year.
	Yen.	Yen.	Yen.
Gold	5,214,655	-73,137	-90,689
Silver	59,879,612	+1,712,140	+10,685,211
Nickel	6,586,653	+50,050	+699,844
Copper	9,357,517	-2,005	-43,471
Total	81,038,509	+1,587,048	+12,250,824

An attempt at suicide was made on Wednesday last, from the small steamer *Teiki Maru*, which plies between Yokohama and Yokosuka. At about 3 p.m., when the boat was off Honmoku, on her way from Yokosuka to Yokohama, one of the passengers suddenly sprang overboard. The alarm steam whistle was blown and the steam launch *Hiryu Maru*, of the Water Police, which was in the vicinity, came up and after a short search succeeded in picking up the man half-dead. He was revived after a time and brought to Yokohama, and was found to be a resident of Nihonbashi, Tokyo, who was suffering from *hakke*, which prevented him from earning a living, and in despair he decided to drown himself.

The Kobe Ladies turned the tables on the cricketers of H.M.S. *Narcissus* on Tuesday afternoon, by winning the return match on the first innings by 12 runs. The scores were, Officers, 34; Ladies, 46. The *Higo News* remarks:—The ladies again appeared in their chosen costumes, but a curious tendency was observed with an extreme minority to go one better than before in the matter of abbreviating the dresses. If we may offer a suggestion, it would be that in any future matches the ladies confine themselves absolutely to a single innings game instead of playing out time; they were noticeably tired before the drawing of stumps yesterday, and the fielding which had begun well went a good deal to pieces. Runs were stolen from them wholesale, and the bowlers had good cause of complaint against this destruction of averages. In the first innings the bowling was very good. Mrs. Skinner being the most successful; if cricket is to be continued by these ladies, how-

ever, they should in fairness pitch the ball up a bit. The visitors bowled all for catches and very few were missed. There was more vigour generally in the batting and Miss Ellerton (21) in particular did wonders. Miss Smithers (4) showed as much confidence as any one, but very foolishly ran herself out. Some of the others made quite long stays without scoring; Mrs. Lightfoot contributed a useful score (12). Four naval bowlers were tried, McNeile taking five wickets for six runs.

The C. P. steamer *Empress of Japan*, which arrived in port at about 1.30 p.m., on Wednesday, has broken the record across the Pacific. She left Vancouver at 10 a.m. and Victoria, B.C., at 7.45 p.m. on the 26th June, the time occupied by the voyage from the latter port being only 10 days, 3 hours and 39 minutes. Her daily runs were as follow:—31, 396, 415, 414, 421, 441, 433, 432, 429, 417, 415, and 26 knots; total 4,270 knots. The previous record, made by the same vessel, but on the voyage from Yokohama, was 10 days 18 hours. She sailed from Vancouver five days behind schedule time, the reason for her delay being, we understand, a washout on the C. P. railway line, which prevented the mails arriving at Vancouver on time. The *Empress* has made up three days of her lost time and as she was got away at 5 this morning, is expected to make up the balance before reaching Hongkong. It speaks well for the steaming powers of these fine vessels, and for their skillful handling, that such a feat should be possible.

The demand for Japanese yarns in Shanghai, says the *Yoroku Choho*, increased very suddenly after the outbreak of plague in Bombay. Japanese yarns seem to have obtained a good reputation in China for quality and weight, and owing greatly to that well-earned credit, the product of Japanese mills is now superseding the Bombay manufactures. The market price of yarns varies between seventy-eight and seventy-nine taels per horse-pack of 20's, while 16's are quoted at over seventy six taels. Despite the circumstance that the sericultural season is now at its busiest, when the demand for yarns generally falls off for a space of two or three months, the Spinning Companies are now finding themselves embarrassed with an excess of orders, the extensive shipments to Shanghai this year having cleared the market of all superfluous produce. Contracts for delivery in November have already been concluded. Goods are taken delivery of as soon as they arrive in Shanghai.

One of the striking incidents of the royal procession through the City of London was the presentation of the "Very Goodbye Sword," known as Queen Elizabeth's pearl sword, presented to the Corporation by the maiden queen at the opening of the royal exchange in 1570. This was carried by the Lord Mayor. On the arrival of the Queen at the confines of the City's liberties, on Jubilee Day, she found the corporation awaiting her. The Lord Mayor uncovered. Approaching the carriage of Her Majesty, his Lordship, with all due obeisance, presented the hilt of the sword, which was undrawn. This is called the ceremony of dutiful submission. The Queen quietly touched the hilt, and returned it to the Lord Mayor. Sir Faudel Phillips wore an earl's robe, to which Lord Mayors are entitled when crowned heads visit the city, a cloak of ruby silk velvet and a gown of white silk edged with ermine. The robe is identical with the coronation robes of peers.

The *Yoroku Choho* states that the revised draft of the Criminal Code, to be presented in the 11th session of the Diet, has lately been completed. The principal alterations are said to be the division of offences into crimes and delicts, instead of maintaining the criminal classification as heretofore, police offences being included in the category of delicts. The distinction between ordinary offences and those connected with treason is removed, and terms of imprisonment are fixed for crimes and delicts as "above or below so many years," for the purpose of

rescinding the periods specified by each article in the former code, thus extending the sphere of application. Nevertheless, a fresh suggestion having been made in certain quarters for a further revision of the Code, it is supposed that not only will radical changes be made in the system, but also an exclusion of the French principles of individualism will be effected. The compilation of the Code is to be based on the so-called principles of State.

Most of the Japanese who go abroad are labourers, remarks the *Mainichi Shimbun*. In Hawaii, Mexico, and the islands of the southern ocean are found Japanese immigrants of the lowest classes. That they have had the courage to risk going across the wide ocean to foreign countries is evidently the result of a spirit of adventure and enterprise with which they were inspired. There is nothing to blame them for in the matter. But it is of paramount importance that in connection with the emigration of labourers some influential men of practical enterprise should also endeavour to pursue a similar career and take up their abode in Japanese settlements abroad. The late war with China won for Japan extensive concessions in Hanchow, Soochow, and Shashi, but it is to be deeply regretted that very few, if any, Japanese have settled in those places. Schemes are being contemplated by the Government to encourage emigration to China, with a view to the development of Japan's foreign commerce.

The Princess of Wales' Jubilee dinners to the poor were very successful. About 300,000 denizens of the "slums" were sumptuously entertained at various centres. The Princess, accompanied by the Prince of Wales, Princess Victoria of Wales, and Prince and Princess Charles of Denmark, visited the principal halls where the feasts were given. The Princess of Wales requested the Lord Mayor to deliver this message to all the diners as follows:—"Although I am unfortunately unable to be present at all the dinners for my poor, I shall be with them in spirit, hoping that they will enjoy themselves and give three cheers for their Queen." At Central Hall, Holborn, 17,000 people, young and old, partook of the banquet. When the Royal party entered the Hall the food was apparently forgotten. All present stood up and cheer after cheer shook the building. On making a tour of the room, the Princess of Wales turned to an old Irish woman and expressed the hope that she had partaken of a good dinner. To this the old woman replied:—"God bless you dear," and patted the Princess on the shoulder.

We wonder if the following paragraph, that appears in the *N.-C. Daily News*, refers to the poor, half-demented fellow who passed as Muir, alias Wilson, alias various other names, when in Yokohama, and who, after claiming first American and then British nationality, led a battle-dore and shuttle-cock life between the treaty ports of Japan and China for some 12 months:—A mysterious affair happened on board the *Tatung* on her last passage up river. Just previous to leaving Shanghai a foreigner, who gave the name of Moor, went on board and booked a first-class passage to Chinkiang, but omitted to provide himself with a ticket. He was seen in his cabin at about two o'clock on the following afternoon, but an hour later was missed. The ship was searched, but no trace of him could be found. He brought no luggage on board with him, with the exception of a small parcel, which disappeared with him. On the settie in his cabin were found a coat, waistcoat, and shirt, while two life-belts which were on a rack in the room were missing. The whole affair is a mystery, as the fact of his taking the two life-belts with him precludes the idea of suicide. After arriving at Chinkiang one of the native passengers stated that he saw a foreigner swimming some time before the vessel's arrival, but thought he was amusing himself!

NATIONAL LOAN BONDS.

Since the promulgation of Law No. 5, in February of the 29th year of *Meiji*, in regard to the purchase of national loan bonds for withdrawal, purchases made at twelve different periods amounted, says the *Shogyo Shimpō*, to 10,610,016 *yen*, against 10,643,550 *yen* in face value, including some pension bonds bearing five per cent. interest. The profits thus realized by the Government do not fall short of 33,533 *yen*. The following details will be interesting:—

	Date of purchase.	Face Value. Yen.	Purchase price. Yen.
1—New Public Bonds	March, '96	357,375	351,701
2—	31st Mar., '96	231,400	221,865
3—Pension Bonds	and Sept., '97	175,000	174,450
4—New Bonds	8th Sept., '96	1,000,000	999,696
5—(New Bonds)	29th Sept., '96	32,050	31,915
6—Consols	do.	700,000	700,000
7—(Pension Bonds)	22nd Oct., '96	9,750	9,690
8—(Naval Bonds)	do.	60,000	59,000
9—(Pension Bonds)	do.	10,000	9,850
10—(Pension Bonds)	Jan., 1897	90,800	90,000
11—(Naval Bonds)	Feb., 1897	90,800	89,379
12—(Naval Bonds)	do.	2,014,000	2,010,886
13—Naval Bonds	March, 1897	80,000	79,980
14—Naval Bonds	April, 1897	5,717,400	5,711,618
15—Pension Bonds	June, 1897	313,950	309,996
Totals		10,643,550	10,610,016

Measures must be taken this year to gradually redeem 29,823,320 *yen* of five per cent. pension bonds. Although the period of redemption extends to the 39th year of *Meiji* (1906), the amount to be actually redeemed in the current fiscal year is estimated at 3,904,470, of which 313,950 *yen* worth of bonds having been purchased and destroyed, a balance remains of 29,509,373 *yen*.

THE "ADEN."

From a telegram published in the London *Daily Mail* we learn that the wreck of the *Aden* occurred during a violent storm. Two boats were lowered but were swamped. The lifeboat got away amidst tremendous seas, and has not since been seen. The Captain and other officers were washed off the deck. The survivors remained on the wreck for a week, during which time the weather was frightful, the rations were of the scantiest, and they were despairing of safety.

The *China Mail* prints the following list of Officers of the ill-fated P. & O. steamer *Aden*:—

Capt. R. E. Hill, R.N.R., who joined the *Aden* in February, 1894.
Chief Officer, E. Carden.
Second Officer, A. Miller (late of the *Ancona*).
Third Officer, R. Manning, R.N.R.
Fourth Officer, E. Huddleston.
Surgeon, G. H. Forman (late of the *Ancona*).
Chief Engineer, D. Carmichael, R.N.R.
Second Engineer, C. J. Chisholm, R.N.R.
Third Engineer, T. A. White.
Fourth Engineer, P. McL. Kelt.
Winchman, W. Atkins.
Carpenter, H. Holmes.
Boatswain, C. McKie.
Stewards, Ada Nichols (late of the *Ancona*).

The *Hongkong Daily Press* gives the following particulars with reference to the *Aden's* passengers:—

Mr. Strain, who with his wife and two children were swept overboard and drowned, was a chemist at the Imperial Arsenal at Tientsin. Miss Lloyd and Miss Weller, who shared the same fate, belonged to the Church of England Zenana Mission at Foochow.

Mrs. Collins, who with two children left the wreck in the missing boat, was evidently the widow of the late Rev. J. S. Collins, of the Church of England Missionary Society at Foochow. Her case is a particularly sad one, as it is only two months since her husband met his death by drowning while on a missionary tour in his district. The accident occurred on the 20th April, while the rev. gentleman was on his way from Yeng Ping to Kucheng. The large steering oar of the boat in which the reverend gentleman was travelling broke in passing down one of the rapids of the river and the boat became unmanageable. Mr. Collins then jumped into the river, but although he was a good swimmer he was unable to cope with the strength of the current and was drowned.

Of the others in the missing boat, Mrs. Smyth of Ningpo, is believed to be wife of Dr. Smyth of the Church of England Missionary Society. In the Directory we only find one entry under each of the names of Reilly and Suttie, namely, Captain

Reilly, of the Army Service Corps, Singapore, and Mr. D. Suttie, Assistant Manager of the Central Borneo Company, Labuan; two ladies of the same names are amongst the missing and surmise points to the probability that they were the wives of the gentlemen mentioned.

Of the passengers saved we find that Mr. Valpy is an assistant overseer of the Perak Sugar Cultivation Co.; Mr. Pearce is an assistant with Messrs. Ibert and Co., merchants, Shanghai; and Mr. Gillett, an assistant with Messrs. Mollison & Co., merchants, Yokohama.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentiments or opinion of our correspondents for the accuracy of their assertions or for the deduction they may choose to draw therefrom.]

THE OTHER SIDE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with interest the correspondence in your columns on the rude conduct of the Japanese toward foreigners. I do not deny any statements which your correspondents make, but aside from the rudeness of children which, by the way, is not nearly so exasperating as the barking of the dogs, I have met no more cases of rudeness in Japan during a period of five years than I met in America during the same period. It is probably true that in Japan the foreigner is not held in higher esteem than John Chinaman in America, and John has the reputation of having rough treatment from the polite, well-mannered Americans.

So far as my own experience goes the police have always been obliging and helpful to the extent of their ability. Railroad officials have taken extra trouble on various occasions to be accommodating. Shopkeepers are proverbial for their good conduct. And as for jinrikishamen I think they have received and receive more abuse than they deserve. I have been repeatedly surprised by their honesty and, as a rule, they are ready to go more than half way in meeting kindness with kindness.

That these men and policemen and trainmen should have soured on the foreigners, if that is the fact, is not strange. I have been called upon occasionally to interpret for foreigners under what seemed to be rather exasperating circumstances, but I have never considered it a breach of faith to change angry words to the politest phrases which I could use. The open ports so much frequented by drunken sailors are undoubtedly responsible for the rudeness which cooies in such places manifest.

In Tokyo I pass crowds of students every day. I have seen no scowls, and I am not blind. I have heard no jeers, and I am not deaf. They have on the whole, been as orderly as American college students. Now, I wonder, Mr. Editor, whether the scowls and jeers and sticks and stones to those who meet with such experiences, do not depend very largely on the conduct of the foreigners. It looks to me like a rather rash act for a foreigner to collar a Japanese boy and march him to his parents. The parents might give the boy a licking, but they would set the foreigner down as *Yakamashi* and cherish toward him no very generous feelings notwithstanding his laudable efforts to maintain his dignity. Some people can extract the honey without getting stung and some can't. Why is it?

I think the mistake which your correspondents make is to charge upon the whole nation of Japan the individual acts of a very few people. One of your correspondents in his recent letter mentions an incident which occurred at Yokohama several years ago, unless my memory is badly at fault. Such writing certainly does not help the situation.

This experience of mine is not the exception. I have inquired of others what their experience has been with the rude Japanese. But almost invariably it is the testimony that rudeness has been the result of provocation on the part of the foreigner.

In regard to quarrels about jinriksha fares, is it not always better to have an understanding with your man when you employ him? And in general is it not better to pay a little more than is just sometimes rather than have a fuss?

Yours truly,

A. D. WOODWORTH.

Tokyo, June 21, 1897.

YOKOHAMA ENGINE AND IRON WORKS, LIMITED.

The tenth ordinary yearly general meeting of shareholders in the Yokohama Engine and Iron Works, Limited, was held at Keit's Building on Tuesday afternoon. There were present Messrs. Jas. Walter (Chairman), J. F. Lowder, J. Johnstone, J. A. Fraser, A. B. Walford, J. H. Curtis, R. J. Kirby, C. K. M. Martin, H. Pinckney and Geo. Charlesworth, Secretary.

The Secretary read the notice convening the meeting.

The CHAIRMAN proposed that the minutes of the last half-yearly meeting be taken as read. Mr. Curtis seconded the motion, which was carried unanimously.

The CHAIRMAN then read the report and accounts for the year ending 31st May last, which were as follow:—

REPORT.

The Directors have the pleasure of submitting to you their Report with a statement of Accounts for the year ended the 31st of May last.

The net profits for that period, including the sum of \$8,013.40 brought forward from last year, amount to \$114,041.47 from which amount the following payments have been made:—

On 4th August, 1896, Dividend for the year ended 31st May	\$13,000.00
On 4th August, 1896, Bonus to Employees	1,125.50
On 24th December, 1896, Interim Dividend	13,000.00
	\$27,125.50

leaving a balance to credit of Profit and Loss account of

On the 18th July, 1897, the sum of \$55,000.00 was applied to the reduction of Capital from the Cash then in Bank.

The Directors propose to declare a final Dividend for the year of \$20 per share, which will absorb

To give a Bonus to employees of

And to carry forward to new account

\$85,915.97

The business and the working of the Company during the year just expired have been highly satisfactory, and there is every prospect of continued prosperity.

Messrs. J. F. Lowder and J. H. Curtis have been appointed by the Board to fill the vacancies created by the resignation of Messrs. Davis and Gillett; and the number of Directors has been increased by the addition of Mr. R. J. Kirby, whose appointment requires the approval of this meeting. Messrs. Fraser and Lowder retire by rotation, but offer themselves for re-election.

The Accounts have been audited by Messrs. O. Keil and C. H. Fearon; and the Directors have pleasure in suggesting that these gentlemen be elected Auditors for the current year.

JAMES WALTER, } Directors.

J. A. FRASER, }

June 1, 1897.—By Balance ...

Geo. CHARLESWORTH, Secretary.

We have examined the foregoing accounts and compared them with the books and vouchers of the Company, and certify them to be correct.

O. KEIL, } Auditors.

C. H. FEARON, }

Yokohama, July 1st, 1897.

The CHAIRMAN said that at the last yearly general meeting an error had been made by the chair in taking the sum of \$65,000 to be accumulated profits and using them for the reduction of capital. This had been rectified by placing that amount back again to the credit of profit and loss account. The balance carried forward still remained very high, but would eventually be reduced when the material now in stock, was worked up into contracts, some of which were now in hand. The gross earnings of the company during the year, over \$100,000, showed a very satisfactory state of affairs, and that the business was improving under the present management. The earnings were larger than in any previous year except the last, which could not be taken as a criterion, owing to exceptional circumstances. In 1895 the gross earnings had been \$95,000 and this was the best year previous to the one under review. If any one had any questions to put he would be glad to answer them, and in the meanwhile would propose that the report and accounts as presented be passed.

Mr. WALFORD noted that wrecking gear appeared among the assets of the Company and asked if wrecking was a part of their business.

The CHAIRMAN said it was a very important part of the business of the Company to assist in getting vessels afloat that had got ashore, or raising sunken ships, and they had to keep the necessary plant and gear to carry on this work.

Mr. WALFORD said that from the way it was worded in the accounts it looked as if the Company were engaged in wrecking vessels.

The CHAIRMAN—It might perhaps have been differently worded.

Mr. WALFORD regretted that no notice had been taken by the Chairman of the remarks he had made at the last half-yearly meeting regarding the sum of \$65,000, which appeared in the profit and loss account, instead of being returned to the shareholders, though it was said that a portion of the sum had been returned in the form of dividends. If it was used as capital—as it was—it should be put down in capital account. It made it appear that the profits were abnormal, 60 per cent. on the capital, while as a matter of fact they were only 30 per cent.

The CHAIRMAN, in replying, said that he thought Mr. Walford was wrong in supposing that the \$65,000 was continually carried forward; it was being paid off by degrees. Six thousand of it had been paid during the past year and the ratio of payment might be greater in future. Of the \$39,000 paid in dividends, \$33,000 was from their earnings and \$6,000 from the \$65,000. Eventually it would all be returned to the shareholders.

Mr. LOWDER then seconded the Chairman's motion that the report and accounts be passed and it was carried *nem con*.

The CHAIRMAN said the next business was the election of two Directors in place of Messrs. Fraser and Lowder, who retired by rotation.

On the motion of Mr. J. H. Curtis, seconded by Mr. Martin, Messrs. Fraser and Lowder were re-elected to the Board.

Mr. KIRBY proposed the re-election of Messrs. Keil and Fearon as auditors, and the motion was carried.

The CHAIRMAN said the Directors had asked Mr. Kirby to join the Board, but the appointment required the confirmation of the meeting.

Mr. MARTIN proposed that Mr. Kirby's appointment be confirmed. Mr. Fraser seconded and the motion was carried unanimously.

This concluded the business and the meeting dissolved.

INDEPENDENCE DAY IN TOKYO.

The American residents of Tokyo celebrated Independence Day this year for the first time, we believe, in the history of the metropolis, and had a thoroughly enjoyable occasion. The celebration was the outcome of the enthusiastic patriotism of the Rev. Edgar Leavitt, who inquired last Thursday (July 1st) in the Tsukiji Reading Room, if the American Tokyoites couldn't get up an old-fashioned "Fourth of July." The query aroused others to make the attempt, and consequently Messrs. Leavitt and Tyng that afternoon and evening circulated a call for a meeting of American citizens in the Parish Building, Tsukiji, Friday afternoon.

At that time a number of Americans assembled and chose Prof. H. T. Terry as Chairman, and Rev. Edgar Leavitt as Secretary. Inasmuch as the Yokohama celebration was to be on the 5th, the Tokyo affair was set for Tuesday, the 6th. Several plans were discussed; but it was finally voted to hold a basket picnic at Omori during the afternoon and evening of that day. A committee

of arrangements was appointed, consisting of Messrs. Terry, Leavitt, R. S. Miller, and Clement, and Mesdames Smith and Gardiner; but, as Mrs. Gardiner asked to be excused, Mrs. Swift was named to fill the vacancy. This committee at once went to work to "hustle things" on short notice.

But, by Saturday evening, it became clearly evident that the obstacles in the way of going to Omori were insurmountable. A committee meeting was, therefore, held again on Monday morning, July 5th, when it was decided to hold the celebration in Tsukiji. The spacious Episcopal compound was generously offered for the occasion and gladly accepted.

This statement of the inception and development of the plans will certainly be interesting, because it shows forth the genuine American spirit of "push," and may also excuse any mistakes or shortcomings in the carrying out of the plans. It is, however, really cause for wonder that so successful a celebration was arranged on such short notice and in spite of such obstacles. It was not only the hard work of the committee but also the hearty co-operation of the American community that rendered success possible.

The jubilee exercises were held in the Parish Building, which was beautifully decorated for the occasion with flags, bunting, flowers and plants, and began about 6.15 p.m. There were perhaps 150 people present, including children. The U.S. Legation was represented by Col. A. E. Buck, U.S. Minister; Mr. and Mrs. Herod, Mr. H. Wilson, and Mr. R. S. Miller.

The programme was as follows:—

Music.—"Hail, Columbia, Happy Land."
Prayer.—Rev. D. Thompson, D.D.
Music.—"The Star-Spangled Banner."
Declaration of Independence.—Rev. J. W. Cate.
Music.—"The Red, White and Blue."
Speeches.—{ Prof. J. O. Spencer,
 { Hon. A. E. Buck, U.S. Minister.
Music.—"America."
Benediction.—Rev. C. H. D. Fisher.

The music was in charge of Rev. T. S. Tyng, who conducted the singing most efficiently. In the case of the first three songs the audience joined in the chorus only; but all united with vigour in the last song, "America." The first song was rendered by a choir; the second by Mrs. J. W. Wadman, the third by Rev. F. C. Veitz.

The Declaration of Independence was read in Mr. Cate's usual expressive style. Prof. Spencer delivered an eloquent speech and extended a cordial welcome to the new Minister, who responded most appropriately. When Col. Buck rose to speak, he was greeted with a rising salute and three cheers; and, after the exercises, he was introduced to most of those present. The Chairman of the meeting was Prof. H. T. Terry, who presided with both gravity and gaiety. The programme occupied only a little over an hour.

The songs of the occasion were printed in blue ink on white paper with a red margin; and on the first page was an American flag. This document made a very nice souvenir of the celebration.

At about half-past seven o'clock supper was served in the little rooms off the assembly hall; and, after supper, fireworks were let off in the campus of St. Paul's College. No more convenient spot could be found for such a celebration. The fireworks were fine and closed with a beautiful set piece representing two American flags.

Special credit is due to the ladies on the general committee for their indefatigable labour; and thanks are due to many volunteers who helped largely.

It was altogether a very delightful and inspiring occasion, to be long remembered by all present. One man remarked that he had not attended such a "Fourth of July" celebration for 21 years. It is to be hoped that hereafter this may be an annual function; and that thus once a year the American residents of Tokyo may unite in showing their love for their native land, that

"Centre of equal daughters, equal sons,
Chair'd in the adamant of Time."

BUDGET FOR THE 30TH FISCAL YEAR OF MEIJI.

1.—Construction of Tientsin Consulate—	
30th fiscal year	13,000.000
31st fiscal year	14,436.800
Total	27,436.860
2.—Construction of Amoy Consulate—	
30th fiscal year	20,000.000
31st fiscal year	33,000.000
Total	53,000.000

3.—Construction of Forts at Tsushima—	
30th fiscal year	61,134.000
31st fiscal year	61,234.000
32nd fiscal year	21,234.000
33rd fiscal year	20,970.180
Total	164,572.180
4.—Construction of Forts at Nagasaki—	
30th fiscal year	43,681.100
31st fiscal year	50,171.000
32nd fiscal year	66,417.000
33rd fiscal year	65,585.000
34th fiscal year	45,512.300
Total	271,366.300
5.—Construction of Forts at Maidzuru—	
30th fiscal year	93,990.000
31st fiscal year	107,860.000
32nd fiscal year	131,630.000
33rd fiscal year	131,630.000
34th fiscal year	131,334.409
Total	596,444.409
6.—Construction of Forts at Hakodate—	
30th fiscal year	71,812.000
31st fiscal year	73,382.000
32nd fiscal year	109,154.000
33rd fiscal year	143,862.000
34th fiscal year	133,806.916
Total	532,016.916
7. Arms and Ammunition—	
30th fiscal year	982,457.515
31st fiscal year	982,457.515
32nd fiscal year	982,457.515
33rd fiscal year	982,427.925
34th fiscal year	966,320.134
Total	4,896,120.604
8. Construction and initial equipment Expenses—	
30th fiscal year	8,344,575.179
31st fiscal year	3,867,691.716
32nd fiscal year	2,218,313.045
33rd fiscal year	2,164,020.390
34th fiscal year	1,192,469.629
35th fiscal year	998,667.944
36th fiscal year	578,009.023
Total	19,363,746.926
9. Manufacture of Arms and Ammunition—	
30th fiscal year	1,642,000.000
31st fiscal year	1,642,000.000
32nd fiscal year	1,642,000.000
33rd fiscal year	1,642,000.000
34th fiscal year	1,642,000.000
35th fiscal year	1,644,538.429
Total	9,854,538.499
10. Despatch of Mechanics abroad—	
30th fiscal year	22,511.040
31st fiscal year	15,492.000
32nd fiscal year	18,618.240
Total	56,621.280
11. Expansion of the Navy 30th year fiscal year—	
Construction of Ships	16,755,944.703
Manufacture of Arms	6,514,993.990
Buildings	1,720,099.015
Total	24,990,947.708
31st fiscal year—	
Construction of Ships	21,565,227.200
Manufacture of Arms	4,564,093.850
Buildings	680,108.460
Total	26,809,429.510
32nd fiscal year—	
Construction of Ships	17,961,223.443
Manufacture of Arms	7,317,740.920
Buildings	4,368,186.763
Total	26,647,158.126
33rd fiscal year—	
Construction of Ships	9,131,585.073
Manufacture of Arms	8,409,179.000
Buildings	1,061,478.537
Total	18,602,242.712
34th fiscal year—	
Construction of Ships	9,048,122.184

30th to 36th year inclusive	70,000.000

THE QUEEN'S JUBILEE IN ENGLAND.

HER MAJESTY RETURNS THANKS.

London, June 20th.

Queen Victoria began the celebration of her Jubilee to-day, as was befitting her entire career, by rendering thanks to God. Throughout London, the United Kingdom, and the Empire were held services similar to those at St. George's Chapel, Windsor, where Her Majesty paid her devotions and offered solemn thanks to the Almighty.

The announcement that the services at St. George's Chapel would be private and for members of the Royal family, prevented the gathering of a large crowd. The scene was most impressive and the services very simple. Her Majesty sat in the chair of state immediately in front of the communion rail, and just behind the brass plate, the inscription on which designates the spot which was the temporary place of interment of the Prince Consort. The Duke of Devonshire and Lord Rosebery occupied their stalls as Knights of the Garter. The rest of the Chapel was empty, the seats of the Royal family being near the Queen's.

The Dean of Windsor, wearing the insignia of Chaplain of the Order of the Garter, officiated, assisted by the Lord Bishop of Derry and several canons. Punctually at 11 o'clock, amid the soft strains of an organ voluntary, the Queen arrived at the cloisters from the entrance. Assisted by her Indian attendant she walked slowly to the chair of state, the congregation standing. She was dressed all in black, except for a white tuft in her bonnet. The Empress Frederick of Germany, attired in deep black, took the seat at the right of the Queen, while the Duke of Connaught, wearing his Windsor uniform, seated himself at her left. The others grouped closely behind, and looked very like a simple family of worshippers. Among them was the Duchess of Connaught, Prince Henry of Prussia and Princess Henry, Prince and Princess Christian, with their children, Princess Henry of Battenberg, the Grand Duke Sergius and the Grand Duchess.

After the first collect, a special collect was read, and instead of the prayer for the Queen and Royal Family, two special prayers were substituted, containing the following:—

"Almighty God, who rulest over all the kings of the world and disposest of them according to Thy good pleasure, we yield Thee unfeigned thanks, for that Thou wast pleased to place Thy servant, our sovereign lady, Queen Victoria, upon the throne of this realm. Let Thy wisdom be her aid and let Thy arms strengthen her, let justice, truth, and holiness, let peace and love flourish in her days. Direct all her counsels and endeavours to Thy glory, and the welfare of her people; and give us grace to obey her cheerfully. Let her always possess the hearts of the people; let her reign be long and prosperous and crown her with immortality in the life to come."

A special prayer for unity was said, and there were special Psalms and Gospels used instead of those for the day, the Gospel being Matt. xxii. 16. "Render therefore unto Cæsar the things which are Cæsar's."

There was no sermon, but a special hymn, written by the Right. Rev. William Walsham How, Lord Bishop of Wakefield, with music by Sir Arthur Sullivan, was sung at Her Majesty's request. The third verse was as follows:—

"O, royal heart, with wide embrace,
For all her children yearning,
Oh, happy realm, such mother grace,
With loyal love returning,
Where England's flag flies wide unfurled,
All tyrant wrongs repelling;
God make the world a better world,
For man's brief earthly dwelling."

Before the Benediction the following special thanksgiving was offered:—

"O Lord, our Heavenly Father, we give Thee hearty thanks for the many blessings which Thou has bestowed upon us during the sixty years of the happy reign of our gracious Queen, Victoria. We thank Thee for the progress made in knowledge of Thy marvellous works, for kindlier feelings between rich and poor, for wondrous preaching of the Gospels to many nations, and we pray Thee that these and Thy many gifts be continued to us and our Queen, to the glory of Thy holy name, through Jesus Christ, Our Lord, Amen."

The choir of St. George's Chapel rendered the musical portion of the service, Sir Walter Parrett presiding at the organ. The service lasted forty minutes, the Queen remaining seated throughout and following closely the special prayers and hymns.

At the end there was a pause. The Queen, with bowed head, continued in silent prayer. Then followed a touching scene, which will ever linger in the memory of those who witnessed it. Summoning the Empress Frederick, who bowed low at her side, the Queen kissed her on both cheeks. The Duke of Connaught and the others of the family receiving on bended knee a similar token of affection. In many cases the recipient was kissed several times. The Queen was profoundly moved and tears rolled down her cheeks. At last, and evidently with great reluctance, she beckoned her Indian attendant, and leaning on his arm, passed slowly out of the chapel, the entire congregation standing, the soft light falling through the multi-coloured windows, and the exquisite strains of the organ rising and swelling beneath the bannered, gothic roof. It was a scene never to be forgotten, and thrilled all present with strong emotions.

SERVICES AT ST. PAUL'S.

London, June 20th.

There were two services at St. Paul's Cathedral to-day, at 11 o'clock a.m. and 3 p.m.

Immense crowds filled all the approaches to the Cathedral at the morning service to catch a glimpse of the royalties and distinguished persons who were announced, including all the Representatives and Envoys. The first to arrive and to be recognised with the greatest interest was the Archbishop of Finland, in purple and black vestments, accompanied by two deacons, and General Kirren in full uniform. Then followed the Chinese Envoy, in gorgeous garments. He was escorted to the choir, where were seated also the Envoys of the United States, Russia, Holland, Denmark, Sweden, Brazil, Japan, and Hawaii. Under the dome and behind the richly crimsoned royal pews were the peers and peeresses in full robes, other foreign Envoys and five Colonial premiers, with their families. Others seated in this portion of the edifice were the special delegations from the Royal Society of Antiquaries, the Royal Academy of Art, and the Royal Academy of Music; the Presidents of the principal hospitals and colleges in London, Sir Richard Webster, the Attorney-General, and 200 Queen's counsel in their wigs and gowns.

Just before 11 o'clock the Archbishop of Canterbury, the Bishop of London, and the Dean of the Cathedral, with the Cathedral clergy and choir, proceeded to the west door to receive the members of the Royal Family. The aisle was lined with a guard of honour, consisting of the Medical Staff Corps, in view of the fact that it was Hospital Sunday. The members of the Royal Family arrived punctually, and were received with the profoundest respect as they drove through the streets to the Cathedral. Among them were the Prince and Princess of Wales, the Duke and Duchess of York, the Duke of Cambridge, the Duke and Duchess of Saxe-Coburg Gotha, Prince Charles of Denmark and Princess Charles, Prince Albert of Prussia, the Grand Duke and Duchess of Hesse, Grand Duke Sergius of Russia, Prince Waldemar of Denmark, Prince Eugene of Sweden, the Grand Duke of Luxembourg, and the Prince and Princess Frederick-Charles of Hesse. Preceded by the clergy and amid the strains of the processional hymn, "O, King of Kings, whose reign of Old hath been from Everlasting," they proceeded to their seats.

The service was conducted by the Lord Bishop of London; and the Cathedral choir of 100 male voices, assisted by an orchestra of 150 pieces from Covent Garden Opera House and several of the principal theatres, rendered the musical service. The form of service was the same as at St. George's Chapel and was participated in by the vast congregation with evident feeling. To the invocation of the priest,

"Send her help from Thy holy place,"

came the deep response of the kneeling multitude;

"And evermore mightily defend her:"

while in impressive unison came the

"Amen"

following the priest's words,

"Let her reign be long and prosperous, and crown her with immortality in the life to come."

Holy Communion was celebrated, and the sermon was preached by the Lord Bishop of London, who touched upon many events in the reign of Victoria, and eloquently extolled her piety, charity and motherly love for her people.

CELEBRATED THROUGHOUT EUROPE.

Special despatches from Paris, Berlin, Vienna, St. Petersburg, and nearly every large city in Europe, show that thanksgiving services were held in the local English churches and were numerous attended. The newspapers in many cities, especially in Vienna and St. Petersburg, publish long eulogistic articles upon the Victorian reign. At

Constantinople the Sultan sent a number of high Ottoman officials to represent him at the service, and the entire diplomatic corps was present. A guard of English bluejackets was drawn up along the main approach to the chapel.

THE QUEEN ARRIVES IN LONDON.

London, June 21st.

Queen Victoria left Windsor Castle at noon, by the Sovereign's entrance, and traversed part of High Thames-street of Windsor on her way to the railway station. Her Majesty's carriage was drawn by a pair of greys with postillions and outriders. The Queen was accompanied by her eldest daughter, the ex-Empress Frederick of Germany, Princess Christian of Schleswig-Holstein, and Princess Henry of Battenberg, who occupied the carriage preceding that of Her Majesty. The Queen on arriving at the railroad station at Windsor walked through the private waiting room, leaning on the arm of her Indian attendant, and by a sloping gangway entered her saloon carriage. The train started at 12.10. The royal train arrived at Paddington at 12.30 p.m. The weather was fine and warm. The Queen graciously received the addresses presented to her by the Vicar of Paddington and handed back to him a written reply, expressing gratification at the generous instincts of her people toward the poor, aged, sick and young and which had produced such remarkable results. "The late Prince Consort, like herself," Her Majesty continued, "manifested much interest in charitable institutions and her children shared that feeling, which formed not the weakest tie between herself and her people."

The first triumphal arch was very handsome. It was a castellated structure in imitation of gray stone, covered with ivy and bore the motto: "Their hearts are our throne." The second triumphal arch was at the end of the Edgewater-road. It was covered with a crimson cloth, flowers and flags, and bore the motto, "God Bless our Queen." Next to Paddington the crowds selected Buckingham Palace as the most interesting point to view the proceedings, as the gathering of Envoys and their suites and the officers invited to luncheon to be afterwards presented, had already begun at noon and many were the speculations as to the identity of the officers, as they drove up in special carriages. The police were kept busy attending to fainting women, but the crowds were in the best of humour. A few minutes before 1 o'clock a hoarse roar of cheering in the distance announced the approach of the Queen. The cheering grew in strength until it amounted to a deafening storm as the Sovereign reached the vicinity. The Queen bowed slowly to right and left to the greetings of her subjects. Princesses Christian and Henry of Battenberg sat opposite the Queen and the Empress Frederick. Two Scotch gillies rode behind the carriage. The carriage passed direct to the quadrangle. On entering the palace yard the Duke of Connaught saluted the Queen and she was saluted by the Life Guards. The Queen, after entering the palace, proceeded to her private apartments for luncheon and the Royal and other guests had luncheon in the State supper room. Levee costumes were worn and the suites who were also in levee dress had luncheon in the garden and in the vestibule.

IN PARLIAMENT.

The House of Commons was crowded to-day when the First Lord of the Treasury, Mr. Balfour, moved and Sir William Vernon Harcourt, Liberal leader, seconded an address of congratulation to the Queen. Mr. John Dillon, Chairman of the Irish Parliamentary Party, protested. Mr. John Redmond, Parnellite leader, amid laughter from the Conservatives and Unionists, moved an amendment to the address and caused an animated scene. Mr. Redmond protested against Great Britain's rule in Ireland and asked the House to adopt the amendment to the effect that it deemed it its duty to place on record that during the 60 years of Her Majesty's reign Ireland had suffered grievously from famine, poverty, and the continued suspension of its constitutional liberties, with the result that the Irish are discontented and are unable to join in the celebration.

Mr. Redmond's amendment was rejected by a vote of 436 to 7. The address of congratulation to Her Majesty was then adopted by a vote of 439 to 44. When the amendment was put, the anti-Parnellites left the House, but they returned for the main question and on the Speaker saying "The ayes have it," the anti-Parnellites shouted loudly, "Noes have it," whereupon a vote had to be taken. Mr. Balfour then moved that the address be presented to the Queen by the whole House, to which Mr. John J. Clancy, Parnellite member for North Division of Dublin County, said, that after what had occurred the motion was absurd and an absolute untruth. A vote was then taken and it resulted in the adop-

tion of Mr. Balfour's motion by 441 ayes to 41 noes.

In the House of Lords to-day the Marquis of Salisbury, amid cheers, moved and the Earl of Kimberley, Liberal leader, seconded, an address of congratulation to the Queen. The motion was carried unanimously.

JUBILEE HONOURS.

All the Colonial premiers, Mr. William Lecky, the historian, and Sir Herbert Maxwell, the author, have been made Privy councillors. The Prince of Wales is made Grand Master and Principal Knight of the Grand Cross of the Bath; an Earldom is conferred upon Baron Egerton of Tatton, and peerages of the United Kingdom are conferred upon the Earl of Glasgow, Viscount Downe, Lord Justice of Appeal Lopes, the Rt. Hon. Ian Trant Hamilton, and Sir John Burns. The mayors of Leeds and Sheffield are made Lord Mayors, and the Lord Mayor of London, Mr. George Faudel Phillips, is made a Baronet. Mr. Bancroft, the actor, is knighted, and the Chief Justices of Manitoba, Quebec and Ontario, Messrs. Taylor, Taggart, Tait, and Haggerty, are knighted. Sir John Blundell Maple is made a Baronet, and the same honor is conferred upon Sir William MacCormick, M.D., President of the Royal College of Surgeons. Mr. James Pender, the son of the late Sir John Pender, M.P. for the Middle Division of Northamptonshire, and Mr. Samuel Wilks, M.D., President of the Royal College of Physicians and Physician Extraordinary to Her Majesty; Mr. Wyke Bayliss, President of the Royal Society of British Artists; Professor William Crookes, Vice-President of the Royal Society, are made knights. Sir Francis Henry Jenne, President of the Probate, Divorce and Admiralty Division of the High Court of Justice, is made a Knight Commander of the Bath. The Duke of Coburg has been appointed Admiral of the Fleet. The Order of the Grand Cross of St. Michael and St. George has been conferred upon Mr. Wilfrid Laurier, Sir Richard Cartwright and Sir Oliver Mowat.

ENVOYS RECEIVED BY THE QUEEN.

London, June 21.

The Envoys from the different foreign Powers arrived at Buckingham Palace about 2 o'clock and were received by the Master of Ceremonies and his esquires. They were entertained at luncheon and then awaited the summons to present their letters of congratulation from their respective governments to Her Majesty.

Ten minutes before 4 o'clock the Envoys stood in line and went singly to the audience room, to which they were conducted by Colonel the Hon. Sir James Colville, the Master of Ceremonies. The Bow drawing-room in which the Envoys were received is a large room heavily ornamented with gilt and hung with silk. The Queen was dressed in black and wore a widow's cap, the ribbon of the Order of the Garter, and some other orders. She sat in a gilded chair near the centre of the room, the Prince of Wales standing immediately behind her. At her right hand was the Princess of Wales and others of the Royal Family were near Her Majesty or scattered about the room. The Duke of Auerstadt and the Duke of Sotomayor, representing France and Spain, preceded the United States Envoy, Mr. Reid, who was third and followed by the Papal Envoy, Monsignor Sambucetti. All the Envoys presented their letters to the Queen with the lowest obeisance. The Queen took each letter and smilingly addressed two or three sentences of thanks and compliments to each Envoy. Mr. Reid was received in the most cordial manner possible. Her Majesty expressed her sincere thanks to President McKinley and to "the great Nation of our kinsmen."

The Queen looked very well, indeed, she impressed all the Envoys with the sincerity of her thanks for the international compliments paid to her.

The crowds remained about the Palace until a late hour watching the coming and going of the many notabilities.

The Princess of Wales and the Duke and Duchess of York, on returning to Marlborough House, were received with roar upon roar of cheers.

The children of the Duchess of York occupied seats on the garden wall at Clarence House. Their identity was soon discovered and for hours the garden wall was the Mecca of crowds of enthusiastic women and thousands of nurses and children.

THE STATE BANQUET.

The Queen at 8.45 entertained at dinner 90 of her most distinguished guests in the State supper-room at Buckingham Palace. The spacious apartment was a fairy sight, exquisite costumes, diamonds, and countless gems, the most brilliant of uniforms, stars, orders, and crosses without

end, the Royal liveries, the tables and buffet loaded with the famous gold plate, the value of which runs into millions, and Dresden china, flowers and lights glittering up to the highly enriched ceiling, with its foliage and floral ornamentation, while around and over all was that air of old world dignity which is of itself so impressive. This seemed even to be reflected from the great mirrors between the windows and to command the approval of the stately George IV. in his coronation robes upon the walls. Among those present were the Prince and Princess of Wales, with all the members of the Royal Family, the Royal guests, the Envoys of States with the rank of ambassadors, and the great officers of the Household, who were in full court dress. During the progress of the banquet, music was discoursed by the band of the Royal Engineers. The suites of the Envoys and the ladies and gentlemen in attendance dined in the Garden Vestibule. The Yeomen of the Guard were on duty in the Grand Hall and Vestibule. After dinner the Queen proceeded from the grand salon to the ball room to receive her guests, the Envoys and their suites, the Indian princes, the officers of the Imperial forces and of the native Indian escorts, and the officers of the Queen's German Regiment. The Colonial premiers with their wives were presented to Her Majesty by Mr. Chamberlain, Secretary of State for the Colonies, and the suites of Royal and other guests were presented severally by their chiefs. The Great Officers of State attended in full court dress.

THE SCENE IN THE STREETS.

If the streets to-night can be taken as a forecast for to-morrow, the "Queen's Day" will be signalled by the assembling in London of not less than eight millions of human beings. At all the London termini since early morning people have been pouring into the Metropolis in thousands, and for thousands there is no other shelter than the streets, but the utmost good humour prevails. At midnight the weather is quite warm, but the skies are overcast.

OTHER JUBILEE NOTES.

London, June 21st.

The following is the text of the personal letter to Queen Victoria, which was delivered to Her Majesty by Mr. Whitelaw Reid, the Special Envoy of the United States:—

"To Her Majesty Victoria, Queen of Great Britain and Ireland and Empress of India: Great and Good Friend,—In the name and on behalf of the people of the United States, I present their sincere felicitations upon the sixtieth anniversary of Your Majesty's accession to the Crown of Great Britain.

I express the sentiments of my fellow-citizens in wishing for your people the prolongation of a reign illustrious and marked by advance in science, arts and popular well-being. On behalf of my countrymen I wish particularly to recognise your friendship for the United States and your love of peace exemplified upon important occasions. It is pleasing to acknowledge the debt of gratitude and respect due to your personal virtues. May your life be prolonged, and peace, honour, and prosperity bless the people over whom you have been called to rule. May liberty flourish throughout your Empire under just and equal laws, and your Government continue strong in the affections of all who live under it.

And I pray God to have Your Majesty in His Holy keeping.

Done at Washington this 28th day of May, A.D. 1897.

Your Good Friend,

WILLIAM McKINLEY.

(By the President.)

JOHN SHERMAN,

Secretary of State."

London, June 21st.

There was a great scene of enthusiasm on the Stock Exchange to-day. The members introduced their lady relatives and friends, which is almost unprecedented. The building was packed to the utmost when Chairman Hatch proposed a vote of congratulation to the Queen. The proposition was received with deafening and repeated cheers, and then all the members sang "God Save the Queen," "Rule Britannia," "God Bless the Prince of Wales," and "Auld Lang Syne." A despatch was received from the New York Stock Exchange, which created an excellent impression.

A FRENCH-CANADIAN OFFERING.

Chicago, June 21st.

The following cable was sent to-day as an expression from the French-Canadian residents of Chicago:

"To Hon. Wilfrid Laurier, London, England:

In this day of universal jubilation, please offer to your Gracious Sovereign the respectful homage of 50,000 compatriots, who cherish the memory of having lived under her beneficent dominion, and take occasion to express their ardent wishes for her happiness and the prolongation of her glorious reign.—(Signed).—Daniel Bergivin, Z. P. Brosseau E. A. Bauvais, Gabriel Franchère, Césaire Gauthier."

A JUBILEE ODE.

London, June 22nd.

The Times this morning publishes a Jubilee Ode from the pen of Sir Lewis Morris. It begins:—

"Rejoice, give thanks for all the centuries
Since first our little Island's crescent story
A feeble radiance, woke the waning skies,
To rise in full-orbed glory."

The ode proceeds to describe the birth and growth of the mighty Empire until the coming of the present reign, and then says:—

"Ne'er in our crowned republic's story yet
Of all that men remember or forget
This strange, this precious thing had been
No reign of three-score years of King or Queen."

"Our annals hold, till, in this waning age
Time's finger writes it on the storied page,
This is the golden link which bind in one
All British hearts beneath the circling Sun."

JUBILEE DAY IN LONDON.

London, June 22nd.

The last stroke had not died away in the midnight air when from a hundred metropolitan steeples a tumultuous peal of bells announced diamond jubilee day. The vast crowd which filled the streets and squares answered with ringing cheers, and here and there singing "God Save the Queen."

The crowds which peopled the streets and squares all night in the hope of a good view of the procession to-day were amazing in their sublime patience. Waiting for twelve, fourteen, and sixteen hours, as many of these people are doing, jammed together, is a feat of endurance that could only be caused by some overmastering desire. Quite half of these jubilee waiters are women, many of them with the pale, careworn look of the London worker, yet all enduring the back-breaking tediousness with the utmost good nature. Some had camp stools, some sat on projections of buildings, on curbstones, or lanned in the doorways and angles made by the stands. Refreshments were in order everywhere, the police had little trouble, a cheery good humour being the note of the night. During the long hours the snatches of song and occasional bursts of cheering showed that the people were determined to enjoy the festival with patriotism and loyalty to the utmost.

A clear, starlit sky and cool air kept the spirits of the crowd at topmost point through the vigil, and with the dawn the hope for Queen's weather merged into certainty, and the world prepared itself in the fullest confidence for a day of pleasure.

The earliest indication of the great event—apart from the people waiting for it—was, shortly before six, the arrival of vestry carts on the freshly-gravelled roadways, after the fashion which prevailed in the good old days of Sam Pepys. Then, a little later, the inevitable precursor of any procession, the police, began to arrive in great numbers, eight thousand being distributed along the line of route. The streets on the north side of the Thames had been closed to ordinary vehicular traffic at 7.30, and on the south side at 8 a.m. London Bridge had been closed to all traffic at midnight, and Westminster bridge and the other bridges between at 5 o'clock this morning, at which hour all persons were removed from Westminster and London bridges.

The first great difficulty of the police was in assisting the owners of seats on stands and houses to get up to them, for there was a vast interval between the title to a seat and the actual possession. The crowds on the sidewalks were quite willing to give a passage to the favoured mortals who owned seats, but to do so was difficult. It was an attempt to divide six into four with no remainder, and the difficulty was further increased by the arrival of troops after 8.30, taking up their appointed places. The wise, however, had reached their seats on the stands and obtained access to the houses, where they had bought windows, by 7 o'clock to 7.30. It was only inevitable that late-comers, who had to push and struggle, in the case of ladies did much damage to their toilets. At length order was evolved out of chaos—many extreme late-comers were peremptorily shut out, and everybody settled down to wait. The picture was complete. The last touches of the decorator and florist had been given, and the fine effect of the decorations could be viewed.

The decorations for Her Majesty's jubilee have

been universal and without stint. Could the Queen have passed this morning through some of the wretched streets of her great London, some of those narrow ill-favoured alleys where pale-faced children have come to believe that the sky is only a yard wide, where there is want and hunger and disease the year around, she could not have found a more striking evidence of her abiding place in the hearts of her people. The resplendent West End, with its crimson glory of great banners, triumphal arches, paterres and costly blossoms mean no more, if half so much, as the tiny paper flag, or a yard or so of narrow red, white, and blue stretched along the window sill and round the common flower pot with its single root—the modest decorations which formed to-day shrines for children in the shadows in Whitechapel, Spitalfields, Hoxton or Shoreditch alleyways.

It is, however, to the six and three-quarter miles of the processional route that one must turn for what is considered the Jubilee decorations. The means employed here have been as varied as the ends achieved. While there is plenty of red, white, and blue, the greater reliance has been placed on royal crimson, trimmed with gold mottoes, beautiful with scrolls, banners, regalia, royal arms, the imperial monograms, portraits of the Queen in every possible form of reproduction and allusions to 1837-1897. In the richer streets there are countless costly blossoms, but paper flowers have not been disdained, and especially in such decorations as are in the streets proper, and the green of evergreen and fir and laurel is the garment on the triumphal arches. Venetian masts, with thin, idly waving pennons and flowers lend more of the picturesque than perhaps anything else. There were no scrolls or decorations stretched across the street, by the Queen's express desire, owing to an accident which befel in the Jubilee 10 years ago, when a falling motto bade fair to frighten the Queen's horses. Naturally, flags of all nations figured conspicuously in this carnival of colour.

Buckingham Palace itself was undecorated save for the Royal Standard, which floated above it. The stands in front and along the garden as far as Hyde Park corner, which were filled with civil servants, household servants, and their friends, were to be noted more for the happy faces they contained than for any prominent decoration, although the long lines of national colours under the trees were decidedly effective. Indeed, it was not until passing Constitution Hill that one was face to face with the great effect and noted what the gradual adornment of last month led to. All old landmarks are there, of course, but the streets are transformed beyond recognition. All seemed like some large fair or gigantic festival. All the houses and clubs, especially from Hyde Park-corner to St. James-street, are ablaze with multi-coloured draperies, relieved with flowers. Red, white, and blue was the prevailing combination, not only in the bunting and cloth, but also in the blooms of the scarlet geraniums, white marguerites, and deep blue lobelias. Of the houses, Devonshire House and Bath House were the most prominent. Bath House was most artistic, having scarlet draperies festooned with yellow and red stripes, escutcheons, and groups of flags, with baskets of flowers here and there. The universal "V.R." with the imperial crown, were not lacking.

St. James-street was completely transformed and presented a brave appearance with its tall venetian masts, streamers, laurel wreaths, and rich festoons. The Devonshire Club was notable with its rich draperies, bearing excellent portraits of Her Majesty. In Pall Mall much colour was shown by the stands. The Wanderers' Club, at the foot of Waterloo Place, was decked in a suit of red, white, and blue. A little further on at the Pall Mall entrance to St. Martin's Parish more ambitious decorations were attempted. Between this point and Exeter Hall were placed eighteenth arches formed of coloured globes or balloons of celluloid, of the kind used in Paris during the Czar's visit. Supporting poles about five feet high were decorated with oriflamme or banneret, and an escutcheon with two flags. The masts carried a garland of 118 globes, each arch and every balloon containing a lamp.

At Exeter Hall, entering the domain of the Strand Board of Works, an abrupt change was made from celluloid balloons to a line of venetian masts paralleled with the footways extending to the law courts and city limits. The masts were gold, with bannerets between graceful loopings, garlands of paper and muslin flowers, which was quite effective, the design being light and striking. The Griffin, the site of Old Temple Bar, was so covered with decoration for both day and night as to be almost unrecognizable.

The Queen started the royal procession at 11.15, and as she did so the sun broke through the

clouds. There was constant cheering during the procession and the best of order prevailed. The ceremony at St. Paul's cathedral passed off without a hitch, and the Queen returned to Buckingham Palace at 12.30 p.m.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE FRENCH ENVOY IN ENGLAND.

London, July 1.

The French special envoy who attended the Jubilee celebrations has expressed himself as deeply gratified at the extremely flattering reception accorded him by Her Majesty the Queen and the Prince of Wales.

REVIEW OF COLONIAL TROOPS.

His Royal Highness the Prince of Wales will inspect the Colonial and Indian troops at Buckingham Palace on Saturday.

MOVEMENTS OF GERMAN MINISTERS.

Herr von Bülow, German Ambassador to Rome, has been replaced.

Baron Marschall von Bieberstein, German Minister for Foreign Affairs, is going to Auerstadt.

GERMAN MINISTERIAL CHANGES.

Dr. Miguel has been appointed Vice-President of the Prussian Council of Ministers, retaining his present position as Minister of Finance. Dr. von Boetticher, Minister of the Interior, has resigned, Graf von Posadowsky-Welmer replacing him.

RIOTING IN CALCUTTA.

London, July 3.

Serious riots have broken out at Chintpur, a suburb of Calcutta. Several Europeans have been injured. Strong forces are patrolling the streets to preserve order.

THE "ADEN" DISASTER.

The survivors from the *Aden* proceed homeward by the P. & O. steamship *India*.

Her Majesty the Queen has telegraphed her sincere sympathy and condolence with the survivors and the bereaved.

The Right Hon. C. T. Ritchie, M.P., President of the Board of Trade, has stated, in reference to the wreck of the *Aden* off Socotra, that he is determined to spare no pains to overcome the difficulties that have hitherto operated against the efficient lighting of Cape Guardafui and the Island of Socotra.

THE JUBILEE REVIEW.

The review of troops at Aldershot was a most brilliant spectacle. Her Majesty the Queen was cheered enthusiastically.

The Colonial, Indian, and Cingalese forces marched past first, with Field-Marshal Lord Roberts at their head, and received a great ovation.

THE TEA TARIFF NEGATIVED.

The following, timed New York, 10.15 a.m. July 3, reached the Tea Guild's Central Office yesterday morning.

After active agitation in favour of the exemption of tea from duty, the proposal to impose duties on tea was disapproved, mainly by the Republicans, and was at last thrown out.

THE U.S. SUGAR TARIFF.

The United States Senate has adopted the clause imposing an extra duty on sugars which have received bounties from the country of production.

THE HAWAIIAN DUTY ON SAKE.

Honolulu (via San Francisco), July 1st. In spite of the protest of the Japanese Government, the Hawaiian Government

has decided to enforce the increased duty on *sake* imported from Japan after the 1st of July.

NEW OPEN PORTS IN KOREA.

Söul, July 5.

At a Cabinet meeting held last night, it was decided to open the ports of Mok-pho and Chin-pam-pho [after the 1st October this year, by a special Ordinance of the King, not specially in pursuance of the Japan-Korea treaty, and the Government notified the decision to the Ministers of different Powers in Korea. Various regulations and by-laws concerning the opening of the ports will be discussed and drawn up at a conference to be held later on.

KOREAN INTELLIGENCE.

Söul, July 6.

Cho Pyöng-ho, Chief Secretary of the Cabinet, has resigned, and Min Pyöng-hyök (a younger brother of Ming Yong-chu) has succeeded him.

THE HAWAIIAN ANNEXATION.

THE "STATUS QUO" NOT ACCEPTED.

London, July 6.

Mr. Sherman, U.S. Secretary of State, in his reply to the protest made by Japan, declares that the annexation of Hawaii will in no wise prejudice the legitimate interests of Japan or any other Power in the Pacific, but that he cannot entertain any suggestion with regard to the maintenance of the *status quo*.

THE U. S. TARIFF.

The discussion in the United States Senate on the Tariff Bill has concluded.

TURKEY AND THE POWERS.

Owing to the Porte's repeated delays, the Embassies at Constantinople have presented a Note insisting on a prompt decision of the outstanding question with respect to the delimitation of the new Greco-Turkish frontier.

The Turkish Ministers in Council have unanimously adopted a resolution to maintain Turkey's rights in Thessaly.

THE "ADEN" SURVIVORS.

The P. & O. steamer *India* has arrived at Suez with the survivors from the *Aden*, who are all doing well.

GREAT BRITAIN AND AFRICA.

London, July 7.

An agreement has been signed and sealed, under date 14th May, between King Menelik of Abyssinia and the British Commissioner, Mr. Rodd.

The Hon. W. St. John Brodrick, Under-Secretary for War, has announced that the Egyptian Government will conduct the operations along the Nile, and that it is not intended that Major-General Sir H. H. Kitchener shall be superseded in any way.

The Hon. G. N. Curzon, Under-Secretary for Foreign Affairs, has stated that the concession granted to the Mozambique Company has been further extended for twenty-five years. He further declared he was not aware that the Company had been granted fresh privileges in Delagoa Bay.

(GOVERNMENT DISPATCH.)

THE UNITED STATES TARIFF.

New York, July 1.

(Received in Tokyo, July 4.)

The Senate has amended the proposed tariff rates on Japanese silk goods as follows:—On raw *habutaye* (unbleached?) weighing not less than a third of an ounce

and not more than one and a third ounces per square yard, or on pieces dyed in the thread, \$2½ per pound; \$3 on gummed pieces, and \$3½ on goods dyed in the piece or printed.

The final vote on the new Tariff will be taken on July 3.

THE TEA DUTY NEGATIVED.

Washington, July 6.

The Committee of Ways and Means of the Senate has concluded not to impose the duty on tea.

(SPECIAL TELEGRAM TO THE "JAPAN MAIL.")

Hakodate, July 7.

H.M. torpedo-destroyer *Handy* has just arrived.

(FROM THE "SHANGHAI MERCURY")

THE GRAND PRIX.

Hongkong, June 28th, 5.16 p.m.

The following is the result of the Grand Prix de Paris, run on Sunday:—

Doga	1
Roxelana	2
Parasol	3

WRECK OF A PILGRIM STEAMER.

MANY LIVES LOST.

The steamer *Su lan*, of Bombay, has foundered near the island of Socotra. The crew were all saved, being rescued by the P. & O. Australian Mail Steamer *Valetta*. A great many of the native passengers, who were Mahomedan pilgrims, went down in the vessel.

SEVERE EARTHQUAKE AT CALCUTTA.

A terrible earthquake occurred at Calcutta on the 12th inst., the shock lasting for five minutes.

Buildings rocked to and fro on their foundations, and split from roof to basement.

The offices of the *Indian Daily News* and the *Statesman* have been entirely demolished, nothing but a heap of *débris* indicating where they once stood.

Enormous damage has been done to public buildings and other private property besides the offices above referred to.

The railway system has been entirely disorganised, and the lines twisted or rent from the sleepers. The damage is especially severe in Calcutta itself, at Darjeeling, and Tipperah, but so far as can be ascertained Europeans have escaped with their lives.

In Assam a railway train was wrecked.

(FROM "L'AVENIR DU TONKIN")

THE ATTEMPT ON PRESIDENT

FAURE'S LIFE.

FULLER DETAILS.

Paris, June 14.

A leaden tube charged with gunpowder exploded in a thicket in the Bois de Boulogne as M. Felix Faure was proceeding to the race-course at Longchamps. Nobody was injured. The crowd gave the President an ovation. Three individuals who had been arrested on suspicion have been released. The perpetrator of the outrage is unknown. The newspapers consider the affair as of no importance, holding that it was the work of a madman. President Faure has received dispatches from foreign sovereigns and numerous marks of sympathy from France and abroad.

THE EARTHQUAKES IN INDIA.

Several earthquake shocks have been experienced in Calcutta, and much damage is reported. Eight persons were killed. Earthquakes were also felt in Bombay, Simla, Manipur, and Darjeeling.

ANOTHER BOMB OUTRAGE IN PARIS.

Paris, June 17.

This afternoon, a bomb exploded in the Place de la Concorde beside the statue of Strasburg. No damage was done, and no lives were lost. The Place was deserted at the time because of the rain. It is believed that the perpetrator had no intention of killing anyone.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.
The Tokio Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following are the solutions of Problems 325 and 326:—

| 2—Kt to B 3, mate | 1—Q takes P |
| 2—Q takes Q, mate | 1—Kt to Kt 6 |
| 2—Kt to B 3, mate | 1—Kt to B 3 |
| 2—Kt to B 7, mate | 1—Kt to B 5 |
| 2—P takes Kt, mate | 1—P to K 3 |
| 2—Kt to B 6, mate | 1—Kt takes P |
| 2—Q takes Kt, mate | 1—Q to Kt 5 |
| 2—Kt takes Q, mate | |

Correct solution of No. 326 has been received from W.H.S.

"JAPAN MAIL" CORRESPONDENCE TOURNEY.

A Chess Tournament by correspondence will be started next month and players desirous of taking part, are requested to forward their names and addresses at earliest opportunity. Further particulars will follow shortly.

PROBLEM No. 328.

By CARL KONDELK.

WHITE.
White to play, and mate in two moves.

GAME No. 734.

The following is the 21st, and last, game in the recent Pillsbury-Showalter match:—

(QUEEN'S GAMBIT DECLINED.)

- | White—H. N. Pillsbury. | Black—J. W. Showalter. |
|------------------------|------------------------|
| 1 P Q4 | 1 Kt xB |
| 2 P Q4 | 2 B K5 |
| 3 Kt QB3 | 24 P B4 |
| 4 B K5 | 25 R QKt |
| 5 P K3 | sq |
| 6 Kt B3 | 26 P K5 |
| 7 R B xq | 27 R Kt7 |
| 8 B B4(a) | 28 P xP |
| 9 B xP | 29 Q xB |
| 10 B Kt13 | 30 P R6 |
| 11 B Q3(b) | 31 K K2 |
| 12 P xKt | 32 Q xQ |
| 13 P B4(c) | 33 K xKt |
| 14 P xP | 34 P Kt4 |
| 15 K B xq | 35 R Kt7 |
| 16 P B5 | 36 P xR |
| 17 B Q6 | 37 P xP |
| 18 Kt K5 | 38 B xP |
| 19 Q B3 | 39 R Kt sq |
| 20 P KR4 | ch |
| 21 Q Kt3 | 40 B K4 |

NOTES.

- (a) It is no retreat to retire here, for 4—Kt to Kt 5 is no more a wasted move than the pin of the Kt in the Ruy Lopez.
(b) Better than 21—B to Kt 3, as in an earlier game, whereupon 22.... P to Q R 4.
(c) He must prevent P to B 5, fixing him with a weak QBP and an inferiority of pawns on the Queen's side.
(d) This loses him the game and the match. He does not see that his other bishop can be deprived of further interest in the game.
(e) No doubt Black feared the sacrifice, if 19.... P to B 3, of 20—Kt takes P, P takes Kt, 21—B takes P, with winning prospects.
(f) This loses right off, but we think White should win anyhow.

OVER THE CHESS BOARD.

The *China Mail* reports under date July 1st:—At the Hongkong Chess Club, Mr. Pollock the donor of the Championship cup, has won back this trophy from the most brilliant of our numerous brilliant Portuguese players, Mr. P. C. de Souza. The score of the final match was Pollock 2, Souza 1, drawn 3. This cup was held first by Mr. E. Bischoff, who lost it to Lieut.-Colonel the O'Gorman, who in his turn was defeated by Mr. Souza. From him Mr. Pollock won the cup in April of last year, and having held it for nearly three months resigned it to him again without a contest in July. A few weeks longer in Mr. Souza's possession would have made the cup his own property, but now it will have to be held a twelve-month.

Mr. Lewis Walker and other well-known Ceylon players have organised a Chess Club for Colombo. The subscription is ten rupees so it should speedily become a numerous body. They anticipate the support of the Bishop when he returns to the island, and if successful such a Club should serve a use that is almost world-wide, a chess port of call for players travelling out or home to and from all parts of the East and Australia.

The International Tournament in Berlin has been postponed until September and will very probably be well attended. It is said that both Pillsbury and Steinitz will specially come over from New York to play, and as there seems to be no chance of any masters' tournament in England, most of the English masters will likewise compete.

On June 2nd, in the Washington Chess Club, Pillsbury played simultaneously thirty games of Chess, and six of Checkers, against the best players of Washington. After five hours, the last game was finished. Pillsbury won 27 games of Chess, and four of Checkers, and lost only one game of Checkers; the others were draws.

TIPS IN THE OPENINGS.

I.—CENTRE GAMBIT.

Roger J. Wright (Vice-President of the Sussex Chess Association), has suggested a new variation in the Centre Gambit, which deserves consideration. He works it out thus:—

- | WHITE. | BLACK. | WHITE. | BLACK. |
|--------|--------|--------|--------|
| 1 P K4 | P K4 | 3 Q xP | Kt QB3 |
| 2 P Q4 | P xP | 4 Q Q3 | |

White's fourth move, instead of the usual move of Paulsen's—viz., 4—Q to K 3—is the novelty. It avoids the annoying attacks on the Queen which generally follow the usual move.

II.—EVANS GAMBIT.

E. Lasker maintains (1) that the compromised defence is favourable to the second player; (2) that the normal form of the Evans yields to White a lasting and very dangerous attack on the King's side; and (3) that Black has a simple and safe way of evading all difficulty if he will immediately give back his material advantage. Thus:—

- | WHITE. | BLACK. | WHITE. | BLACK. |
|----------|----------|---------------|------------|
| 1 P K4 | P K4 | 6 Castles (b) | P K3 |
| 2 Kt KB3 | Kt QB3 | 7 P Q4 | P Q3 (c) |
| 3 B QB4 | B QB4 | 8 P xP | P xP |
| 4 P QKt4 | B xP | 9 Q xQ | Kt xQ |
| 5 P B3 | B R4 (a) | 10 K xP | Kt KB3 (d) |

NOTES.

- (a) Better than the usual 5.... B to B 4, which gives White more chances for attack.
(b) If White plays 6—P to Q 4 Black has the option of bringing about the "Compromised Defence," which is favourable to the second player.
(c) Black gives up the pawn previously gained for the purpose of simplification.
(d) White queen's side is disarranged for the end game, and Black has a better disposed position for the ending. The white Queen's Bishop's pawn is weak. It is also an obstacle to White's effective development.

The above, says Mr. Gunsberg, may be quite true, but, with due respect to Mr. Lasker, we believe that ordinary amateurs will find much smoother sailing by declining the Gambit with B to Kt 3.

III.—ANDERSSON OPENING.

Prince Dadeau A. Mongrelia points out in *La Strategie* that, although the opening 1—P to Q R 3 followed by 2—P to Q 4 is generally believed to be the invention of Anderssen, it is to be found in a game played between Kieseritzky and St. Amant, and published as No. 1,009 in Walker's "Chess Studies."

IV.—KIESERITZKY'S DEFENCE IN THE "EVANS."

Kieseritzky's Defence, in the Evans gambit of 5.... B to Q 3, is thought to be the best way of meeting that formidable attack. "The Theoretical Big Wigs" declared such a defence to be bad, because it cramped Black's game unnecessarily, but they apparently overlooked the fact that Black had just gained a pawn, and to maintain the advantage he had better be content to have a cramped game for some considerable time. If he can maintain the material advantage without losing more in position than will counterbalance it he must inevitably win the game. By playing the suggested move, viz., B to Q 3, Black prevents White from establishing his pawns in the centre as in most variations, and White's pawn at Q B 3 not only becomes isolated, but for a long time is actually an obstruction, preventing Q Kt from coming out to his best advantage and otherwise remaining a source of weakness and aggravation to White—more so perhaps, than Black's cramped position is to him. Now, it is clear that if Black can only emerge from the opening moves without being overwhelmed by the attack, the result must be favourable to him. Such no doubt was Kieseritzky's idea, and practical play has demonstrated its goodness. Of course, it spoils the beautiful Evans gambits, which are produced when the moves are played in the so-called "regular" manner—that is to say in the way laid down by analysts, which makes the play mostly in favour of the attack.

V.—STAUNTON'S OPENING.

Miron, of the *New York Clipper*, says, that Staunton's opening is likely to become fashionable again in the States. Recently he defended the attack in this wise:—

- | WHITE. | BLACK. | WHITE. | BLACK. |
|----------|--------|----------|--------|
| 1 P K4 | P K4 | 5 K P xP | Q xP |
| 2 Kt KB3 | Kt QB3 | 6 Kt xP | Kt xKt |
| 3 P B3 | P Q4 | 7 Q xKt | Q xQ |
| 4 P Q4 | K P xP | | |

And Black won in a little over 20 moves.

VI.—RUY LOPEZ.

E. Lasker holds that 3.... Kt to B 3 is the only safe defence to the Ruy Lopez attack. By means of sundry variations which he has worked out on his own account he proves that Steinitz's favourite 3.... P to Q 3 is weak. He also demonstrates that 3.... P to Q R 3 is unsound. He does this by showing that the first player in addition to forcing the second player to weaken his queen's side, can compel him to engage both the Queen and the Queen's Rook in looking after the advanced pawn on the Queen's wing. When the first player has succeeded in these lines of play, he can attack the adverse knight at his leisure.

AN END GAME.

THE FORSYTH NOTATION.

The young player might take out his chessboard and men. Place the board in the position for action, with himself as the white general. Place a black rook on the top left-hand corner square, leave four spaces, and place on the adjoining square a black rook, and a space is then followed by the black king. In the next row leave five spaces, and then put a black pawn on each of the three remaining spaces. The next two rows have no pieces on them. In the fifth row first leave three spaces, then put on a black pawn, a space is followed by a white knight, after which are

two spaces. In the next row one square is followed by a white bishop, a black bishop and five spaces. The next row has two spaces, a white pawn, and five empty squares. The last row has an empty square, a white king, a white rook, four spaces, and another white rook. Black has eight and White six pieces.

Instead of so writing the position of the pieces, a neater method was first pointed out by Mr. Forsyth, of Scotland, in 1883. It is exactly as above, only the White pieces are represented by capital, and the Black pieces by small, letters. Numbers represent spaces. Thus:—r 4 r 1 k 5 p p p 8/8/3 p 1 Kt 2/1 B b 5/2 P 5/1 KR 4 R/; or, more briefly, r 4 r 1 k 5 p p p 19 p 1 Kt 3 B b 7 P 6 KR 4 R. (Instead of Kt, N is sometimes written) 8 + 6. White to play.

The reader has now on the board before him a position set up from the Forsyth Notation. It shows the ending of a game between moderately good players. He will observe that White is threatened with..... R to Q R 8 mate. While meditating whether it would not be more dignified to resign than be checkmated, a gleam of hope shot before him in his desperate plight. On examination the fact was revealed that White can win the game. How is it done? The problem is not too difficult.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From Hongkong.....	per P. & O. Co.	Saturday, July 10th.

Chinese	21.50

IMPORTERS.
Importers have again raised their prices on account of further advances in laid-down cost. In spite of this dealers have purchased largely of Bars, Plates, Sheets, and Pig iron.

PER PICUL.	
Round and square 4 inch. and upward	4.15 to 4.60
Iron Plates, assorted	4.20 to 4.50
Sheet Iron	5.20 to 5.50
Galvanized iron sheets	10.00 to 10.50
Wire Nails, assorted	6.00 to 6.50
Pig Iron, per box	5.70 to 5.80
Pig Iron, 100 lb. to 15 inch	2.00 to 2.15
Loop Iron (1 to 15 inch)	4.80 to 5.00

IRON.
The market has slightly improved, and promises to be brisker. Sales have been made both in American and Russian at former rates.

American	\$2.00 to 2.05
Russian	2.00 to 2.05
Langkat	—

SUGAR.
A good business has been done in Brown, sales amounting to 29,923 piculs against 34,886 piculs arrived, rates having risen slightly in some sorts. In White sales have been steady at former rates.

PER PICUL.	
Brown Taka	3.50 to 3.70
Brown Manila	4.25 to 5.00
Brown Dailong	2.80 to 3.00
Brown Canton	3.30 to 4.20
White Java and Penang	6.60 to 6.70
White Refined	7.00 to 9.00

EXPORTS.
RAW SILK.
A reaction has taken place in the last few days. Holders have oversteered their market and all is in suspense. Buyers are holding off entirely for New York and not much doing for Europe. We withdraw quotations until there is some regular market.

TEA.
The demand has been steady during the past week and a fair business has been transacted at former rates. The quality of the second picking is not so good in leaf as last year, but the cup is fair. Daily sales in Yokohama have varied from 12 to 78,000 catty, the average being about 25,000 catty, and in Kobe from 70,000 to 80,000 catty. The *Kaisu* on the 6th took 46,000 lbs. for Europe, the *China*, sailing on the 8th for San Francisco, took 23,239 chests and the *Empress of India* on the 9th, for Vancouver 21,139 chests. Total settlements to date for the season are 140,367 piculs.

LOCAL AND JAPANESE SHARE LIST.

[MESSRS. BISSET & URB'S LIST.]

Yokohama, July 9th.
Mail advices from China bearing dates up to the 30th ultimo from Hongkong and 2nd instant from Shanghai report the following changes in the share market.

Canton Insurances have declined from \$182.50 to \$180; Olivers Mines B shares \$7 to \$6.50; Hongkong Hotels \$49 to \$48.50; Hongkong Ropes \$174 to \$173; Campbell, Moores \$8.50 to \$8; Perak Sugars Tls. 40 to Tls. 38; Shanghai Cottons Tls. 107 to Tls. 106; International Cottons Tls. 120 to Tls. 115; Laon-Kung-Mows Tls. 123 to Tls. 118; American Cigarettes \$72.50 to \$72; Sumatras Tls. 114 to Tls. 109; Shanghai Lankats Tls. 585 to Tls. 580 and Municipal 1893 Debentures from Tls. 105 to Tls. 101.

The only rise to be reported is in Green Islands from \$35.50 to \$36.

In forward settlements China Fires have been registered at \$107 for September (\$103 cash); China Sugars at \$147, \$148 and \$149 for September (\$141 to 144 cash); Hongkong Banks at 192 per cent. premium for July (190 per cent. cash); Indo-Chinas (Tls. 26 cash) at Tls. 37.50 for September; International Cottons (Tls. 120 to Tls. 115 cash) at Tls. 117 and Tls. 116 for July and Tls. 120 for December; Laon-Kung-Mows (Tls. 123 to Tls. 118 cash) at Tls. 120 and Tls. 119 for July; Sumatra Tobaccos (Tls. 111 to Tls. 109 cash) at Tls. 112 for July and Tls. 115 for September; and Shanghai Lankats (Tls. 580 cash) at Tls. 610 for August and Tls. 670 for December.

A wire was received in Hongkong from the Manager of the Olivers Mines reporting a crushing of 200 tons at the Eureka Mines from which an ounce of gold to the ton was obtained.

It is rumoured that the profits of the H. & S. Bank exceed those of the last half year by \$350,000, which means a net profit of over \$1,800,000, not including the balance of over \$300,000 brought forward from last year.

Locally, we have no change to report. The market is very strong with buyers of nearly every stock, viz: Grand Hotels at \$215; Club Hotels at \$75; Iron works at \$165; Breweries at \$355; North & Raes at \$175; Langfeldts at \$200; Brewery Debentures at \$110 and Y. U. Club Debentures at \$100. There are sellers of Oriental Hotel Founders at \$450; Breitts at \$7.50; Hyogo Gas at \$180; and Breitt Debentures at \$104. We quote Oriental Hotels steady at \$140.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In 1 short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Couvre, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 17TH, 1897.

DEATH.

On the 15th July, at the Yokohama General Hospital, CAMILLE LASSUCHETTE, of Paris, aged 28 years.

SUMMARY OF NEWS.

THE weather still continues very damp and cold.

MOUNT SHIRANE and Bandai-san have broken out in eruption.

FORTY-FIVE emigrants left Kobe for Hawaii on the 14th instant.

H. I. H. PRINCE ARISUGAWA, left Paris for home on the 13th instant.

TURKEY is putting every obstacle in the way of peace negotiations.

THE Yokohama Electric Light Co. has declared a dividend of 11 per cent.

THE *Fiyuto*, or Liberal Party, are arranging to have a grand procession at Ueno, Tokyo, on the 18th inst.

FIVE men were killed in an explosion on board the Italian cruiser *Bassan*, when firing a salute on the 26th ult.

THE American sealing barque, *Cape Horn Pigeon*, has been wrecked at Hakodate. The crew were saved.

Molly Bawn won the first, and *Mary* the second prize presented by the French Residents,

on the Fourteenth of July in the sailing race for the big boats, and *Undine* that for the 17 Raters.

A GRAND regatta is to be held on Lake Biwa on the 18th inst., in which a number of schools will compete.

THE Liberals (*Fiyuto*) are to hold a grand lecture meeting at the Kinkikwan, Kanda, on the 19th inst.

THE heavy rain of Wednesday evening did considerable damage to property on, and at the foot of, the Bluff.

THE Imperial Court is still at Kyoto. It is expected that the Crown Prince will pass the summer at Hakone.

THE Tokyo Tramway Company has declared a dividend for the past half-year at the rate of 30 per cent. per annum.

AT the Jubilee review of the British fleet at Portsmouth there were assembled 167 British and 15 foreign warships.

THE Mitsu-bishi Company propose constructing a dock at Wada, Kobe, capable of accommodating vessels of over ten thousand tons.

THE revised treaties between Spain, Portugal and Japan having been ratified, will shortly be promulgated under Imperial Ordinance.

ABOUT 7.30 p.m. on Wednesday, the 14th inst. a violent thunderstorm, accompanied by a perfect deluge of rain, visited Yokohama.

MR. WOLHEIM, formerly *Chargé d'Affaires* for Mexico at Tokyo, now at home, is expected to return to Japan as Minister at an early date.

THE presentation of diplomas to the graduates of the Nobles' School (Boys) took place at the Akasaka Detached Palace on the 15th instant.

A TORPEDO, believed to be one which was lost by H.M.S. *Edgar* last year, was fished up by some fishermen off Honmoku on the 15th inst.

SEVERE floods have resulted from heavy rains in Fukui Prefecture. Several persons have been drowned and over 4,000 houses have been flooded.

A TELEGRAM from Taipeh under date of 8th inst. reports that the new cases of plague at Tainan numbered 11 in all from the 4th to the 6th inst.

CAPTAIN UCHIDA and the crew that are to bring out the new cruiser *Takasago Kan* from England, left here by the *Hakata Maru* on Tuesday for London.

MR. LI KAI, late Korean Minister to Japan, who returned to the Peninsula some months ago, will again come to Japan about October in the capacity of Minister.

FIRE broke out in the coal bunkers of the steamer *Kinryu Maru* on the 11th inst., but was extinguished without serious damage to the hull or cargo of the vessel.

THE British steamer *Pegu* has been pirated in the Straits of Malacca by Achinese, and the Captain and seven of the crew murdered, sixteen others being wounded.

THE new steamer *Taihoku Maru*, built in England for the Osaka Shosen Kaisha, has sunk near Lisbon, after being in collision with another vessel. The crew were all saved.

MR. HARMAND, Minister for France, presided at the dinner of French residents at the Club Hotel on the Fourteenth of July, and delivered a patriotic speech appropriate to the occasion.

THE presentation of diplomas to the graduates of the Imperial University took place on the

10th instant. Among those present were Count Matsukata, Premier, Marquis Hachisuka, Minister for Education; Surgeon-General Ishiguro; Rear-Admiral Yamamoto, and many foreign and Japanese gentlemen. The graduates numbered 275.

REPORTS from India show that the damage done by the recent earthquake have been under rather than overstated. The mortality in the Cherra hills is estimated at from four to six thousand.

THE tea business done in Kobe from the commencement of the season up to the 30th of June was as follows:—Arrivals 7,719,200 catties, sold, 9,879,200 catties, direct export, 494,749 catties.

A FINE display of fireworks was made on the evening of the Fourteenth of July, off the Bund, but the torrents of rain which occurred between 7.30 and 8.30 put a sudden end to it and to most of the illuminations in the settlement.

THE Fourteenth of July, the anniversary of the capture of the Bastille, was celebrated this year by the French community in Yokohama more extensively and enthusiastically than usual. There were sports and entertainments on board the flagship *Bayard* and the cruiser *Eclairer*, a dinner at the Club Hotel and a reception and dance at the Consulate in the evening.

A COLLISION occurred on the Nakasendo line of the Japan Railway Company on the 11th, between a passenger train and a luggage van and locomotive. One passenger carriage was smashed to pieces and others thrown off the line into the paddy fields. Seven passengers were, it is feared, fatally injured, and a considerable number received more or less serious injuries.

THE negotiations between Turkey and the Powers are still in a very unsatisfactory condition. The Ambassadors have jointly urged the Sultan to cease his obstructive measures, and he has telegraphed direct to the Sovereigns of the Powers desiring a concession as to the Thessalian frontier. The Porte has also proposed sending Turkish reinforcements to Crete.

THE week's trade in Yokohama has been greatly interfered with by the *Bon* holidays and the turn-over is consequently small. Shirtings have hardened and look more promising for the immediate future, but nothing is doing in fancies or woollens. The demand for yarns has petered out, dealers having satisfied their present requirements. In metals the only important business has been in pig iron and sheets. The news of the strike among the iron workers in Belgium has rather upset dealers, who had been figuring on steady supplies of cheap, second-grade iron from that quarter. The strike should have some influence on the English iron-trade, for Belgium has been cutting into that rather seriously of late, though of course only for the cheap and inferior qualities. A fair business has been done in kerosene at unchanged rates. Sugars have again had a steady sale, some sorts hardening a trifle as the week closed. Turning to exports, we note that raw silk has seen practically no change, buyers being scarce and holders very firm. The ideas of shippers and holders being so much apart, all talk of quotations is still in abeyance. The waste silk market has not yet opened. A brisk business was done in the earlier part of the week in tea, but the spurt died out during the *Bon*. Shipments have been quite up to the average, while 14,000 lbs. were sent to Europe by the M.M. steamer *Melbourne*—about the first big shipment to that quarter that we remember. Exchange improved somewhat at the close of the week, a rise of $\frac{1}{4}$ taking place on Friday.

SPiRiT OF THE VERNACULAR PRESS DURING THE WEEK.

The *Nichi Nichi Shimbun* devotes a long article to the question of ship-building. It sets out by expounding the immense benefits that a nation derives in time of peace from the development of that industry, and then insists on the fact that the very existence of a State depends on its ability to be self-supplying in the matter of ships, since, owing to the scrupulous observance of international law, which is one of the characteristics of the era, the services of neutral countries' dockyards are not available to a belligerent in time of war. The immense dimensions of the ship-building industry in England are instanced as an index of her prosperity and power, and the *Nichi Nichi* goes so far as to say that, in these closing days of the nineteenth century, the strength and resources of a country may fairly be estimated by the producing capacity of its dockyards. Then follows an indictment of the Japanese Government for blowing hot and cold. There are only five private ship-building yards in Japan, the Ishikawa-jima yard in Tokyo, the Tekkoji yard in Osaka, the Kawasaki yard in Kobe, the Mitsubishi yard in Nagasaki, and the Shiramine yard at Kuniyoshi-ura in Aki. Of these the last alone can be called an independent enterprise from the outset: all the others received more or less assistance from the Treasury. At the time of their initiation, the idea of officialdom was merely to encourage individual enterprise. Subsidies and grants were given to persons, and little, if any, pains were taken to superintend the progress of these State-aided enterprises. Then, after the war, a purely impersonal and general policy was adopted. Aids, liberal enough, were promised, not to this company or to that, but to ships that satisfied certain tests. But the tests are such that vessels constructed in Japan have very little chance of attaining the necessary classification, and the result is that there has been a sudden leap from the paternal methods of former days to a system which virtually constitutes no encouragement at all. Japanese builders, unless they have a prospect of selling a ship to the Government, can not afford to attempt anything fine. They must cater to the tastes and capacities of their customers: in other words, they must build a cheap and inferior class of vessel. In such conditions the *Nichi Nichi* sees little prospect of the development of the industry. But it indicates no remedy. A general exhortation represents the sum of its suggestions.

A lengthy and wearisome essay appears in the columns of the *Mainichi Shimbun* on the subject of the decline of the *hambatsu* and the rise of the *shobatsu* system; that is to say, the decline of personal government and the development of plutocratic government. We may remark, *en passant*, that the estimate formed by some Japanese editors of the patience of their readers must be phenomenal. The article that we are now considering is packed with platitudes and crowded with commonplaces, and the conclusion resulting from its perusal is, either that the Japanese people must be in need of most elementary instruction, or that some Japanese editors find insuperable difficulty in saying what they have to say briefly and concisely. However, the article derives considerable interest, first, from the general fact that the wealthy members of the merchant class have gradually attained a position of unparalleled eminence and influence in the State, and secondly, from the special fact that a movement is on foot to dispute their supremacy. Ever since the inauguration of parliamentary institutions in Japan, the shibboleth of the Opposition has been, "down with the *hambatsu seifu*;" that is to say, down with a Government composed of clansmen because they are clansmen. Otherwise expressed, the campaign was directed against the *Sai-cho* clique that presided over the work of the Restoration and thereafter monopolized the places of power. It did not appear to outsiders that the members of the clique abused their privileges: that they great-

ly enriched themselves at the expense of the country; that their administration tended to impede national progress. But their political opponents thought differently, and the *Nichi Nichi Shimbun*, which appears to have lent its columns for the nonce to Mr. Nakano Buyei, or some other *Shimpo-to* leader of his stamp, now congratulates the nation very earnestly on the fact that the reign of the clansmen is over. On the other hand, they have been succeeded by the plutocrats, a far more formidable party. For whereas the clansmen could be attacked and overthrown in the arena of pure political discussion, the plutocrats govern not by principles but by the force of wealth, and by that same force a large section of the community is indissolubly bound to them. The particular plutocrats indicated by our contemporary are, as will easily be guessed, the Mitsui, the Mitsubishi, and the Nippon Ginko. It is not denied that the talents and proved capacities of these new leaders entitle them to their places of prominence, but the *Mainichi* dwells at length on the immense power they wield, and on the wide-spread disaster that would be caused by any abuse of it. On that point the *Mainichi* is explicit. But it thinks that the part of wisdom is to prevent evils rather than to deal with them after they have arisen, and it therefore urges combination on the part of minor capitalists, and the organization of a large private bank to compete with the three plutocratic principals. That is the gist of our contemporary's article. We can not weary our readers with the details of the argument.

The *Yiji Shimo* writes about the importance of placing a larger sum at the disposal of the Foreign Office for secret service. It is impossible to attain ends consistent with the magnitude of the country's interests if only eighty thousand yen are available. In former days, when Japan was regarded by Western nations merely as an interesting child to which no special attention need be paid, the appropriation granted to the Foreign Office was not so insufficient. But since the war with China, Japan has become an object of scrutiny and suspicion. The Americans complain that her industrialists threaten them with serious competition; the Hawaiians, though possibly their recent action was, in some degree, connected with annexation projects, are unquestionably afraid of the growth of a Japanese element in the islands; the Australians are legislating against the introduction of Japanese labour. On every hand it is plain that Japan has to face a greatly altered state of affairs. She has been frequently taken by surprise. She was taken by surprise in connexion with the retrocession of Liaotung, and she was taken by surprise in connexion with the annexation of Hawaii. The truth is that she does not possess a sufficiency of agents because her Foreign Minister can not pay for them. He must be enabled to do so. To deal with difficulties after they have arisen is an incomparably clumsier policy than to prevent them.

The same journal (*Yiji*) has a strong article advocating an increase of taxation. The national financiers have to choose between one of two things: they must either raise a foreign loan or increase the taxes. The adoption of gold monometallism was intended primarily to open an avenue for the inflow of foreign capital, and to a certain extent that object has been obtained. But one inevitable effect of the introduction of foreign capital will be a general appreciation of prices, with a corresponding augmentation of the wealth of the producing and distributing classes, the agriculturists, the industrialists, and the merchants. That means development of imports and still further disturbances of the balance of trade. In the face of such conditions, how can there be any hope of maintaining the gold reserves of the Treasury? So long as the Indemnity is available, any outflow of the yellow metal through commercial channels can be recouped, but the indemnity will not last for ever. So soon as it is expended, and so soon as a suspicion gets abroad that

the Treasury's reserves of hard money are becoming inadequate to maintain gold specie payments, the country-folk will resort at once to the habit so largely practised by them in the days of the *fat* currency, the habit of hoarding. At that epoch every one that could get hold of a piece of silver, hid it away at the bottom of a bag or in some secret nook of the family chest-of-drawers. Gold is much easier to hoard. Value for value it is only a thirtieth part of the weight and bulk of silver. The people will not be slow to hoard it if they begin to have doubts of the Treasury's solvency. Thus, on the one hand, gold would be flowing out of the country to pay for the excess of imports over exports, and, on the other, it would be withdrawn from circulation all over the country for hoarding purposes. That is the prospect inevitably to be contemplated if recourse be had to a foreign loan. Were the people unable to endure an increase of taxation, the case would be different. But there can be no doubt whatever about their ability. More or less hardship would, of course, be entailed. But one consequence would be a reduction of general purchasing power, and, therefore, a tendency towards the restoration of the balance of trade. Above all, the national finances would be placed on a sound basis, and all danger of the Treasury's solvency being averted, there would be nothing to tempt the people to hoard. If the Ministers of the Crown have not the courage to inaugurate new or increased taxes, it is the duty of publicists to try to remove their timidity.

The *Kokumin Shimbun* also advocates increased taxation, and appeals strongly to the patriotism of the people. It reminds them how unhesitatingly they granted a sum of two hundred million yen to carry on the War, and it asks whether they will now shrink from comparatively small sacrifices, not merely to secure the results attained by the War, but also to ensure the maintenance of peace. Our contemporary plainly indicates the Land Tax as the source from which additional revenue ought to be sought, its argument being that the Land Tax, as actually levied to-day, does not represent a fraction of the original assessment. The times have certainly changed when we find an increase of the Land Tax advocated by political organs; the Land Tax whose reduction was the watchword of all political parties five years ago.

The Government, according to the *Shogyo Shimo*, has at length determined to abolish all export duties and the Budget for next year will be compiled on that basis. Nothing could be more satisfactory. Hitherto certain publicists have laboured under the egregious mistake that export duties were paid by the foreign exporter, and that to abolish them would be merely to put so much money into his pocket. But the era of such misconceptions has happily past. It is now well understood that export duties constitute an obstacle to the development of the country's commerce, and thus inflict upon it a loss immeasurably greater than the sum accruing to the revenue. There are over fifty articles of export that pay duty at present, but the total sum raised does not exceed two million yen annually. In 1896, silk paid 954,001 yen; tea, 312,441 yen; and copper, 274,664 yen. The other 47 odd staples brought the total figure up to 1,707,237 yen. The vexatious and paltry character of the tax is illustrated by these figures. As for the contention advanced in some quarters that no impulse would be given to the export trade by removing the duties, it is only necessary to look at the Customs Returns. Duty-free articles were exported in 1886 to the total value of 13,420,000 yen, whereas in 1896 the figures was 67,240,000 yen—an increase of 500 per cent. At that rate of development, the present export trade of a hundred and twenty million yen will amount to six hundred millions in 1906, and that the import trade will grow in proportion can not be doubted. Supposing that, in 1906, the import trade is only 500 millions, still the duty collected under the new Tariff would be 10 millions. The Treasury can afford, therefore,

to adopt a liberal policy, apart from the enrichment of the country that would certainly ensue.

The *Yorodsu Choho* writes ably and frankly about the results that have to be recorded in the sequel of the War. Japan fought to secure the independence of Korea by eliminating the baneful suzerainty of China. She won the victory, but is Korea independent? Is not the little Kingdom's neck bowed under another yoke more puissant and weighty than was that of China? She fought to promote the maintenance of peace in the Orient. Have her successes contributed materially to that end? As for herself, it is true that she won glory by the war, and that the world suddenly awoke to a sense of her national capacity. But does she not now see her people discriminated against as dangerous rivals in countries to which they previously enjoyed free access. Formosa was the sole accession of territory that the war brought her. Has the possession of Formosa contributed to her reputation? Has it not rather exposed her to the world as a nation lacking administrative ability? At the Shimoda Conference, when the cession of Formosa was proposed, the Viceroy Li said that the Formosans would not easily be brought to submit to Japan's rule, whereupon Marquis Ito is said to have laughed scornfully. Yet it appears that the Viceroy was right. There is no moral tonic more wholesome than the frank recognition of one's failures. That conviction dictates the *Yorodsu Choho's* articles.

THE JUBILEE SERMON AT ST. ANDREWS.

The Venerable Archdeacon Shaw has published, "by request," the sermon preached by him in St. Andrew's Church, Tokyo, on Diamond-Jubilee Sunday. It is rather an essay than a sermon, for it reviews the leading events of Her Majesty's long reign as a historian might review them, and while emphasizing the moral aspects of the Victorian era, does not give them sole prominence. Referring to the American War of Secession and to the mistaken part that England played in it, the Archdeacon says:—"Some here can still remember how, when at a crisis in our history, many of our fellow-countrymen, led away by what is, after all, a noble instinct of the Anglo-Saxon race, in a contest, to side with the weaker, were ready, on provocation, to take an active part in that dreadful struggle then rending in twain our brethren in America, the Prince Consort, with his own hand, weak with the weakness of approaching death, inscribed with the authority of the Queen a dispatch which, by the moderation of its tone, was the chief means by which was averted that which would perhaps be the greatest calamity that could befall our race, a war between the mother country and her kin beyond the sea." We wish that the Americans of the present generation could be persuaded to take the Archdeacon's view of the motives that impelled the English people on that most unhappy occasion. But the Americans are set in their own view. The Archdeacon is an optimist, as it becomes him to be. "It is certain," he says, "that at no previous period of our history has there been anything like the same serious recognition of the evils of society, or the same resolute, sustained, earnest effort to grapple with and overcome them." So we think, too, but at the same time, we are obliged to confess that those evils are still stupendous, and that, in some respects, they have attained unparalleled dimensions. It is on record that a prominent philanthropist, addressing an assembly of working-men in the early sixties, warned them above all things to abstain from striking. Could he have looked forward to the America of the year 1897, he would have seen a country in which strikes on the part of employers are the rule not the exception. The great trusts by which the American consumer is robbed to-day, are nothing but strikes *sui generis*. Happily free trade has saved us from such abuses in Eng-

land. They are one of the results produced by the demoralization of protection. But we have other social evils which seem to be further than ever from effective remedy. However, the Archdeacon's sermon glows, as it should glow at such a time, with hope and exultation, and as we read it now we are not surprised that it received the plaudits of its hearers. We quote a few paragraphs:—

In the midst of this new exuberant life of our nation growing, seething, with a lately born knowledge of its power, deeply stirred with strange dim hopes for the future; and in that almost turmoil of effort we see going on about us, in the cause of purity, of temperance, of suffering, it is impossible to over-estimate the influence that the pure and noble life of our Queen has had, in quickening and sustaining all spiritual and moral growth.

It might have been so different. We know what the English court is capable of being; what it has been under other Sovereigns. And all who value purity, and truth, and right; who believe in the high destiny of their country, and her position in the history and moral training of the human race, may well thank God on this day, with a boundless thankfulness, for the bright example of our beloved Queen, and the long years of her glorious reign.

May well thank God, I say, that amidst the wonderful changes and upheaval of society, so confusing to the minds of men, which we have witnessed; amidst the sudden and unparalleled increase in the wealth of the nation, fraught with such danger to its moral welfare, there has been, at the very centre of influence and example, one, not only whose own life has in all things been above reproach, but into whose presence nothing impure, no one on whose name lay a stain of open shame, has dared to enter. And who has ever been foremost among the first, in every cause of love, and sympathy, and help; in every cause that could turn to the improvement, material, moral, or spiritual, of those world scattered millions, over whom God's providence has made her ruler.

I spoke but now of the moral training of the world, and of the place which God has given us in it. From out of that little group of fog-girt islands in the Northern Seas, which shows so small on any map of the world, from that mixed race of hardly islanders, there has sprung a people of an imperishable instinct and of a world wide dominion. It has peopled—it has given its free institutions—to two continents and is busy assimilating a third. Its language is destined in no long time to be the language of the world. Is it not a sign to us, that we, an English congregation, should meet in this city to celebrate to-day? To us who believe in God and the unity of man, who believe that our Father in Heaven is ordering the affairs of men, using, training our race for His own purposes in the world—that there is "one far-off Divine event to which the whole creation moves,"—to us I say, the position which the providence of God has given the English speaking race,—growing, into great nations here and there throughout the earth,—with its invincible love of freedom, with, after all is said, its deep moral and prophetic of the part it is destined to play, in shaping the future character of civilization, and the destiny of the world.

IMPOVERISHING THE LAND.

The agricultural products of Japan, remarks the *Shogyo*, take more from the soil than they yield to it. Should this anomaly continue, the soil will become more and more unproductive year by year, and agricultural industry, which now occupies a most conspicuous position in the general economy of Japan—realizing a return of six hundred and sixty million yen—will steadily decline to nothing. Investigations have recently been made by the Geological Section of the Mining Bureau of the Department of Agriculture and Commerce into the relation that phosphoric acid bears to the soil. The following results were found:—

1. The amount of phosphoric acid in the fertilizers produced in the interior is reported as being 10,994,419 *kwamme*, which, together with 432,542 *kwamme* of phosphoric acid contained in the fertilizers imported from foreign countries, aggregate 11,426,962 *kwamme*. This is the amount of phosphates put into the soil of Japan per year. The quantity of phosphates in rice and other agricultural crops taken off the land was 16,986,432 *kwamme* two years ago. Subtracting the former amount from the later a balance is left of 5,559,470 *kwamme* representing the quantity of nutritious material taken from the soil. In other words, the agricultural products of Japan are depriving the soil of phosphoric acid to the amount of about 5,560,000 *kwamme* per year. Fertilizers used in Japan consist principally of fish, oil

cake, and rice-bran, most of which contain a large quantity of nitrogen and potassium. More phosphates will have to be used if the yield from farming operations is to be satisfactorily maintained.

According to Mr. Fesker's theory, 1,200 *momme* of phosphates are required per *tan* of land. As fertilizers hitherto employed in Japan contain but 630 *momme* of phosphates per *tan*, a deficiency of 570 *momme* has to be made good if the soil is to be properly nourished. Cultivated land in the empire amounts to 50,125,750 *tan*, so 28,571,678 *kwamme* of phosphates are immediately required. Whence shall Japan obtain such a quantity of phosphates? The world's yield is only two million tons annually, of which 750,000 tons are used in America. Europe buys most of its phosphates from America, and Japan will have to go there, or to Africa, to fill her requirements. In view of the necessity of the times we think the Government would be wise if it lowered the import duty on fertilizers from twenty per cent. *ad valorem* to five per cent.

THUNDERSTORM IN YOKOHAMA.

During the thunderstorm and extraordinary deluge of rain which visited Yokohama on Wednesday evening, a piece of the hill-side near the Kyoritsu Jogakko (Boys and Girls School), Bluff, fell in and crushed a Japanese house below, No. 219, Motomachi Gochome, inhabited by a carpenter. One of the inmates had a very narrow escape of being buried in the debris but fortunately no one was injured. A small land-slip also occurred near Dr. Wheeler's residence on Camp Hill. The wall of the General Hospital, facing the main Bluff road, also collapsed and is now nothing but a heap of ruins. The road in front of the Japan Brewery Company's stables was piled with stones, mud, and other debris washed down from the roads above, and presents a curious spectacle. Other damages have been done in different parts of the Bluff.

A part of the hill-side behind No. 57, Bluff, slid down, the mass carrying before it three Japanese houses standing below and moving them a distance of one *ken*. A lamp that was hanging in one of the houses fell and set fire to the house, but the flames were subdued without much damage being done. Lightning struck the hill-side at No. 2, Ichome, Ishikawa Nakamachi and brought down a mass of mud on to a house below the hill, but no one was hurt. In Aikawa-mura, Naga-gun, Kanagawa Ken a stroke of lightning struck the garden of a farmer but without any accident. A Japanese lady, Miss Iijima Tomi, who was walking near Kishimojin Shrine at the time, was rendered insensible by a flash of lightning which struck a huge tree near the Shrine. Miss Murashi Kiyu and four other persons were also rendered insensible by the lightning.

Wednesday's storm will teach the useful lesson to many Bluff residents of keeping their drains as clear as possible. Many of the most serious washouts would have been sensibly lessened in extent had this precaution been observed. By-the-way, the huge stone embankment at the back of No. 34, Bluff—the Baptist Mission School—is bulging in the middle, beside having big cracks down its front, and in its present condition is a serious menace to the folks living on the lower level.

The Tokyo Rice Exchange suspended transactions on the 10th instant for the purpose of adjusting accounts. Further suspension became necessary, however, on account of eleven prominent brokers refusing to pay the increased deposits now demanded for security. It is supposed that the intercession of Mr. Amenomiya will lead to a speedy compromise. In the event of the brokers persisting in their refusal the Exchange is resolved to take steps towards prosecuting them for breaches of the regulations.

JAPANESE TOPICS.

In more than one leading vernacular journal we find a paragraph explaining that, owing to difficulties experienced in carrying out new industrial undertakings, on account of which appropriations have been made in the Budget, it generally happens that considerable sums have to be carried over to the following year's accounts. During the present year, for example, the Communications Department is supposed to lay telephones in four hundred new districts, and the necessary funds were included in the Extraordinary Expenditures passed by the Diet last session. But not more than one-half of the work will be accomplished, and there will be a proportionate sum to be carried forward to the expenditures for 1898-9. In connexion with this subject, our contemporaries note that the sums carried over during the past six fiscal years have been:—

	Yen.
1891-2.....	4,581,200
1892-3.....	7,864,875
1893-4.....	6,741,210
1894-5.....	6,070,397
1895-6.....	5,934,069
1896-7 (probably).....	27,000,000

These sums are liable to be regarded, and are in fact often regarded, as actual surpluses of revenue, but that is a misconception.

The *Hochi Shimbun* says that, according to the ledgers of the Finance Department, the actual revenue and expenditure for the fiscal year 1896-7, were:—

Revenue.....	186,886,312.981 yen
Expenditure.....	166,890,243.350 „

Excess of Revenue..... 19,996,069.631 yen

This information is practically valueless without further details. The estimated revenue (ordinary and extraordinary) for the year exceeded 200 million yen, as did also the estimated expenditure. How the figures became reduced to 187 and 167 millions, respectively, we are unable to conjecture; unless indeed, a large part of the contemplated works were not carried out, and a correspondingly smaller draft was made on the Indemnity.

There appears to have been some misapprehension about the Government's guarantee to the new Industrial Bank. The general supposition has been that the Treasury pledges itself to make to the Bank annually, for the next decade, grants in aid sufficient to ensure to the shareholders 5 per cent. on the paid-up capital. The *Hochi Shimbun* points out that such is not the case. According to the 55th Article of the Bank's Charter, the sum paid by the Treasury is not to exceed 5 per cent. of the capital under any circumstances. Hence, if the Bank makes a loss, the sum available for the purposes of a dividend will be, not 5 per cent., but the difference between 5 per cent. and the loss. The *Hochi* says that many persons, not fully understanding the conditions, sold five-per-cent. bonds in order to buy shares in the Bank, and that they are now much disappointed.

A good deal of information with regard to the revised Criminal Code which, together with the unacted portions of the Civil Code, will be submitted to the next Diet, is contained in the columns of the *Mainichi Shimbun*, but since it is not possible to be sure of the accuracy of our contemporary's statements, and since the

facts have, for the most part, no very great interest, we shall not reproduce them. A few points, however, may be noted. The first is that whereas, in the absence of any special provision, offences against foreign sovereigns or princes visiting Japan have to be treated as though ordinary persons were in question, the revised Code will contain separate clauses relating to such crimes. The same is true with regard to foreigners who, while abroad, contemplate offences against public peace and good order in Japan, and come to Japan before actually committing the offences; and with regard to Japanese subjects who, while in foreign countries, contemplate offences punishable by Japanese law, and return to Japan before committing them. The present Code does not provide for such cases. It is further alleged that the majority of the delicts included in the present code will be removed from the revised Code, the duty of dealing with them being left to policemen.

A telegram from Honolulu published by the *Fiji Shimpō* says that Mr. Shimamura having named the 25th of June as the day on which he must ask for a definite answer from Hawaii to the demands preferred by him, received on that day a reply rejecting the demands. The alleged telegram adds that Counsellor Akiyama's return to Japan for the purpose of explaining Hawaii's attitude, is considered necessary. We believe the whole story to be baseless.

The Government has published a little volume containing the "Law and Regulations relating to the Bonded Warehouse, Imperial Customs, Yokohama." The Law is translated into French and English; the Regulations and the Tariff of Storage charges are in English only. Appended are the Japanese originals. We have to acknowledge the receipt of a copy. The book was printed at the Yokohama Bunssha, where, presumably, a copy can be obtained by anyone. The Japanese title is *Hōsei-Shōgō*.

Long accounts are published by the vernacular press with regard to judicial proceedings recently instituted in Taipei against a number of Japanese who are charged with fraud. The accused include six or seven private individuals and three officials, clerks in the Governor-General's office. Briefly speaking, the fraud consisted in chicanery connected with the sale of some thirty houses to the Government. Having ascertained that the Authorities were willing to pay 20 yen per *tsubo* for the buildings, the band of traders and petty officials induced the owners to sign documents investing them with competence to dispose of the houses. A Chinaman assisted them in this part of the fraud, but he has eluded justice by running away. In some cases it was found necessary to forge the owners' consent. Of course, had the title deeds of the property been in the hands of the owners, things would have been greatly facilitated for the plotters, but unfortunately all documents of that kind were held by the Government. However, the preliminary difficulties were successfully overcome, and the sale having been effected at 20 yen per *tsubo* some 2,750 yen were kept back from the owners. A curious part of the affair is that the higher officials, upon whom no suspicion of any kind seems to rest, having taken the precaution of caus-

ing inquiries to be instituted into the character of the Japanese who figured most prominently in the transaction, were informed by the police that he was a dishonest person who made his living by fraud. Nevertheless, they did not decline to deal with him or to hand over to him a large sum of money. Further charges were brought against a chief accountant and three chiefs of sections for conspiring to over-charge the Government to the extent of 20 per cent. on all materials purchased for public works. About two thousand yen were thus peculated. All the prisoners have been remanded for trial.

The election of new members for the House of Peers from among the Counts, Viscounts, and Barons took place on the 10th instant at the Nobles' Club. Out of 81 Counts eligible for election, 6 signified their unwillingness to sit; out of 317 Viscounts, there were 20 similar refusals, and out of 170 Barons, an equal number. The results of the election in the case of the Viscounts are not yet announced, but the Counts and Barons elected are as follow:—

NAME.	Count.	Votes Poll.
Ogimachi Sanemasa*	70
Shimazu Tadaakira*	69
Tokugawa Satotaka	68
Mibu Motoosa	67
Ohara Shigetame*	66
Madenokoji Michifusa*	66
Tachibana Tomoharu*	65
Yoshii Kozo	65
Uyesugi Mochinori*	64
Matsura Akira*	63
Hirosawa Kinjiro	60
Hojo Toshaki	59
Kwanji Akikoto	57
Kyoshi Iyemori*	57
Omura Sumio	55

Of the above, those marked with an asterisk sat in the last House, and have been re-elected.

NAME.	Barons.	Votes polled.
Honda Chikao*	137
Akamatsu Noriyoshi	137
Aoyama Tei*	136
Senge Takatami*	136
Kaniyama Gunrei*	135
Arichi Shimanosuke	135
Kaneko Arisato*	135
Date Munetsu*	135
Sonoda Yasukata	134
Kikuchi Takeomi*	134
Nakagawa Okinaga*	134
Nakajima	133
Suyematsu Kencho*	133
Sugitani Kotonaga*	133
Kitasaji Kihisa	132
Kajitani Motohiko	132
Watanabe Kyoshi*	132
Honda Sukemoto*	132
Yoshikawa Shigeyoshi	132
Ando Naoyuki	132
Shimazu Uzahiko	132
Iwakura Tomotake	132
Hirano Nagayoshi	129
Nishiitokuji Fuminaka*	129
Tsuji Kensuke	129
Ikoma Chikatada	128
Minami Mitsutoshi	126
Ki Toshitide	125
Tamamatsu Masaki	125
Niita Tadazumi	124
Sakai Tadahiro	121
Takasaki Asuhiko	120
Mori Goro	117
Sakata Yukio	115
Shira Senichi	115

Of the above, those marked with an asterisk sat in the last House.

It is stated that the Nobles contemplate establishing a college for the educational training of military officials. Mention has already been made of the fact that in the new college which they are about to build at Takata, in the suburbs of Tokyo, there will be a section devoted to the education

of diplomatic officials. That project is now to be supplemented—or, at any rate, there is talk of supplementing it—by a military school. The *Fiji Shimpō* has an article highly approving the idea, on grounds that will easily be divined; for example, that the military profession is specially adapted to men of rank; that the country has urgent need of officers in connexion with the scheme of national armament expansion; that the question of emoluments ought to be a minor consideration to military men, from which point of view the *Kwasoku* are notably qualified; that a man's hesitation to sacrifice his life in battle is mainly due to uneasiness on account of his wife and children, which apprehension would not disturb noblemen; that in Japan soldiers attach much value to the leadership of princes and nobles; that the *Kwasoku* of to-day are the descendants of the feudal chiefs who represented the great captains of their time, and that it is most desirable to divert the attention of the nobles from the tendency which they have lately developed to turn to trivial pursuits.

According to investigations made by the Metropolitan Police Board, the total number of *jinrikisha* now plying in the 15 urbans and 8 suburban districts of Tokyo is 39,388, of which 32,925 are single *jinrikisha* and 6,463 are double. The number seems singularly small, and does not consist with the theory held in some quarters, namely, that the earnings of *jinrikisha* coolies are large. We believe that these men do not make more than eight or nine *yen* on the average monthly, a wage which, considering the hardships of the life, can not be called large. We may mention that there is now no tax on *jinrikisha*. Persons who earn a livelihood by farming out *jinrikisha* at so much a month, have to contribute to the Treasury under the heading of "business tax," but the sum formerly levied on each *jinrikisha* is no longer collected.

Our readers may remember that subsequently to the recent attack upon Tuatutia by Formosan rebels, the Foreign Consuls in the island were said to have forwarded to their respective Governments a protest against the apparent inefficiency of the protective measures adopted by the Japanese. It now turns out that no such step was taken by the French Consul. The British and German Consuls did protest, but not the French.

Provisional charters have been granted to the following railways:—

NEW LINES.

The Seinan Railway; from Kokubu in Kagoshima to Nōbioka in Miyazaki: 100 miles; capital, 55 million *yen*.

The Mino Railway; from Seki to Kami-arachi in Gifu: 35 miles: 1,300,000 *yen* capital.

The Kwachi Railway; from Sumimichi (on the Kwansei Line) to Kashiwara (on the Osaka Line): 8 miles 40 chains: 300,000 *yen* capital.

The Fuji Railway; from Suzugawa to Ōmiya in Shizuoka: 8 miles: 250,000 *yen* capital.

EXTENSION OF LINES ALREADY BUILT.

The Chiuyetsu Railway; from Takaoka to Fuseki: 5 miles: 400,000 *yen* capital.

The Kwansei Railway; from Kano to Kizu: 3 miles 65 chains: 185,000 *yen* capital.

We read in the *Fiji Shimpō* that Shirane-san and Bandai-san have again given evidence of dangerous activity. Shirane-san began to emit rumbling sounds on the afternoon of the 7th inst., and continued to be noisy until 2 a.m. on the 8th. Two hours later, namely, at 4 a.m., a violent eruption took place from a spot known

as "Iwo-ike" (sulphur lake.) The rails and a bridge on the line leading from the mine were destroyed, and rocks weighing 115 to 225 *cho* were scattered over the vicinity. Happily there was no loss of life, nor any injury to man or beast. The ashes were ejected as far as Kusatsu. As for Bandaisan, it had remained quiescent ever since its celebrated performance in 1889, but at 10 a.m. on the 5th instant, and between that time and the evening of 8th, eleven rumblings were heard. On the 8th, smoke was emitted, to the great alarm of the people in the neighbourhood.

Two banks in Osaka are said to have made arrangements for amalgamation. They are the Thirty-fourth National Bank and the Hundred and Twenty-first. The former has a paid-up capital of 375,000 *yen*, and the latter, of 200,000 *yen*. The union will become a practical fact from Sept. 1st, and the capital of the new concern will be 2,100,000 *yen*.

In a recent issue we reproduced, from the columns of the *Hochi Shimbun*, a very explicit statement, which we ventured to contradict, to the effect that the Government had decided to dispose of the Aomori-Tsukushima State Railway, and to devote the proceeds to public works planned by the Communications Department. Our contemporary appears to have discovered the incorrectness of its information, for it now states that nothing has yet been decided on the subject.

The Liberal Party's projected demonstration on the 18th inst. promises to be a great affair. They call themselves the *Kwantō Jiyū-to Seinen-daikwai*, and it is their intention to assemble at the Party's head-quarters in Shiba, whence they will march to Ueno in procession. Squadrons of 100 persons each are to be formed under squadron leaders; there will be a band, and a hundred and fifty special constables will be told off to preserve order. If the day be wet, waterproofs, rain-hats and straw sandals will be worn, and as the procession advances, it will sing a march; presumably the march recently published by the *Nichi Nichi* and other journals. Great numbers of members are expected to come to Tokyo from the provinces, and the members representing the Party in the Diet, persons of note, editors of Japanese and foreign newspapers and others have been invited to attend. An invitation, we may mention, has reached our own office. The Liberals are evidently waking-up.

Japan may have a small edition of Ireland on her hands before long. In the *Riukiu Islands* there is a party calling itself the *Fukuhān-to*, or advocates of the restoration of the feudal system. They are about to send a committee to Tokyo for the purpose of petitioning the Government; first, to make the former King their chief; secondly, to remove all officials belonging to other parts of Japan, and thirdly, to put an end to all interference on the part of the Tokyo Government. In short, they want to have *Riukiu* made independent.

The *Sekai-no-Nippon*, which, as our readers probably know, is the chief organ of the Opposition, describes the last Cabinet meeting in terms that suggest a speedy rupture of the Ministry. In the first place, says our contemporary, when the question of appointing Departmental Counsel-

lors of *chokunin* rank came upon the *tapis*, and when it was announced that Messrs. Ozaki Yukio and Shiba Shiro, prospective Counsellors, insisted on sharing the confidence of the Ministers in all important matters, certain members of the Cabinet denounced the idea as extravagant, and it was decided to postpone the question of appointment. In the second place, when Governor-General Baron Nogi's programme of Formosan reform was introduced, Viscount Takashima urged that the Civil Administration Bureau be abolished, and that the Southern Bureau of the Colonization Department undertake its functions, whereas Count Okuma's advice was that, simultaneously with the reform of the Governor-General's Office, it should be made entirely independent of the Colonization Department. Count Matsukata merely listened to those discussions, and refrained from expressing any opinion. It is probable that the story has lost nothing by the *Sekai-no-Nippon's* telling.

We read in the *Tokyo Asahi* that although an appropriation in aid of the Formosan Railway was duly voted by the Diet last session, and can be obtained at any time from the Treasury, the project has hung fire, and the shares having fallen in market value, difficulty is experienced in getting the first calls paid up. A million and a half *yen* ought to be paid on 300,000 shares, but only seven hundred and fifty thousand *yen* have been received on 15,000 shares. With the latter sum it would be hopeless to make a commencement. The idea now is to try to procure payment of the first call on 20,000 shares, and to ask the Imperial Household Department to take the remaining 10,000.

In connexion with Formosan administrative reforms, we read that it is proposed to try to induce a better class of officials to go to the island by granting special privileges. For example, whereas in Japan proper a service of 15 years is necessary to make a man eligible for pension, 7 or 8 years will suffice in Formosa. Moreover, officials in the island will be given higher rank than those occupying similar posts in Japan proper.

A SONNET.

Here is a lovely sonnet by Edward Cracraft Lefroy, who died six years ago, a poet wholly unnoticed by the public, but whose work is now beginning to receive the recognition that it deserves—the subject of the sonnet was a fine young fellow killed by a fall from his horse:—

"O kiss the almond-blossom on the rod!
A thing has gone from us that could not stay.
At least our sad eyes shall not see one day
All business treading where all beauty trod.
O kiss the almond-blossom on the rod!
For this our budding Hope is called away
From growth that is not other than decay
To bloom eternal in the halls of God;
And though of subtler grace we saw no sign,
No glimmer from the yet unrisen star,—
Full-orbed he broke upon the choir divine,
Saint among saints beyond the golden bars,
Round whose pale brows new lights of glory shone—
The aureoles that were not and that are."

In some verses published by the *Spectator* under the old Horatian heading "Labuntur anni," occur these beautiful lines descriptive of old age:—

Now there is no distance more, near the goal at last:
Time has nothing left to give; all is of the Past:
Fathers, mother, sister, brother, none are left behind;
Only in the old tree still sings the old sea-wind.

THE FOREIGNER AND THE JAPANESE.

IT appears to be very difficult to avoid equivocal statements when discussing the conduct of Japanese towards foreigners in Japan. The Rev. Mr. WOODWORTH in a recent letter to this journal, expressed the opinion that the foreign resident is probably not more highly esteemed in Japan than John Chinaman is in the United States. Another correspondent signing himself "A Foreign Resident," strongly traverses Mr. WOODWORTH'S assertion. And well he may. The great objection to the Chinaman in America is that he represents a comparatively degraded element of the population. He lives on a low level, and constitutes a demoralizing factor in the social system. We are at a loss to conceive how Mr. WOODWORTH can have instituted such a comparison, for it is beyond query that the average foreigner in Japan stands considerably above the average Japanese in everything that establishes a title to respect. It is not a question of the superiority of Occidentals to Japanese in general, or *vice versa*. On that point we say nothing. Our contention is—and the Japanese themselves will readily admit it—that the foreign community in this country contains a much smaller per-centage of the lower elements of society than the nations from which it is drawn, and therefore than the Japanese nation also. In other words, the foreign residents of Japan represent a higher average of intelligence, education, social culture, and moral refinement than would be represented by an equal number of individuals blocked out without selection from any European people or from the Japanese people. Precisely the opposite is true of the Chinese in the United States. The point need not be elaborated. It is quite patent, Mr. WOODWORTH'S conception reflects very injuriously upon Japanese intelligence and discernment. He will perhaps, be able to explain it. We can not.

But observe what "A Foreign Resident" himself says. "All the Japanese know of civilization has been taught them by Foreigners." Surely that is even less consistent with facts than Mr. WOODWORTH'S comparison. "All that the Japanese know of civilization!" Why, the Japanese had attained a high plane of civilization when our British ancestors were in a state of comparative barbarism. Their scientific, industrial, and commercial development was in a backward condition, it is true, but the refinement of their lives, the courtesy of their manners, the elaborateness of their social etiquette, and may we not even add, their ethical codes, showed a degree of civilization that did not fall below the best Occidental standards. Our correspondent is doubtless well aware of all that, and has no intention of disputing it. His meaning, we imagine, is

simply that foreigners have been Japan's teachers in almost everything that contributes materially to national prosperity and national strength; a proposition not to be denied. But his want of explicitness lays him open to a damaging rejoinder from Mr. WOODWORTH.

There is one thing that should not be left unsaid. This controversy had its origin in the base-ball incident. Some of the spectators, presumably students, behaved rudely on that occasion, and we strongly condemned their conduct. But whatever protest may be entered against the occasional bumptiousness of the student class, the insolence of *jinrikisha* men, or the truculence of coolies, there is no denying that in all games of skill or chance the Japanese are ideal opponents. Has any one of our readers ever seen a Japanese lose his temper at a game of cards, of tennis, of billiards, or of base ball? We never have. Never once have we heard a Japanese anathematise his own bad luck or resent his adversary's good-luck. He is invariably imperturbable, courteous, pleasant. That he takes a keen interest in such games is proved by the proficiency he develops in playing them. But without exception he plays them like a perfect gentleman. The term is hackneyed. We know of none better fitted to convey our meaning, however. Further, our remark applies not merely to contests between mixed nationals, but also to contests in which Japanese alone are engaged. Good-humoured courtesy always reigns, and we strongly suspect that if the Japanese could be persuaded to indicate frankly what they find least refined and most inexplicable in the social conduct of the average foreigner, they would point to his want of self-restraint in playing games of skill or chance. The fact is interesting. Our readers, if they do not happen to have paid particular attention to it already, will at once recognise the truth of what we say when they give the matter a moment's thought.

BRIBERY AND CORRUPTION.

IN reply to our comments on the sweeping charges of bribery and corruption preferred by it against Japanese officialdom and Japanese business men, the *Kobe Chronicle* writes at some length, its chief argument being the marshalling of cases, some of which have been actually proved in Courts of Law and some rest on mere rumour. All these instances are matters of public knowledge, and while they undoubtedly show that grounds exist for impugning the integrity of some Japanese officials, we can not for a moment think that they warrant the wholesale accusations originally advanced by our contemporary. Fuller testimony is required from independent sources; above all, testimony that rests on something more solid than vague hearsay. We entirely

agree with the *Kobe Chronicle* that the pay of many officials, notably judicial officials, is glaringly inadequate, and that the insignificance of their emoluments compared with the magnitude of the interests they have to decide exposes them to undue temptation. Further, we appreciate the fact that officials have been convicted of corrupt practices, and that, from time immemorial, there has existed in Japan a habit of making presents to men of position and influence. As to the former fact, however, it is to be remarked that the open arraignment of offenders against the code of strict honesty is, in itself, not only a wholesome sign but also an evidence that corrupt practices constitute the exception, not the rule. As to the latter fact, everybody knows that the presents in question are usually of insignificant value; that they can not reasonably be regarded as investing the giver with any claim on the interested assistance of the recipient, and that it is a point of carefully observed etiquette to make more than equivalent acknowledgment in kind or coin. For our own part, we have not assumed, and do not assume, any positive attitude towards this question. Experiences vary, and it has not been our fortune to encounter any one who could affirm, of his own knowledge, that bribery and corruption were commonly practised. On the contrary, we have invariably found that those most positive in the character of general accusers were found to be the worst equipped with testimony in support of their accusations. The *Kobe Chronicle* itself does not seem to constitute an exception to that rule. Confronted by the inevitable consequences of its charges, it shrinks back, and protests against "the utter futility of entering upon a discussion if expressions and statements are to be credited to it which were not made." What expressions and what statements? Our contemporary's *ipsissima verba* were:—"Scarcely a single transaction takes place, from the sale of merchandise to appointment to official position, without squeezes being expected and paid." In analysing such a charge, it is essential to consider, first, how official appointments are made; and secondly, by what process bribes could be employed to secure them. That is the plain line that any intelligent inquirer must take. We took it, and it led to conclusions with which our *Kobe* contemporary now declines to be saddled. It led, first, to the conclusion that all, or nearly all, the prominent statesmen of the *Meiji* era must be cognisant of, and privy to, the alleged system of bribery. There is no escape from that inference. If "scarcely a single appointment to official position takes place without squeezes being expected and paid," it results beyond possibility of evasion that the men in whom the power of making official appointments is chiefly vested must expect

and receive "squeezes." Brought face to face with that logical interpretation of its charge, the *Kobe Chronicle* says:—"The *Japan Mail* has an unfortunate habit in controversy of slightly shifting the ground of argument and then defending positions which were not attacked." Are we to understand, then, that the "*Meiji* statesmen"—"Men like Marquis ITO, Marquis YAMAGATA, Count KURODA, Count OKUMA, Count KABAYAMA, Marquis SAIGO, Marquis OYAMA, Marquis HACHISUKA and so forth"—are entirely exempted from connexion with a system under which "scarcely a single official appointment takes place without squeezes being expected and paid?" We have not the slightest desire to put any forced construction on our contemporary's writing. Our object has simply been to trace the steps of the alleged corrupt dealing; to think the matter over quietly, and see how the disgraceful system actually works in practice. If the *Kobe Chronicle* intends to acquit all, or nearly all, the leading statesmen of the *Meiji* era, then it acquits all, or nearly all, the men in whose hands the bestowal of official appointments has rested for the past thirty years. In that case, what becomes of the charge that "scarcely a single official appointment takes place without squeezes being expected and paid?" It appears to us that the trouble is, not "a slight shifting of the ground of argument by the *Japan Mail*," but a remarkable shrinking from the consequences of its own accusations on the part of the *Kobe Chronicle*. Passing, then, from the recipients' "squeezes" to the nature of the squeezes themselves, one naturally asks, in what form is "consideration" given? A percentage of the emoluments attaching to the office in question suggests itself as a probable and simple device. But the *Kobe Chronicle* repudiates that idea. Indeed, our contemporary betrays some indignation at being supposed to entertain any suspicion of the kind. It "points out the utter futility of entering upon a discussion if expressions and statements are to be credited to it which were not made," and, it says that "handing over a percentage would be altogether too open and palpable." What then is the process? It is this, according to the *Kobe Chronicle*:—"Presents from applicants for appointments are frequently made to men who are supposed to be influential with those who appoint to official posts, and in some cases to the men who appoint." We arrive thus at two conclusions: first, that the leading *Meiji* statesmen are innocent of any collusion with the alleged corrupt practices; and secondly, that the recipients of bribes in the form of presents are, as a rule, not the men that actually appoint to office, but men possessing influence with the latter. Is it to be understood, then, that the men by whom the appointments are made seldom receive any "consideration"? Is it to be under-

stood that there exists a class of influential individuals who batten upon "squeezes" paid them for procuring posts while the high officials in whose gift the posts lie have little share in the "squeezes"? It is impossible to conceive anything of the kind. If dishonesty exists on the whole-sale scale indicated by our contemporary, if "scarcely a single appointment to an official position takes place without squeezes being expected and paid," then all ranks of officialdom must be permeated by the poison, and however unwilling our contemporary may be to face the logical sequel of its indictment, there is no escape. As for the presents alluded to, we are well aware that the habit of making them prevails widely, but in the vast majority of cases they represent mere compliance with an old-fashioned code of etiquette, and their intrinsic value is altogether too insignificant to warrant their classification as bribes. We would ask our *Kobe* contemporary to be assured that our remarks are not dictated by any controversial spirit. If abuses exist, it is the duty and interest of every journalist to expose and denounce them. But before assuming their existence, we must examine clearly whether the assumption leads us, and in this case it leads us to a position inconsistent with common sense and apparently repudiated by the *Kobe Chronicle* itself. Positive evidence, one way or the other, is, of course, very difficult to obtain. But there is one piece of evidence probably familiar to many foreign residents; namely, the fact that policemen, and officials on Government railways, in Japan do not accept "squeezes." It must have happened to the great majority of our readers to tender a *douceur* to a railway porter, and we venture to say that the offer was invariably refused. As for the police, their worst enemy has never accused them of corruption, scanty as their salaries have hitherto been. Is it not difficult to reconcile these two cases with the theory that bribery exists on the scale alleged by the *Kobe Chronicle*?

There is one other point to which we must allude, though we would gladly leave it untouched. The *Kobe Chronicle* writes:—

The editor of the *Japan Mail*, whose knowledge upon these matters is "negative," alleges that "public sentiment in Japan does not condone bribery," "the newspapers hold it up to obloquy, and any whisper of its employment in the House of Representatives provokes stormy discussion. We would suggest that to the last clause should be added 'when all do not get their share.'" Will the editor of the *Japan Mail* explain, for example, why Mr. Shimada refused to support the Nippon Yusen Kaisha subsidy?

What does that mean? Even at the risk of being rebuked for crediting our contemporary with "expressions and statements which were not made" by it, we fail to see how the paragraph can be read except as an assertion that the whole House of Representatives is corrupt; that provided all the members get their share of a bribe, no protest is raised against bribery, and that Mr. SHIMADA SABURO

would not have opposed the subsidy to the Nippon Yusen Kaisha had he been paid to support it. Such accusations do not require refutation, nor can we pretend to attach much value to the general argument of a critic so biased and so injudicious as to advance them. Elsewhere, the *Kobe Chronicle*, by way of proving "the existence of corruption among officials," mentions "the removal of Count OKI from the Presidency of the Privy Council, and the resignation of Count GOTO and Mr. SAITO from the Ministry of Agriculture;" and cites "the charges brought against Governor OKI and Secretary MITSUHASHI in connexion with the Yokohama Waterworks and Harbour Works, and their removal from office." Further, as examples of "contracts for public works secured by corrupt practices," it adduces "the Tokyo Water Pipe scandal and the Yokohama Harbour Works scandal." With regard to these things we have only to say that our contemporary does gross and unpardonable injustice to every one of the officials named. Count OKI, Count GOTO, Mr. SAITO SHIUCHIRO, Governor OKI and Mr. MITSUHASHI are above all suspicion of dishonesty. Nothing has ever been proved against them, and we are astonished that a journal seeking to be just should have allowed itself to point the finger of obloquy at such men because, in the heat of political controversy, wild accusations were levelled against them without a shadow of substantial confirmation. Further, although gross chicanery was certainly practised by the contractors for the Tokyo Water Works' pipes, it is erroneous to allege that they "secured the contract by corrupt practices." Intimidation had to do with the matter, and so had unbusiness-like sentiment, but to speak of the contracts being secured by corrupt practices is to accuse the Tokyo Municipality of accepting bribes—an accusation which betrays much ignorance, and which the *Kobe Chronicle* has the honour of being the first to formulate. Finally, with regard to what our contemporary calls the "Yokohama Harbour Works scandal," we have yet to learn what the scandal is. After months of exhaustive experiment and investigation, an official committee of experts failed to expose any "scandal." Assuredly it has never been shown that contracts were "secured by corrupt practices" in the case of the Yokohama Harbour Works. If it is upon evidence of such a nature that our contemporary founds its belief, we are glad to think that more careful reflection and research will probably induce it to modify its verdict.

Early on the morning of the 14th inst. the dead bodies of a man and a woman were found on a tea-stool near the Ise Shrine, Iseiyama, by a policeman on duty. Upon examination it was ascertained that they had committed suicide together. As the bodies were not identified the Yokohama Town Office had to take charge of them for burial.

A JOURNALISTIC INCIDENT.

We have before us an example of journalistic devices which for good solid knavery surpasses anything that has previously come under our notice. The incident will probably amuse our readers, and we accordingly give it space. In its issue of the 9th inst., the *Japan Herald* says:—

The *Japan Mail* takes occasion to make merry at the expense of the *Japan Gazette*, by drawing attention to its alleged contradictions by means of what the *Mail* calls "the deadly parallel." But it would seem that the *Mail's* jealousy has been aroused, and it by no means is disposed that our evening contemporary should have a monopoly of that sort of performance, as witness the subjoined:—

"JAPAN MAIL," AUG. (sic) 7TH. "JAPAN MAIL," AUG. (sic) 7TH.
"Despite the protest of the Japanese Representative, the increased import duty upon Japanese *saké* entering Hawaii, went into operation from July 1st. The Hawaiians evidently intend to make things unpleasant for the Japanese immigrants. This *taxing of saké* seems to us a miserable performance. There can be no appreciable revenue in it, and so far as protection is concerned, the only attainable end is to drive the Japanese labourer to the whisky saloon instead of letting him have his comparatively harmless measure of rice wine at home. Certainly the conduct of the Hawaiian Provisional Government towards Japan during the past few months is disfigured by a degree of race prejudice that constitutes a disgrace to all white men."

Now observe the conscientiousness of the editor by whom the above "deadly parallel" was manufactured. The two paragraphs extracted from our columns have been carefully mutilated so as to make it appear that they represent statements advanced by us on our own responsibility, whereas, in reality, the facts they embody were distinctly attributed by us to independent sources, namely, a telegram from Honolulu and an article in the *Mainichi Shimbun*. Here are the uncut commencesments of the paragraphs as they appeared in the *Japan Mail*:—

"JAPAN MAIL," JULY 7TH. "JAPAN MAIL," JULY 7TH.
A telegram from Honolulu says that, despite the protests of the Japanese Representative, the increased import duty upon Japanese *saké* entering, etc.

The sentences italicized have been carefully deleted, it will be observed, by the critic who manufactured our ingenious contemporary's "deadly parallel." In cutting extracts from the *Japan Mail* for his honest purpose, he took pains to insert his scissors at such points as should make it appear that our statements were original, whereas by us they were explicitly attributed, the first to "a Honolulu telegram," the second to "the *Mainichi Shimbun*." The exceeding clumsiness of the fraud makes it quite conical, though of course corresponding tricks in business affairs would soon relegate their perpetrator to the rank of the pariahs.

We pointed out on Tuesday that the *Japan Herald* had been guilty of gross chicanery in deliberately mutilating two paragraphs taken from the *Japan Mail*, so as to deceive the public about their provenance, and create the false impression that the second as well as the first contained a statement of our own views, thereby convicting us of inconsistency. The second paragraph was prefaced by the words:—"A paragraph in the *Mainichi Shimbun* explains the matter" (of the increased duty on Japanese *saké* entering Hawaii) "and it seems desirable that the facts advanced by our con-

temporary should be made known to our readers," with which exordium we proceeded to epitomise the *Mainichi's* article. From first to last not the faintest expression of our own opinion was advanced, nor is it for an instant conceivable that any sane reader of a paragraph prefaced by such words could be betrayed into the small delusion about the source of the views it embodied. Nevertheless, the *Japan Herald* now pretends to imagine that a part of those views was our own. Having dishonestly excised the preface that indicated the *Mainichi Shimbun's* responsibility for the views, and having been convicted of that dishonesty, it now seeks to shelter itself behind a simulation of inconceivable stupidity; and with the columns of the *Mainichi Shimbun* to refer to for confirmation or refutation of its pretended suspicion, it will not take the trouble to refer to them but calmly accuses us of "descending to lying and mere abuse." It is impossible to deal with a writer so hopelessly unscrupulous. We must assume that he has ceased to be morally responsible, and substitute pity for the contempt that would otherwise be his due.

VARIOUS TOPICS.

We have received from the "The English Church Building Committee," of Innsbruck, in the Tirol of Austria, a printed circular, which runs as follows:—

Whilst the Alpine Regions of Central Europe are being more and more frequented by travellers, and especially by members of the English nation, who come thither from all parts of the world, in the city of Innsbruck, at once the capital of the Higher Alpine Regions and the most widely-known centre for summer visitors to the Austrian Alps an ever increasing English colony has settled itself. Those who have taken up their permanent residence here have been influenced, no doubt, by the magnificent situation of the city, by its healthy climate, and also by the fact, that its excellent institutions afford exceptional advantages.

There exist in Innsbruck, which with its suburbs has 40,000 inhabitants, churches and places of worship for Roman Catholics, Lutherans and Jews—only for members of the English Communion are there no such advantages provided.

A committee has, therefore, been formed under the Patronage of His Excellency the Right Honourable Sir Horace Rumbold, Her Britannic Majesty's Ambassador in Vienna, for the purpose of collecting, by issuing an appeal to all English countries in the world, the means of building a Church which shall serve as a place of worship for the English Colony in Innsbruck, and for the nearly 10,000 members of the English Communion who are yearly gathered together during both the summer and winter seasons from Great Britain and Ireland, America and India, as well as from the Colonies in Africa and Australia; some of whom wander through the Alpine districts of the Tyrol, in pursuit of pleasure, while others again are seeking restoration to health and strength in its watering-places and health-resorts.

The members of the Committee are of opinion that they are justified in expecting contributions from the inhabitants of all English countries, even from those who dwell in the most distant colonies, and so they take the liberty of addressing to you a request that you will insert in your widely-read and influential paper the appeal, free of charge.

Trusting that you will be kind enough to forward the cause which we have at heart by granting our request, we have the honour to be, Sir,

Your obedient servants,
Imperial Councillor FRIEDRICH PICHLER
Vice Mayor of the Capital of the Tyrol
(President of the Committee)
J. C. PLATTER C. L. LANDSER
Publisher Town Council and Hotel Proprietor
(Secretary) (Treasurer)
On behalf of the English Church Committee.

We have nothing to say about the merits of the above appeal, but we deem it a duty to bring the facts to our readers' knowledge.

The *Yorodsu Choho* appears to be in a very bad humour at present. A few months ago, it had nothing but good to say of the *Japan Mail*, but now it attacks us with a degree of rancour that is quite entertaining. It has set up on high that terribly battered old dummy that we are paid to paint Japan in delusive colours, and it tilts at the ancient effigy with a degree of vigour that is absolutely refreshing. What amuses us particularly about the *Yorodsu* is the moral that it preaches. "The desire to appear well in others' eyes while in reality they are not so well, is a very lamentable weakness of the present Japanese." It is a weakness very common in the world, for the matter of that, but we can not see that our Tokyo contemporary's practice constitutes a corrective example. What, for instance, was the purpose of the

Yorodsu Choho in engaging an American citizen to write original articles and paragraphs for its columns month after month while declaring, all the while, in the most emphatic terms, that its English columns were from Japanese pens? Could not that be described as a specimen of "the lamentable weakness of desiring to appear well in other's eyes while in reality they are not so well"? When, on the departure of the said American, a representative of the *Yorodsu* called upon the editor of the *Japan Mail*, and asked him thenceforth to correct the English matter for the columns of the *Yorodsu*, and when the editor of the *Japan Mail* declined to associate himself in any way with a journal that had been guilty of such chicanery, we very well understood, and were quite content, that the *Yorodsu Choho* would thereafter figure, not as our panegyrist, but as our assailant, and we were not unprepared to find that the same moral obtuseness which had betrayed it into deceptive devices in the past would lead it to make use of very wretched weapons in the future. But that it should profess to be shocked at a failing on the part of its countrymen which had already been displayed to a flagrant degree in its own columns, affords quite a striking illustration of the pot and the kettle. Its present programme seems to be the pursuit of notoriety through the channels of general abuse. Like the proverbial Scot, it's "just awearing at large." It works itself into a veritable pother of excitement about "Choshu insincerity, Higo hypocrisy, Satsuma covetousness and Fukuzawa mammonism," and having thus thrown as much dirt as possible at the leaders of its own nation, it turns upon the Yokohama foreign residents, and, in a series of refined articles, lays to their charge crimes that must remain unrefuted since decency forbids their discussion. We do not think that there need be the slightest apprehension lest the practices of the *Yorodsu Choho* should make the Japanese appear in other's eyes better than they really are. It would seem, on the contrary, that our patriotic contemporary has deliberately adopted the self-sacrificing rôle chosen by the American propagandist of teetotalism, who presented himself to his audiences in a state of beastly drunkenness in order to demonstrate the disgusting effects of inebriety.

A terrible interest attaches to the discovery of no less than 24 bodies of persons who had caused themselves to be buried alive in pits near Tiresopol. We read that these fanatics are descendants of the dissenters who were persecuted in Russia during two centuries, thousands of them having been knouted in the reign of the Empress Sophia. The consequence was that they developed a spirit of fierce fanaticism, and embraced the doctrine of salvation by martyrdom. Six of the twenty-four recent victims were wallied up by a man who frankly avows his deed. Among the six were his own wife and two little children. The latter, of course, can not have been consenting parties. It is appalling to think that such barbarism should still exist in Europe. A cognate case, in our opinion, is that of the poor girl killed recently in Berlin, while supporting an object at which her brother, the professional marksman Kruger, shot with a pistol. The girl received the bullet in her mouth, and died almost instantaneously. What justification can be found for permitting such exhibitions? The same justification, we presume, that exists for allowing bull fights in Spain, prize fights in America, and the brutal defiance of lions and tigers in circus cages everywhere. The day can not be very far distant when all such displays will be remembered as relics of pristine savagery.

Another effort is on foot for the elaboration and adoption of a language of universal communication. The new plan appears to have been conceived by Mr. L. Samenhof, of Grodno, Russia. He has prepared, and caused to be printed, circulars which indicate a great deal of trouble and must have involved considerable outlay. But of course no prospect of final success is suggested by the plan. We say "of course," because the compilation of such a

language can never be effected until the Governments, or, at any rate, the leading scholars, of all nations agree to coöperate for the purpose. Even then the experiment would be doubtful. The only rational hope, so far as we can see, lies in the possibility that some one of the languages already in use will eventually become the tongue of the civilized world. Practically the choice is limited to English and French, and considering the enormously greater and constantly growing vogue of the former, there should not be much room for doubt. However, Mr. Samenhof's plan is to invite expressions of opinion on the subject from persons in every part of the world, and to embody their essays in a three-volume book of 960 pages, no contributor being allowed more than 10 pages, and the contributions being inserted in the order of their receipt by the editor, without distinction of persons. Each subscriber to the work—which is to cost four shillings—will be entitled to vote for the language of his choice, provided that he subscribes before the issue of the last volume, which will contain a list of the voters. It is plain that, connected with such a scheme, there are contingencies of a purely commercial character. As to that, our readers can draw their own conclusions.

The *Saturday Review* summarizes a Blue Book recently published with reference to the Cocos Islands, thus:—

The Cocos Islands, some twenty in number, are situated in the Indian Ocean, to the south-west of the Dutch island of Java, far removed from the ordinary trade routes. They form a roughly broken circle, with a shallow lagoon in the centre, protected by an outer barrier of reefs. The population at the present time numbers about six hundred, of whom the greater proportion are native-born Cocos people, and the minority Malays from Batavia. The Ross family are the only Europeans inhabiting the group, and though all the male members of the third generation were educated in Scotland and are described as well educated, quick and intelligent, they have almost all contracted native marriages and thrown in their lot with the people among whom they live. Their sons and daughters, with few exceptions, neither speak nor understand English, and Mr. George Clunies Ross, the head of the family, and a man of remarkable force of character, was at one time eighteen years without hearing English spoken, and confesses to being a little rusty in its use. The system of government is sufficiently remarkable. There are no written laws, and Mr. Ross has successfully resisted the suggestion that the penal code of the Straits Settlements should be introduced into the islands. There is no police force and no crime. Mr. Ross owns the whole of the land and is the sole employer of labour. The currency is parchment currency, convertible at a fixed ratio into rupees or dollars when an islander makes a rare visit to Batavia or Singapore, or when a Bantamese coolie leaves the island to return home. The natives, who are Malays by race, profess Mohammedanism, but there is the utmost freedom in religious matters, and the influence of the Ross family, exercised through three-quarters of a century free from disturbing elements, has effected many striking changes in the habits and customs of the people. One after another the officials from the mainland confess that they find it difficult to institute a comparison between the Cocos-born Malays and the Malays with whom they have previously been brought into contact. The Cocos islanders live in neat houses comfortably furnished on the European model, and kept scrupulously clean. They have adopted the institution of a weekly washing day, and sit at table to eat their food with the aid of knives and forks. But is not only in externals that European influence is clearly discernible. "The marriage laws," Mr. Hugh Clifford states in the 1894 Report, "which to most Malays represent the Alpha and Omega of Mohammedan law, have been entirely superseded by the English marriage customs. Polygamy is unknown on the island, at any rate among the Cocos-born Malays, and public opinion on the subject is sufficiently strong to induce any Bantamese who has more than one wife to dispense with this superfluity." The sole export of the island is copra, which is sent once a year in a vessel chartered for the purpose by Mr. Ross to England for sale. From England, too, supplies for the islands are obtained, although formerly everything was bought in Batavia, with which port communication is kept up by a small schooner belonging to Mr. Ross. Of the people subjected to this paternal and benevolent despotism, and cut off from all contact with the outer world, the uni-

versal testimony of the reports is that they are contented and happy. They make no complaints, and look upon Mr. Ross as their benefactor and friend. It is surely a curious fate that has brought this sturdy and capable Scottish family into a remote corner of the Indian Ocean, and has enabled three generations of Europeans to influence and mould the character and habits of an alien and inferior race, from the intrusion of conflicting forces.

The ladies of Paris are beginning to avenge themselves on the men that behaved with so little courage and so much brutality on the occasion of the burning of the bazaar. It is said that a list containing sixty-two names has been compiled, and that the leaders of society—the ladies of course—have all agreed to turn their backs upon the men thus catalogued. A story is told of the manner in which the resolution was carried out in the case of one "gilded youth." One of the ladies that had escaped from the holocaust was entertaining a number of her friends. To them arrived a young elegant, one of the "gardenia wearers," against whose name the black mark had been set. A handsome youth, versed in all the *convenances*, he had been accustomed to a cordial reception everywhere. But on the present occasion a chilling silence fell upon the group of ladies, and when he advanced with artistically rounded shoulders and gracefully extended hand, the dame of the mansion, *très froide avec la dignité un peu sèche que l'on devine*, said:—"Sir, pray do not forget that you were formerly a friend of the family. But to-day the door is closed to you. I beg you to save me from having you shown out by my servants who, for their part, have shown themselves men of courage. You understand me. Good evening." It is a clumsy tale, spoiled by transmission through a vulgar medium, but it illustrates what Paris is saying.

The surprising fact has been demonstrated by Mr. Flinders Petrie that the builders of the Pyramids were half pervaded by the customs of cannibalism. He made the discovery by investigations among tombs in Egypt. Numerous remains found there show very plainly that the bodies had been dissected and stripped of their flesh in a manner pointing clearly to habits of cannibalism. It does not appear that all the inhabitants of Egypt three thousand years before Christ were cannibals. The conclusion arrived at by the learned Egyptologist is that the custom prevailed chiefly, if not entirely among the Libyan invaders. In an essay setting forth the facts, Mr. Flinders Petrie describes the wide area of the world over which cannibalism used to be, or still is, practised, and analysing the motives for it, tabulates the result thus:—

Honour, kindness, future good, love	20 per cent.
To obtain strength or magic results	19 do.
As a ceremony or to acquire position	10 do.
As a punishment	5 do.
[per cent.]	
From hunger or need of food	18 54
From preference as food	28

FIRE IN YOKOHAMA.

At 8.15 on Wednesday night an alarm of fire at No. 73 Settlement, was received at the Central Fire Station. Superintendent Morgan, with a party of Brigade men, hose reel, and stand pipe, proceeded promptly to the spot, and found that the ceiling and shingles of the roof of one of the upstairs rooms, occupied by Mr. F. H. Bugbird, were on fire. Water from a hose attached to a neighbouring hydrant very soon extinguished the flames, and comparatively little damage was done. It appeared that a Japanese *hibachi* had been placed too near a wooden partition in the servants' room and set fire to the woodwork, which burned up through the ceiling of the room and ignited the shingles under the tiles of the roof.

FOREIGN CAPITAL IN JAPAN.

Many erroneous assertions, remarks the *Yiji*, have lately been made with regard to the introduction of foreign capital into Japan. It is alleged that the introduction of foreign capital will supply the deficiency of funds for all enterprises, now regarded as the cause of serious abuses in the economic world, and that while tending to contribute to the development of new enterprises, it will also lead to a fall in the current rates of interest. These allegations are the outcome of ideas entertained by the public at present, and even form the basis of a discussion as to the propriety of the late change in the Coinage System. The rates of interest depend, as a matter of fact, upon the relations between demand and supply of capital. The practical effect that may be produced upon the rate of interest and the circulation of money by the introduction of foreign capital can only be attained by the capital in question being introduced in the form of internal loans and passing into the hands of enterprising business men. Foreign capital is at present only obtained by the sale of public securities raised to meet expenditures required in the expansion of armaments and other new undertakings of the Government. Even if Industrial or Railway Bonds should be sold to foreign countries in future, the scheme conduces only towards preventing the funds in the interior from being absorbed. It does not effect any increase of capital in the banks for the issue of a greater number of loans. Relaxation in the circulation of money is not therefore to be hoped for in this direction. On the contrary, it seems not improbable that the import of foreign capital will enhance the prices of commodities and tighten the circulation of money. To assert that the introduction of foreign capital will lead to a fall in the rates of interest while the methods of its appropriation remain uninvestigated, is no better than the unenlightened allegation that an increase of the currency would remedy the distress caused by pressure on the circulation. The rates of interest are invariably influenced by the amount of capital in hand. An increase in the volume of currency could scarcely fail to raise the prices of commodities, and would necessitate the appropriation of a greater amount of funds for any given enterprise than was required in former times. The demand for capital thus increases, and with the increase in demand interest rises. If one desires to promote the circulation of money through the instrumentality of foreign loans, schemes must first be formed to redeem the internal loans bearing high interest with foreign capital at low interest, so that the loans so redeemed may, through the holders of bonds, be delivered to the various banks in the form of deposits to increase the Banks' loan-issuing capacities. To issue the Bonds of the Industrial Bank at a low rate of interest in foreign markets and to dole out the Bank's funds in loans to persons in the interior, engaged in agriculture and industry, is, it seems, the best means of employing foreign capital. But the scheme cannot be expected to be carried into practice within a short space of time. The import of foreign capital therefore is to be limited for the present to the sale of Bonds by Government, and the economic community can hardly expect to reap any great advantages from these transactions. The Government seems to have counted on success in financial adjustment through the introduction of foreign capital, but will fail to attain its end for the reasons above stated.

The *Shogyo Shimpō* remarks that the ship-owners of Japan are already experiencing considerable inconvenience owing to the paucity of docking accommodation in the Empire. The only two places where ships of from 5,000 to 6,000 tons can be repaired are Nagasaki and Yokosuka, but owing to the niggardliness of the Diet in voting supplies, the latter place has to refuse work, even when the ships are disengaged. Some remedy will soon have to be found if profitable work of this description is to be kept in Japan.

KOREAN TOPICS.

The "chief event of the week" ending June 17th in Chemulpo was the election of an honorary secretary of the Lawn Tennis Club. "Eleven persons cast ten ballots for four persons." What a week! What an event!

The Colonel commanding the Taiku regiment in Korea has given the Authorities a piece of his mind. It appears that the War Office, without assigning any reason, dismissed one of the regiment's most capable and useful lieutenants and appointed an ignoramus in his place. Thereupon the Colonel resigned, declaring that he would not retain the command of a regiment subject to such incidents.

Incidentally we learn that the pay of a soldier in Korea is \$5.50 per month. The custom of the War Office hitherto has been to retain 50 sen of that amount, and hand the accumulation to a soldier on the expiration of his term of service. But, for reasons not stated, the whole pay is now issued.

The *Independent* says:—"We are informed that the work on the Sŏul-Chemulpo railway is being vigorously pushed, and as soon as the final surveying work is finished a thousand more men will be put to work. At present the graders are pushing the surveying party closely, being at work on the Chemulpo side of the pass, and from there to Chemulpo. The small Decauville construction track is laid from the outskirts of Chemulpo to a distance of about five miles from Chemulpo, most of the way now being continuous, with temporary trestles. We hear the Korean coolies are very satisfactory as workmen and are able to take small contracts for grading. They take well to the use of the small construction railway and other foreign tools."

The Korean tradesman is not without ideas. Recently a vendor of a marvellous medicine wanted to obtain the patronage of the Palace, his conviction being that the Crown Prince would derive much benefit from the use of the drug. By way of advertisement he hired a drum, and beat it "in a most frantic manner," having mounted to the top of the south gate for the purpose. The police took charge of him.

The King of Korea reviewed the students of the English, Russian, and French Schools on the 22nd of June. All three schools sent their students simultaneously to the ground, but the exercises were conducted independently. The lads of the English School wore khaki uniforms with red stripes and facings. The first company carried rifles, but the rest had not yet attained sufficient proficiency to be entrusted with arms. The French scholars were in Korean costume. Various evolutions were performed by the English and Russian students, but the French lads do not appear to have taken any part other than that of joining the parade.

CHINESE NEWS.

In Wenchow the Chinese recently spread a rumour that the Formosans had risen, and were driving out the Japanese.

The sum subscribed by the Chinese in Hongkong to the Diamond Jubilee Fund aggregated \$29,845 on the 2nd of July.

We gather from the reports thus far published of the Blackburn Commissioners' inquiries in China, that foreign goods have to pay very heavy taxes before they pass into the hands of Chinese consumers. That was the question, above all others, that the Commissioners were interested in investigating. Doubtless they have obtained statistics, but these they have not yet made public. They limit themselves to the assertion that foreign imports have to pay very large duties.

The Commissioners speak in glowing terms of the wealth of Szechuan. The annual export of opium from that province is estimated at 140,000 piculs; the salt wells supply the wants of the whole of China, and the production of drugs, hides, silk

and wool is very large. But the population is excessive. It is in Szechuan that a famine is now raging owing to a succession of bad harvests and the want of proper means of communication with other centres of supply.

The 1st of July came and went in Shanghai without any serious trouble in connexion with the wheelbarrow licences. Up to noon only 60 licences were taken out in the English Concession, but in the afternoon 800 were applied for. On the preceding day some attempt was made to harangue a crowd of coolies into resisting the tax, but the chief agitator was promptly seized, and an attempt to rescue him, led to the arrest of fourteen others. The Chinese Magistrate sentenced three of the men to 700, 600 and 500 blows respectively.

In marked contrast to Szechuan, the Commissioners found the country about Yunnan-fu in the poorest and most miserable condition. Yunnan-fu is the point to which the French have just obtained permission to extend their railway from Tonkin *via* Kwangsi. Mr. Bourne, of the Consular Service, who accompanied the Commission, had been in Yunnan ten years previously, and it did not appear to him that any improvement had taken place in that time. A leading Chinese banker of the city told him that a century must probably elapse, under normal conditions, before any appreciable change for the better could be effected in the plains of southern Yunnan. Devastation by successive rebellions has been the cause of this wide-spread indigence. The people are without farming implements or oxen; water communication does not exist, and the roads are execrable even for China. It is supposed that in projecting a railway over the barren plains of Kwangsi and the impoverished plateau of Yunnan, the real objective point of the French in Szechuan.

The China Mail says:—

Colombo exchanges to hand contain reports from several steamers which had been in the vicinity of Socotra about the time the *Aden* was lost. The *Sultan*, also wrecked near Socotra, experienced terrific weather on the 8th and 9th June; the sea was lashed into a perfect fury, and the water broke continuously over the vessel, one big wave tearing open the hatches and filling the holds. The vessel began to settle down, and falling in with the *Valetta* on the 10th Captain Collin decided to abandon his vessel. With great difficulty the passengers and crew (including the captain's wife) were saved—125 lives in all; but several of the boats were swamped and ten lives lost. Two passengers died from exposure and shock, and Capt. Collin was badly injured by having his hand jammed by a door during the height of the gale. His mind is also said to have become unbalanced by his fearful experiences. The *Sultan* was built twenty-three years ago by J. Elder and Co., Glasgow, and was formerly named the *Prins Hendrik*. The names of the Europeans (all saved) are—Messrs. W. F. Collin (and wife), Master; J. H. Collin, Chief Officer; Wm. C. Marshall, 2nd Officer; H. H. Scallan, 3rd Officer; Wm. Keir, Chief Engineer; J. H. Meyer, 2nd Engineer; Jas. E. Mylan, 3rd Engineer; J. R. W. de Cruz, 4th Engineer. The China Mutual steamer *Chingwo* also encountered bad weather. Eight passengers died from the effects of the weather and natural causes and the chief cook was washed overboard and drowned. The P. and O. *Himalaya*, as well as the *Valetta*, must have been in the neighbourhood of Socotra when the *Aden* was making her worst weather. The *Sultan* was loaded down to the centre of the Plimsoll disc, and was laden with 3,000 tons of salt.

At the dedication of the re-constructed Roman Catholic Cathedral in Tientsin, on the 21st of June, the French Representative delivered an address, the principal points of which were:—

1.—The ceremony took place in memory of the unfortunate French people who were massacred in 1870. The Cathedral was built over their very tombs; it is a lasting monument elevated to their memory.

2.—The massacre of 1870 outraged the whole Christian world; as the Chinese Government has given its consent to the reconstruction of this sacred monument, satisfaction has been given to the Christians, and Frenchmen may now pardon and forget the terrible event of 1870.

3.—We are permitted to hope that such a massacre will never be repeated. The Chinese

Government has arrived at the recognition of the fact that Christianity will be an important factor in the civilisation of China, and that the Empire has already realised its advantages.

In connexion with this we note that our Shanghai contemporaries now congratulate the French on their firm action of carrying out the dedication ceremony on the anniversary of the massacre, 27 years ago, and not making any postponement in deference to threatened interference by Chinese roughs. Such congratulations contrast strangely with the utterances of the same journals before the ceremony.

GERMAN NOTES.

An interesting case was heard last month in the Berlin court, when George Knaak, former proprietor of the Berlin firm "Deutsche Waffenfabrik," had to defend himself against a charge of fraud. The affair dates back—says the *Tageblatt*—to the recent China-Japanese War, when the well-known firm of Mandel & Co., of Shanghai, made a contract on behalf of the Chinese Government with Moritz Magnus, of Hamburg, to supply a large quantity of cartridges, to be delivered at Hamburg on board ship 10 days after receipt of order. To enable him to execute the order within such a short period of time, Magnus was obliged to contract with various manufacturers, one of whom, the defendant, agreed to supply over 40,000 cartridges. The order was completed within the contract time. Twelve months later, a letter was received from Mandel & Co. complaining that part of the shipment of cartridges had not been according to contract, some of the cases having contained blank cartridges only, and others had the shot loosely packed. In consequence, Magnus had to pay a sum of 5,000 marks for damages. After a good deal of negotiation, Magnus finally laid a charge of fraud against the defendant. It seems that Knaak had hoped that the cartridges would be landed and distributed amongst the Chinese soldiers at some port or other before reaching Shanghai; so that his irregularity would not become known to the Shanghai merchants. Defendant admitted having supplied several thousand blank cartridges containing only 3 grammes of powder instead of Mauser cartridges, model 71, containing shot and 5 grammes of powder as agreed; but stated that it was done with the knowledge of Magnus. This contention he eventually substantiated, and the judge found that if any fraud had been committed against Messrs. Mandel & Co., it had been done by the connivance of both Knaak and Magnus: He therefore non-suited plaintiff.

It is difficult to describe the scenes of rapture and enthusiasm evoked last month at a concert given in Paris by the Berlin Philharmonic Orchestra. An audience of over four thousand filled the spacious Concert Hall, representatives of the best Parisian society being present. Amongst them were the German Ambassador, Count Münster, several members of other legations, and M. Crozier, Master of Ceremonies at the Elysee. After Beethoven's 7th Symphony, the "Freischütz Overture," and Wagner's "Siegfried," the performers received round upon round of applause which lasted many minutes. Again and again the conductor, Herr Nikisch, was called before the curtain, and when the concert concluded with a most artistic rendering of the "Tannhäuser" Overture, the audience rose to their feet, frantically waving hats and handkerchiefs, and calling "Au revoir." Herr Nikisch once more appeared, tears running down his cheeks, and bowed his thanks to the French audience, calling out, "de tout mon coeur au revoir." Outside, on the Boulevard du Temple, the ovations were continued and hundreds of enthusiasts accompanied Nikisch and his wife to their hotel.

The *Contemporary Review* for June publishes, over the signature of "Germanicus," a singularly outspoken article about the Emperor of Germany. No newspaper or periodical in Germany itself could venture to be the medium of circulating such views. The essay

abounds with quaint sayings and sweeping assertions. The Emperor, we read, is profoundly disappointed at not having been invited to England for the Diamond Jubilee. Had he come "heaven only knows what he might have done to attract people's attention." "He might have asked the Queen to allow him to put himself at the head of the whole population of England to march past Her Majesty; for a march past is the Emperor's ideal of bliss. Not without good reason do his witty Berlin subjects say with bated breath that their Emperor is suffering from *defilurium tremens*." . . . "Omniscience he claims as one of the attributes of his kingly majesty. Popular wit expresses this in the words, 'God knows everything, but the Emperor William knows everything better.' He annulled the decision of a jury of experts as to which drama ought to receive the Schiller prize. He set aside the award of a committee of architects as to the prize for the Reichstag Palace. In short, he acts always up to the principle *Regis voluntas suprema lex*. 'Germanicus' gives a most disquieting idea of the state of affairs that is gradually growing up under such conditions. 'The middle classes see, with sullen discontent, that the administration of justice is tarnished as soon as the slightest question arises between the feudal nobility and the members of the citizen class. . . . The situation is getting more and more dangerous. The feeling of discontent increases in intensity every day. . . . A violent conflict between this autocratic, headstrong monarch and the people seems unavoidable. . . . Prudent people in Germany, men who have rendered service to their country, look with grave anxiety upon the present state of affairs. They know that the headstrong monarch who, at this moment, guides the destinies of the Fatherland, constitutes a danger to their country; that what he considers to be energy is generally only fussiness; that he possesses neither wisdom nor patience; and that his efforts to put back the clock of Germany to the time of the dark ages can but end in ruin for the crown and for the country.' 'Germanicus' may be a Social Democrat, who, finding in Germany no vent for his extreme views, carries them to England for publication in the *Contemporary Review*. But he may also be an impartial observer. We can only hope that he is egregiously mistaken.

The scene in the Austrian Reichsrath on the 24th of May must have been striking. The "unparalleled violence resorted to," say the Vienna correspondent of *The Times*, "was due to the course adopted by the majority with the object of depriving the Opposition of one of their weapons. This resulted in a vehement outburst of party and personal rancour which soon converted the Reichsrath into a veritable pandemonium. 'Insolent Jew,' 'pack of thieves,' 'Jewish dogs,' 'Christian Socialist vagabonds,' and 'paid agitators' were some of the epithets hurled at each other by his Anti-Semitic allies and his opponents in the presence of the Austrian Prime Minister. The latter was himself greeted from the German side with cries of 'Down with Baden! Be off with you!' while the Vice-President was received with shouts of 'Fie upon you!' The defeat of the minority led to a scene of indescribable confusion and disorder. Certain members of the Opposition seized the notes from the hands of the official stenographers, tore them to pieces, and flung them on the President's desk. The others, following this example, destroyed their copies of the Standing Orders, and used the fragments as missiles or scattered them on the floor of the House."

The improvement of the harbour of Wakamatsu, Kyushu, is to be undertaken by the Wakamatsu Port Construction Company, which intends to increase its present capital of yen 400,000 to yen 3,000,000, to facilitate the work. It is stated that there are now about 3,000 vessels, including steamers and junks, inside the port, with cargoes of coal averaging 10,000 cattiees each, making a total of 30,000,000 cattiees.—*Chugai Shogyo*.

EVOLUTION AND CREATION.

It is a pity that Mr. Herbert Spencer found "the amounts of time and energy remaining to him" too small to justify his entering into the general question recently raised again by the Duke of Argyll. When we speak of "natural selection" we infer the existence of things from which to select. When we talk of the "survival of the fittest," we imply that there must have been originally some organisms among which the struggle for differentiation commenced. The former term is Darwin's; the latter, Spencer's. The Duke of Argyll now declares that the very language employed by the two great philosophers constitutes a profession of belief in a creative power. "Selection, as we know it, can not make things: it can only choose among materials already made and open to the exercise of choice. Therefore selection, whether by man or by what men are pleased to call nature, can never account for the origin of things." Spencer's "survival of the fittest" means nothing but a mere truism; namely, that the creatures fittest to survive do survive. It explains nothing and tells us nothing about the origin of creatures. With regard to the wider generalization "organic evolution," it is nothing more than "the general idea of development in its special application to organic life," and all Spencer's great heads of evidence from Geology, Classification, Distribution of Species, Embryology, and Rudimentary Organs, are merely proofs that "nothing we can see or know, nothing that we can even conceive, is produced at once as a finished article, ready made without any previous processes of growth." The Duke's arguments run in this strain:—

We know as certainly as we know anything in the physical sciences, that organic life must have had a definite beginning, in time, upon this globe of ours. If so, then, of course that beginning can not possibly have been by way of ordinary generation. Some other process must have been employed, however little we are able to conceive what that process was. All our desperate attempts, therefore, to get rid of the idea of creation, as distinguished from mere procreation, are self-condemned as futile. The facts of nature and the necessities of thought compel us to entertain the conception of an absolute beginning of organic life, when as yet there were no parent forms to breed and multiply.

Darwin, as is well known, recognized this ultimate necessity. He clothed the conception of it in words derived from the old and time-honored language of Genesis. He spoke of the Creator first breathing the breath of life into a few, perhaps only into one single organic form, (his followers generally seem to regard this as a weak concession on the part of their great master. They never dwell on it. They never realize that without it, or without some substitute for it, the whole structure of what they call organic evolution is without a basis—that it represents a chain hanging in mid-air, having no point of attachment in the heavens or on earth. It is as certain as anything in human thought that, when organic life was first introduced into the world, something was done—some process was employed—differing from that by which those forms do now simply reproduce and repeat themselves.

But the moment this concession has been fully, frankly, and intelligently made, another concession necessarily follows—namely this: that we can not safely conclude that the first, and more strictly creative, process has never been repeated. Yet this is the assumption tacitly involved in all the current materialistic theories of evolution. It is an assumption nevertheless in favor of which there is assuredly no antecedent probability.

If the processes of ordinary generation have never been reinvigorated by a repetition of that other process—whatever it may have been, in which ordinary generation was first started on its wonderful and mysterious course—then all the more certainly must the whole of that course have been foreseen and prearranged. It has been a magnificent and orderly procession. It has been a course of continually fresh adaptations to new spheres of functional activity. We deceive ourselves when we think or talk, as the Darwinian school perpetually does, of organs being made or fitted by use. The idea is, strictly speaking, nonsense. They were made for use, not by use. They have always existed in embryo before the use was possible, and, generally, there are many stages of growth before they can be put to use. During all the stages the lines of development were strictly governed by the end to be attained, that is to say, by the purpose to be fulfilled.

This, indeed, is evolution; but it is the evolution of mind and will; of purpose and intention. . . . I quite agree with Mr. Spencer that most men when they talk of separate or special creation do not realize, or 'visualize,' what they mean by it. But exactly the same criticism applies to the language of those who are perpetually explaining organic structures as developments governed by the absolute necessities of external adaptations. They do not really see the necessary implication of their own language. If the organism is to live at all, they frequently tell us, such and such developments must arise. Quite so—but who is it, or what is it, that determines that the organism shall live, and shall not rather die? The needed development will not appear of its own accord. The needed perception of its necessity must exist somewhere; and the needed power of meeting that necessity must exist somewhere also. Moreover, the two must act in concert. Those therefore, who talk about that combined perception and

power existing in nature are using words with no meaning, unless by nature they mean a conceiving and a perceiving agency. It is on this principle alone that we can explain very clearly why some apparatuses are common to all living things.

Mr. Spencer, as we have said, has declined to raise the gauntlet thrown down by the Duke. He calls himself too feeble to enter the lists. It is a pity, for on whichever side our sympathies are enlisted, a collision between two such intellects could scarcely fail to strike some sparks of truth.

FORMOSAN REFORMS.

Radical reforms are to be made in the administration of Formosa, remarks the *Fiji*, but the details are still secret and it is impossible to ascertain the exact nature of the alterations contemplated. We hazard the opinion, however, that the points given below will be attended to:—

1. For the present nothing should be done in regard to the native tribes. They ought to be regarded as beyond civil administration. Energy should be entirely devoted to the pacification of the natives in the interior of Formosa that are already under the influence of civil administration.

2. To make the natives sensible of the advantage of the Imperial administration, it will be absolutely necessary to guarantee the safety of their lives and property; facilities of communication are of paramount importance for the attainment of that end. A railway between Taipei and Tainan should be constructed, and highways repaired, so that travelling may be undertaken by *jinrikisha* and goods transported in carts.

3. As the construction of roads would be of small effect for the protection of lives and property, unless an efficient police force is provided, the fullest consideration should be given to the question of the distribution of police inspectors and men.

4. The police should be persuaded to learn the native language as soon as possible.

5. The necessity of learning the native tongue does not lie with the police alone: it is incumbent on all officials in Formosa. A portion of the office hours ought to be set apart for the study of the language, and extra pay, or reward, should be granted by way of encouragement to persons who have attained proficiency in it.

6. Matters of taxation should be conducted in conformity with old usage and customs. Should any necessity arise for fresh taxation, discretion should be exercised in the investigation of the subject.

7. No interference should be made in the customs and manners of the natives; time alone can effect such changes.

8. The teaching of the Japanese language to the natives has produced advantageous results beyond expectation, and the expansion of the scheme is highly to be commended.

KEROSENE IMPORTS.

The demand for kerosene oil, remarks the *Sekai no Nippon*, increases year by year. The amount distributed from Yokohama has, it is said, increased by five hundred thousand cases per *ensem* as compared with last year. Arrivals of kerosene from America and Russia and the quantity sent to the interior during the half year from January 1st to June 30th this year, are as follow:—

	From	Arrivals.		Transport to interior.
		Cases.	Cases.	
January ...	America	40,000	152,484	
	Russia	8,255	55,115	
February ...	America	54,000	71,459	
	Russia	150,923	88,881	
March	America	196,000	17,444	
	Russia	135,200	82,704	
April	America	436,250	132,763	
	Russia	47,869	62,432	
May	America	71,000	156,361	
	Russia	47,868	66,077	
June	America	80,000	111,435	
	Russia	42,917	55,963	
Totals...	America	879,250	793,946	
	Russia	505,032	451,172	

From the above it may be perceived that the arrivals from America and Russia during six months aggregated 1,384,282 cases, of which 1,245,018 were distributed for internal consumption.

NEWS OF THE WEEK.

The abolition of the Colonial Department is said to be gaining favour in official circles.

Bandai-san and Shirane-san, which have been quiescent for a long period, are reported to be in eruption again.

The U.S.S. *Forktown*, in the return baseball match against the Kobe C.C., beat the home side by 14 runs to 9.

The crew that will bring home the *Takasago Kan* from England, left Yokohama by the *Hakata Maru* on Tuesday.

The Crown Prince will probably spend the summer at Hakone. His health has been in different of late, at least so the vernacular press states.

We notice two former Yokohama lads among the team that represented the H. & S. Bank in a cricket match played against the Consolidated Gold Fields of South Africa in May—Sidney Wheeler (34 runs), and E. H. Moss (21).

The *Porodsu Choho* declares that "dark clouds are now seen hanging over the Department of Colonization," and the promotion of Mr. Mizuno, President of the Civil Administration Bureau of Formosa, to be Vice-Minister of the Department, is in abeyance.

The floods in Fukui are said to have involved damage to 4,300 houses. In Sakai-gun 160 houses were inundated, while seven men were drowned in Ono-gun. Damage to crops, railway-tracks, and river embankments is reported from all parts of the Prefecture affected by the rains.

James Mullens, an ordinary seaman on board the U.S.S. *Boston*, has been sentenced by Mr. Hunter Sharp, acting U.S. Consul at Kobe, to 60 days' imprisonment, for obstructing the police while in the execution of their duty. The man was tipsy and threw a policeman into the water. After which he drew the constable's sword and brandished it.

The Japan-Mexico Colonizing Company, which was organised by Viscount Enomoto, having lately completed arrangements for the purchase of land as well as the establishment of a company in Mexico, has determined to raise the necessary capital. The shares are to be 4,000, of which the Viscount himself takes 1,000, another 1,000 being allotted among the promoters of the scheme. The remaining 2,000 are to be offered to the public.

A bluejacket named Brown, belonging to H.M.S. *Narcissus*, had the misfortune to ride over a Japanese woman in Division Street, Kobe, last week. The woman was badly injured and Brown was proceeded against in the British Court, on a charge of furious riding, with the result that he was fined \$5; ordered to pay costs of Court, \$1.50, and compensation of \$83.46. At the suggestion of the *Kobe Chronicle* a subscription list was started, and the \$90 was raised for Brown, who is a married man by a warm-hearted public.

The N.Y.K. steamer *Sakura Maru*, while on her way from Oginohama to Yokohama, on the morning of the 7th instant, sighted a vessel flying signals of distress. The *Sakura* steered for the distressed vessel and found her to be the steamer *Koyo Maru*, owned by the Kochi Imperial Steamship Company, whose shaft was broken. At the request of the Captain of the disabled steamer, the *Sakura Maru* took her in tow and brought her safely into Yokohama harbour on the 8th instant.

From the Manila *Comercio* we gather that a disastrous eruption of the volcano Mayon—in the south west of Luzon—occurred on the 26th June, and fifty-six persons lost their lives, many more being injured. Only a brief telegram had been received at Manila in reference to the catastrophe and further details were anxiously awaited. Since 1716 the volcano has been in eruption thirteen times, at long intervals, speci-

ally calamitous outbreaks occurring in 1766, 1814, 1853, and 1871. It became active again on the 6th July, 1881, and has continued so slightly ever since. On the 26th June last it broke out in complete eruption, causing great alarm and damage in the surrounding district.

The books of the Tokyo Rice Exchange have been seized by the police, and also the private account books of Mr. Yonekawa, Chief Director of the Exchange; and those of Messrs. Matsuzawa and Shimada, prominent brokers. It is said that all three men are involved in a charge of violating the Regulations in connection with time bargains for July and August.

The *Hochi Shimbun* ascribes the recent rise in outward freights from Europe to the machinations of Russia and China, forgetting—or probably not knowing—that the real cause is the activity now prevailing in the South and North American trades, the South African trade, and the shipping trade of Europe generally, which are absorbing every available steamer and sailing vessel.

The *Sekai no-Nippon* has received information of a piece of cruelty recently perpetrated by a prison inspector in Hokkaido, which it denounces in vehement terms. Inspector Wakamatsu was in charge of a band of convicts engaged in weeding the grounds of the penitentiary, when a venomous snake was discovered. He thereupon ordered one of the prisoners, Yasuda Chiutaro, to capture it alive. The man attempted to do so and was bitten by the reptile. In a few hours he died. Inspector Wakamatsu is reported to have expressed surprise at the death. We have never heard of venomous reptiles in Japan that kill a man in a few hours. We have heard, however, of venomous slanderers who try to kill men's reputation with a paragraph.

The Japan Railway Company, says the *Porodsu Choho*, proposes to double the following lines in view of the necessity of extending the means of transportation. The work will be extended over five years and is estimated to cost 3,854,026 yen. The principal officers of the Company having agreed on their views, the scheme is to be presented for approval at the general meeting of shareholders.

Section of Railway.	Distance Miles.	Expenditure Yen.
Takata-Zōshigaya	5.00	503,700
Omiya-Kamio	5.02	90,386
Omiya-Shirakawa	98.79	2,237,317
Matsukawa-Fukushima ...	8.22	260,952
Iwanuma-Iwakiri	15.73	384,754
Minami Senju-Kita Senju	1.52	105,082
Shinagawa-Zoshigaya	9.40	271,835
Total	144.28	3,854,026

The Formosa Opium Regulations, says the *Fiji Shimpō*, were to be enforced from the 1st April in districts where the police authority is thoroughly organised. The population of the localities where the Regulations were put in operation, being only 150,000, does not exceed one-seventeenth of the whole populace of the island, which may be supposed to aggregate 2,500,000. Opium smokers are 15,123 in number, while the amount of opium transported from the manufactories is as follows:—

Opium paste.	Amount boxes.	Value Yen.
1st class	84	29,207
2nd class	219	69,917
3rd class	694	172,271
Total	997	270,486

It is supposed that in the event of the Regulations being enforced throughout the island, by September this year, receipts from opium, including fees for the delivery of licenses, will not fall short of 2,500,000 yen.

The *Yomiuri Shimbun* reports that a benevolent association is about to be formed in Tokyo, whose object will be to take charge of remittances and other funds sent to the capital for the support of country students. Many a promising young fellow comes up to Tokyo to study, but before long he is induced to visit a

brothel or other infamous resort with of some his fellow-collegians and soon he enters upon the slippery path that ends in profligacy. The evil has grown seriously of late, cases of suicides, murder and fraudulent exactions of money connected with the student class having reached a total of 170 for the first half of this year. The root of the evil is undoubtedly the possession of larger sums of money than the lads have ever handled before—contributed towards their support by parents, brothers, and other relations—which, not having been earned by their own exertions, they consequently undervalue. The temptations which surround these country lads in a place like Tokyo are much greater than those to be met with in smaller places. With a view to maintaining a restraining influence over the lads, the new association proposes to take charge of all remittances and make monthly allowances to the students. Men well-known for their probity are said to be at the head of the project.

The *Mainichi Shimbun*, in the course of an article dealing with the land tax, remarks that a change has come over public opinion since the first few sessions of the Diet. Then clamours were raised on all sides for a reduction in the tax, now people are openly advocating its increase. One strong party in financial circles is of opinion that the revenue can be increased more easily by a revaluation of the standard price of rice. This was last fixed in 1874, since when it has risen in value very considerably. It is therefore suggested that a new average be struck, taking the values of rice for the past few years as a standard. This would bring in some 15 million yen to the Treasury and allow of the land tax being left as it is.

The *Nagasaki Shipping List* contains the following notes on the *Empress of India's* rapid run from Yokohama to Nagasaki:—The steamer left Yokohama at 5 a.m. on the 8th inst. and reached this port at 7.30 a.m. on Saturday (the 10th). Special arrangements had been made for rapid coaling and nearly 1,500 coolies were waiting the ship's arrival. These were in full swing shortly after eight o'clock and, in spite of the showery weather and fresh breeze, they succeeded in loading 1,360 tons by 12.30 p.m., thus enabling the *Empress* to sail punctually at her advertised time, 1 p.m. This may be considered a record for Nagasaki coaling, the actual time taken in loading the coal being only a fraction over four hours. The *Empress* will now probably be able to reach Hongkong not only in time to save her contract time, but with a few hours to spare.

In connection with the Military Tournament, says a home paper, a large contingent of Japanese sailors from the warship *Fuji* were honoured guests of the Tournament Committee on the 1st June. They came, some 200 strong, marching from King's-cross Station headed by the drums and fifes of the Scots Guards. Nearly all wore medals for the sea fights in which they took part off the mouth of the Yalu, and at Wei-hai-wei, in the war against China, and some were further decorated with the Order of the Black Hawk for conspicuous gallantry in action. They looked like good fighters, and perhaps it is the highest tribute one can pay to their discipline to say that they moved with the smartness of British bluejackets. The young lieutenant in command of them was received later by Sir Redvers Buller, who occupied a seat in the Royal box. At the conclusion of the performance, they paraded in the arena, and, headed by a band, marched out by way of the officers' enclosure between lines of British bluejackets. Among the visitors in the evening were the Chinese, Japanese, and the Siamese Ministers. On the 2nd ult. another contingent of the Japanese sailors visited the Tournament, and were equally well received.

A report from the Governor-General's Office in Formosa as published in the *Tokyo Shimbun*, runs as follows:—On the 24th of June, Lieut. Okuda, in command of a detachment of the First Mixed Brigade, encountered a small band

of insurgents in the vicinity of Wantan, and, after a brief struggle, killed one and captured two, together with some rifles. A similar encounter was reported by Sub Lieutenant Tagu-sari, the same day, which resulted in the death of one of the rebels. The district of Ilan is at present infested by rebels, entailing not a little injury to innocent people. Major Yemura, Commandant of the garrison, gave orders to Captain Ishimori on the 25th June to take some men and a company of artillery and attack insurgents in the neighbourhood of Shaoshian. When the firing began, the rebels fled in all directions, leaving a rifle and other articles behind. On the 28th June Lieutenant Azuchi with some non-commissioned officers and men, while inspecting the district of Limbisong, fell in with a number of rioters who made a desperate resistance. They were dispersed within an hour. The commander of the First Brigade proceeded on the 1st July towards Loosan with a view to the extermination of the rebels in that locality.

Silks from various districts are now being subjected to inspection at the Offices specially erected by the Government in Yokohama. Arrivals are increasing day by day, says the *Mainichi*, but it seems that the examination is as yet confined to fine silks from Kwansei, no Shinshu goods of any reputation having yet been presented. The result of a general scrutiny shows that the quality of cocoons this year is excellent and the silk a trifle superior to the production of previous years. Owing, however, to the late growth of some worms and the faster growth of mulberry leaves, silks reeled from some cocoons are rough to the touch and have a comparatively greater number of nibs. It was found that some of this silk had 1,700 nibs in 500 metres of thread. Two causes are alleged. One is already mentioned: the other arises from the use of cocoons imperfectly dried. Another defect lies in the whiteness of the thread. It is true that foreigners have shown particular interest in this sort of silk, and thus its production is the outcome of a desire to gratify their taste. But silk can never be turned out in the autumn and winter of a uniform colour. Yet foreigners display strong antipathy to silk that shows a want of uniformity in colour.

Mr. Garry, the diver of the Nippon Yusen Kaisha, was the victim of a dastardly attack by Japanese coolies on Monday last. It appears that a few days previously a man who entered the compound of Mr. Garry's house on the Bluff at the very unreasonable hour of 1 a.m., was bitten by a dog kept by Mr. Garry. The injury inflicted was not severe, but Mr. Garry offered to pay the man 60 cents a day while he was incapacitated from work, and all medical expenses. This, however, does not appear to have satisfied the man or his friends, and at about 7 p.m. on Monday three men, armed respectively with a club, an iron bar and a handful of big stones, entered the compound and forcing their way into the house, attacked Mr. Garry, who, fortunately, dodged a blow aimed at him by the man with the iron bar, and successfully wrested the club from the hands of another assailant and, armed with this weapon, succeeded in beating off the three men. About 8 o'clock, the men returned, this time reinforced by about a dozen more roughs, who entered the compound. Mr. Garry now armed himself with a revolver and standing inside the half opened door, warned the crowd that he would fire on the first man who attempted to enter the house, he having meanwhile despatched a messenger to fetch the police. On an attempt being made to rush the doorway, Mr. Garry fired a couple of shots over his assailants' heads, and they then beat a hasty retreat just before the police arrived. A report was lodged at the Bluff Police Station, but so far no arrest has been made, though the Inspector in charge has taken the precaution to lodge a couple of policemen in Mr. Garry's house at night.

RULES FOR THE INSPECTION OF SILKWORMS.

ORDINANCE NO. 8 OF THE AGRICULTURAL AND COMMERCIAL DEPARTMENT.

It is hereby notified that the Rules for the enforcement of Law No. 10, issued in the 30th year of *Meiji*, providing for the inspection of silkworms, are as follow:—

Count OKUMA SHIGENOBU,
Minister of Agriculture and Commerce.

June 24th of the 30th year of *Meiji*.

Art. I.—Silkworm egg producers shall, according to Form I, report to the Local Government Office before the 15th February each year the number of worms hatched from the original eggs of the year and the estimated production of eggs.

Art. II.—The silkworm egg breeders shall plainly state on the standard paper or card the particulars specified in the first clause mentioned below, before entering upon the raising of silkworms; and those specified in the second clause before the inspection of the eggs:—

1. The distinction, on the face of the card, as to spring, summer, and autumn worms, and the respective names of the same.
The residence and names of breeders, on the face or back of the card.

2. The exact date of production.
Art. III.—Should the silkworm egg producer desire to produce standard eggs, he shall cause one female moth to lay eggs in one section and affix the mark for the moth and the section so provided.

Art. IV.—Should the silkworm egg producer desire to obtain eggs from cocoons produced by summer or autumn worms, he must limit the manufacture to those which were reared from the original eggs hatched in the first period of the year.

Note.—The original cards from which the eggs were hatched in the first period of the year shall be preserved until after the inspection of the produce of the eggs.

Art. V.—Silkworm eggs which are subject to inspection according to Article V. of the Silkworm Eggs Inspection Law shall be examined in the following order:—

1. When the cocoons are produced, the cocoons and the original worms shall be brushed off.
2. After the eggs are produced, the eggs and the pierced cocoons used in the production of the same, shall be shown.
3. In the case of original eggs, the female moth used for the production, shall be examined.

Art. VI.—The inspection specified in the first and second clauses of the preceding Article shall be enforced upon producers of eggs; and the inspection required by the third clause of the said Article and in the second clause of Article VIII. of the Silkworm Eggs Inspection Law shall be conducted at the office specially established for the purpose.

Art. VII.—Silkworm egg producers shall, before undergoing the inspection specified in the first clause of Article V., set apart the cocoons eligible under Article III. of the Silkworms Inspection Law, and ascertain the amount thereof and that of the cocoons to be taken for producing eggs, separately from each other.

Note.—No cocoons of different species shall be mixed together.

Art. VIII.—If it is deemed that the standard cocoons selected as specified in the foregoing Article are imperfect, the Inspector of Eggs may issue orders for a fresh selection.

Art. IX.—Should the Inspector (after effecting the examination specified in the first clause of Article V.) judge that there is nothing incompatible with Articles III. and IV. of the Silkworm Eggs Inspection Law, he shall issue a certificate according to Form VI.

When the Inspector has examined the original cards from which the eggs were hatched he shall affix his seal on the back of the cards.

Art. X.—If the Inspector of Eggs (on the completion, of the examination specified in the second clause of Article V.) is of opinion that the amount of the production of eggs, pierced cocoons, and cocoons for eggs can be justified with reference to the certificates delivered for them, he shall affix on the back of the original a seal as provided in Form III., in the case of eggs for rearing purposes, and another seal, as shown in Form IV., in testimony of the qualifications attained in the case of eggs reserved for reeling purposes.

Art. XI.—If the silkworm egg producer desires to sell or cede a portion of a card to be appropriated for reeling, he shall draw a line or lines

on its back, denoting which portion is intended for reeling and which for breeding, prior to the inspection being made.

With regard to the eggs specified in the foregoing Article, the seal testifying their qualifications shall be affixed in each section on the back of the cards.

Art. XII.—The inspection specified in the third clause of Article V. shall be conducted according to the following process:—

Each moth is put in a mortar and then ground with a small quantity of distilled water.

The liquid so obtained is to be subjected to examination through a microscope. Should microbes be found in it, the seal indicating the presence of virus, as shown in Form V., shall be affixed, and in case of the absence of microbes another seal, testifying to the non-existence of any poisonous matter, as shown in Form VI., shall be placed on the external part of the section of the card reserved for breeding purposes. The card so prepared shall also be attested with a seal as shown in Form VII., indicating the qualification for appropriation as a standard.

The seal mentioned in the foregoing article, certifying to the qualifications after examination, shall only be affixed after that portion of the card which contains injurious eggs is removed.

Art. XIII.—The examination specified in the second clause of Article VIII. of the Silkworm Eggs Inspection Law shall be carried out according to the following method:—

About one hundred shall be taken from the whole surface of each card, and divided into ten parts. Each part shall then be put in a small mortar and crushed with a small quantity of diluted solution of caustic potash. The liquid is then to be strictly examined through a microscope in order to discover the presence of microbes. If no microbes are found after the fourth examination with a microscope, the seal, as indicated in Form IV., certifying the qualifications for purposes of reeling, shall be affixed to the back of the card.

Art. XIV.—In case the Inspector shall not attend to examination as specified in the first clause of Article V., even at the approach of the hatching period, the producers of eggs may report the fact to the nearest police station and demand inspection.

Art. XV.—In case a police officer has received such a demand, he shall select two persons whom he deems most suitable from among the producers of eggs in the nearest district, and cause them to hold the examination in his presence.

The persons so chosen are not allowed to refuse the work of examination without justifiable cause.

Art. XVI.—In case the temporary examiners specified in the foregoing article, find that Articles III. and IV. of the Silkworm Eggs Inspection Law are in no way violated, they shall prepare two copies of certificates for cocoons qualified for the production of standard eggs according to Form II. and obtaining the seal of the police officers thereto, deliver one of them to the applicant for inspection and send the other to the Silkworm Eggs Inspection Office having jurisdiction.

When the original cards from which the eggs were hatched have been examined, the seal of the examiner must be affixed to the back of the card.

Art. XVII.—In case the silkworm egg producers have lost or disguised the certificates for cocoons qualified for breeding purpose, they shall apply to the Silkworm Eggs Inspection Office for the delivery of another copy or a fresh certificate (authorised copy).

Art. XVIII.—In case the silkworm egg producers have sold, bought, transferred, or accepted through transfer, the whole or part of cocoons bearing certificates of qualification for breeding purposes, they shall present to the Silkworm Eggs Inspection Office having jurisdiction an application counter-signed by the other party, together with those certificates, for delivery of rewritten or fresh copies of certificate.

Art. XIX.—In case the local Governor wishes to alter the position and jurisdiction of the Silkworm Eggs Inspection Office, he shall previously report the fact to the Minister of Agriculture and Commerce and issue notice thereof throughout his jurisdiction.

This provision applies also to cases when the Inspection Office is opened or closed.

Art. XX.—The period of commencing the inspection specified in the 3rd clause of Article V. or the 2nd clause of Article VII. of the Silkworm Eggs Inspection Law shall be from the 1st September every year.

Art. XXI.—As regards Inspectors of eggs, the local Governor shall appoint them from among persons characterized by good conduct and possessing one of the following qualifications:—

1. Persons who are in possession of diplomas of graduation in the Sericultural Training

Institute belonging to the Department of Agriculture and Commerce, in the former Silk Industry Experimental Station, under the Bureau of Agricultural Affairs, or in the Section of Sericulture of the Temporary Experimental Station of the Agricultural Bureau.

2. Persons who are in possession of certificates showing that they have satisfactorily passed the examination for qualification in the Agricultural Bureau.
3. Persons holding certificates of graduation from a school, Training Institute, or Experimental Station, which is held trustworthily by the local Governor, and where they have completed the course of studies relating to sericulture industry; or those who have attained proficiency in sericulture in the inspection of cocoons.

Art. XXII.—If the local Governor has appointed or released from office any Inspector of Silk-worm Eggs, he shall report the fact to the Minister of Agriculture and Commerce, and issue notice thereof within his jurisdiction.

XXIII.—The local Governor shall, on the appointment of an Inspector, furnish the latter with a certificate according to Form VII.

Art. XXIV.—In case of the said certificate being lost or defaced, the Inspector shall apply to the local Governor for the delivery of a new one.

Art. XXV.—When a report is made by the Inspector as to the loss of his certificate, the local Governor shall notify the fact throughout his jurisdiction.

Art. XXVI.—The silkworm eggs produced in a School, Training Institute, or Experimental Station (recognised by the Minister of Agriculture and Commerce or by the Local Governor), may be sold or transferred as standard eggs after they have been examined according to these Rules and to the Silk-worm Eggs Inspection Law.

Note.—In such cases, the seal or name of the institution above mentioned shall be impressed to show the qualifications certified by the examiners.

Art. XXVII.—The local Governor shall present to the Minister of Agriculture and Commerce on or before the 15th May every year, a report on the results of inspection in the previous year, according to Form IX.

Art. XXVIII.—Any violation of Article I. shall be punished by a police fine of from fifty *sen* to one *yen* ninety-five *sen*.

Art. XXIX.—The method of supervising the Inspectors and of enforcing the inspection shall be determined by the Local Governor and reported to the Minister of Agriculture and Commerce.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentiments or opinion of our correspondents, for the accuracy of their assertions, or for the deduction they may choose to draw therefrom.]

"ANOTHER SIDE."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I read with amazement Mr. Woodworth's remarks under the heading "the other side" which appeared in your issue of 3rd July. He said "it is probably true that in Japan the foreigner is not held in higher esteem than John Chinaman in America, and John has the reputation of having rough treatment from the polite, well-mannered American." I feel loath to admit that any sensible inference can be drawn from such nonsense, but waiving that point, the conclusion forced on one is, that in Mr. Woodworth's opinion the Chinese who emigrate to the States are relatively to the polite and well-mannered American as are the foreigners resident in Japan to the Japanese Public. How does this pan out? The bulk of the Chinese who go to the States are drafted from the labouring classes of a country low down in the scale of civilization, and they find it advantageous to labour in one where a higher civilization exists. They are satisfied to occupy themselves in employments distasteful to the white working man, in fact, to become the proverbial hewers of wood and drawers of water in the American land of promise. Now in what esteem (to use Mr. Woodworth's word) is the intellectual and well bred American justified in holding the above class of Chinese provided they are well behaved? Clearly in just the same as he would hold similar labourers of his own or any other nationality. Turning to Foreigners in Japan, it will probably be admitted they are fairly representative of the middle classes of their respective countries, and the bulk of them are citizens of the three or four most highly civilized countries in the world; countries far and away in advance of Japan. These foreigners do not come to Japan to wait on Japanese, wash their clothes,

etc. On the contrary, they pay Japanese to serve them in all such matters whilst they occupy themselves in Merchant's offices, Banks, etc., that is, in just such occupations as the rising middle-class Japanese youth is trying to fit himself for. If this was all that could be said for Foreigners resident here, it would be amply sufficient to show they are altogether on a different footing relatively to the natives to that occupied by the Chinese relatively to Americans. But it is far from all. All the Japanese know of civilization has been taught them by Foreigners. Foreign Experts have been employed by the Government in the Army, Navy, Communications, and Public Works Departments to teach its nationals. The foreign mercantile community has been for years past and still is an involuntary teacher of the Japanese commercial classes. Look where you will, the Foreigners are the teachers; the Japanese the pupils. Repeating my former question, with a slight variation, I would ask in what esteem might the Japanese middle and labouring classes be expected to hold such Foreigners as those above referred to? Well, Mr. Woodworth has given us his opinion on the matter; as to which I will remark, that though I have by no means a high opinion of the reasoning powers of the Japanese, I cannot but take strong exception to a view which, if true, would place their intelligence on much the same level as that of a baboon. Well might the Japanese cry, save us from our friends! That the Japanese middle and labouring classes cherish a very considerable amount of ill-feeling towards resident foreigners is, I think, unfortunately a fact beyond dispute, but that they should hold these foreigners in the same esteem as the better class of Americans do the Chinese labouring classes in America is simply impossible. For all that, I venture to think the Japanese have already gone much too far in that direction for their own good. I have observed many cases of unprovoked impudence or insolence on their part towards foreigners, and the sooner they learn that this comes especially from people so much indebted to Foreigners for the advances their country has made, the better, particularly when under no circumstances can any good come of such conduct, while evil may.—Yours, etc.

A FOREIGN RESIDENT.

June 6th, 1897.

AN APPEAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The columns of the *Japan Mail* contain appeals for help in many directions, at various times, and a generous public is apparently long-suffering and sympathetic, and will doubtless, should the revised treaties bring about the annihilation of such a medium as the *Japan Mail*, greatly regret it for more reasons than one. Certainly foreigners in the interior knowing of worthy and needy enterprises may be perplexed as to how to bring to the public a knowledge of such interesting humane work. Much more might be said, for other reasons, of the public disaster both to foreigners and Japanese, should a paper which has been one of the greatest factors for enlightenment that has existed in Japan, be abolished.

My object now is to present the needs of the Maebashi Orphan asylum, a non-secretarian and purely Japanese institution. It has been presented here before, but as children keep on eating and growing, their needs expand in every direction. The institution has no endowment as capital, save a house, a good-sized garden and apparatus for cultivating a limited number of silk-worms, these with the good, strong, right hand and brains of its father-founder, which do not flinch at any toil however humble. This only meets the daily, necessary wants of the little waifs. With firm and constant faith in the All-Father, and his own God-given mission, Mr. Kaneko does not flinch, though sometimes he finds the family funds reduced to ten *sen*. They have never gone hungry, help has always come, though at the last minute perhaps. Receiving much inspiration from Mr. Ishii and his Okayama work, he believes that the needs of Joshu are as great as those of the Okayama region, which is doubtless true, since Joshu is said to be the hotbed of criminals and boisterous men, a large proportion of the criminals of Tokyo coming from Joshu. He has undertaken this work in the same simple-hearted faith as did his friend Mr. Ishii, believing his to be a work to which he has been called of Heaven.

It is just five years since the Asylum became a fact, and Mr. Kaneko has never abated an iota in his individual self-denying efforts for the little ones; showing an unselfishness and an unswerving purpose which we wish might be true of more young men in Japan.

Afflicted in the death of his first wife, who seemed particularly fitted and peculiarly called to be

a helpmeet in such a work, many a less brave soul would have faltered. The second Mrs. Kaneko is a worthy successor to a noble work. Coming of a good family, she has relinquished pleasures, position, personal adornments, even to the selling of her own clothes, for the needs of the family. Mr. Kaneko makes his wants known to his Heavenly Father, but it is only rarely and then with the greatest repugnance that he makes the wants of the family known to others.

Even I who have lived less than a quarter of a mile from the Asylum for nearly five years, knowing that there were one or two benevolent Christians in town who had been benefactors of the asylum from the first, had always supposed that this asylum never got into great straits. So it was with something of a shock the other day, while talking with Mr. Kaneko about the asylum and making inquiries, I learned the true state of the case. When I asked why he had not told of Mrs. K.'s selling her clothes, he said it was "hadzukahishii."

While Mr. Kaneko would probably not turn away any who came to him needy, it is his present thought and desire to receive only so many as he can care for as a father would, though doubtless should his work increase in time he would call helpers to himself as Mr. Ishii has done. It is his desire that the children should be decently, healthfully, fed, clothed, and educated to be respectable, honourable self-supporting members of society.

Most of the 19 children are now either in the common schools or kindergarten, where the former has repeatedly received certificates of superior good behaviour and lessons, while the conduct of the latter has been so good that an official of position in town—a strong Buddhist—has made a request to Mr. Kaneko that one of the children be allowed to come and reside in his own family for a time, for the sake of the good influence upon his own children who also go to the same kindergarten. There is no question but that Mr. Kaneko has unusual power and influence over children.

It is said that the silk spun in Joshu is in general inferior, because the aim is quantity rather than quality, and the condition of the employed spinners—mere children—is often little different from that of slaves, being compelled to begin work at 2.30 a.m. in summer and kept at work until midnight, turning their wheels to the accompaniment of obscene songs. Then, if they fall asleep over their task, they are beaten with a rod,—kept at work day in day out, no Sundays, only two holidays a year, and for this they receive twenty *yen* per year and perhaps two or three *kimono*, with the poorest and coarsest food. It is not much wonder that they become diseased and are short lived.

Mr. Kaneko has now a small plant for raising silk worms; he wishes next year to increase his plant, so that the older children may be taught how to spin thread of the best quality while themselves living under wholesome healthful conditions. This will require considerable outlay at the start, and bring in little or no returns in money for two or three years. The first year being only expense as far as the thread produced, and probable loss rather than otherwise.

At present Mr. Kaneko has only the children and this laudable desire,—no means by which to accomplish it. If the thought and desire are God-given—he is sure the children are—he believes means will come for it.

It is my own thought to write this letter, not Mr. Kaneko's at all. I take the liberty to say that should any be inclined to help him in this noble work they can send directly to Mr. Kaneko at the Orphan Asylum, Iwagami-mura, Maebashi, Joshu, or to the writer.

H. FRANCES PARMELEE,

Iwagami Mura, Maebashi, Joshu.

Mr. Kaneko will visit Karuizawa again this summer, at my advice, to solicit funds for the asylum, also, as he has arranged to leave home for a time, he would be glad to serve as teacher of Japanese to any who might need such service in Karuizawa.

He has given the best of satisfaction in this capacity already. H. F. P.

AQYAMA CONFERENCE.

The members of Japan Conference of the M. E. Church, both native and foreign, together with the ladies of the Women's Foreign Missionary Society of the same Church, met at half-past seven, on July 8th, in Goucher Hall, Tokyo, to celebrate the holy Sacrament of the Lord's Supper, the introductory service to the opening of the fourteenth session of the Conference. Bishop J. W. Joyce conducted the service assisted by the presiding elders.

At the conclusion of Sacrament, the Bishop took the chair, and instructed the former secretary, Rev. J. W. Wadman, to call the roll. Forty-seven members in full and fifteen members on trial responded to their names. The Rev. J. W. Wadman was then chosen Secretary in English, and Rev. K. Ishizaka, Secretary in Japanese, and each chose an assistant. Rev. M. S. Vail was made Treasurer of the Conference, and Rev. E. R. Fulkerson, Statistical Secretary. Revs. S. Ogata and H. Yamaka were chosen interpreters, and Miss J. Vail organist. Standing committees were appointed on Bible Cause, Church Extension, Conference Relations, District Conference Records, Education, Epworth League, Fraternal Relations, Missions, Sabbath Observance, Sunday School, Temperance and Tracts, on nomination by the presiding elders. These committees usually consist of one foreign and two or more Japanese members.

The fraternal delegate of the Japan Methodist Episcopal Church South, Rev. C. B. Mosely, was introduced, and gave a spirited address. Visitors were then introduced, Misses Osborn and Merrill from the M. E. Mission in China; Misses Spencer and Wilson, who have recently come from America to reinforce the work; and Misses Bender and Blackstock, who have just returned from furlough in the U.S.A., and Miss Parish, of the Women's Temperance Association.

Bishop J. W. Joyce recently returned from an extensive tour of inspection and Episcopal supervision of the work of the M. E. Church in Korea and China. The Bishop and his wife travelled far into Western China to places hitherto never visited by a Bishop of the church, but he seems none the worse, physically, for his long journey, but on the contrary appeared better in health than a year ago. His remarks to the Conference were full of deep spirituality, and flashed here and there with wit and humour. The large audience seemed to be in the best of spirits; any differences of country and language were lost sight of in the common love and interest in the work of the M. E. Church in Japan.

The second day of the Japan Conference opened with a prayer meeting, led by Mr. K. Waneke. The business session was called to order by Bishop Joyce at 9 a.m. The Revs. Magaki and Tada, fraternal delegates from the Church of Christ, were introduced and gave addresses. The Revs. Aibara, Draper and Sasamori were appointed a committee to convey the good wishes of the conference to the Synod of the Church of Christ now in session, and were excused attendance to proceed in company with the Revs. Magaki and Tada.

The regular reports of the Presiding Elders of the Aomori, Sendai Nagoya, Nagasaki, Kagoshima, East and West Tokyo Districts were read.

The Bishop announced that he held a draft for \$446, gold, from the profits of the Book Concern, New York, payable to the Conference. This was received by the Conference with thanks.

The afternoon session was given up to the reception of statistical reports and collections for the various benevolent societies of the Church. In the evening a large audience gathered to listen to the missionary sermon, preached by the Rev. Tanaka.

The third day of the Methodist Conference was held on July 10th. The devotional exercises were led by Rev. Kambe. After the minutes were read, the Rev. Oldmans, of the Dutch Reformed Mission, was introduced and delivered a fraternal address in Japanese. Rev. A. Morgan, of the Prot. Methodist Church, and Revs. Knight and Takano of the Evangelical Association, fraternal delegates, were introduced and made short addresses.

The President of the Yokohama Gospel Society read the report of that Society. It showed that there is a Boarding House, Free Reading Room and Library, and Night School in connection with the Society.

Bishop Joyce then addressed the candidates for full membership in the conference. He said:—Preaching is not to show your learning, but to move the hearts of men. When you start to prepare a sermon kneel down with an open Bible before you and ask the Lord to teach you what to write. While writing the sermon, if the preacher's heart is not moved he will not move the hearts of others. The pastor of a church should learn the art of getting money out of the people. Keep sweet, no matter what people may say about you. Do not get cross and scold. Visit among your people, but do not gossip, and never betray a secret. "I am more afraid of one preacher who gossips than of ten women gossippers." Preach repentance, regeneration, and sanctification. If any one is afraid of the word sanctification tell him that it means taking the evil out of a man's heart. "Here and now God can save us from head to foot." Be familiar with the Bible for it is the preacher's tool-box.

The candidates were then asked the disciplinary

questions, to which an affirmative answer is required for admission to Conference; and the questions in regard to tobacco and debts have to be answered in writing. The business of the Conference was continued in the afternoon, and in the evening the annual meeting of the Home Missionary Society was held.

The weather on July 11th was all that could be desired at this season of the year, and a large audience gathered at Aoyama to enjoy the services of the day. At nine o'clock the Love Feast began. This is a service peculiar to the M. E. Church. Bread and water are passed round, and all who partake of these simple elements signify by the act that they are in love and fellowship with each other. Many testified to the power of God to save from sin, and the songs of praise were sung with spirit and understanding. After prayer by Rev. J. H. Correll, D.D., and reading of the scriptures by Rev. Dr. Soper, Bishop J. W. Joyce delivered an excellent sermon, full of wisdom and practical advice to the class of deacons who were to be ordained later by the Bishop. Directly after the sermon the Bishop ordained seven young men deacons. The large and intelligent audience listened with great pleasure to the Bishop's sermon, which occupied over one hour, and was interpreted by the Rev. S. Ogata. In the afternoon Bishop Joyce ordained ten men elders. After the ordination service a service of song, and gratitude to God was held. Several interesting speeches were made by those who had been Christians a number of years, and who called to mind the time when sign boards forbidding Christianity were hung at the corners of the streets.

In the evening a praise and consecration service, led by Rev. G. F. Draper, was held.

The fifth day of the Japan Conference began on July 12. After the usual devotional exercises that preceded the business meeting in the morning, Rev. Dr. Scott and Mr. Murimatsu, fraternal delegates from the Methodist Church of Japan (Canadian), were introduced and gave fraternal addresses. A vote of thanks was tendered Dr. Scott.

At ten o'clock the special business of the hour was taken up, the vote on the two questions submitted to annual conference by the General Conference of the M. E. Church. The question of admitting women to the General Conference was first taken up and received twenty votes in favour to thirty-seven against. The vote on the amendment to the constitution of the Church allowing equal lay representation in the General Conference received twenty-five votes for and thirty-three against.

The afternoon session was given up to hearing reports from the Woman's Foreign Missionary Society. The annual report was read by Mrs. Van Petten in English and Japanese. It was such an excellent report that we hope it will be printed in full.

Mrs. Joyce gave an interesting account of her trip to Korea and China; and Miss Osborn, of Kiukiang, spoke of the work in Central China.

Rainy weather prevented many from attending the temperance meeting of the Conference on Monday night, and listening to the eloquent addresses of Hon. T. Ando, Mr. Ito, and Miss Clara Parrish.

On Tuesday morning, the sixth day of the Conference, Mr. T. Hara, who is engaged in work among, and for the benefit of, discharged prisoners was introduced and addressed the Conference.

Rev. R. A. Morgan, formerly President of the Methodist Protestant Mission, but who has recently severed his connection with that body, was admitted into membership of the Conference by vote.

The reports of the Presidents and Deans of the schools of the Conference were presented at the afternoon session. The annual meeting of the Church Extension Society was held in the evening.

On Wednesday morning, the seventh day of the Conference, the great question of the session came up, viz. the separation of the island of Kyushu and the islands to the south and west of it, and the making of this southern portion of Japan into a Mission Conference. The question was debated for nearly two hours, and finally disposed of by the Conference voting to postpone action until next year.

SYNOD OF THE CHURCH OF CHRIST IN JAPAN.

The Synod met at 9 a.m., on July 6th, in Shiba Church, Tokyo, and continued its sessions for five days in succession. The number of delegates representing the several presbyteries throughout the country was between thirty-five and forty. The delegates, with a single exception, were all Japanese. Three or four missionaries were present as

advisory members, and a number of others as spectators. The latter were invited to sit as corresponding members.

In the absence of the retiring Moderator, the opening sermon was preached by the Rev. M. Uemura, editor of the *Fukui Shimpō*. Mr. Uemura's discourse was based upon several texts chosen from different parts of the Acts of the Apostles, and dealt in a practical way with different phases of the spiritual evolution which the Apostles underwent after the ascension of Christ. At first their ideas were narrow and selfish, not extending beyond the limits of Judaism, and were well expressed in the question which they put to their risen Lord:—"Lord, wilt thou at this time restore again the Kingdom to Israel?" But as the Holy Spirit came upon them with power from on high these crude notions were broadened and spiritualized until the faith of the Apostles embraced the whole world and they came to realize that they had a mission to all mankind. The purely nationalistic spirit with which they started out gradually gave place to the broad and loving spirit of the Master Himself. The sermon was from first to last deeply spiritual in tone and made a profound impression upon the audience.

At the close of the sermon the election of officers took place, resulting in the choice of the Rev. Mr. Yamamoto, pastor of the Shioh Church in Yokohama, as Moderator, and of the Rev. Mr. Wada, pastor of the Shiba Church, as clerk. The committee of arrangements then reported, recommending that the forenoon be devoted to the transaction of business and that the afternoon be given to meetings for conference and prayer. This report was accepted and adopted. Among the important resolutions passed by the Synod were the following:

1. A resolution defining the meaning of the term *Co-operation*. At the meeting of the Synod two years ago in Nagoya the presbyteries were directed to appoint committees to inquire into the state of co-operation between the Church and the Mission within the bounds of the presbyteries, and to report upon the same to the Synod at its next meeting. The reports were accordingly prepared and presented before the Synod at the Meeting just closed. They with one accord called attention to the fact that there has been of late years almost no such thing as genuine co-operation between the Japanese Church, as represented by its presbyteries, and the Missions working within the bounds of the presbyteries. In view of these reports the Synod passed a resolution expressing what it as a body understood true co-operation to imply and to involve, and appointed a committee to confer with the missions upon the subject and, if possible, to secure co-operation of the character indicated in the resolution. Co-operation, as defined by the Synod, would involve the appointment in every presbytery of a committee consisting of an equal number of Japanese and missionaries to which all matters pertaining to evangelistic work should be submitted for decision. The discussion called forth by this resolution was animated throughout by the best of feeling toward the Missions, and by a strong desire for a more real and sympathetic co-operation, in order to effect the advancement of the cause of Christ in this country.

2. On Self-Support:—Upon this subject three separate resolutions came before the Synod. The first proposed to make all organized Churches self-supporting, the implication being that organizations which are unable to support themselves shall cease to be recognized by the Synod as Churches. After a spirited discussion this motion was laid upon the table in view of approaching consultation with the missions concerning co-operation. The advocates of self-support, however, were not content to leave the matter in this shape. They therefore brought up the question in a slightly different form. This second motion proposed that all Churches which did not become self-supporting within one year should be disbanded. After a full discussion this resolution was lost. At a later session the subject was brought before the Synod a third time in the form of a resolution proposing that the members of Synod agitate on the matter of self-support with a view to putting all churches on an independent basis within the next two years. This resolution was finally adopted. Self-support may be said to have been the keynote of this meeting of Synod as evangelistic work was that of the meeting two years ago.

3. A resolution enjoining upon the Churches a stricter observance of the Sabbath:—This resolution was passed in view of the fact that many Japanese Christians, owing to the materialistic tendencies of the times, the mad rush for wealth, &c., have ceased to keep the Lord's day, as a day sacred to rest and to spiritual improvement. The action of the Synod laid down no specific rules on the subject, but simply emphasized the importance of keeping the day as a means

of grace. This resolution, together with other resolutions relating to temperance, marriage, and divorce, etc., was ordered to be printed and distributed freely among the churches.

4. Among other resolutions on the general subject of evangelistic work, the Synod passed a resolution directing its Board of Home Missions to give increased attention to work in Formosa. There are already more than ten thousand Japanese in Formosa, among whom are many Christians belonging to the Church of Christ in Japan. A Church has already been organized in Taihoku and a preaching station established in Tainan. It was the desire of the Synod that this work among the Japanese on the island should be prosecuted with greater vigour, and that as soon as possible a helping hand should be extended to Formosans themselves.

The Committee on the State of Religion reported seventy organized churches in connection with the Synod, with an aggregate membership of 11,324; and the number of adult baptisms during the past year 774; Sunday School pupils 5,891.

The business sessions, as well as the meetings for conference and prayer, were attended by a large number of spectators who took a lively interest in all the proceedings. The feeling of interest among these on-lookers was at times very noticeable. This was especially true during the discussion on self-support, when some persons in the back of the house rose to their feet and even paced the floor back and forth.

The afternoon meetings were well sustained. The subject on the first afternoon was, "How to promote a truer faith and a higher tone of spiritual life in ourselves and in the Churches." On the second afternoon questions of practical import, such as preaching, pastoral work, etc., engaged the attention of the meeting. On the third day the programme was altered so as to provide for a business session in the afternoon and to postpone the meeting for conference till evening. In the evening of that day two lectures were delivered on theological and ethical themes.

The forenoon of the last day, July 10th, was set apart for the observance of the Lord's Supper, followed by a consecration meeting. The sermon preceding the Holy Communion was preached by the Rev. Mr. Hattori, pastor of the Church in Yamaguchi. His theme was "The Christian Minister an Example to his Flock." In all matters of Church work the pastor should be an example of patience, self-sacrifice, and zeal. Especially in the promoting of self-support a Minister should never ask the question, "How much salary am I to have?" but accept the situation whether the amount offered be 30 yen, or 3 yen. At the Consecration Meeting, which followed, the hour was all too short for the many who were eager to speak a word, or offer prayer.

A business meeting on Saturday afternoon brought to a close the session of the Synod, which then adjourned to meet again in Tokyo on the second Thursday of July, 1898. A truly Christ-like spirit of unity and brotherly love pervaded all the meetings, and one could not rise from them without feeling that the Church of Christ is already a power in Japan, and that she is to play an important part in the future of this country, as she has done in the history of western lands in the past.

FORMOSAN INTELLIGENCE.

(FROM OUR OWN CORRESPONDENT.)

Taipeifu, June 30th.

His Excellency Lieut. General Baron Nogi, Governor-General of Formosa, has departed for Tokyo for a reported stay of a month or so. It has been rumoured, however, that the special object of his visit is to hand in his resignation, in consequence of the attack on Taipeh by the rioters some weeks ago. This is probably not true. Many of the Japanese newspapers, I believe, consider that he, as the highest officer of the Formosan administration which has given such a vivid example of weakness, should resign, and admit that he was not equal to the task.

I believe that I am voicing the views of the whole foreign community, missionaries included, and the better class of Chinese, when I state it is considered that to recall Baron Nogi at this critical period would be a great calamity for the island. There has never been in Formosa a man so generally respected as His Excellency. The most virulent foreign writers, the most complaining of the respectable Chinese, have no word of complaint to say against him.

I can conceive of no more effective way of making affairs in the island more difficult than they are at

present than by changing two or three higher officials. During the two years of Japanese administration in the island, we have had three governors, all good men, but each bringing forth his own ideas and putting them into execution to the detriment of the Chinese, who were so constantly subjected to changes of system, the imposition of new regulations, etc., that they knew not where they stood; and trade was thrown into confusion.

I believe that the Chinese would have no objection to a little mild oppression were they allowed to carry on their usual vocations without official interference. But the Japanese, with the best of intentions, desire to give them the extent of freedom and equality enjoyed upon the main-land, and accordingly introduce them to the intricacies of law and a mass of regulations, a great number of which are of course absolutely necessary. But the Chinese, whose experience with officials in their own land has been far from pleasant, place all Japanese officials in the same category, and the sight of a policeman with a note book very nearly throws them into hysterics. It is this dread of everything official that makes it so often difficult to inflict punishment upon guilty parties when the Chinese are the victims. As an example; a few weeks ago a Japanese coolie was arrested for beating a Chinese. The Chinese in question was told to follow to the Prefectural Police office, which he did. But after his arrival he was in such a great funk that it was necessary to postpone the examination until the man could make a plain statement. This was explained to him fully, but no sooner was he released than he fled and has not again been seen to this day.

Under General Nogi, many reforms were introduced, peacemaking officers were arrested to a considerable number, and Formosa residents were hoping at last to see peace and order restored when the attack on Tawatutia occurred. While the country is still disturbed and rumours of attacks by bandits are constant, Tawatutia has not again been troubled, and the Japanese are keeping a closer guard on the settlement. It seems to be the desire in Japan to place the blame on the shoulders of some one official, and the Japanese press have apparently selected Lieut. General Baron Nogi for the burden, while the main Government has believed criticised Mr. Hashiguchi, Taipei Prefect, and severely censured Commander-in-Chief Major-General Nakage. Neither Governor-General Nogi nor Prefect Hashiguchi are to blame, and to one who views affairs from the outside it would seem that the Central Government in Tokyo could with much propriety shoulder a large portion of the responsibility.

The area of Formosa is nearly 15,000 miles square, every mile of which, excluding that occupied by the savages, contains some enemies of Japan. It has been considered necessary to place all under Japanese administration and there are not troops or policemen enough to give each district the number required. I believe this has often been pointed out to the Central Government, perhaps even by the two officers above mentioned. The members of the Diet cannot understand the situation at all by viewing affairs from Tokyo. The fact, unpleasant as it is, must be faced: the Chinese throughout the island generally dislike the Japanese. That will no doubt in the future be changed for the better. The Chinese must in time see that the intentions of the Japanese are the best, and that the advantages of civilization and education, &c., are given them for their benefit. However, the present is to be considered. The situation must be reckoned with as it is, not as it ought to be. More troops, more gendarmes, and more police are needed, and the police should be selected not from raw recruits but be picked out from the police now on duty in Japan, old and trusted men.

The attack on Tawatutia was beneficial in one way, that it taught a lesson to the Japanese and exposed to them their own weakness. Governor-General Nogi and every other officer in North Formosa has profited by it. It has been instructive to them. They are better able to cope with similar affairs in the future. But one Chinese street in the market place suffered on that occasion. Had the mob's numbers been greatly increased—and it must be admitted that there was plenty of material to draw from—the mob might have gone five blocks further and entered the walls of the capital. As it was, they confined themselves to the rich merchants and then escaped, but not, however, without serious loss. Now that the lesson has been learnt and taken to heart, it is suggested by some of the press that the Governor-General should be recalled. I should say that it was now all the more necessary that he should stay. He is known to be a man of courage, com-

mon sense, and energy. Experience is of prime necessity, but can only be obtained with time. Let the Central Government send back His Excellency with increased powers, and when he has introduced the reforms he has in view, let the Central Government keep "hands off." The Chinese will, with time, absorb the new regulations, and when they find that they are lasting, all will be well and good in the island and reflect to the credit of the Empire.

RAMBLES IN FORMOSA.

(SPECIALLY WRITTEN FOR THE "JAPAN MAIL.")

HOR-LENG-KANG (KHILAI PLAIN).

Rain, rain and everlasting rain! As Daudet's jolly Nabob said: *et s'il n'y en a plus, il y en a encore*. It needs no stretch of imagination to enter into the feelings of that discouraged batch of savages, who, a hundred years ago, turned their back upon these over-irrigated shores and, disgusted with the never-ceasing downpours, set their sails toward the brighter islands of the south, whence their ancestors had emigrated to the east-coast of Formosa. Rain at Kelung, rain at Sao, and still no glimpse of the sun at Khilai. We couldn't help it, though, and since everybody seemed to enjoy being freshened up continually, we pretended to like it too, and talked highly of the admirable fertility of the soil and the splendid green hue of everything in sight, a greenness, so vivid, so poison-like, that an adherent of the earlier plain-air school would have died of delight and enthusiasm.

Sao-bay is probably much more valuable in the eyes of a painter than in those of a trader, affording an extremely pretty, but rather unsafe anchorage. Not a single trading vessel was to be seen there at our arrival and we heard afterwards that, on the average, only five Chinese junks call in a month, and these not from China, but from some Formosan port. The bay was known to the earliest Chinese immigrant, and subsequently to the Dutch. It served for a long time as an export-place for the agricultural products of the rich Kapsalan plain, but seems of late to have become partly superseded by the anchorage of Toi, a few *ri* N.E. of Gilan, and also, perhaps, by the growing importance of the mountain-road from Kelung. At present there is a small force of Japanese policemen in Sao village, three or four Japanese merchants, and one or two *yadayas*. The natives are exclusively Chinese, hailing from Foochow and Swatow. About three miles distant, there is a settlement of Pophuan, and thirty to forty miles away there lurk the head-hunting savages. Life is not smooth at Sao and an insurance company could scarcely be prevailed upon to do business preferably in that corner of the world. Only the other day, five Chinese peasants were killed by the mountaineers in a rice-field which is but 5 *cho* from the village. Nor are the robbers less active. A Japanese, who was a passenger in our ship and who had travelled all the way from Japan to see his brother, arrived in Gilan only to hear that his brother had been killed by brigands the day before. The poor fellow sat speechless the whole day. The Japanese do, however, what they can. Two companies guard the road to Gilan, which is held by two other companies.

Paying a visit to Mr. Ando, who had come to Sao in the interest of the energetic president of the Toyo Kisen Kaisha, Mr. Asano, we heard many interesting details about the savages and their curious ways, and were treated to the sight of two tottering Pophuan, whose ages were 65 and 87 years respectively. From these wizard-like specimens of a once powerful race we secured a great number of words, and Mr. Ando furnished us with a small vocabulary of the Nanyo-tribe of mountain-savages, amongst whom he had spent some days. It is an amusing task to pump unsophisticated natives for their wealth of expressions and I relished it keenly; besides I scented the smoke of a coming battle and the enchanting vision of a new theory seemed to dawn upon me. The fact is, most of the writers who authoritatively discuss the aborigines of Formosa, like Dr. Mackay, the enthusiastic Canadian missionary; Imbault-Huart, the brilliant French Consul; Dr. Riess, the solid German scholar, and many others, take it for granted that all pre-Chinese settlers of the fair island belong to the Malayan race. An exception is made, however, by a German naturalist, Schetelig, who visited the Kapsalan plain in 1867. He thinks, though rather vaguely, of the Miaotse, the aborigines of China, whose descendants still exist in Kwantung and Yunnan, as possible kinsmen of the early Formosans. There is also on record a tradition of the Chiu-wan to the effect that their ancestors came from the mainland in the west before its

being settled by the sons of Han. Dr. Riess (of the Imperial University), introduces a non-Malayan race in his recently published history of Formosa, giving, as his opinion, that the island was originally settled by Liu-kiu people, but he evidently believes that all traces of them, outside of dusty chronicles, have been irretrievably lost. The problem is no doubt a very attractive one, the more so because its solution may throw light on the origin of the Japanese, who confessedly have a considerable strain of the blood of a more southerly race in their veins. Now, I don't say that language proves everything, being aware of the fact that the Tataric Bulgarians adopted a Slavonic language, the Celtic Gauls took to the idiom of their Roman, and the Fellahs to that of their Arab, conquerors. But if Formosan tribes are found to speak non-Malayan dialects, I do assert that other than Malayan influences have been at work in the mountain fastnesses of the beautiful island. For, nobody who has looked at all into the subject, be it ever so superficially, can gainsay that there are two entirely and decidedly different sets of native languages throughout Formosa. On the other hand, the local differences within these groups are far smaller than it is commonly alleged; they are less indeed than between Tuscan and Sardinian. The words which I secured from Mr. Ando, agree wonderfully with the idioms that obtain in the Dodd range and east of the Dragon-lake, while the wholly distinct Pepohuan expressions were joyfully recognized later on in the Khilai plain and are nearly identical with those of Long-kian in the extreme south and those of Bam-kim-sing, two journeys east of Takau. As I am afraid lest a too special investigation might prove tiresome, I shall only point out that between the Malayan numerals of the Pepohuan, *isa, dua, tolu, sipat, lima* (1-5) and the Chin-wan terms *ko-toch, sai-yin, chin-hoat, ba yet, ma-gal* (1-5) there is no similarity whatever. Now since *lima* is invariably the Malayan term for hand and five from Honolulu to Madagascar, we conclude that the dialect which employs another word is non-Malayan. Besides also the flexion in the respective groups is shaped after distinctly incompatible patterns.

I left Sao village after dark, and returned to our vessel, but not without having dropped two *yen* to four unwilling Chinese boatmen. Perhaps they trembled for their lives, fearing the cunning of the mountaineers. Anyhow, half a *yen* for scarcely a half hour's work is not half bad for Chinamen, and still they are always talking about the starving wages of the children of Asia. And the Japanese boat-men, who evidently could not bear the idea of taxing their efforts cheaper than those of the vanquished Chinese, demanded still higher fares! In dim moonlight, which made the fantastic crags and spires of the surrounding peaks appear even more unearthly and fairy-like, we slowly sailed out of the pretty bay and beat our course southward again. Every four or five miles there sprung upon our eyes an unexpected inlet, washed out by the relentless attack of the foaming waves, and cut from the very heart of the wooded giants, that seemed like sentinels to guard the hidden treasures and beauties of the mysterious island. Then rain set in again and we went to bed. In the early dawn, we passed the famous cliffs, which have invariably moved to a panegyric frenzy the few travellers that have as yet beheld them. Owing perhaps to our distance from the shore, I could not quite share this enthusiasm. Guillemaud, in the "Cruise of the Marchesa," says, the precipices of the Semie dwindle into nothingness before those of eastern Formosa." I think that a sad exaggeration; and if the Rev. Campbell and others declare, that these sea-cliffs are the highest in the world, they forget that the towering peaks in some Norwegian fiefs attain a height of 10,000 feet, immediately along the coast. A rather vague and probably exaggerated estimate fixes the height of the Formosan rocks at seven thousand.

Later in the morning, we reached Hoe Leng, at the mouth of the Khilai (*Japonica Karengo*) river. I think that Khilai is identical with the Paichien and Buntang (S. Formosa) word *achilat*, meaning water. Thus the term *ache*, meaning simply water, has in Germany become the name of several brooks, and the Orange is by the Hottentots called *gerist*, meaning just "river."

CRICKET.

A match was played on Saturday afternoon between Club teams chosen and captained by Messrs. F. E. White and Coghill Jackson. The latter's team went in first and knocked up a total of 127, of which 38 were contributed by Edwards, in a well played innings which included 3 fours and a five. White's team failed to reach their oppo-

nents' score and were disposed of for 107, in spite of a very prettily played innings by F. E. White for 35 not out. Lias and Kingdon were the only others of the twelve who got into double figures. The full scores were as follow:—

MR. COGHILL JACKSON'S TEAM.

D. Tyng, b. F. E. White	23
W. Y. Showier, c. W. Goddard, b. F. E. White	3

A VISIT TO VLADIVOSTOCK.

A correspondent writing from Vladivostock on the 29th ult. gives us the following account of his impressions of the place and its people:—

Vladivostock is a booming town of about 15,000 inhabitants, exclusive of the peripatetic Chinese and Koreans. The community is, of course, naturally and distinctly Russian. Probably seven out of every eight men in business are Russians. The Germans come next numerically and in commercial importance, but some of these sturdy Teutons have become naturalized Russian subjects. There is now and then a son of La Belle France to be found in business here. The entire American contingent numbers a baker's dozen—but there is nothing unlucky about the number it would seem, for they are all doing well. There must be about 6,000 Chinamen, and a thousand or so of white-robed representatives of the Hermit Kingdom—or rather the Kingdom that might have something of the hermit aspect did not Russia and Japan make the peninsula the theatre of political intrigue and rivalry. The Chinese and Koreans are strictly the "hewers of wood and drawers of water" in Vladivostock. Most of the Celestials are from Shantung Province. They are stout, able-bodied fellows, and generally pretty good workers. These Chinamen and Koreans return to their respective homes during winter. The general condition of business can be judged from the fact that there is not an unoccupied stone building or dwelling house in the town. New buildings, mostly of brick, are in course of construction. The city has a very substantial appearance. There is no doubt but that a veritable "boom" will follow the completion of the great trans-Siberian railway. The hearts of local business men were gladdened the other day when it was learned that the chief-engineer of the Manchurian-Siberian railway, accompanied by a good many assistants, had arrived on the steamer *Nagato Maru*. The chief-engineer had had audience of the Emperor of China. After meeting representatives of Manchurian interests the engineer and his large party will repair to Manchuria, and at once begin the final section of the route. This work will be prosecuted with all possible vigour. The final survey, it is expected, will be completed within 8 or 10 weeks. The general Government, it is understood, is going to prosecute the construction work in a way that will be rapid as compared with the earlier work done on the system. The saving in distance by running the road through Manchuria, instead of following the original route, will be about 1,000 versts—something like 700 or 800 miles. This purpose of the Government is of course exceedingly agreeable to the local business community. Another act of the Government's that is pleasing to those engaged in commercial pursuits here is the purchase of a tremendous ice-breaking boat.

The vessel arrived in this port from Copenhagen a few weeks since. There were in charge of the craft experts representing the manufacturers. These engineers say they are absolutely convinced that the boat, by itself, will be able to keep the harbour open through the entire winter. Business men also think there is no doubt at all as to the success of the undertaking, and are making arrangements accordingly. The several steamboat companies report a greatly increased business as compared with last year. That enterprising Japanese company, the Nippon Yusen Kaisha, is particularly fortunate in enjoying an increase of business. The company's service, both passenger and freight, is entirely satisfactory.

BUDGET FOR THE 30TH FISCAL YEAR OF MEIJI.

FIRST GENERAL SUPPLEMENTARY BUDGET FOR THE 30TH FISCAL YEAR.

EXTRAORDINARY REVENUE.

IX. I.—Appropriation from the War Indemnity 1,339,895.104

THE DEPARTMENT OF WAR.

EXTRAORDINARY EXPENDITURE.

XI.—Supplementary Funds for Work-shops..... 1,339,895.104
1. Supplementary fund for the Tokyo Arsenal Work-shops... 650,528.664
2. Supplementary Fund for the Osaka Arsenal Work-shops... 582,614.836
3. Supplementary Fund for the Senju Woollen Cloth Factory Work-shops..... 106,751.604
(N.B.—The numerals prefixed to the items in the above and all supplementary Budgets refer to the places that these amounts would occupy were they included in the regular Budget.—Ed. J. M.)

SECOND GENERAL SUPPLEMENTARY BUDGET FOR THE 30TH FISCAL YEAR.

ORDINARY REVENUE.

IV. 5.—Receipts according to the Public Officials Families, &c., Relief Law 18,324.947

EXTRAORDINARY REVENUE.

IV. 2.—Donations for Manufacturing men-of-war 183,249.479
IX. 1.—Appropriation from the War Indemnity 6,420,330.341

Grand Total..... 6,621,904.857

THE DEPARTMENT OF COLONIZATION.

EXTRAORDINARY EXPENDITURE.

XII.—Supplementary Fund for the Formosan Expenses 6,420,330.431
(N.B.—The item "Donations for manufacturing men-of-war represents 10 per cent. of the salaries of Formosan officials.—Ed. J. M.)

THIRD GENERAL SUPPLEMENTARY BUDGET FOR THE 30TH FISCAL YEAR. A SECTION.

EXTRAORDINARY REVENUE.

II. 2.—Money Refunded..... 1,183,266.768
VIII.—Bought over from Revenue of last fiscal year..... 102,096.372
Total..... 1,285,363.140

THE DEPARTMENT OF FINANCE.

ORDINARY EXPENDITURE.

VIII.—The Audit Board..... 33,366.230
1. Salaries and Allowances 18,580.000
2. Office Expenses..... 1,491.000
3. Repairs 300.000
4. Travelling Expenses..... 11,459.680
5. Miscellaneous Allowances ... 1,535.550

THE EDUCATIONAL DEPARTMENT.

ORDINARY EXPENDITURE.

ADDENDUM TO THE FIFTH SPECIAL SUPPLEMENTARY BUDGET FOR THE 30TH FISCAL YEAR.

Appropriations on account of Liabilities to be incurred by the Treasury over and above the Budgetary Items.

DEPARTMENT OF COLONIZATION.

To grant in aid of the Formosa Railway Company according to the following terms:—That the whole line may be divided into three sections, namely between Kiyu and Daichyn; between Daichyn and Kagi; between Kagi and Daku, with branch line to Anpei.

That the Capital be fixed at 15,000,000 yen, to be either increased or decreased according to circumstances. That the whole line be completed in five years from the day of concluding the agreement. That Aid shall be given at the rate of six per cent. of the paid-up capital, counting from the month after the payments of the same.

That the Aid shall be given to the Company for 12 years after the opening of each section to traffic.

That if the Company violate this contract, it shall at once refund all the money hitherto received in Aid.

SIXTH SPECIAL SUPPLEMENTARY BUDGET FOR THE 30TH FISCAL YEAR OF "MEIJI."

SEVENTH SPECIAL SUPPLEMENTARY BUDGET FOR THE 30TH FISCAL YEAR.

THE EDUCATIONAL DEPARTMENT.

THE IMPERIAL UNIVERSITY.

EXTRAORDINARY REVENUE.

V. 1.—Money received from the Government for observing the Total Eclipse of the Sun.....	9,012,000
--	-----------

EXTRAORDINARY EXPENDITURE.

V. 1.—Expenses of observing the Total Eclipse of the Sun.....	9,012,000
---	-----------

(Attached to the General Budget.)

LIABILITIES TO BE INCURRED BY THE TREASURY OVER AND ABOVE THE BUDGETARY ITEMS.

DEPARTMENT OF FOREIGN AFFAIRS.

I.—To make a contract with a foreign Employe now in the service of the Department who receives 600 yen a month for an increase of 2,800 yen per year, from April 1st of the 30th of Meiji to March 31st of the 33rd year.	
---	--

II.—To make a contract for a house in Mexico for the new Japanese Legation, the rent to be 2,700 dollars in Mexican silver, per annum, and the term five years.

III.—To make a contract for a house in Brazil for the new Japanese Legation there, at a yearly rent of £400 in English coin; for a period of five years.

IV.—To make a contract for a house in Siam for the new Japanese Legation there, at a yearly rental of 2,200 yen a year, for a period of five years.

V.—To make a contract for a house in Sydney, Australia, for the new Japanese Consulate there at a yearly rental of £238 in English money, for a term of 5 years.

VI.—To make a contract for a house in Anvers, Belgium, for a new Japanese Consulate there, at a yearly rental of 3,600 francs in French money, for a period of 5 years.

VII.—To make a contract for a house in Chicago, the United States, for a new Japanese Consulate there at a yearly rental of \$2,000 in American money for a period of 5 years.

VIII.—To make a contract for a house in Manila, in the Philippines, for the new Japanese Consulate there, at a yearly rental of 1,200 yen, for a period of 5 years.

IX.—To make a contract for a house in China for a new Japanese Consulate there, at a yearly rental of 1,200 yen for a period of 5 years.

INDIAN FAMINE RELIEF FUND.

Mr. J. Troup, H. M. Consul, has handed us the following letter for publication:—

To JAMES TROUP, Esq.,

Her Britannic Majesty's Consul,
Yokohama, Japan.

SIR,—I have the honour to acknowledge receipt of your letters dated the 24th and 29th April, forwarding a list of your subscribers, together with a copy of letter from Mr. J. C. Nicholson, and a draft for Rs. 176-8, being the balance of subscriptions received in Yokohama and Tokyo, for the benefit of the Indian Famine Fund.

For this amount I have great pleasure in sending herewith the formal receipt.

I hope you will be good enough to convey to your subscribers in Yokohama and Tokyo, how deeply we appreciate this mark of their sympathy with the sufferers from Famine in India, and how grateful we are to them for the practical and generous shape in which that sympathy has been evinced.

When I tell you that, at the present moment, there are over 4,000,000 of people on the Government Relief Works, our friends in Japan will understand how serious is the situation.

It only remains for me on behalf of the Central Executive Committee and myself, to tender to the subscribers in Yokohama and Tokyo, and to yourself, as I sincerely do, our very grateful thanks; and, without desiring to draw any invidious distinction, I venture to add a special word of thanks to Mr. J. C. Nicholson, to Mr. K. Kawakami and the other Japanese gentlemen who have so generously come forward with their assistance; and our thanks are also due to the Great Northern Telegraph Company for so kindly wiring your remittances to Calcutta, free of charge.

I have the honour to be, Sir,

Your most obedient servant,

FRANCIS W. MACLEAN,

Chairman, Central Executive Committee,
Indian Famine Charitable Relief Fund.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

ABYSSINIA AND THE SOUDAN.

London, July 9.

The British Mission to Abyssinia has obtained from King Menelik a promise that he will observe a benevolent neutrality regarding the Anglo-Egyptian operations in the Soudan.

THE U. S. TARIFF.

THE SENATE AMENDMENTS REJECTED.

The United States House of Representatives has refused to accept the amendments made by the Senate in the Tariff

Bill. Both Houses of Congress are now conferring.

RE-IMPOSITION OF THE DUTY ON TEA.

The following telegram is said to have reached a Yokohama resident on the evening of Tuesday:—

Judged from the progress of the conference now being held by the Deputies of the two Houses of Congress about the new Tariff, it is feared that the amendment to impose an import duty at the rate of 10 cents per pound may be revived and carried through.

London, July 13.

We (*Japan Times*) understand that a telegram has reached Tokyo saying that the Deputies of the two Houses of the American Congress have decided in favour of the imposition of an import duty on Hawaiian sugar, as had been proposed by the House of Representatives.

WAR CORRESPONDENTS' LIBEL ACTION.

Mr. Atteridge, who was the war correspondent of the *Daily Chronicle* with the Dongola expedition, has obtained a verdict for one thousand pounds as damages from Mr. Knight, war correspondent of *The Times*, for libel, consisting in an imputation of cowardice and of neglecting a sick comrade.

TURKEY AND THE POWERS.

TURKEY STILL RECALCITRANT.

London, July 9.

On July 7th the Turkish Minister announced that his Government declined to accede to the collective Note presented by the Powers. This communication, which is practically a negative reply, is regarded as a virtual rupture of negotiations. The Ambassadors are now deliberating.

THE GRAND VIZIER'S ATTITUDE.

The Grand Vizier, Khalid Rifaat Pacha, is stated to have declared that he will never sign an agreement based upon the strategic line proposed by the Ambassadors.

LORD SALISBURY ON THE SITUATION.

Lord Salisbury states that the delays at Constantinople are entirely due to Turkey, who is carrying her usual methods of deliberation to excess, thus causing great injury, possibly even attended by danger, to the prospects of an early and satisfactory settlement. This, he adds, will increase in proportion as the situation becomes more analogous to that of the year 1878, when the Russian Army was at the gates of Constantinople.

RUSSIA'S SUGGESTION.

A circular from the Russian Representative, under date of July 8th, suggests taking steps to expedite peace.

FURTHER COMPLICATIONS.

London, July 11.

The Embassies at Constantinople presented a Note calling on the Porte to cease its obstructive measures. The Sultan thereupon telegraphed direct to the Sovereigns of the foreign Powers, and to President Faure, making a fresh appeal for the concession of the River Pineas (Salembría) as the Thessalian frontier. To this request, the French President and all the Sovereigns replied advising the Sultan to conform to the wishes expressed by the Concert of the Powers.

A circular has been issued by the Porte, proposing to send Turkish reinforcements to the island of Crete. This has further complicated the situation.

CAPE COLONY AND THE NAVY.

At a banquet to the Colonel Premiers

held at St. George's Club, the Right Hon. G. J. Goschen, M.P., Secretary of State for the Navy, announced that Sir J. Gordon Sprigg, Premier of Cape Colony, had intimated that the Cape was prepared to provide a first-class ironclad to be placed at the disposal of the Empire, no conditions being stipulated regarding local defence.

CRICKET.

OXFORD V. CAMBRIDGE.

London, July 9.

In the Annual Cricket Match between Oxford and Cambridge the latter University were victors by 179 runs.

"PLAYERS" V. "GENTLEMEN."

London, July 11.

The "Players" beat the "Gentlemen," at the Oval, by eight wickets.

ETON V. HARROW.

The Eton and Harrow match ended in a draw in favour of Harrow.

BLACK PLAGUE.

Taihoku, (Taipei), July 11.

On July 6th, two fresh cases of bubonic plague were reported in Taipei, making a total of 595 from the outbreak of the pestilence.

PRINCE ARISUGAWA AND SUITE.

Paris, July 12.

H.I.H. Prince Arisugawa and suite will leave Paris to-morrow for London. On the 17th inst. the party will leave Liverpool for New York, and on August 2nd they will leave Vancouver for home.

PIRACY IN THE STRAITS OF MALACCA.

A BRITISH SHIP LOOTED.

CAPTAIN ROSS AND SEVEN MEN KILLED.

London, July 13.

A gang of Achinese (passengers?) on board the British steamer *Pegu* murdered Captain Ross and seven of the crew, natives, wounded sixteen others, looted the ship, and afterwards fled to the Achene coast with their booty.

BRITAIN AND TUNIS.

Sir Harry Hamilton Johnston, K.C.B., British Commissioner and Consul-general in Nyassaland, has been appointed Commissioner and Consul-general in Tunis.

(SPECIAL TELEGRAMS TO THE "JAPAN MAIL.")

THE FIRE INSURANCE CASE AT KOBE.

STRONG REMARKS FROM THE BENCH.

JUDGMENT FOR DEFENDANTS.

Kobe, July 16, 7.45 p.m.

Judgment was given in the British Consular Court to-day, by Mr. John Carey Hall, Consul and Judge, in the fire insurance case that has aroused so much interest here. The Court found for the defendants—Messrs. Lucas & Co., Agents for the Union Fire Assurance Company. The plaintiff was J. A. Sylva, and the claim arose on some rolls of matting, cases of screens, and other goods, alleged to have been destroyed or seriously damaged at a fire that broke out on May 17 in a godown rented by the plaintiff. The Consul, in delivering judgment, said that the whole case reeked with fraud and defendants had rendered signal service to the public and to commercial morality.

H.M.S. "GRAFTON."

Hakodate, July 11.

H.M.S. *Grafton*, Rear-Admiral Oxley's flagship, arrived here yesterday.

Hakodate, July 14.

H.M.S. *Grafton* and the torpedo-boat destroyer *Handy* have left here for Korniloff Bay.

WRECK OF A WHALING VESSEL.

The American Whaling Barque, *Cape Horn Pigeon* has stranded outside the harbour. The wreck is rapidly breaking up, but a portion of the valuable cargo of sperm oil is being salvaged.

(FROM JAPANESE PAPERS.)

JAPANESE STEAMER FOUNDERS.

Osaka, July 14.

According to a telegram received from London, the steamer *Taihoku Maru* (3,100 tons), built in England for the Osaka Shosen Kaisha, while on her way out from England, collided with a steamer in the vicinity of Lisbon, Portugal, and sank immediately. All the crew are reported to be safe. The vessel is fully insured.

Kobe, July 15

The new steamer *Taihoku Maru* of the Osaka Shosen Kaisha, which sank near Lisbon, left London for Japan on the 8th inst. and was lost on the 12th. The cargo on board was most likely iron goods. The captain of the steamer was Mr. Conrad who brought out the steamer *Anpei Maru* to Japan some time ago.

THE FLOODS: DAMAGING RAILWAY TRACKS.

Niigata, July 10.

Owing to the heavy rainfall since the day before yesterday, many rivers have risen considerably, breaking their embankments, and have flooded several towns and villages. The Shinano River has burst its embankment and inundated the town of Niigata. The inhabitants are working night and day on temporary repairs to prevent further mischief. The rain is still falling.

The railway line between Fukui and Imasho having been repaired, traffic was resumed to-day. The repairs to the line between Tsuruga and Imasho will be completed in a few days.

Naoyetsu, July 14.

In order to clear away the accumulation of water caused by the overflow of the river Hokura, the line of the Hokuriku Railway has been broken through at nine places by the farmers of the district. Mr. Okune Kanjo, Chief of Minamigawa-mura, and over 50 other persons have been arrested on suspicion of having taken part in the work of destruction.

Niigata, July 14.

Towards dark on the 13th inst. rain began to fall in torrents and the River Shinano overflowed its banks. Nearly the whole of the town is inundated.

Mayebashi, July 14.

This morning the river Tone rose ten feet. Some bridges were removed to save them from being washed away.

Niigata, July 15.

The water of many rivers that rose over 10 feet by noon to-day is now rapidly falling, the rain having ceased.

Osaka, July 15.

To-day at 1 p.m. rain began to fall in torrents and is still continuing. There is fear of floods should the rain continue.

Nagata, July 14.

The embankment at Koshi-gun along the River Shimano was broken at three places to the extent of 100 *ken*, 30 *ken*, and 200 *ken*, while smaller breaks are numerous. Some steamboats are now plying on the rice-fields to render assistance. Many of the rivers are now falling.

Tochigi, July 14.

The river Watarase rose ten feet and much damage was done. Some persons are reported to have been drowned.

HIRANO SPINNING CO.

Osaka, July 10.

The general meeting of the Hirano Cotton Spinning Company took place to-day when a dividend of 40 per cent. per annum was decided upon.

DISASTROUS RAILWAY ACCIDENT.

Urawa, July 12.

Yesterday, about 1 p.m., a passenger train collided with a luggage van at Fukaya-yeki on the Nakasendo line, and 12 passengers were fatally injured and many slightly wounded. Several cars were smashed.

Later.

The collision which occurred at Fukaya-yeki was caused by a mistake being made in the time of departure of the train. The passenger train was struck on the side by the luggage van and several of the cars were thrown off the line into the rice-fields. Mr. Kubomura, a Police-Inspector, and others who were severely wounded, will succumb to their injuries.

IMPERIAL AUDIENCE.

Kyoto, July 14.

The new Portuguese Minister, who had audience with the Emperor yesterday, when he presented his credentials to His Majesty, again proceeded to the Palace to-day. The Minister will return to Tokyo this evening.

TROOPS FOR FORMOSA.

Ujima, July 15.

Over 200 troops have arrived here to-day by a train, and leave for Formosa to-morrow morning by the steamer *Yorihime Maru*.

RAILWAY ACCIDENT.

Kobe, July 16.

According to a telegram received here yesterday a passenger car and a mail car were capsized on the line of the Hantan Railway and two other cars derailed. Though 20 passengers were in the capsized car all escaped without any serious injury. The accident was caused by a defect in the line.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following is the solution of Problem 327:—

SOLUTION OF PROBLEM No. 327.

- | | |
|--------------------|-------------|
| WHITE. | BLACK. |
| 1—B to B 6 | 1—K takes B |
| 2—Q to R 4, ch | 2—K moves |
| 3—Q to B 4, mate | |
| | 1—K to Kt 5 |
| 2—Q to R 5, ch | 2—K takes Q |
| 3—P to Kt 4, mate | |
| | 1—K to K 5 |
| 2—R to Q 2, dis ch | 2—K moves |
| 3—Q or B, mate | |

Correct Solutions of Problem No. 327, received from W.H.S., J.W.E. and D.D.

"D.D."—(1) Of course. (2) In a problem, if the defence can by any possibility delay the 'mate' beyond the stipulated number of moves, that problem is "unsound." In a game, if mate be announced by your opponent in n moves, and on examination you discover that he cannot do it, you can only laugh at him; the mere announcement of checkmate is meaningless when it cannot be done.

PROBLEM No. 329.

By R. A. CLELAND, DUNEDIN, N.Z.

Mate in three moves.

OVER THE CHESS BOARD.

"A PROBLEM."

It is sometimes the best player, in his idle moments, who is responsible for the most audacious burlesques of chess; and it may be granted that such a player has as much right to burlesque chess as a good poet has to parody good poetry. The late Dr. Zukertort, in a looser mood, constructed a mate in two which he evidently intended as a touch of humour—of satire—a problem *pour rire*, over which solvers might rack their brains or crack their sides; chess he never meant it to be. After this preface, the reader can play with the puzzle if he likes, and he will soon satisfy himself that there is no mate in two according to the canons. Here it is:—

BLACK.

WHITE.

White to play and mate in two moves.

(Solution. To be looked at only in urgent cases.)

White must begin with a check, or his own king will be assailed, and as B to Q 7 is useless he must take something. To be brief, the key move is: Pawn takes queen's pawn, en passant discovering check from queen and rook. This is quite as diverting as it was meant to be. There are times when all rules may be broken by particular persons. Zukertort found himself at such a time, and he did well to break as many rules as possible. He introduced into a two-mover the necessity of considering Black's previous moves; and this previous move was utterly unimaginable, because the position of the white bishop behind the three pawns was impossible. The position of the black king is all but inconceivable, and there are sundry pieces of both colours which have no bearing on the puzzle. The joke is perhaps unintentionally ingenious, for if the walling up of the bishop be defended on the ground that a problem need not be regarded as a phase of a regular game of chess, this argument is overthrown by the various ante-initial assumptions which it is necessary to make. One can affirm at least three previous moves, taking them backward, before the statement of the problem: 1. Black pawn to queen's fourth. 2. White queen checks. 3. Black knight from queen's fourth to bishop's second. Does the reader see why Black must have made this last move?

We are reminded of another chess joke somewhat similar in its character, proposed by a chess editor, several years ago, for solution as an ordinary problem. In this case the white king was on his own square, and all the squares on his left were unoccupied. There was apparently no solution to the problem as it stood, but there would be one if the king could be transferred to queen's bishop's square in a single move. Here the key was, "Castles on the queen's side." There was no rook to castle with, but that did not signify; you had only to imagine one. The tenth law of the B.C.A. Code lays down that "when the odds of either rook, or both rooks, are given, the player giving the odds shall be allowed to move his king as in castling, as though both rooks were on the board." It has been said that the most useful quality in chess is imagination; and the man who is fond of chess puzzles must imagine backwards as well as forwards.

AMATEUR AND HIS FRIEND.

In the following classical game "his friend" ought to have got the advantage of the "Amateur." Unfortunately, however, he was mated before he got a chance to show off his abilities:—

Danish Gambit.

- | | |
|--|---------------------|
| White—(Amateur). | Black—(His friend). |
| 1—P to K 4 | 1—P to K 4 |
| An excellent opening; both players are rapidly developing. | |
| 2—P to Q 4 | 2—P takes P |
| 3—P to Q B 3 | 3—P takes P |
- White is playing a risky game. The masters and books are all agreed that the pawns should not be thus wasted.

- | | |
|--------------|---------------|
| 4—B to Q B 4 | 4—Kt to K B 3 |
| 5—Kt takes P | 5—Q to K 2 |

"Amateur" repents in good time his reckless ways, but "His Friend" is determined to get another pawn.

- | | |
|---------------|-------------|
| 6—Q to B 2 | 6—Kt to B 3 |
| 7—B to K Kt 5 | 7—P K R 3 |

Every experienced player knows that the Danish Gambit is unsound. It is only a matter of driving the white forces back judiciously.

- | | |
|-------------|-----------------|
| 8—Kt to Q 5 | 8—Q takes P ch. |
|-------------|-----------------|

Black knew perfectly well that the attack could not last, and that he was bound to gain another pawn. White might imagine that he would gain a rook, but he overlooked that he would lose two pieces for it. The exchange of queens must paralyse White's efforts.

- | | |
|----------------|--------------|
| 9—Q takes Q ch | 9—Kt takes Q |
| 10—Kt takes P | |

Checkmate!!!

Those wretched traps! Just as you are winning the game!

JOTTINGS.

"Dangers are no more light if they once seem light, and more dangers have deceived men than forced them; and it were better to meet some dangers half-way though they come nowhere near us, than to keep too long a watch upon their approaches, for if a man watch too long it is said he will fall asleep."—Bacon.

The kind of game which, however masterly, I call radically bad in style may be simply illustrated by a game in sixty moves, in which the combatants exchange first their bishops, then their knights, and afterwards their rooks, and pass the rest of their time skulking about the board with their odd rooks in search of each other's pawns. —John Ruskin.

We hope that the suggestion for a chess match between the House of Commons and some of the Australian Legislatures will be taken up. The match with America had the most excellent effect in promoting friendly feelings between Parliament and Congress, and we should be even more pleased with a scheme which would bring the House of Commons into cordial relation with the Legislatures of our own Colonies. The telegraphic difficulties are, we believe, considerable, but Mr. Henniker Heaton has undertaken to tackle them, and if he does not persuade the authorities that they are not insuperable he is not the man we take him for. —Globe.

Some old-time Chess-players, who strolled into the Judiciary Committee-room during the recent parliamentary cable-match, where the games were reproduced, were puzzled to see that on every board the King stood where the Queen ought to stand and vice-versa. This was readily explained, however, by the statement that this had been done for many years by British players, in honour, of Queen Victoria, the piece bearing the crown now representing the Queen instead of the King, as in the days when the royal game had its origin. This has been done in England, it is said, ever since the time of Henry Staunton, a famous Chess-player, who first changed the pieces out of compliment to the then young and beautiful Queen Victoria. However, while the pieces have thus been changed, the play has not. The crowned head, representing the Queen, does not stay at home near her Castles for self-protection, but skims with rapid movements over the whole field of war, just as kings were wont to do, while the quondam Queen, now the King, trembles as of old at the constantly threatening danger of checkmate.—*Washington Post*.

"JAPAN MAIL" CORRESPONDENCE TOURNEY.

Two players have so far entered the lists, and we hope more will follow before the entries close on the 15th of August next. The exact mode of conducting the Tourney can not be definitely arranged before we know the approximate number of players that will take part. Everything will be done to facilitate rapid play. To that end arrangements have been made to have the moves and replies printed in each daily issue of the *Japan Mail*.

RAILWAY TIME TABLES.

YOKOHAMA AND SHIMBASHI.

YOKOHAMA—5.20, 6.15, 7.10, 8.08, 8.47, 9.20, 9.57, 10.45, 11.50 a.m.; 12.45, 1.35, 2.25, 2.50, 3.35, 4.15, 4.55, 5.25, 6.13, 7.15, 8, 8.50, 9.45, 10.25, 11.20 p.m.

LATEST COMMERCIAL.

IMPORTS.

Owing to the *Bon* holidays little or nothing has been done. Shirts have hardened in price and look more promising for the immediate future. The demand for yarns has fizzled out, buyers having filled their requirements. Nothing doing in fancies and woollens.

COTTON PIECE GOODS.

	PER YARD.
Grey Shirtings—8½ yds., 38½ yds., 39 inches	\$2.50 to 2.80
Grey Shirtings—9½ yds., 41 inches	2.80 to 3.35

At the beginning of the week a brisk business was done, which has fallen off during the last few

days owing partly to the Bon holidays. The sales in Yokohama amounted on the 9th to 127,600 catties, the 10th, 96,500, 12th 22,000, 13th, 4,700, 14th, 22,900, and 15th 38,900 catties. Very little has been shipped since the *Empress of India's* departure on the 9th. The M. M. steamer *Melbourne* took 14,000 lbs. for Europe on the 11th. Quotations are about the same.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, JULY 24TH, 1897.

SUMMARY OF NEWS.

MARQUIS ITO will remain in Paris until August and then proceed to Italy.

THE weather suddenly set in very hot on Thursday: it is the *doyo* season.

THE survivors from the wrecked P & O. steamer *Aden* have reached London.

It is reported that the Government has decided to abolish all export duties from the beginning of next year.

THE yacht racing on Saturday was very close, *Mary* only winning first prize by one minute from *Molly Bawn*.

MARQUIS SAIONJI, ex-Minister of Education, who was reported to be seriously ill in Paris, is now convalescent.

THE presentation of diplomas to the graduates of the Yokosuka Gunnery School took place on the 19th instant.

COUNT GOTO is in a very critical condition, and presents have been sent to him by the Emperor and Empress.

THE military authorities in Formosa have decided to construct a light military railway between Shingchiku and Taichu.

THE foreign trade of Japan during six months from January to June last, was as follows:—Exports, yen 75,071,484, and imports yen 99,041,224. These figures show an increase of yen 21,138,000

in exports, and yen 18,674,000 in imports, over last year's returns for the same period.

MRS. GILLET, of Yokohama, seems to have behaved with great courage on the *Aden* during the 17 terrible days that they remained upon the wreck.

Two cases of plague having occurred on board the *Toyo Maru*, she was kept at the Quarantine Station at Nagahama, Yokohama, for three weeks.

It is reported that the new trade tax regulations having given rise to much complaint, the Authorities will make a reduction of 30 per cent. in the tax.

A LIBRARY is to be established at the new Kyoto Imperial University, for which a grant of 60,000 yen per annum, for five years, is to be given by the Government.

THE presentation of diplomas to the graduates of the Kazoku Jo-Gakko (Nobles' School for Girls), Nagatacho, Kojimachi, was held on the morning of the 17th inst.

THE accounts of the military expenses defrayed during the China War were made up on the 19th inst., when it was found that they amounted to over yen 170,000,000.

A CASE of hydrophobia occurred in Yokohama a few days ago, the sufferer being a Japanese. The dog which bit the man, and which had rabies, has been killed by the police.

THE discussion of the proposed amalgamation of the Sanyo and Hantan Railway Companies, which has been under consideration for some time past, has now turned out unfavourably.

A grand lecture meeting of the Liberal Party took place at the Kinkikwan, Kanda, on the 19th inst., the audience numbering over 2,000. All the speakers attacked the present Cabinet.

A grand conference of Commandants of the Eastern, Middle, and Western Section Headquarters took place at the General Staff Office on the morning of the 17th inst. Other general officers were also present.

THE presentation of diplomas to the graduates of the Tokyo Semmon Gakko, Waseda, Tokyo, took place in the hall of the institution on the afternoon of the 20th instant, the 15th anniversary of the College being also celebrated at the same time.

On the 19th inst. a collision occurred between the steamers *Sokaku Maru* and *Arisoura Maru* near Nagahama, Kanagawa Ken. The former steamer was considerably damaged, but reached Yokohama safely without any loss of life.

It was reported that over one hundred soldiers at Mayebashi were attacked with cholera. Later information showed that the men were not suffering from cholera, but from fish poisoning, having eaten some bad fish, *namaribushi*. They all recovered in a few days.

It is stated that a company is now under formation with the object of constructing a harbour at Funakawa, the eastern port in Japan to Vladivostok, while a steamship company is also to be started, and a railway line to Funakawa is being projected. The port is certain to become a great commercial port in the future.

OWING to the heavy rains of the past week serious floods have occurred over a wide area in the central and southern parts of Japan. Many towns

and villages have been flooded, river embankments broken, railway lines damaged, and traffic stopped, telegraph lines washed down and other damage done; there has also been some loss of life.

THE conversations given by Count Okuma, Foreign Minister, at his official residence, Nagatacho, on Thursday evening was attended by the Ministers of State and many others.

THE regular general meeting of the Koku-yetsu Sekiyu Kaisha (Kerosene Company) took place on the 21st inst. The net profits during the first half-year amounted to yen 16,670, out of which yen 6,720 were appropriated for payment of a dividend at the rate of over 10 per cent. per annum.

THE Authorities have received a telegram that Mr. Mutsu Hirokichi, Second Secretary of the Japanese Legation in the United States, left Washington on the 15th instant for home on account of the critical condition of his father, Count Mutsu, ex-Foreign Minister, and that Mrs. Hoshi, wife of the Japanese Minister, will also return home with him.

THE Government received a telegram a few days ago from Mr. Kurino, Japanese Minister to France, to the effect that the revised treaty between France and Japan, which was reported to have poor prospects of passing the Senate, has been favourably reported on by the Committee of the French Senate. The French Senate was to close from the 14th of July until October next and the treaty will not be submitted to the Senate until after the recess.

In Onuma district, Fukushima Prefecture, there is a valley known as the Taki-no-Sawa (Valley of the Cataract), where, in days of old, judging from its name, there may have been a waterfall, but until recently there was none. On the afternoon of the 14th inst. the district was visited by a heavy rain and thunder-storm, causing much damage, and at the same time a spring of clear water sprang from the precipice of Mount Ohira, creating a cataract over 50 feet high. It is stated that the spring is still gushing forth in a great stream and that the valley is crowded with people from neighbouring places who have come to see the wonder.

In the phrase of the Japanese middleman, business in Yokohama has "gone up country to sleep." The spurt of a fortnight ago has died out completely, and absolutely nothing is doing. Manchester prices having risen all round, the buyers who came into the market a week or so ago and filled their books, are now making a handsome return for their foresight. Business is dull in metals, as is usual at this time of the year, only a few hundred tons being booked "to arrive." Prices are firmer in sympathy with the increased cost of lay down, and buyers do not feel inclined to come up to the figures asked. Kerosene is moving moderately, at steady rates. The market continues dull for sugar, and stocks of white refined are accumulating, Hongkong sending up the stuff a little too freely. A little disposition for business was shown by silkmen at the beginning of the week, a few orders having come from abroad, both for flatures and re-reels, so outgoing steamers will have some cargo, though the trade is far from being in full swing yet. Nothing fresh has transpired in waste silk, no business being done. Tea has been brisk, and though prices are firm in the ordinary grades, lower sorts have advanced. Both the *Belgie* and *Olympia* carried away good shipments. Exchange closes weak.

SPIRIT OF THE VERNACULAR PRESS
DURING THE WEEK.

The *Fiji Shimpō* addresses to its readers a wholesome warning against the spirit of inflated vanity that seems to have taken possession of so many Japanese in recent times. People talk largely of Japanese progress, but, after all, what is that progress? By what standard is it judged? If Japan's former condition be taken as a basis of comparison, it is undoubtedly true that she has made great advances, but if the condition of Occidental countries be considered, she is still in a very poor state. She conquered China, it is true, but the victory signified very little, for China was already tottering, and a slight push from Japan sufficed to overthrow her. Thirty-five years ago, England and France, with a handful of men, marched across China and seized the capital, and in more recent times, Admiral Courbet, with a small squadron, effectually paralysed the naval strength of the Chinese. Undoubtedly the China of 1894 was much better equipped than the China of 1861 or 1884, but the Chinese themselves had not changed: a victory over them can not be taken as any indication of special prowess on the part of the conqueror. Since then, Japan has elaborated a scheme of military and naval expansion, and many of her people are astonished at its dimensions. But what a paltry affair it will be, after all, in comparison with the armaments of Occidental Powers! Some folks point with pride to the growth of Japan's foreign trade. There has certainly been a great development. From a total of fifty or sixty million *yen*, it has grown to nearly three hundred millions. On the other hand, is such a figure worthy to be mentioned in the same breath with England's 738 millions sterling, France's 724 million francs, Germany's 794 million marks, Russia's 1,228 million roubles, and America's 1,642 million dollars? The fact is that Japan having so much ~~less~~ *to make up*, her progress is remarkable in comparison with her former backwardness, but all the while that she advances, Western countries are advancing also, and it will be time enough for her to feel some satisfaction when she gets fairly within sight of them. A similar criticism applies to the field of education. The number of public schools and private schools has increased largely, but has the intellectual condition of the people been greatly raised? Do we not still see folks believing in charms and amulets and worshipping at the shrines of imaginary deities, and do we not see that even men wearing foreign dress and professing to be leaders of progress are tainted by the same superstitions and traditions? This progress so much vaunted is in truth, only relative: it looks large because the unit of measurement is small. There is, indeed, one solid fact, namely, that since the war foreign countries have begun to pay attention to Japan and to think it worth their while to place obstacles in the path of her national development, and the Japanese have the pleasure of feeling that their condition is described by the old aphorism *gashin shōtan* (sleeping among faggots and living in dread). But there are few indications that the situation is appreciated. Scholars and leaders of thought seem content to let things take their course, and to amuse themselves composing verses, making tea, collecting objects of art, and gazing at pictures. There must be a large access of earnestness and honest appreciation if real progress is to be achieved.

The same journal discusses the present economical conditions, and arrives at the conclusion that currency is too plentiful and too easily procurable. To that cause it assigns the rapid rise of prices that has taken place during the past two years, the disturbance of the balance of trade and the other disquieting indications presented by the money market. It was natural that prices should rise after the war, and that a spirit of enterprise should impel the people to engage in various undertakings, but it is dangerous that too great facilities should be furnished by the banks, on the one hand, while,

on the other, the Government is drawing large sums from abroad and spending them for unproductive purposes. So long as prices show an upward tendency no serious complaints will be heard, but a reaction must set in sooner or later, and the great thing is to take such steps as shall prevent it from being attended by a panic. To that end the *Fiji* recommends that the Bank of Japan should raise its rate of interest so as to place an obstacle in the path of speculators who busy themselves starting new enterprises.

* * *

The *Yomiuri Shimbun* writes in strong but not unfriendly terms about the singular tardiness shown by Austria-Hungary in the matter of Treaty Revision. Every Western State, with the one exception of the Dual Monarchy, may now be said to have revised its treaty on the model of Great Britain's, and the sole reason assigned for Austria-Hungary's delay is her desire to obtain an independent tariff. Such an ambition is very singular. Her import trade with Japan does not exceed twenty-five thousand *yen* annually. Twenty five thousand *yen* is not to be despised, and Japan does not yield to Austria-Hungary in a friendly desire to augment the bulk of their mutual transactions. But when it is considered that countries like Russia, Belgium, and so forth, which sell to Japan goods aggregating from 60 to 80 times the amount sold by Austria-Hungary, have not thought it necessary to ask for separate tariffs; and when it is further considered that among the few staples dealt in by Austro-Hungarians, all, with one or two exceptions, are already included in the British, French or German Tariffs, and that the exceptions have already been legislated for in the Japanese General Tariff, where they properly find a place, the unreasonable character of Austria-Hungary's demand becomes apparent. Japan's patience is sorely tried by the fact that not only is the great work of Treaty Revision impeded, but also the operation of her own laws is postponed by the strange obstinacy of Austria-Hungary. It would be a great pity were Japan driven to the unfriendly alternative of denouncing the Austro-Hungarian Treaty, and the *Yomiuri* hopes that no efforts will be spared to avert the necessity for such action.

* * *

The *Kokumin* writes in a vague but grandiose strain about the absence of any perennial elements in the policy of Japan's present statesmen. They are content to limit the range of their foresight to their own days, and deal simply with whatever presents itself for immediate management. It is alleged on their behalf that no change has come over their policy since the beginning of the *Meiji* era; that progress and enlightenment have been their unvarying watchwords. That kind of talk serves only to delude tyros. What the *Kokumin* calls a perennial policy finds its every-day counterpart in the case of a man who drafts a programme to be commenced by himself and consummated by his grandson or his great-grandson—as, for example the accumulation of a million *yen* or the acquisition of two million acres of land. There is no indication of any such programme in the State policy of Japan to-day. Compare her conduct with that of Russia, whose steady advance in Eastern Asia is the work of generation after generation, and who pursues through cycle after cycle the path mapped out by Peter the Great. The *Kokumin* gives no indication of the particular kind of perennial policy on which it would have the Japanese Government embark. With the usual exasperating vagueness of Japanese journals, it leaves the matter there.

* * *

Between January 1st 1895, and May 31st 1897, there were started in Japan joint stock companies, exclusive of banking and railway companies, the aggregate capital of which was 348,594,500 *yen*. The figure, large as it is, does not seem to surprise the public at all. People appear to regard the whole thing as a species of *Kumai sōba* (market price of imaginary rice). The total production of rice in

Japan is only some 40 million *koku*, but the quantity dealt in at the various exchanges amounts to several hundred millions of *koku*, whereas not more than a small fraction of that actually changes hands. The public looks upon the joint-stock-company performance pretty much in the same light. But that is an erroneous view. At least one-fourth of the capital of a company must be paid up before it can sell its shares in the open market. Hence the sum actually subscribed during the past two and a half years has been 87,148,625 *yen*, and if we assume that the remainder has to be paid in installments spread over ten years, it results that 26,144,587 *yen* has to be put up annually. The question is, does the people's financial strength suffice for such an effort. Industrial, commercial and agricultural companies are means of developing the national wealth, say some apologists. Undoubtedly they are. But companies started for the purely speculative purpose of dealing in shares do not belong that category. The *Nippon*, from which we quote, is of opinion that too much latitude is allowed to projectors of companies. It thinks that a stricter programme of investigation should be prescribed for the officials charged with the responsibility of granting charters, and it wants to know whether Count Okuma finds the duties of the Department of Agriculture and Commerce too heavy to discharge in conjunction with those of the Foreign Office, or whether he is growing old.

* * *

It has hitherto been the custom to call Japan an agricultural country, writes the *Shōgyō Shimpō*. But if we consider her products in the year 1895, it will be apparent that the appellation threatens to become inappropriate. Here are the figures:—

	<i>Yen</i> .
Agricultural Products	499,370,000
Industrial Products	321,270,000
Marine Products	48,040,000
Mineral products	18,830,000
Total	887,560,000

It thus appears that agricultural products constitute 56 per cent. of the whole; industrial products, 36 per cent.; marine products, 5 per cent., and mineral products, 2 per cent. On the other hand, the country's foreign commerce is rapidly developing. Until 1887, its total value remained below 100 million *yen*. In 1888, it rose for the first time to 130 millions; in 1893, it was 230 millions; in 1896, it amounted to 289 millions, and during the first half of the present year it totalled 170 millions—an increase of 39 millions as compared with the corresponding period of last year—, so that there is every reason to expect an aggregate of over 300 millions for the whole year. Nor will the growth stop at that point. The development of manufacturing industry means a corresponding development of foreign commerce, and exports will be further encouraged next year by the abolition of export duties. Thus while industry presses on agriculture, commerce in turn presses on industry, so that, before many years have passed, Japan will have to be called an industrial-commercial country, not an agricultural. In other words, she will become the England of the East. The Government should spare no effort to promote that result by removing every obstacle from the path of industry and commerce.

The Osaka *Asashi* has an article about Formosa, but it amounts to nothing more than a warning that unless greatly improved methods of administration be adopted, the world will conclude that Japan has no executive ability, nor any right to increased empire. Our contemporary advances the statement that since Japan lost Korea fifteen hundred years ago, Formosa is the first foreign territory she has been required to govern. We fancy that it would be difficult to substantiate that statement historically.

JAPANESE TOPICS.

The trial of the *Nichi Nichi Shimbun*, the *Tokyo Shimbun*, the *Chuo Shimbun*, and the Tokyo News Agency for publishing the marching song of which we recently gave a translation, commenced on the 15th instant in Tokyo Local Court. We may mention that, owing to a printer's error, one line of the original was omitted from our columns, though the translation was complete. The omitted line was:—

Tsuke-ya kususe-ya naikaku wo.

Assault, overthrow the Cabinet.

Judge Nakajima presided, and the Public Prosecutor briefly opened the case by reading the incriminating matter, and declaring that it violated the Press Law, being calculated to bring the Ministers of State into contempt in the discharge of their duties and to disturb public good order. The presiding Judge then questioned the defendants as follows, according to the reports appearing in the journals concerned.

Judge—It is stated in the *Tokyo Shimbun* that this matter was received from Komuro Kusan. Is that correct?

Editor of the *Tokyo Shimbun*—As a matter of fact it was received from the Tokyo News Agency, but it is not our custom to indicate the source of such matter.

Judge—What was your idea in publishing it?

Editor—I regard it as an ordinary item such as all newspapers commonly insert.

Judge—Do the epithets *muno musaku* (without brains or policy) apply to the Ministers of State.

Editor—Well, they are used in a light sense. Certainly they may be supposed to refer to the Ministers, but they are written without any special meaning.

Judge—How about the words "attack, accuse the Ministers, assault, overthrow the Cabinet?"

Editor—These too are used in a literary sense. The form of the expressions is a point of linguistic force only.

Judge—"Grasping at personal power and emolument" and so on—did you publish these words because you had reason to believe them true?

Editor—I had no special reason. I merely thought of reforming the Ministry.

Judge—Do you know what effects were likely to be produced on the authority of the Ministers by the publication of such a song? You must have understood that it would impair their reputation.

Editor—All newspapers now-a-days publish language equally strong. I had no special idea of bringing the Ministers into contempt or injuring their reputation.

Judge (to the publisher and printer of the *Tokyo Shimbun*)—Did you decide to publish this matter after examination?

Publisher.—We merely observed that it was headed "marching song." We had no particular idea about it. It often happens that we do not consult about matter for insertion.

Judge—Then do I understand you to say that you did not consult with the editor about the fact that these words are calculated to bring the Ministers of State into contempt in the discharge of their duties?

Publisher.—We did not even read the song, and of course formed no conception as to the effect it might produce.

The trial was resumed in the Tokyo Local Court on the 20th inst. The defendants were represented by Mr. Isobe and twelve other barristers. The Presiding Judge put the following questions to the editor of the *Chuo Shimbun*:—

Q.—Whence did you obtain this marching song?

A.—From the Tokyo News Agency.

Q.—What does it mean?

A.—I know nothing about its meaning.

Q.—Does the word "Ministers" refer to the members of the present Cabinet.

A.—I don't know.

Q.—What does the words "Ministers of State" mean?

A.—I don't know.

Q.—Is this matter placed before the public with the intention of injuring the discharge of their duties?

A.—I don't know.

Q.—Is it intended to be injurious to public order?

A.—I have no idea.

After some further procedure with regard

to testimony, which was of an unimportant character, the Public Prosecutor summed up for the prosecution. His argument was simple. He claimed that there could not be the slightest doubt as to the song's being intended to apply to the present Ministers of the Crown, or as to its being calculated to bring them into contempt in their official capacity. The Cabinet Ministers differed from other officials in that they were appointed direct by the Sovereign to advise and aid His Majesty in the conduct of the Administration, and to adopt measures for the promotion of the national interests and the people's prosperity. If to charge the Ministers with being incapable, and with disorderly conduct in office, was not an attempt to bring them into contempt, it was difficult to see what constituted an attempt. He then proceeded to review the circumstances that distinguished the cases of the various defendants, and to indicate the provisions of law that they had violated.

Mr. Toshimitsu, on behalf of the defendants, alleged that it was a pure conjecture to assume that the members of the present Cabinet were referred to in the expression "Ministers without brains or policy." Even supposing that the present Cabinet were referred to, the words did not exceed the limits of free speech as now fixed by law. There could no longer be any such crime as that of "bringing officials into contempt" by public criticism. As for the charge of disturbing public order, it was extravagant. Did an attack upon the Cabinet amount to a disturbance of public order?

Mr. Okazaki, also for the defence, contended that to try to bring about a change of Cabinet was an ordinary proceeding under a constitutional system of government, and had nothing to do with disturbing social order; and that the language of the song did not go beyond the legitimate realm of free speech as now granted to the Japanese press.

The other advocates argued much on the same lines. Mr. Tomitsu, the last that spoke, contending that to institute a public prosecution on grounds so slender as this paltry song was calculated not to convict the defendants of wrong-doing, but rather to demonstrate the extreme slenderness of the foundations upon which the prestige and authority of the Cabinet rested.

Judgment was reserved.

The *Mainichi Shimbun* thinks that President McKinley's suddenly adopted resolve to sign the Hawaiian annexation treaty was really due to apprehension of Japan's designs, and that the despatch of the *Naniwa Kan* to Honolulu was interpreted in the sense of a menace. Subsequently, however, being re-assured as to this country's intentions, and having learned that, under no circumstances at present conceivable, would Japan be disposed to bring her difficulties with Hawaii to the arbitrament of the sword, the President changed his mind, and ceased to be solicitous in the cause of annexation. As for the Senate Committee, it will investigate the matter with such care that its report can not possibly be presented during the present session, nor does there appear to be any likelihood that a continuing committee will be appointed. Our contemporary further thinks that the Hawaiian Government will now show itself willing to settle the immigration question in an amicable and fair spirit.

With regard to the taxing of Hawaiian sugar entering the United States, we yesterday reproduced, from the columns of the *Japan Times*, a telegram to the effect that the two Houses of Congress had decided in favour of imposing a duty on Hawaiian sugar. We now learn that the telegram actually received on that subject reads as follows:—"The Tariff Bill, as passed by the Lower House, contained a proviso against the section relating to the imposition of duty on sugar, the proviso being in the sense that Hawaiian sugar should be free of duty on account of the existence of the Reciprocity Treaty. This proviso the Finance Committee of the Senate struck out, with a recommendation that the Executive should make such arrangements with Hawaii as would enable them to impose a duty on Hawaiian sugar. But the Annexation Treaty having been signed, the Committee restored the proviso, and thus the result now is that Hawaiian sugar can be imported into the United States free of duty, and will continue to be importable duty-free, so long at least as the Annexation Treaty remains in the Senate without any steps being taken upon it."

It is stated in the *Kokumin Shimbun* that Mr. Ito Kozayemon, a business man of Muroyama, in Miye Prefecture, has devised a means of employing steam power in the manufacture of soy, and that he will presently apply for a patent. If the news be correct, Mr. Ito should have a golden future before him.

Here is an article which we translate from the *Tokyo Asahi*, and which will probably prove interesting to some of our readers:—"The cardinal points of foreign policy at present are the encouragement of direct trade in exports and imports, and of emigration. In other words, the objects to be attained are first, the wresting of our country's foreign trade from the hands of the foreign middlemen in the Settlements, and its transfer to Japanese who shall go abroad to conduct it; and secondly, the emigration of Japanese to countries beyond the seas, so that the strength of the empire may be developed and the people's interests furthered. Upon these objects the attention of the nation is now concentrated. The quantity and value of the exports and imports passing direct through the hands of Japanese merchants are gradually becoming larger in proportion to the bulk of the trade, and, moreover the number of Japanese that apply to the Foreign Office for passports to travel abroad is yearly increasing. Here are figures:—

Number of passports granted in	1894...	16,726
" " " "	1895...	22,411
" " " "	1896...	27,585

Further analysis shows that among those going abroad in 1896, 811 went on public business; 211 went to Europe and America, 29 to Korea, 26 to China 17 to England and 84 to various other countries, for purposes of study, at public or private charge. Korea attracted the largest number of business men, namely 1,414; China came next, with 434; then followed the United States with 360; Russia with 327; Hawaii with 225; and other countries with smaller figures, the grand total of mercantile men being 3,124. In connexion with agriculture and fishing 2,323 went to Russia; 828 to Korea; and others elsewhere, making a total of 3,295. Labourers aggregated 17,689; of whom

9,206 went to Hawaii; 4,121 to Russia; 1,066 to the United States; 630 to Korea; 865 to Canada; 778 to Australia; and 211 to China."

Concerning Japanese and foreign swords, a writer in the *Hochi Shimbun* has this to say:—"Among the accomplishments of the Japanese *Samurai*, fencing had made most progress, and the skill developed by the Japanese swordsmith was such that a blade forged by him was far superior to any foreign weapon. For example, the slight curve given to the edge was to obviate the danger of the sword's turning at the moment of delivering a cut, in which case a blow with the flat resulted. The massing of material in the back was to give momentum sufficient to cut through a foeman's bones, and the rounding off of the dorsal edges was to facilitate withdrawal from a wound. Further, the fact that the possession of a Japanese sword increases the courage of troops was proved in the war with China. An opinion has been advanced, therefore, that cavalry should be armed with Japanese blades. On the other hand, it is contended that, fine as are the cutting capacities of a Japanese sword, its weight renders it inconvenient for wielding with one hand, and to arm a trooper with it would be to incapacitate him for long action. The swords now in use have been proved to work well in practice. There have been a few cases of fracture at the hilt, but they were attributable to unskillful use rather than to defects in the weapon, which has been known to cleave a skull without the edge's turning. So the question is not settled." We can not, for our own part, see why the objection raised on the score of weight should have validity. The weight could be altered by the forger at will.

A telegram received in Tokyo on Saturday morning announces that the Foreign Relations Committee of the United States Senate has reported favourably on the Hawaiian Annexation Treaty, but adds that the Senate is not likely to take any action this session. Hitherto it has been very confidently predicted that the Senate Committee would not make any report during the present session, and that prophecy having now been falsified by events, it is possible that the anticipated inaction of the Senate may be similarly contradicted. However, the composition of the Senate renders it improbable that any very strong inclination to endorse the Treaty will manifest itself. There is no legal limit of time in such matters. They are determined simply by the courtesy of debate.

The *Mainichi Shimbun* has a detailed account of the negotiations between the Japanese Representatives in Honolulu and the Hawaiian Government. If our contemporary be well informed—and the very circumstantial nature of its statements leads us to think that its intelligence is derived from official sources—, Mr. Shimamura experienced great difficulty in arriving at an understanding. Not only did the Hawaiian Authorities endeavour to evade the points raised by him, but when at length they sent, on June 25th, what professed to be an exhaustive reply, it appears that, although not definitely reflecting the whole of Japan's claims, they had shifted their ground so as to render a clear understanding more difficult than

ever. Thus, whereas at first they had not raised any question about the *bona-fide* possession of the money carried by the immigrants—which was generally understood to be the real grounds for refusing to permit their landing—but had confined themselves to asserting that, while seeking entrance as free labourers, the men were, in fact, contract labourers, and had failed to comply with the forms prescribed for persons coming in that character, they turned round at the end, and abandoning the latter contention, adopted the former, namely, that the money had not been the *bona-fide* property of the immigrants. Persuaded that no hope of arriving at a satisfactory settlement could be entertained in the presence of such shiftiness, Mr. Shimamura waited on the Minister for Finance and intimated that nothing now remained except to ask the Japanese Government to formulate its ultimatum. Before doing so, however, he considered it due to the friendly relations hitherto existing that he should let the Minister know what he contemplated. Mr. Smith at once recognised the gravity of the situation, and asked Mr. Shimamura to defer making any such communication to the Tokyo Cabinet until he had seen President Dole. Accordingly, on the following day (June 27th), the Japanese Representative met President Dole. He found the Chief Magistrate of the island republic in much the same mood as the Finance Minister had been. After some conversation, the President spoke of appealing to the arbitration of some other independent country. Mr. Shimamura replied that the points at issue were really too plain to call for any reference to a third party. He could not say, therefore, whether or no his Government would consent to arbitration, but if Hawaii desired to take that course, he begged to have an official communication made to him on the subject, and he undertook, on his part, to forward it with a covering despatch of his own describing the state of affairs in Hawaii. The following day, a despatch came from the Minister of Foreign Affairs suggesting arbitration, and adding that if the proposal was accepted, it would be desirable to have recourse to the good offices of some country near at hand, so as to avoid unnecessary expense in submitting the case.

As to the attitude of the Japanese Government, our contemporary thinks that its wish from the outset having been to settle the matter amicably, it will accept Hawaii's proposal and submit the dispute to arbitration. With regard to the method of arbitration, a tribunal consisting of publicists sent by each of the disputants and presided over by the sovereign or chief magistrate of some independent and entirely neutral state, might be appointed, to sit in the capital where the president resides. That, however, would be a decidedly costly process and Hawaii would consequently be embarrassed by it. The other course is that each party should forward a written statement of its case to the arbitrator, and entrust the matter to his sole judgment. That will probably be the plan selected. Concerning the choice of an arbitrator, it is evident that the United States, England, France and Germany have interests which render them unsuitable. The *Mainichi* further thinks that Hawaii would object to Spain, Portugal, or Austria-Hungary, and that the choice is thus narrowed to Switzerland or

Norway and Sweden. Japan's disposition will be to select the latter.

It has been anticipated from the first that if Hawaii could not see her way to conceding what Japan asked, the trouble would end in arbitration, but the public will nevertheless see reason to congratulate both parties on selecting the only civilized exit from an international difference that involves a mere question of compensation. It must be conceded, too, we think, that Japan has shown commendable moderation in the matter. She has been blamed for sending a man-of-war to Honolulu, but unless we are greatly misinformed, the *Naniwa* was despatched, not at all for the purpose of making an armed demonstration, but simply to secure the peaceful and orderly behaviour of Japanese subjects in Hawaii. Had excitement broken out, and had anything like a riot occurred the Japanese Government would have been justly and severely criticised for not making provision to impose restraints which lie virtually beyond the ability of the Hawaiian Administration. This is the first instance of a serious complication between Japan and a non-Asiatic power, and its ending is fortunate. As to the verdict of the arbitrator, not much doubt can be entertained.

Vernacular newspapers say that the association formed to bring about Baron Iwasaki's resignation of the presidency of the Bank of Japan, have decided to call themselves the *Jitsugyo Kiasai Domei-Kai*, or union for promoting business interests. Their plan of procedure is to address to the Baron written communications, urging him to give up the position; and indeed, they have already sent one such letter over the signature of "the patriots of No. 1 Ward, Horiye-cho, Nihon-bashi." There is an air of mystery about the whole affair. The public are kept carefully in the dark as to the nature of the errors or mismanagement on Baron Iwasaki's part that have led these patriots to combine against him. So far as we can see at present, the incident is another example of that curiously meddlesome propensity that seems to suggest a decided lack of moral balance among certain classes of Japanese.

It is a curious and noteworthy fact that Mr. Mizuno, an official concerning whom foreigners in Formosa have had nothing but good to say, should be precisely the official now singled out for something like disgrace. We have often heard Mr. Mizuno spoken of as a thoroughly competent and upright administrator, who, unfortunately, was not able to carry out his own efficient and wise methods owing to the obstructive influences of the military authorities. Possibly the verdict was incorrect, but it has certainly been unanimous, so far as foreign critics are concerned. People were not surprised, therefore, to learn that Mr. Mizuno was to be promoted to the post of Vice-Minister in the Department of Colonization. Some mysterious obstacle prevented that consummation, and now the vernacular press talks calmly of his dismissal. The affair is perplexing.

The inquisition into the conduct of officials in Formosa is proceeding vigorously. In vernacular newspapers we read that the police of Taipei visited and searched the residences of no less than eleven officials and several private persons, on the 7th instant, with the result that three

officials were arrested and lodged in prison, as well as the chief partner in a business firm. Formosa is evidently destined to cause much humiliation to Japan, but the Government acts wisely in not burking the ugly facts. Resolute and uncompromising investigation and punishment may create a temporary scandal, but will ultimately prove beneficial to the country's reputation.

A brief allusion is made by the *Nichi Nichi Shimbun* to a question that has been causing much controversy and perplexity during the past two years, the question of foreign ownership of land in Formosa. Not only are several foreigners in possession of land in the neighbourhood of Twatutia which they obtained in their own name from the Chinese before the cession of the island, but there are also others who appear as normal owners of lands which have been transferred to them by natives so as to avoid complications with the Japanese Administration. The laws of Japan do not sanction ownership of land by aliens, and an attempt was accordingly made at the outset to place the matter on a publicly recognisable footing. But many difficulties presented themselves, and now, after more than two years delay, a settlement does not appear to be nearer than it was before.

It is observed by Japanese newspapers that America will probably feel some diffidence about approaching Japan on the subject of seal and sea-otter preservation in the northern seas. England, the United States, Russia, and Japan are all interested in the question, their hunting grounds being contiguous. But English experts and American experts seem unable to reconcile their views as to the form that protection ought to take, and if Mr. Sherman's message to Her Majesty's Government, conveyed through Colonel Hay, be correctly reported by Reuter, the Cabinets in Washington and London are again at loggerheads. At all events, Japan has to be consulted, and in view of recent events some Tokyo journals think that she may not show any strong inclination to entertain proposals coming from the McKinley Government. We should be surprised if such forecasts were warranted by events. Japan is concerned in the preservation of seals and seal-otters, and the discussion of measures to that end ought to be quite independent of irrelevant matters like the Dingley Tariff or the annexation of Hawaii.

A telegram from Formosa, dated the 17th instant, at Taiwan, says that, on that day, Mr. Mizuno, Chief of the Civil Government Bureau; Mr. Yamaguchi, Chief of the Finance Bureau; and Mr. Doi, Chief of the Bureau of Communications, sent in their resignations. The telegram adds that others are likely to follow. Tokyo journals, commenting on this event, note the remarkable fact that such a step should have been taken by the leading civil officials of the island during the absence of the Governor-General in Tokyo, and unanimously conclude that Mr. Mizuno and his colleagues must have made up their minds to resign immediately on receipt of the news that the intention of appointing Mr. Mizuno to be Vice-Minister of Communications had been abandoned. It will be remembered that the contemplated change was openly announced, and that the name of Mr. Mizuno's successor, Mr. Okuda, was also

published. But on the arrival of Governor-General Nogi in Tokyo the programme was changed, and the Government then decided to leave Mr. Mizuno in Formosa and to give the post at the Colonization Department to Mr. Okuda. Our Tokyo contemporaries think that Mr. Okuda's appointment was announced in Formosa on the 16th, and that it gave the signal for the resignations above announced. But we prefer to think that some other explanation will be forthcoming. It can make very little difference to Governor-General Nogi whether Mr. Okuda or any one else holds the position of Vice-Minister at the Department in Tokyo, but it must make a great difference whether a man of proved capacity presides at the *Minsei-Kyoku* in Formosa. If the Governor-General has objected to Mr. Mizuno's removal from the island on the ground that he can not be spared, Mr. Mizuno ought to stay there, it seems to us. His resignation under such circumstances would savour of unworthy pique. But it may be that his rejection for the Tokyo post would have precluded his removal from the *Minsei-Kyoku* also, in which case his resignation assumes a different complexion.

The innumerable allusions made by vernacular newspapers to next year's budget, continue to be as conflicting as ever. According to the latest story, published by the *Yomiuri Shimbun*, a section of the Cabinet, headed by Viscount Nomura, are now distinctly in favour of increasing the taxes, their principal contention being that, whereas the prices of all commodities have risen largely, with a corresponding increase of administrative expenses, no addition has been made to the revenue of the State. Their proposal now is to raise the *Saké* Tax to 10 *yen* per *koku* and the Land Tax from 2½ to 3 per cent. These changes would give an additional revenue of 20 million *yen* approximately. On the other hand, it is feared that, as the general elections take place next year, there would be much difficulty in inducing the House of Representatives to vote increased taxes. Something will have to be done, however, for although the Finance Minister may insist on large reductions being made in their estimates by the various Departments, he will have to provide for some augmentation of expenditure, whereas, on the other hand, the new sources of revenue devised in 1895 are not likely to prove as prolific as was anticipated. The Business Tax is understood to be showing more or less unsatisfactory results, and it is still difficult to predict how the tobacco monopoly will turn out. The *Saké* Tax and the Registration Tax, indeed, are giving unexpectedly good yields, but against their extra productiveness has to be set the fact that, owing to floods and storms, the return from the Land Tax will probably be below the average. A "situation" has to be faced, therefore, and there is nothing to be gained by shrinking from it.

Does it not appear to our readers that there is a strong tendency among amateur financiers in Japan to create an impression that the people are crying out before they are hurt? Here is a nation contributing a pittance of only six shillings per head for the support of the State, and yet the question of paying another shilling—for that is what an additional revenue of twenty million *yen* means—provokes discussion of the most portentous character.

It may be urged, indeed, that the case is capable of being stated differently: that instead of talking of an additional shilling we should speak of an increase of sixteen per cent. But per-centages are fallacious guides in such matters. The point is that Japan wants to enter the society of nations, and that it her wish is to be gratified, she must live up to her new position.

The agitation recently started in the Riukiu islands and the petition drawn up for presentation to the Tokyo Government, were interpreted, as our readers know, in the sense of a movement towards the recovery of the little archipelago's independence. But we now read in the *Jiji Shimpō* that no such idea is entertained. What the petitioners desire is chiefly that the former King, Sho, and his descendants should be appointed hereditary Prefects, and that, having regard to the geographical position of the islands, and the great divergence of their manners and customs from those of Japan proper, a correspondingly different form of administration should be organized. The people of Riukiu are said to entertain a traditional aversion to Satsuma officials. In former times the islands were an appanage of the Satsuma fief, and the southern *samurai* proved themselves very stern taskmasters; whereas at the hands of the Chinese the Riukiuan received always most considerate treatment. The result was that, regarding Satsuma men as fair types of the Japanese nation in general, they privately entertained a conviction that they would be happier under Chinese rule. After the Restoration, however, they found the *Meiji* officials much more endurable, and the majority of them are now tolerably reconciled to Japanese administration. But there is still a strong conservative party, and by its leaders the present agitation has been fomented.

We observe that the fifth number of the *Jitsū-Yei-Zasshi*, Japanese-English Magazine, a monthly periodical, has been published with considerable improvements. The editor, Mr. Kondo, is principal of the Yokohama English School. He has evidently found that his magazine is useful for English students of Japanese as well as for Japanese students of English—a fact about which there never should have been any doubt, in our opinion—and to increase its usefulness, he has added special columns of Japanese conversations with English equivalents. There is also an interesting collection of Japanese proverbs with excellently chosen English representatives. These are published by permission of Mr. Okoshi, Superintendent of Customs in Yokohama. We notice, by the way, that *mi kara deta sabi* is rendered "who spits against the wind, spits in his own face," which seems to be a doubtful translation. The editor promises that in the next issue of the magazine the part intended for foreign students of Japanese will be extended, in which event he ought to secure a good many subscribers, for the little volume costs only ten *sen*, and is excellent value for the money. The proceeds of the book's sale are to be devoted to paying for the school buildings, which have now to be purchased.

Our readers are aware that the final accounts of the war expenditures have not yet been published. It has hitherto been understood that the outlays would aggregate something like 130 million *yen*, but nothing precise was known. We

now read in several of the vernacular journals that the statement of figures relating to the military expenditures alone was submitted to the Board of Audit on the 19th instant, and that the total is 170 million yen. The figures for the amount actually sanctioned are these:—

Amount for the disbursal of which sanction has already been obtained	164,248,864 693
Details—	
Expenses of Headquarters and Field Divisions	84,662,067 234
War Department and Detached Offices	109,586,797 459
Total	164,248,864 693

The difference (5,751,135 307 yen) between this total and 170 millions, seems to represent an unexpected increment.

Through an oversight we have hitherto failed to publish the names of the Viscounts recently elected by their Order to sit in the House of Peers. The names and votes are as follow:—

	VOTES.
* Tani Tateki	87
* Soga Sukenori	287
* Tachibana Taneyasu	285
* Nagaoka Moriyoishi	280
* Naito Masatomo	278

* Matsudaira Noritugu	157

Those marked with an asterisk are re-elected. Grouped according to political parties, the results are, *Shoyu-kai*, 44;

Neutrals, 23; Strong Party, 3. The *Shoyu-kai* are supposed to be adherents of the Ito Cabinet, but they will probably support the present Ministry.

The *Mainichi Shimbun* writes in a sensible and liberal strain on the subject of the Hawaiian arbitration. There has been talk, it says, of asking the King of Norway and Sweden to arbitrate, but Hawaii is understood to be desirous of appealing to the good offices of the United States. To that some folks reply that America can scarcely be expected to bring an unbiassed judgment to the consideration of the problem, but the *Mainichi* has no sympathy with any such apprehension. Under any circumstances, it declares, the Government of the United States might be expected to pronounce a fair decision, and under existing circumstances if there were any bias at all, it would probably be in Japan's favour. The question is, however, would the United States Government be willing to undertake the task. We (*Japan Mail*) think it most unlikely.

We read in the *Nichi Nichi Shimbun* that a German, a Chinese, and a Russian teacher have been engaged for the new School of Foreign Languages, which is to open from September. Baron Hayashi has telegraphed from St. Petersburg that the Russian will set out for Japan in a few days.

An item of intelligence from Formosa, published by the *Kokumin Shimbun*, is to the effect that, on the 16th instant, a party of insurgents, numbering over sixty, attacked the police barracks in Tamsui and that a detachment of troops from the Tamsui garrison, with three half-companies from Taisui, put the rebels to flight. When shall we cease to hear of such disturbances?

Commenting on the new periodical *Gaikoku Gogaku Zasshi*, we remark in another column that it ought to find a purchaser in every student of any of the languages to which its pages are devoted. We have since learnt that the whole of the first issue, 7,000 copies, was sold off at once, and that a second edition is being printed. That is a satisfactory result, and we can not but share the pleasure that the publishers must feel, for if enterprise ever deserved a reward, theirs does. A correspondent who has excellent means of informing himself about the intention of the compilers, says:—"The magazine aims at teaching practical English, and is not intended to be a text-book of either grammar or rhetoric. In the section devoted to correspondence, for example, the usual method of teaching the letter-writer style is abandoned, and letters that have actually passed through the post are reproduced. The standard of English scholarship in Japan, and the means of encouraging the study of the language, are such that a work like the *Gaikoku Gogaku Zasshi* is in great demand. The magazine has for its supporters and contributors all the talent that can be found among Japanese scholars of English. It is designed expressly and solely for Japanese students, and as its programme has been framed by men that have been engaged for many years in the work of teaching English, they probably know what the Japanese student wants."

There appears to be an element of uncertainty in the telegram sent by Mr.

Kurino on the subject of the Franco-Japanese Revised Treaty. The words attributed to him by the *Yomiuri Shimbun* are:—"The Senate Committee has reported to the Senate that the Franco-Japanese Revised Treaty is conducive to our (*ware*) interests, but in view of the imminent termination of the session, the Treaty will not be brought up now for discussion. It will probably be submitted in the ordinary session next autumn." What "our interests" means exactly is a question, but the impression is that the Committee has reported favourably, and that the passing of the Treaty next session is pretty certain.

Baron Iwasaki, President of the Bank of Japan, has the honour and very doubtful pleasure of being elevated to a prominent place in the world of politics by Opposition organs. The *Chuo Shimbun* attributes to him a declaration that Count Matsukata is evidently incompetent to control the Cabinet and that the only course now open is for the Count to confine himself to the portfolio of Finance, with Marquis Ito for Minister President. Everybody would be pleased to see a powerful coalition Cabinet, including Marquis Ito, Count Okuma and Count Matsukata, but as for the *Chuo's* story, it looks to us as though it were made out of whole cloth. Sometimes the paragraphs published by Japanese journals suggest the impression that they have been constructed wholly out of the imagination of an enterprising news monger, whose plan is simply to put his own ideas into the mouth of any one occurring to him on the spur of the moment.

MR. HOSHI ON THE U. S. TARIFF.

The Tokyo Chamber of Commerce lately sent a telegram to Mr. Hoshi, Japanese Minister to the United States, requesting him to use his influence to persuade the Senate to reject that part of the revised import tariff dealing with Japanese goods. The Minister, according to the *Shogyo Shimpō*, is said to have replied as follows:—

"I beg to acknowledge receipt of a telegram in which you request me to oppose the new customs tariff to the utmost, in view of its being detrimental to Japan's trade with America. An increased tariff was affirmed almost simultaneously with the victory of the Republicans at the election of the new President in November last. Conferences have frequently been held by the Republican Party since that time with regard to the tariff question, and I have from the outset requested the authorities not to levy heavy taxes upon imports from Japan. Moreover, after Congress met in special session, I openly approached the United States Government upon the subject and presented a memorial to both Houses pointing out the gross injustice that the revised tariff would inflict on Japan; also intimating that should the tariff be enacted, not only would it injuriously influence Japan's commerce with America but it would also bring about lamentable consequences in the friendly relations of the two countries. In short, I did all in my power towards effecting the curtailment of the tariff. The Finance Committee of the Senate has not only cut down certain figures in the Import Tariff, but also seems, so far as the actual circumstances are concerned, to have resolved upon the entire rescission of the increased duties upon tea. There is also a prospect of the 25 per cent. *ad valorem* duty upon fancy matting being decreased. The only difficulty that now lies before us is the reduction of the taxes on silk textiles, it being found that there is no alternative but to maintain the rates advanced by the Senate. Nevertheless, I will still exert my energies to the fullest extent of my power."

The R. F. Syngé, of the Foreign Office, and Captain Beaumont, R.N., A.D.C., were attached to the suite of Prince Arisugawa during his stay in London. Major Cavendish was attached to the Korean Ambassador.

THE "JIYU-TO'S" DEMONSTRATION.

The mass meeting and procession of the *Jiyu-to* (Liberal Party) took place on Sunday as arranged. From early morning hundreds of members poured in from the rural districts, many coming from places as far away as Nagoya and Utsunomiya. These farmers and country *soshi* presented a queer sight as all were clad in straw rain-coats and wore huge hats, in contrast to the foreign-style hats and garments worn by the towns-folk. The Party's headquarters in Shiba Park was the rendezvous and for many hours this place was crowded with throngs of people, notwithstanding the threatening aspect of the weather. All the members of the Party were decorated with pink favours, while the general public who cared to take part in the proceedings received yellow rosettes. Several political speeches were delivered, among them one by Count Itagaki, while telegrams of congratulation, received from all parts of the country, were read amid enthusiastic shouts of "Banzai." At a little past noon a procession was formed, under the guidance of Mr. Terasaki, Chief Manager, which, headed by a band, made its way towards Ueno Park. The police forbade the unfurling of any political banners, —bearing expressions and sentiments of the most liberal order—and the singing of the Marching Song was also interdicted, but plenty of noise was made otherwise in the frequent shouting of "Banzai." The procession passed into Ueno Park under a triumphal arch of red. A display of fencing, in which Mr. Imai, of Niigata Ken, took a prominent part, helped to while away the afternoon, the meeting dispersing about 4 o'clock. Refreshments were provided for all upon the grounds out of the Party's treasury.

At the demonstration of the Young Liberals held in Ueno on the 18th, the following declaration and resolutions were passed:—

DECLARATION.

Of what generation is to-day? The national finances are completely disorganised, our foreign diplomacy is humiliated, and the internal administration of our land is corrupt. Ah! in what part of the Empire lies this territory? Do not the eight provinces of Kwantō occupy the most conspicuous position among the noted places of Japan? A man standing on a high peak seeks to enjoy a distant view; whoever descends into the abyss feels himself surrounded by tombs. A catacomb surely produces sorrow, while the appearance of a sacred shrine inspires feelings of veneration. The soul, quiescent as it appears, can hardly avoid being influenced by local characteristics. No part of our country is lacking in public-spirited men ready to rise and give vent to their opinions with regard to the common welfare of the State. With tears they sometimes appeal to the sword, or their unconquerable spirit sometimes makes them so fearless that they tread upon fire and water without shrinking from the ordeal. Yet these actions are nothing but the outcome of sentiments aroused by the sad condition of affairs in their country. We, the members of the Liberal Party, do hereby declare before the public on this 18th day of the 7th month of the 30th year of Meiji, that unless Count Matsukata be . . . and unless the facts be notified throughout the country in regard to his financial mismanagement, the responsibility cannot be made clear; that unless Count Okuma is . . . and the facts notified throughout the Empire in respect to the diplomatic humiliation of Japan, the national prestige can never be restored; nor can the corruption of internal administration in any way be cured on the source of abuses extirpated without . . . Viscount Takashima. [The spaces left blank are to be filled in with characters meaning political action in a constitutional sense, and appealing to the bar of public opinion.]

RESOLUTIONS.

We, the allied members of the Liberal Party, recognising that the proceedings of the present Cabinet are utterly incompatible with the Spirit of the Constitution, prejudicial to the national prestige, and productive of financial disorganization, have made a vow to bring about its dissolution.

1. In order to carry out the resolve of the Party, a special committee shall be appointed.

2. This Committee shall be composed of men of like spirit, and consist of not more than five persons from each prefecture or town in Kwantō, who will thereafter reside in Tokyo.

3. The Party shall endeavour to attain its ends by co-operation with men of similar ideas throughout the country.

Immediately after these declarations had been carried, the following motion was introduced amidst applause:—

"In order to give serious warning to the three Ministers of State—Counts Matsukata and Okuma and Viscount Takashima—constituting the leading party in the present Cabinet, who are bringing ruin on the country—the Liberals' Club proposes to present to the said Ministers three public documents."

The Yuichikwan (Liberals Club) then made public announcement of its sentiments. It recognises in matters involving contempt or humiliation the truth of the principles underlying acts of vengeance, viz., violence against violence, unconstitutional acts against unconstitutional acts, blood for blood.

At the close of the conference Count Itagaki, rose and remarked:—This meeting has come together with my hearty approval. It has been organized by Young Liberals of the Kwantō and is the result of a combination effected between public-spirited men of eminent loyalty and public-spirited men imbued with a sense of true patriotism. What is the actual condition of society at the present moment? Our marching song had been interdicted and freedom of speech is entirely lost sight of. Our members have been forbidden to march in companies, and freedom of public meeting is thereby crippled. The people of the electoral districts have parted with their franchise for a consideration; while members of Parliament have placed their fidelity at the bidding of a purchaser. Are not liberty and popular rights in Japan literally dead? Is not the constitutional form of Government as now carried on a mere farce? The nation's finances are utterly disorganised, and under the control of a few millionaires. True, practical industry is in a morbid condition. Such abuses will continue unremedied so long as ignoble apostates in the political field are suffered to proceed without censure. In all these things we see nothing but the utter lack of energy now shown by the people. The spirit of probity has been swept from the land, and public morality has completely disappeared. There is no gainsaying the perfect decay of society at large. Men on the point of death require a stimulant. So does society. It is the legitimate duty of all patriotic and public-spirited men to administer such needful medicine. This function more particularly devolves upon striplings who possess pure ideals. By speaking of striplings, I do not mean young persons only, but every one, even men gray with age, who are yet full of energy and spirit. I hope all of you are willing to be considered youths in that sense. Look at the present condition of our country? The revision of the treaties is not yet completed; friendly relations with the treaty Powers are not fully cultivated, and the country, having aroused the jealousy of other nations by its victory over China, is now considerably embarrassed. To attempt to escape from such a situation is honourable, but to be content to remain in it displays the horrible stage of degradation into which we have descended. Victory over competition alone leads to independence. The inhabitants of the State ought to be, one and all, young men, and ought to cultivate the spirit and energy of youth. This meeting has set an example to the whole country, and it prescribes the stimulant that society now so urgently needs. I congratulate you with all my heart. Be ardent all of you.

If Count Itagaki wants youth, he certainly has it. His own speech is intelligible enough so far as mere language is concerned, but we lay it down with a sense of vacuity. What is the matter? What has gone wrong? What is the situation to be saved? "The nation's finances are utterly disorganised, and under the control of a few millionaires. . . . The revision of the Treaties is not completed"—these appear to be the only specific charges preferred by the Count. They seem to us to be empty accusa-

tions. The finances are not disorganised, and the revision of the Treaties is practically achieved. The Liberal leader talks vaguely about "the spirit of probity having been swept from the land" and about "members of parliament having placed their fidelity at the bidding of a purchaser." Perhaps he could not afford to be more explicit. At any rate we are disposed to think that the real source of his dissatisfaction is embodied in those plaintive phrases. After nearly twenty years of toil, this noble old man, against whose perfect integrity and singleness of purpose no whisper of suspicion has ever been raised, sees his Party paralysed by dishonesty. Such, at all events, is his obvious conviction. He believes that the disintegration of the Liberals in the House of Representatives last session was accomplished by the strength of gold, and he turns as a forlorn hope to the rising generation since the risen has proved base under the test. He ought to know what he is talking about. But he ought also to know that the corrupt are blameworthy as well as the corrupters. Does he shrink from proclaiming the fact? Do the Young Liberals shrink from proclaiming it? Young in truth they are. The embroidery of their Declaration is extremely verdant. But they make one thing plain, namely, that in their opinion Viscount Takashima is the exploiter of parliamentary venality. If it be true that a nation has the rulers it deserves, and a community the journals it merits, it must also be true that constituencies have representatives worthy of them. There will be a general election next year, and it is to be hoped that Count Itagaki and the Liberal leaders have put a black mark against the names of the men that sold themselves, if in truth there were any such.

THE SECOND HIGHER SCHOOL.

The graduation ceremony of the Sendai Second Higher School was held on the 10th inst. The number of graduates was unusually large compared with previous years. The total number of graduates in that section of the school which prepares students for the University, during the six years of its existence on its present basis is 269. Of these no less than 103 graduated on Saturday last. This fact speaks well for the reputation of the school throughout the country. From year to year the number of students in attendance has increased and the Director stated on the 10th that a still further increase was anticipated in September next, when the new academical year begins. With a view of meeting the increasing applications for entrance, the sum of \$10,000 is to be spent in building new class rooms and providing other accommodation. The address delivered by the new Director on Saturday was decidedly hopeful in tone and showed a determination to keep the school up to the requirements of the age. The student chosen to represent the graduates and to read the usual reply to the Director's address was Mr. Sagara Tsumato, who graduated at the head of the Law Class. The School reopens on September 11th.

DEPARTURE OF MR. DUN.

Mr. E. Dun, ex-Minister of the United States in Japan, left Tokyo by the 9.45 train on the morning of the 17th instant. A large number of people, official and non-official, assembled at Shimbashi to bid farewell to the departing Minister, whose popularity among all nationals has been of the strongest character throughout the long period of his service at the Legation, as Second Secretary, or First Secretary, and finally as Minister. Among those present at the station were Their Excellencies Marquis Saigō, Count Okuma, Baron Sannomiya, the Representatives of Italy, the United States, Great Britain, Spain, Holland and China, and many other prominent officials, as well as a host of private friends, several of whom accompanied Mr. Dun to Yokohama. Mr. Dun left Yokohama for the United States by the *Belgic*.

CHRISTIANITY & THE JAPANESE.

SOME interesting comments have been evoked in connexion with the question of the possibility of Japan's becoming Christianized. In a criticism of Mr. A. M. KNAPP'S recent work "Feudal and Modern Japan," the *Japan Times* quoted and endorsed the sentence "religiously and politically Japan will remain the unconquered Island Realm," and we, in turn, traversed that assertion, devoting our remarks especially to the romantic and irrational sentiment that it seemed to embody, namely, the sentiment that Japan might take pride in beating back the invasion of any alien creed, just as she has successfully beaten back political aggression from whatever quarter. Mr. KNAPP, in a letter published elsewhere in our columns, disavows all intention of suggesting that Japanese patriotism has been perverted into such an obstacle to the exercise of liberal intelligence, and explains that the chapter of his book from which the *Japan Times* quoted is, in truth, "an exhibit of the unusual openness and susceptibility of the Japanese to religious influences from without." We frankly accept the disavowal and the explanation. The *Japan Times*, also, in subsequent articles, excludes spurious patriotism and false emotion from the arena, and approaches the problem from the standpoint of calm reason and historical research. Into that realm we gladly follow our contemporary.

The first question that presents itself is—did Buddhism conquer Japan. We allege that it did. We further allege that it achieved its first victory in the garb of an alien creed, and its second, in the form of an alien creed modified to suit the indigenous faith of the nation. We further allege that when Buddhism was first introduced into Japan, its acceptance subjected her nationalism to a strain incomparably greater than that to which the acceptance of Christianity would subject it now. And from these propositions we deduce the inference that what Buddhism did can be done by Christianity, a higher and worthier form of religious belief. The *Japan Times* does not agree with us. It sets out by saying that we read history incorrectly. Its allegations are these:—"Buddhism, eleven hundred years ago, was a welcome instrument in the hands of the advisers of the Crown in carrying out their plan of consolidating the nation." "The conquering Imperial race had succeeded in establishing a nominal suzerainty over the whole country, but the power of the Court did not extend to the aboriginal tribes in the provinces, which, under the rule of their hereditary chiefs, practically enjoyed independence." Thereupon the EMPEROR and KAMATARI, founder of the FUJIWARA family, evolved "the gigantic scheme of political change known in history by the

name of the *Taika* Revolution, the object of which was to establish a centralized monarchy by breaking down the power of the semi-independent local chiefs." "One of the measures employed * * * was the encouragement given to the spread of Buddhism among the provincial population. * * * It was expected that by turning the people's attention to spiritual matters, the political bonds between them and their various chieftains would be weakened." * * * "Yet, even with the powerful assistance of the newly centralized Government, the clear-sighted leaders among Buddhists were not slow to discover the truth that the new faith had little chance to supplant the old, and that the only way to reach the hearts of the people was to effect a compromise with the indigenous creed. GYOKI and RYOBE then originated the doctrine of the identity of Buddhist and Shinto deities. * * * It was only when this radical change was effected in the fundamental tenets of Buddhism that it began to be really received into the homesteads of the people in general. But even then it could not supplant the original national faith: it was only suffered to co-exist with the latter by accommodating its cardinal principles to the national genius of the people." * * * "The people remain Shintoists first and then Buddhists, to some extent. There are villages which have no Buddhist temple, but there is not one which has not a shrine dedicated to its tutelary deity."

Such are the historical views expressed by the *Japan Times*. We have quoted them verbatim in order to avoid errors of construction. Broadly stated, they amount to this: first, that Buddhism was employed by the Imperial Court and its advisers as a political engine for bringing the semi-independent aboriginal tribes within the pale of the Court's authority. Secondly, that despite the power of Imperial propaganda, the alien creed had to be modified so as to accord with the indigenous faith. Thirdly, that the modification was effected by inculcating the doctrine that the Buddhist and Shinto deities were identical. And fourthly, that, despite such modification, the people remained Shintoists at heart.

Now, in the first place, Buddhism came to Japan in the middle of the sixth century, and was definitely adopted by the Court during the reign of the Empress SUIKO (591-629), when an Imperial Rescript encouraged the spread of the faith; when orders were given that the Prince Imperial, the Princes of the Blood, and the Ministers of the Crown should have images of Buddha made; when ranks and rewards of land were bestowed upon the makers of such images, and when envoys were sent to China to obtain copies of the *sutras*. It is recorded that, in the year 627 A.D., there were 46 temples, 816 priests, and 569 nuns in Japan. For 32 years the imported creed

had failed to obtain a footing, but from 584 A.D. its progress had become rapid. The *Taika* reforms commenced in 645 A.D. It is therefore certain that the Buddhist doctrine had been accepted by the Imperial Court, that vigorous measures had been taken to propagate it, and that a large degree of success had attended those measures long before Prince KATSURAGI and NAKATOMI-NO-KAMATARI set themselves to compile the *Taika* Code; which indeed, was not promulgated until the year 702.

Our first conclusion, therefore, is that Buddhism had been firmly established among the educated classes in Japan several years before the compilation of the *Taiho-ryo* was undertaken.

Let us pass now to the proposition that the alien creed was used by the Court, in the middle of the seventh century, as a political instrument for bringing the aboriginal tribes under the full sway of the central government. We do not deny that Buddhism continued to receive Court patronage during the reigns of the sovereigns immediately succeeding SUIKO, but we have to ask, who were the aboriginal tribes in question, what ultimately became of them, and what was the indigenous faith spoken of by the *Japan Times*. The point made by our contemporary that Buddhism would not have permeated the nation had not Imperial influence been exercised to propagate it among the aboriginal tribes, and that, despite such powerful propaganda, it had ultimately to be modified so as to bring it into accord with "the indigenous creed"—that point ceases to have any value unless proof can be furnished that the creed of the so-called aboriginal tribes was the creed of the Japanese nation. We are considering how Buddhism made its way among the Japanese nation, and when we are told that it would not have made its way had not the Government used political influence to spread it among the aboriginal tribes, and that it had nevertheless to be subsequently modified so as to avoid conflict with the indigenous creed, we must accept the implication that the aboriginal tribes represent the bulk of the Japanese nation, and that theirs was the creed in deference to which Buddhism had to be modified. Startling propositions, are they not?

The doctrine enunciated by RYOBE and GYOKI and elaborated by SAICHO and KUKAI was that the *Shinto* deities and the Buddhist god were identical; that the *Kami* were simply incarnations of the one and only divine being, *Hotoke*. Who were the *Kami*, the gods celestial and the gods terrestrial? Were they not the denizens of *Takama-no-hara*, the immediate ancestors of the first semi-divine rulers of Japan in the age called *Kami-no-yo*? Are we to suppose that the aboriginal tribes, while acknowledging the divine origin of the Emperors, refused to pass under their

sway, and preferred allegiance to their own chieftains? There is something very perplexing about all this. It seems to us that the aboriginal tribes and the methods of propagating Buddhism among them may be left altogether out of the discussion. Long before the conversion of the aborigines became politically expedient—if it ever did become politically expedient—and still longer before RYOBEN, GYOGI, SAICHO and KUKAI undertook their eclectic modifications, Buddhism had been accepted by the educated classes in Japan. And its acceptance, we repeat, had subjected Japanese nationalism to a much greater strain than that to which the acceptance of Christianity would now subject it. For in the days of BIDATZ, of SUIKO and of SHOTOKU TAISHI, the reconciliations of RYOBEN had not yet been imagined, and in imperial, noble, and official circles an alien creed prevailed, according to which the numerous deities of *Takama-no-hara* were the only gods entitled to human worship, and their title to reverence was also the title of the empire's Sovereigns to the allegiance of their subjects. But the acceptance of Buddhism meant that those deities were supplanted by one god and one god only, and that, too, a god with whom the imperial ancestors had no connexion. Are we not justified, therefore, in saying that Japan was conquered by Buddhism? It is probably true, as the *Japan Times* says, that the great majority of the villages throughout the country have shrines dedicated to their tutelary deities, and that "the first thing a villager does after morning ablution is to clap hands and worship *Shinto* deities." That may be true, but of what value is it as an argument against the possibility of Japan's Christianization? If it proves anything, it proves that the Japanese are so wedded to polytheism as to be incapable of accepting a monotheistic faith, and that Buddhism could not find any favour among them until it bowed itself to the level of their comparatively uncivilized moral condition, and lent to the multitude of their gods the sanction of its own supreme being.

THE HAWAIIAN COMPLICATION AT WASHINGTON.

IF the judgment of America is fairly reflected in the press of that country, the annexation of Hawaii is strongly opposed by a large proportion of the community. The scheme is denounced by journals of every political shade, only a few official organs supporting the efforts of the little knot of speculators whose fortunes depend upon the success of this dubious project. When the question was suddenly reopened, some four months ago, it was at once evident that the advocates of absorption had established close relations with the news agencies of the United States, and made themselves masters of

almost every available channel of publicity. For several weeks the papers of all parts were deluged with communications in which the immediate possession of Hawaii was set forth as the one supreme need of the Great Republic, while effective precautions were apparently taken against the circulation of arguments on the other side. Rarely has a more determined attempt to manufacture popular opinion been put in operation. But while the news columns were thus captured wholesale, the independence of the editorial pages remained unshaken, and so far as they were concerned, a stolid indifference to the entire subject was maintained until the execution of the Treaty was unexpectedly announced, when a storm of condemnation and protest burst, the severity of which must have startled the PRESIDENT and his advisers in the movement. The hasty transaction was declared a scandal to the Government and an outrage to the nation. Writers who claimed to have accurate knowledge of the circumstances did not hesitate to assert that a shameful story of corruption and fraud would inevitably be disclosed if the plot were carried further, and warned the Executive against pursuing an enterprise which would bring lasting discredit upon all participants therein.

How far these expostulations were justified, and to what extent the ominous predictions are likely to be fulfilled, it is not for us now to inquire. But there is a feature of the business which cannot be overlooked by those interested in the Japanese view of the proceedings. We refer to the singular attitude assumed by Mr. SHERMAN, the Secretary of State, not only in renouncing the principles to which he has always professed allegiance, but in exhibiting a lack of consideration for Japanese susceptibilities, and a disregard of diplomatic courtesy, for which no excuse can easily be conceived. It is well known that Mr. SHERMAN placed himself on record, not long ago, as an undeviating opponent of territorial expansion, proclaiming that as long as his life lasted, he would do nothing to extend the limits of his country, or "to add new dangers by acquisition of foreign territory." He now appears as one of the principals in an act of aggrandizement, his share in which seems peculiarly calculated to aggravate the "dangers of acquisition," by inflicting a slight upon a nation which has never shown itself unmindful of the obligations of friendly intercourse. The story is published in several newspapers, not as a matter of irresponsible report, but as an array of undisputed facts. And very extraordinary facts they appear to be, from beginning to end.

It is first stated that the Japanese Minister at Washington, although disinclined to believe that the PRESIDENT would abruptly reverse the policy laid down in his inaugural address, was induced by the prevalence of annexation rumours to inquire

directly at the State Department, on June 16th, as to what the intentions of the Government were. He was then assured by Mr. SHERMAN that no treaty was in course of negotiation, and that the acquisition of Hawaii would be contrary to the interests of the United States and the wishes of those in authority. Mr. HOSHI then took occasion to explain, with care and precision, the position of the Japanese Government and its relations toward the Hawaiian republic; giving the most emphatic pledges that Japan had no desire to take possession of the islands, and that under no conceivable circumstances could they be regarded as a valuable addition to the imperial domain. Mr. SHERMAN expressed satisfaction with this declaration, and the interview terminated with, to all appearances, a thorough understanding on both sides. Early the next morning, the Treaty was signed. Mr. HOSHI lost no time in sending a document to the State Department which was generally spoken of as a "protest" in some form, though not acknowledged to be precisely that by the members of the Japanese Legation. On the same day, Mr. SHERMAN was visited by the German Ambassador and the Portuguese and Chinese Ministers. Before evening, reports were flying through the diplomatic circle to the effect that the Secretary of State had admitted to one or more of these gentlemen that the annexation was displeasing to him, and that he had steadfastly and consistently disapproved it. When called upon for confirmation or denial, the foreign representatives in question declined to answer, with the exception of the envoy from Portugal, who would give no information respecting the particular conversation of that day, but acknowledged that Mr. SHERMAN had frequently expressed unqualified objections to the union of Hawaii with the United States.

Whatever he may or may not have said on the 17th of June, it is certain that on the 18th the Secretary announced his complete accord with the PRESIDENT, professing to have discovered a reason why his general conviction with regard to exclusion should not hold good in this special instance. The reason was made public in an authorized newspaper statement on the morning of June 19th, in which Mr. SHERMAN declared that his hostility to the broad policy of annexation was unchanged, but that he had been obliged to make the present exception "on account of the claim of Japan to these islands." The effect of this injurious imputation, which, it is alleged, was not merely dictated by Mr. SHERMAN, but was read over by him and formally approved, prior to its publication, was to create an extremely unpleasant impression in diplomatic society. Within three days, the leader of the Cabinet had as many times shifted his position on the most important international question yet taken in hand by the new Administration. On Wednesday, he is reported to have

assured the Japanese Minister that no treaty of union was in immediate contemplation—and this, we may incidentally mention, is understood to be in agreement with intelligence received by the Government of Japan. On Wednesday, also, he accepted with apparent acquiescence and trust Mr. HOSHI'S announcement that Japan had never thought of possessing the islands. On the morning of Thursday, he signed the Treaty which he had declared non-existent the day before. And on Friday, he authorized the statement in a Washington newspaper that he had consented to the incorporation of Hawaii with the United States because of the claim which Japan had asserted to the territory.

The comments of the best American journals upon this remarkable series of occurrences indicate a deep and sincere regret that a friendly country should have been subjected to what is necessarily regarded as a grave affront, the painful effects of which, it is frankly avowed, "will be limited only by the forbearance of the Japanese Government." No attempt to defend Mr. SHERMAN'S course is made in any quarter, but a plea of extenuation is set up, on grounds scarcely less astonishing than the incidents they are intended to account for. It is plainly asserted, not alone by newspapers addicted to sensational exploits, but by many of the worthier class, that the venerable Secretary's intellect is impaired by age and toil, and that his incompetency to conduct the business of the State Department has been an open secret from the time of his appointment to office. The mistakes of the Hawaiian negotiation are said to be not the first proof of his failing powers, several other exhibitions of weakness having been previously observed and criticized. His condition was, indeed, a matter of public discussion before the Hawaiian difficulties arose. But his manner of dealing with these complications has naturally drawn additional attention to the subject. It is now affirmed that Mr. SHERMAN'S denial of the Government's purpose was due to the circumstance that he had not been consulted in the affair when he received the Japanese Envoy, and that he knew nothing of what was impending until the evening preceding the execution of the Treaty. The entire transaction, including the preparation of the report of negotiations which was signed by him, is said to have been arranged by subordinates, the PRESIDENT having recognised the inexpediency of intrusting so laborious a task to the chief of the department, in his present feeble state. The details of evidence brought forward to sustain the charge of mental incapacity are certainly striking, and unless they are promptly refuted, there seems to be no escape from the conclusion drawn by various New York newspapers, that the dignity and credit of

the Government may at any moment be dangerously compromised by Mr. SHERMAN'S prolonged control of diplomatic affairs. For many reasons it would be a relief to learn that his infirmity has been exaggerated, and that his mind is still sufficiently alert for the requirements of the public service; but should this be demonstrated, the embarrassing circumstances above narrated, and especially the unwarrantable treatment of the Representative of Japan, will remain without explanation of any sort. The dilemma is a painful one, whichever horn we may seize in the endeavour to reach a solution of the awkward problem.

THE "YORKTOWN" CASE.

ON the 19th instant, the United States Vice-Consul at Kobe, Mr. HUNTER SHARP, was called on to decide a case that has interest for foreign residents, inasmuch as the incidents were precisely of the kind that may occur at any moment, and that would probably occur very often if the foreigner did not exercise forbearance. A *jinrikisha* coolie preferred a charge of assault and battery against Ensign EVERHARD, of the U.S.S. *Yorktown*. It was the old familiar story. Mr. EVERHARD had hired a *jinrikisha*; had paid the men their full fare; and had been dunned by one of them for more. Thus far the experience was one of almost every-day occurrence to people engaging *jinrikisha* in Yokohama. The sequel, however constituted a departure from the ordinary routine. Mr. EVERHARD struck the coolie several heavy blows with a Malacca cane over the head and hands. The coolie's contention was that he had done nothing whatever to provoke such treatment, that he had not laid hands on Mr. EVERHARD; that he had been severely beaten merely because he asked for some more money, and that, when he grasped his assailant's cane, Mr. EVERHARD had drawn a pistol and pointed it at his face, and had also pulled out a knife and cut him above the eye. Mr. EVERHARD'S story was that the man had followed him demanding money; had grasped his arm and used force to turn him round; and had shouted at him; that a crowd had collected and joined, apparently, in the pursuit; that he deemed himself in imminent danger, and that he had acted entirely in self-defence. Our readers will at once recognise a position in which any one of them may be placed at any moment. It is certain that *jinrikisha* coolies have of late developed a tendency to lay hands on a foreigner by way of enforcing a demand for extra fare. What is the foreigner to do under such circumstances? He is the victim of an assault. Were he similarly treated by a cabman in his own country, he would promptly give the man in custody, and there could be no doubt about the verdict that a magistrate would

pronounce. If he knocked the cabman down, the law would hold him guiltless. But in Japan, if he meets assault by assault, he may find himself summoned as Ensign EVERHARD was summoned, and then the very dubious question arises whether his simple statement will constitute a sufficient defence against the charges that may be preferred by the other side, especially in the face of wounds inflicted by him while himself remaining scathless. Fortunately for Mr. EVERHARD several circumstances told in his favour. There was, first, the strong inherent improbability that a naval officer of generally placable and self-possessed disposition as Mr. EVERHARD was proved to be, would lay open a coolie's head with a heavy cane merely because the man asked for a few *sen* in addition to his fare; there was, secondly, the fact that the blows which fell upon the coolie were admittedly received at considerable intervals, thus demonstrating persistence in the conduct that provoked them; there was, thirdly, the circumstance that the coolie followed Mr. EVERHARD for a distance of about 250 yards, and had followed him for half that distance before being struck; and there was, fourthly, the fact that Mr. EVERHARD entered the house of a foreigner and asked for protection, thus showing that he believed himself to be in imminent peril. The Vice-Consul acquitted him, very rightly we think, and happily an injustice was avoided. But the affair might have had a very different ending, and in view of the fact that such happenings are liable to be repeated at any moment, it becomes a question whether the police should not address to *jinrikisha* coolies some warning against laying hands on a foreigner. We do not wish to be understood as suggesting that *jinrikisha* men are usually uncivil or extortionate. Quite the contrary, indeed. They are a hard-working, cheerful and most courteous set of fellows, and in general the foreigner takes genuine pleasure in paying them a little more than the pittance for which they toil. But that a few of the men plying in the Settlements make a habit of over-charging, and are ready to seize a foreigner's arm or obstruct his path unless he accedes to their demand, is beyond question. We can not suppose that they entertain the slightest intention of committing an assault, or of perpetrating a rudeness. Their object is to get money, not to annoy wantonly. But they believe that a verbal appeal will not be intelligible, and that recourse to the hands is not governed by the same rules among foreigners as among Japanese. A coolie would never dream of taking hold of one of his own nationals. He recognises such an act to be grossly and unpardonably impolite. But he has not the same perception where a foreigner is concerned, and our point is that if the police conveyed the knowledge

to him, a source of considerable danger might be removed. It is too much to expect that foreigners should always remain placid when a *jinrikisha*-drawer grasps them by the arm, or places himself in their way, and if the coolie knew that such conduct puts him hopelessly in the wrong and constitutes an assault in the eyes of the law, he would soon abandon it.

There is one point in the Vice-Consul's judgment that calls for brief notice. Mr. SHARP, according to the newspaper reports, "quoted from a case settled at Kanagawa in 1862 to decide the relative value of testimony on oath and statements made under a mere warning." It seems to us not only improper, but also impolitic that any reference of the kind should have been made. The United States Consular Court is conventionally open to every Japanese suitor that has a complaint or a claim to urge against an American citizen. A Japanese is entitled by treaty to bring his case before that Court. He has no other place to bring it. The Court does not primarily derive its jurisdiction from any sovereign right vested in the United States. It derives its jurisdiction from a power delegated to it by the SOVEREIGN of Japan. It is in the very essence of such jurisdiction that no technical discrimination should be exercised against a Japanese suitor; that he should not be placed at any disadvantage under which he would not labour in the Japanese Court for which the American tribunal is conventionally substituted. But he is placed at a manifest and very serious disadvantage if credit be denied to his testimony merely on the ground that his method of vouching for its truth—the method prescribed by the laws of his own country and accepted by the tribunals of his own country—differs from the method pursued in American courts. Justice, in short, is denied to him because, not being a Christian, he can not take a Christian oath, though justice is guaranteed to him by Treaty independently of his religion or his nationality. These are fundamental questions. They have been threshed out long ago, though possibly Mr. SHARP's perception of them may not have been ground fine in the weary mill of protracted controversy. We can appreciate the position that he took. It is a natural position, and, after all, if a Consul in Japan follows the principles of the law of evidence as applied in his own country, he may claim exemption from harsh criticism. But there is a nice question involved and we entertain no doubt that Mr. SHARP will agree with the view here advanced. Moreover, there was no occasion whatever to make such a discrimination. The prosecutor's case would not have been a whit more credible even had he kissed the Bible, and nothing could be more unfortunate than to proclaim to Japanese suitors that their nationality and their religion place them at a *prima-facie* disadvantage in an American Consular Court.

THE SUICIDE OF A HAILEYBURY BOY.

THE papers recently received from England contain accounts of a sad event which cannot fail to have been read with painful attention by all interested in our English Public Schools. The facts are shortly as follows:—A Haileybury School boy, CUTHBERT EVANS, aged 16, on Monday, May 31st, deliberately committed suicide by laying his head on the metals in front of an approaching train between the stations of Ware and St. Margarets on the Great Eastern Railway. On the grass near the body two letters were discovered, a short one of farewell to his father and mother, and one to the Headmaster, Canon LYTTLETON, in which he gives at length the motives that prompted his act of self-destruction. The latter letter from beginning to end is a charge against three of the boys in his house, whom he specifies by name, for conspiring to make his life a misery to him. The cause to which he attributes the beginning of their persecutions is almost incredible. "Last term," he writes, "they conceived the vilest dislike to me for nothing at all except my opinions about Crete." We know how party spirit in politics can run high among school-boys, and how a boy may bring himself under provocation by taking up a line against the popular views of his school-fellows; but we can hardly imagine how the Cretan question could be enough to stir up political passions in the school-boy breast, or, even if it did, how it could lead to the prolonged persecution of an individual boy carried to the extent of making his life unbearable. Yet there can be no doubt, whatever the cause may have been, that his life was made miserable and that the boy's sensitiveness—an element in character that boys, of all people, have least consideration for—aggravated and intensified the misery of his condition. We gather this again from what he writes. "It was the haunting feeling, he says, that they were continually talking to my disparagement, that I was the object of derision to all in the house . . . that drove me to this." Finally he anticipates that his act will be ascribed to unsoundness of mind—a charge which he repudiates in the strongest language:—

"I solemnly declare that A, B and C (here he again mentions the names) are the sole agents in my death. . . . This I write in full and perfect possession of my senses, having thought over this step since Friday last."

This letter was read at the inquest, where, in the face of the above solemn declaration and on the evidence of the Headmaster that he had fully enquired into the circumstances and that the whole thing amounted to simple "teasing," the jury returned a verdict of suicide during tem-

porary insanity. However opinions may differ as to the legitimacy of such a verdict, the matter was one that neither a jury's verdict nor the simple statement of a Headmaster could suffice to lay at rest. All the suspicions on the part of parents and others as to the existence of bullying at our public schools are again aroused and the distressing event once more brings criticism to bear on our public school system. Now, with all our belief in our public school system, and while we thankfully recognize the more humanizing influences brought to bear on the school life of our English boys in the present day, we grant that like all other systems it is liable at times to break down and for that reason sad occurrences like the present one at Haileybury may well open the eyes of trustees and masters to the grave responsibility of their position.

We know nothing of Canon LYTTLETON: he may, for all we know, be an admirable headmaster, but if the words he is reported to have used at the inquest are correct, we cannot help thinking that he showed a lamentable ignorance of school-boy nature. "The whole thing," he is reported to have said, "amounted to simple teasing, and the unfortunate boy might have ended it all by reporting the occurrence to him." But that is just what a boy would never have done. Whatever persecution he might be subjected to, he would never, if he had the true boy spirit, say a word to his own house master, still less to the headmaster, about it. Masters must use their own eyes, and a discerning master, who has the interest of his boys at heart, will, without any vile methods of espionage, quickly acquaint himself with the character of the boys under his charge and know whether things are going on rightly with them or not. The weaker and younger boys should be especially objects of his care and, by availing himself wisely of the aid of the prefects in his house, the captains of dormitories, and of other lads to whom a measure of authority is delegated, he will seldom fail by honourable means to discover and check any mischief that is abroad, and to secure for the weaker boys the protection they stand in need of. A headmaster should be something more than a successful teacher, something more than a disciplinarian; he should be an expert in the training of boys' characters, earnestly watching over their development and requiring of the masters under him to do the same.

The *Chugai Shogyo* learns that the result of the trial of foreign made quick-firing guns which has been going on at Narashiro, Chiba Prefecture, having proved eminently satisfactory, the Military Authorities have recently ordered from abroad a number of mountain and field quick-firing guns through Messrs. Illies & Co. of Yokohama. We (*Japan Mail*) believe that this statement is premature. The trials have been concluded, so far as target practice is concerned, but other tests have still to be applied.

JAPANESE PROVERBS TRANS-
LATED INTO GERMAN.

We have received from Mr. T. Ehmann a work entitled "Sprichwörter Bildliche Ausdrücke der Japanischen Sprache. Gesammelt Übersetzt und Erklärt." The volume is a reprint from the paper contributed to the German Asiatic Society by Mr. Ehmann on the same subject and is the first of a series. The proverbs and metaphors, 465 in number, are printed in Romaji as well as in Japanese and are arranged alphabetically, the first volume going to the end of the letter G. Mr. Ehmann states in his preface to the work that he has collected over 3,000 proverbial sayings and figures of speech, all of which are to be translated and explained at a later date. Of the value of such a work when compiled in the scholarly way in which Mr. Ehmann has accomplished the task there can be no question. It is the metaphors of the language that a student of Japanese finds most difficult to master, on account of their being so unlike those with which he is familiar. We have only one doubt in connection with Mr. Ehmann's book. Is not its scope somewhat too large? We observe that the author includes such terms as *baka*, *dasshi suru*, *deiri ga aru*, *gongo-dōdan*, *gyō wo migatu* among the expressions selected for explanation. Such latitude, it seems to us, prevents Mr. Ehmann's work from being rendered tolerably exhaustive in its own line, which, were its scope more limited, it might become.

In his preface Mr. Ehmann discusses a number of interesting topics. Among them the subject of personification in the Japanese language will probably attract most attention. Mr. Ehmann is entirely at issue with Mr. Percival Lowell, and to a considerable extent is opposed to Mr. B. H. Chamberlain's views on this point. Mr. Chamberlain says on p. 272 of his "Handbook of Colloquial Japanese":—"Inanimate objects are rarely, if ever, personified," &c. Mr. Ehmann, on the contrary, maintains that personification is quite as frequent in Japanese as in any European language. The Japanese objects of worship are personifications of nature, the terms male and female are used of a number of inanimate objects, and legendary tales abound with personification. According to Mr. Ehmann, it is a matter of no importance whatever whether personification appears in the verb or in the noun. The following instances are given as a few among hundreds that might be cited. *Akire ga rei ni kuru. Akufi senri wo hashiru, kōji mon wo idesu. Ari no Kwannon mairi. Ari no omoi mo ten made to do ku. Ashita no koto wo iu to tenjō de ntsumi ga warau. Daikai wa chiri wo erabasu. De mono haremono tokoro kirawasu.* Students of the language will do well to read what Mr. Ehmann has to say on this interesting subject.

BICYCLE ACCIDENTS.

Bicycle accidents increase in number in Paris. Last week two fatal falls were recorded, without mentioning ordinary sprains which hardly merit passing notice. Some of these accidents are due to the ill-will of coachmen, or rather to their lack of good-will. If there are few to-day who deliberately contrive to jam a cyclist against the kerb of the side-walk or against the inhospitable tramway rails, there are still many who pretend to pay no more attention to a cyclist than to a stone lying on the road. They turn suddenly without warning, stop short without making the least sign, and seem to think ironically that the cyclist, more fortunate than the camel in the Bible, can pass through the eye of a needle.

But it must be acknowledged that a large number of accidents, perhaps the majority, are due to the rashness or inexperience of the riders. The rule for the riding of cycles prescribes "a moderate speed" in crossing centres of traffic or places where streets interlace. This wise warning is ignored or despised by a number of

high-spirited people, who shoot like a train across the most frequented ways, sometimes without holding the handles, as if they were in open country between two rows of apple trees. Most accidents happen to young people who think themselves disgraced if they obey the advice to be prudent which their elders give them. They have a kind of bravado in courting danger, bravado the worse misplaced as it is not their own persons alone that they risk.

It is, however, impossible to erect in a city like Paris warning notices at every dangerous passage. One would be needed wherever streets cross, or rather one for all Paris. And besides the notices are useless, for it is generally only quiet riders, those who do not need to be called to order, that attend to them. Others pass proudly by the warnings as if their dignity did not allow them to think that the warnings were meant for them. And a hundred yards beyond the despised warning they come to grief in a cart hidden behind a turning or in the barrier of a level crossing, or perhaps they make a splash over the parapet of a bridge across a ravine, such as may be found in the turning of several mountain roads. The warning-notices* which the Touring Club has erected along French roads are all Greek to the mad-caps, whose only idea of riding is to go 30 kilometres an hour like the winners in the Bordeaux-Paris race. A curious example of this obstinate rashness is supplied by the last number of the *Revue Mensuel* of the Touring Club. In the Maritime Alps not far from Nice and Monaco there is a descent of great danger, for it is complicated by a treacherous turning, where a bridge overhangs a ravine. It is the bridge of Ramingas, a picturesque structure, but whose parapet, being low so as not to obstruct the view, gives but poor protection to cyclists who have lost control of their machines. After many accidents had occurred, a warning notice was erected on the summit of the hill. Accidents however, increased rather than diminished. The Touring Club had to decide to save the precipitated cyclists in spite of themselves. With the consent of the Department of Roads and Bridges it placed a net for the purpose of catching in their flight cyclists in process of performing the dangerous leap over the parapet. I must acknowledge that at first I hardly believed the announcement of this net stretched over the abyss like a providential spider's web. But the Ramingas net is no myth. It exists, it acts, and corpses are not the only fish it catches. It is a firmly fixed net of iron wire. Only placed there on the 5th of last April, it was four days afterwards occupied by a poor fellow who had been shot over, whose machine was crushed against the parapet, and who was making his way to a better world when he had the pleasant surprise of finding himself brought up in his career and laid on something like a spring mattress. Here is a new sensation which recommends itself to lovers of sport. Since then four other victims have been in the same way saved from certain death, which gives an average of one every week. One asks then how many tourists must have fallen into the ravine of Ramingas in three or four years.

The Touring Club has done well in putting an end to this hecatomb. But is it not incredible that advice and example should so long remain inefficacious, and that it should be necessary, weary of the struggle, to stretch a net over the abyss because numbers of people prefer the risk of falling in these, to taking the least measure of precaution?

The Ramingas net is positively symbolic. The life of the present day is like a steeple-chase. Everybody wishes to arrive quickly even at the risk of not arriving at all. Moralists' precepts are like the notice-boards of the Touring Club. They do not stop those who wish to precipitate themselves. Only statesmen seek in vain for the protecting net which may save the break-neck from his final catastrophe.—Translated from the *Journal des Débats*, of May 29, for the *Japan Mail*.

* Some 17 years ago, the Cyclists' Touring Club began to erect at the top of certain hills the notice:—*To Cyclists: This Hill is Dangerous.*

HAWAII.

The articles evoked in Hawaii by the news of the signature of the annexation treaty make no allusion whatever to the complication with Japan. So far as folks in Hawaii are concerned, it would seem that they do not connect annexation with any Japanese contingencies. In correspondence from Washington, however, we find the following:—

The present condition in Hawaii, it is said, has had much to do with the favourable consideration of the treaty. The present Government of Hawaii and the people who support it are much concerned about the Japanese situation. Private information received by Hawaiians in this city is to the effect that the Japanese may at any time take some action looking to the acquisition of the islands. The advice officially received are of much the same tenor. The sentiment in the Senate seems to be that Japan in no way should control the islands or get a foothold there. This argument has been used to prevent even notice of the abrogation of the present treaty in the tariff bill. It is said that such notice might be followed by Japanese occupation and the islands could not be regained by the United States without a struggle.

The *Hawaii Gazette* publishes the following interview with Mr. Shimamura:—

"You may say that the rumour that Japan has withdrawn its request from the Hawaiian Government for an explanation of the reasons for rejecting the Japanese immigrants is unqualifiedly false."

This was Minister Shimamura's reply to a question by an *Advertiser* reporter yesterday regarding the rumour that the request for a settlement had been withdrawn by him, and that Hawaii would come out top side high in the unpleasant affair, which has occupied the attention of diplomats all over the world.

"There has been no correspondence between this Legation and the Minister of Foreign Affairs since June 4th," continued Minister Shimamura. "At that time I addressed a letter to the Minister of Foreign Affairs, and, as yet, though it seems a very long time, I have received no reply."

The reporter suggested that a great many letters might be written in 14 days.

"Quite so," ventured a member of the Legation; "long enough time in which to write a book."

"The position is this," said the Minister:—"Before the steamer having the immigrants on board left Honolulu I made a formal protest to the Minister of Foreign Affairs. His answer was incomplete and unsatisfactory. In due time I received instructions from my Government, and sent a request to the Minister of Foreign Affairs for the reasons for the expulsion of the Japanese labourers. Extracts of the contents of my letter and this Government's answer have already been published in the Honolulu papers. I considered the answer vague and indefinite. On June 4th I wrote again, and for two weeks the letter remains unanswered. I am waiting for a communication to arrive, have been waiting for several days and I think now that it must come to-day or to-morrow."

"One paragraph in your leading editorial to-day is rather misleading. Does your paper believe that Japan has taken Hawaii by the throat and said: 'Give me your money?' Such a thought is preposterous. I may say an object is black; you will insist that it is white. I would not take you by the collar and shake you for your opinion; I would ask your reasons for saying so. Another misleading sentence is the one regarding indemnity. No demand has been made, and that phase in the controversy has not been mentioned, beyond my saying that I would like this Government to recognize the principles of indemnity, as governed by international law. Japan has shown no hostility toward Hawaii in this matter. We ask, simply, that justice be done if it is proven that Hawaii is wrong. Indemnity to the Japanese immigrants will be asked only in this event. If the affair is settled satisfactorily, then immigration may continue from Japan as formerly, not otherwise."

"Those Japanese left their homes under the laws of their Government, and they are innocent of any wrong intent in coming here. If the agents of the immigration companies in Honolulu committed a wrong in bringing them here against the laws of Hawaii, then, it occurs to me, it is the duty of the Government to punish them, not their dupes. The men who were connected with the companies were tried in the courts and acquitted. If there was nothing wrong in their actions, upon what grounds were the immigrants sent back? That is the question I am endeavouring to get an answer to from the Minister of Foreign Affairs."

"One would infer from the editorial that we have made a peremptory demand, but such is not the case. We have given the Minister of Foreign Affairs an excellent opportunity to explain why the Japanese were not permitted to land; it was the main question in my first letter to Minister Cooper and was repeated in the second, mailed June 4, and yet I have had no reply. You have been misinformed if you think I have not given the Government an opportunity to furnish me with reasons for sending back the immigrants."

Counsellor Akiyama and Secretary of the Legation Koya were present during the interview and expressed themselves very emphatically in supporting Minister Shimamura's denial of the rumour that he had withdrawn his request for an explanation.

"There are all kinds of rumours floating around," said Counsellor Akiyama. "One ridiculous one was that the Japanese sailors were to land and take charge of the Custom House. Another is to the effect that the *Naniwa* is to leave on Wednesday next. You may say regarding that rumour, as with the other, it is without any foundation whatever. About two months hence another man-of-war will be here, and the *Naniwa* is not likely to leave before then."

KOREAN TOPICS.

The *Soul* correspondent of *The Times* has displeased some of the residents of that city by his caustic comments on the ceremony of laying the foundation of the arch of independence. Well, it was certainly a celebration that lent itself to ridicule. But when we come down to hard pan, as the Americans say, the chief item of comicality in any attempt to assert Korean independence is that the Koreans themselves do not seem to care about being independent. King Log or King Stork, 'tis all the same to them, but King Frog has a poor show. If they were really imbued with a spirit of nationalism or independence, what a long distance towards that goal the mere mood would carry them. Let them only get their own right aim ready to help themselves, and a very little good will on the part of their eastern neighbour would effect the rest. Therefore all friends of a nation's independence should be ready to sympathise with, rather than to laugh at, the independence-arch demonstration. It was a means to a good end.

Cow stealing is rather an uncommon kind of fraud: the portage of the prize presents a difficulty. The other day, however, a Japanese milkman of Chemulpo missed two of his cows. A Chinaman had quietly walked them off to *Soul* and sold them to a compatriot who keeps a dairy there. So far as we can gather, nothing happened except that the Japanese owner went to *Soul* and drove the cows home again.

The Korean War Office has set itself an interesting problem. A squadron of cavalry numbering 100 is to be organised for patrolling the city. The company is to be divided into watches of not less than 33 each. The watches are to be divided into patrols of not less than 8 men each. The streets are to be perpetually patrolled. Each watch must be off duty not less than 8 hours in every 24. If a patrol observes "a really suspicious character" he must be at once arrested. No patrolmen is to dismount from his horse under any circumstances. See how that works out. Suppose that *A*, *B* and *C* are the watches. *A* goes on duty from 6 a.m. to 2 p.m.; *B*, from 2 p.m. to 10 p.m.; *C* from 10 p.m. to 6 a.m. Which watch takes the next relief? Necessarily *A*: otherwise *B* and *C* would not have their regulation time off duty. Thus it results that each watch goes on duty at the same hour each day, and *C* never gets a night in bed from year's end to year's end. How the arrest of a man on foot is to be effected by troopers forbidden under any circumstances to dismount is another problem.

There is great building activity at Chemulpo. Nearly a thousand houses are said to have been put up since January. Timber is 100 per cent. higher than it was two years ago, and a plot of land measuring 15 square metres (less that 4 *tsubo*) in the business part of the town was sold lately for \$600.

The *Independent* says that the vice of opium

smoking is increasing in Korea, and mentions a rumour that a number of Chinese smugglers recently brought a quantity of the drug to Peking. They were arrested, but their release quickly followed, for reasons unexplained.

The *Independent* has this quaint note:—

"We are very much amused to learn the belief with which the Koreans pray for rain at the time of drought as at present. It is an elaborately formulated ceremony which consists of various grades of service, the first of which is conducted by a low official in the Government, and the sacrifice consists of a bowl of rice, two dishes of fruit, and three cups of wine. If the God of Rain does not send rain after this sacrifice, it is evident that he is not satisfied with the offering. Then the second service is ordered after waiting three days. At this service the officiating Master of Ceremony must be of the sixth rank in the Government, and the *menu* is increased, that is, two bowls of rice, four dishes of fruit, and six cups of wine are offered as exchange for rain. If the God of Rain does not get "roped in" by this treat (some years he is insatiable), the third service must follow. The officiating priest of this service must be of the third rank in the Government and the sacrificial bill-of-fare is accordingly improved both in quantity and quality.

The improvement is kept up as long as there is not enough rain; sometimes it necessitates the Prime Minister to honour the obdurate Rain Deity by one or two calls with equally appropriate *vin et viande*. On such occasions a roasted pig, a broiled sheep, and sometimes a boiled ox head, are offered.

In case the efforts of these officials all fail, the King must pay a call on him with grand ceremony and a most alluring feast. It is said that the Keeper of Rain Water always gets flattered at the honour of a call by the King and pleased with the delicious repast which has been prepared by the expert *Chef* who belongs to the Palace, and invariably loosens the spigot which locks the water tank, and the desired hydrogen oxide, which the French call *eau de pluie*, comes down in abundance.

However, it very seldom requires the last resort, as it rains generally before the royal visit. It takes a month or more for the officials to complete their series of the ceremony, and by that time the drought usually ceases. We are informed that the first service was held a few days ago, and was begun by a chusa. We voice the sentiment of many in expressing our wish that the present universal thirst be thoroughly quenched before reaching the stage of offering a roasted pig.

Lads in *Soul* are said to be developing a military fever. They form companies in the streets; go through various drill exercises to Japanese or Russian words of command, and blow tin bugles with much expertness. The next episode of this fancy will be mimic battles between the Japanese and the Russian squads.

A Ladies' Society has been organized in *Soul* by Mrs. Kato, the wife of the Japanese Representative. Its object is to discuss affairs domestic, charitable, and social, for which purpose meetings will be held once a month.

Another batch of "conspirators," five in number, has been arrested in *Soul*. The object of the plot is said to be identical with that of the recent affair. We are not much the wiser for that information.

A *Yang-ban* of Kong fu was suspected of murdering his female serf. The Governor ordered the Magistrate to examine the body. The Magistrate declined to undertake any such dirty work: he had once been an official in the household of the Crown Prince, and his person must be held sacred from contamination. The Governor did not press the point lest he should be denounced for disloyalty; he procured the assistance of another magistrate.

The son of a woman murdered in Yung-heung set out five years ago in pursuit of the murderer. He travelled through every province in the Kingdom and found the man at last in an inn at Eijn on the Yalu. A duel ensued, and the murderer was killed on the bank of the river. The son gave himself up, and the Law Department has ordered that he receive 60 light bows.

CHINESE TOPICS.

Willison Circus was to have left Shanghai for Japan on the 10th instant, and the horses and properties were duly shipped in the *Kobe Maru*, but owing to some misunderstanding, the whole were put ashore, and the steamer started without them.

A correspondent of the *N.-C. Daily News* who recently visited Weihaiwei, says:—

I found that the Japanese troops are being rapidly reduced and that only a comparatively small garrison now holds the place. The forts are all dismantled and in ruins; expensive Krupp guns of large calibre lying about, some broken and fractured by charges of dynamite and all thrown down and damaged in such a way as to be rendered utterly useless. One wonders why these costly cannon were not preserved, as it was the Japanese conquerors who destroyed them, not the Chinese, who simply ran away and left them intact. One would have supposed that they could easily have been transported to Japan and used there in coast defence. These dismantled forts which were quite new and had been built at great cost under foreign supervision, give one an impressive sense of the desolation that war brings in its train, and a distressing sense of the impotence of the Chinese in the use of these modern modes of warfare and their utter helplessness as opposed to any European Power or a Power like Japan. The thrifty husbandman has, in the meanwhile, changed the aspect of affairs by using the ground occupied by the forts as an addition to the adjoining fields of millet or sweet potatoes.

A most inviting account of the new summer resort at Kuling—properly Ku-niu-ling—is given in the leading Shanghai journal. Kuling is a section of the Lushan range in Kiangsi, 13 miles from Kiukiang on the Yangtze. "It consists of a gently sloping valley, about four thousand feet above malaria level, which is checkered with numerous streamlets of pure, cool, fresh water (not often seen in this part of the country) and shot to the core with sunshine. The tiny rills which come down from the mountain sides unite to form a main stream which flows through the centre of the valley. This valley has been bought by foreigners and divided by them into 130 large lots, all of which have been re-sold, and the proceeds have been devoted to building three rest houses—one in Kiukiang, one at the foot of the hills, another on the Estate—and cutting the road up the mountains. Kuling is controlled by foreigners, and a lot is forfeited if sold to a Chinese. There is plenty of building stone, and fifty handsome residences have been erected.

Two ladies driving to the fête at the French Municipal Ball, at Shanghai, on the 14th of July were struck with stones thrown from among the crowd.

Nothing whatever has been done to improve the state of the river at Tientsin. The Chinese Authorities have proposed a scheme estimated to cost a million taels, whereas the plan elaborated by foreign experts would have involved only one-fourth of that outlay. It is said to be too late to effect anything this season.

The Ching-chong match factory on the Singkeipang Creek, Shanghai, and some forty-five adjacent buildings, inhabited by factory hands, were destroyed by fire on the afternoon of the 15th instant. The conflagration originated in the dipping room, and was caused by a workman's treading on some loose matches. The factory was insured for Tls. 30,000 and the houses for Tls. 3,000.

A seaman, named A. White, died suddenly at the Shanghai Sailor's Home on the 14th inst. from heat apoplexy induced by excessive drinking. At 8 o'clock he was put to bed by a comrade and was singing a song when the latter left him. At a quarter to 10 he was dead.

The *China Mail* is informed that Emilio Aguinaldo, the rebel commander in the Philippines, has succeeded in breaking through the Spanish lines confining him to Cavite Province, and has joined forces with the Central Luzon army. In the last engagement at Montalban, to the North of Manila, in which the Spaniards lost over 100 men, Aguinaldo commanded in person.

GERMAN NOTES.

Prince Louis William August of Baden, died on April 27th. He was born in 1829, became a General of Prussian Infantry and was President of the first Chamber of the Grand Duchy of Baden. He was married in 1863 to the Duchess of Leuchtenberg.

It is reported that Germany has given definite notice to the Russian Government that it will not be represented in any way at the forthcoming International Congress of Medicine at Moscow, unless all restrictions with regard to the passports of the Hebrew members of the German delegation are at once withdrawn. This is creditable to the German Government. A goodly number of distinguished physicians and surgeons in Germany are Jews.

The Vienna *Stein der Weisen* says:—"The stories of magnetic mountains exerting an attraction upon vessels that come into their vicinity seems to have some real foundation. It has been demonstrated in the neighbourhood of Germany. Bornholm, a little island situated in the Baltic Sea, and belonging to Denmark, seems to be a huge magnet. True, the power of this magnet does not approach that of the legendary magnetic hills that drew nails out of ships—and caused such trouble to Sinbad in the brave days of Arabian story—still it can occasion a great deal of trouble to passing vessels. The magnetism of Bornholm influences the magnetic needle so as to turn it perceptibly from its true direction. A rocky reef near Bornholm is also composed of a magnetic substance."

When Frithjof Nansen passed a day with Emperor William, the Emperor introduced his children to his guest in a peculiarly characteristic manner. After dinner the young princes were called. They filed in, and stood "to attention" in military style. "Shake hands with this gentleman," said the Kaiser, "look well at him, some day you will be able to understand what his work is, and then you will be glad to be able to say, you have met him."

There has been considerable discussion going on of late among experts, as to the value of sugar as a food for manual workers. In this connection *Die Deutsche Zuckerindustrie*, of Berlin, says that Alpine climbers appreciate sugar very highly, not a few of them, though they never eat candy at home, consuming a notable quantity of sugar in the course of their excursions in the Alps. All the guides are very fond of it. This is because, as everyone knows, the source of muscular force is not in nitrogenous or albuminous substances (lean meat), but in the carbohydrates (starch, sugar, and fats). After muscular work the blood becomes very poor in saccharine matter, but a small quantity of sugar eaten suffices to restore the muscular energy, a result that agrees with the observation of Alpine climbers.

One of the most important and significant appointments made of late to a theological chair in Germany is the call given to Dr. Warneck to lecture on mission work at the University of Halle. Dr. Warneck has long been recognized as a leading authority in Germany on mission affairs, and through his most excellent *Missionstseitschrift*, a monthly magazine, has contributed more than any other man to the arousing of a lively interest in the cause of missions in the Fatherland. No man is better acquainted with the theoretical and scientific life-problems of foreign mission work than is this new Halle professor. It is to be noted that this is the first chair of the kind ever established and manned in Germany.

The crisis which the German Liberals have brought about in Austria, says the *Globe*, shows very distinctly what is the weak point in the constitution of the Dual Empire. The long truce which the misfortunes of 1866 and the personal ascendancy of the Emperor had forced upon the jarring parties has at last definitely come to an end, and the discord, which has been threatening for so many years, has now broken out. The question of the Austro-Hungarian compromise

is for the moment almost overshadowed by the necessity of a *modus vivendi* between the Germans and the Czechs. It is rumoured that the Emperor will convoke the Diet of Prague to find some means of solving the problem, but it is quite as likely that he will order a revision of the Constitution to be undertaken, in order to gratify the desire of the various provinces for a sort of Home Rule. Austria is, in fact, passing through a very serious crisis, and one which is in all probability the beginning of the break-up of the Empire. If these things happen in the lifetime of the Emperor Francis Joseph, it is difficult to say what may not take place when, in the course of nature, he is succeeded by a ruler without his vast experience and personal popularity. That the home affairs of Austria are exciting the greatest interest in Germany and Russia may well be imagined, for everything that weakens Austria strengthens Russia in the Balkans. Germany, too, cannot see without alarm a state of things which paralyses her colleague in the Triple Alliance, and this fact probably explains why she is so anxious to be on good terms with Turkey, and has lent so many of her best officers to reconstruct the Ottoman Army. William II. sees clearly enough that the coming struggle in South-Eastern Europe will be between German and Slav, and not between Christian and Turk.

The Volksraad of the Orange Free State has adopted a motion of reducing the residential qualification for the franchise to three years, and rendering it unnecessary for those desirous of exercising it to relinquish their nationality. Candidates for the franchise, however, renounce their former burgher rights. Transvaal burghers to be placed on the same footing as others. Before becoming law the resolution will have to be confirmed next year.

MONTHLY SUMMARY OF CURRENT JAPANESE LITERATURE.

A close perusal of Japanese modern literature reveals the fact that pessimistic writers are very numerous. They do not figure prominently in these summaries, for the simple reason that we see little use in reproducing predictions that in many cases represent the despondent condition of individual minds rather than the tendency of things in general. There have been prophets of evil in all times and in all countries, but some how or other the world manages to jog along and to improve its condition in spite of them. In an article published in the *Meiji Hyoron*, a modern Jeremiah pours forth his lamentations under four heads. The title of the essay is *Dai-hakwai no Yidai* (The Age of Great Ruin), and the writer attempts to show that (1) the political world, (2) the religious world, (3) the educational world, and (4) the moral world are all in a state of disorganization and corruption. Though occasionally the critic's remarks accurately describe the state of affairs, as a whole, the article is too one-sided to require more than passing notice at our hands.

The *Meiji Hyoron* pens some timely words on the subject of commercial education, the gist of which we now give. There are at present in Japan 17 Commercial Schools of an ordinary type, in addition to the Tōkyō High Class School. These schools are attended by 2,000 pupils. Their annual cost is 100,000 yen. America has 200 Commercial Schools, attended by 44,000 pupils, Germany 80, with about 30,000 students. It is desirable that Commercial Schools should not all be of one type, but should be adapted to the special needs of the districts in which they are situated. This principle was fully recognised in an order issued by the Monbushō in November, 1893. But in practice it has been ignored. Existing Commercial Schools are all of one class, the only perceptible difference between them being that the instruction given is more thorough in some than in others. But there is no attempt to provide schools suited to the industry or trade of the districts in which they are situated, as is done in other countries. The education

given is general, where it would achieve greater results by being made special.

The organ we have just quoted is of opinion that in modern education too little attention is paid to the cultivation of the æsthetic faculties and to supplying students with noble ideals. According to the *Meiji Hyoron* the spirit of the students at the University is growing more and more mercenary.

The *Sekai-no-Nihon* maintains that modern novelists can in no sense be regarded as instructors of the nation. Some of them write in good style and that is all that can be said. Unlike Western writers of romance, they display no intimate knowledge of the customs and modes of life of the Japanese people.

The same magazine asserts that, so far, the present year has been marked by the fewness of books of importance that have appeared. Among those published, by far the larger number are by writers of the old school.

The *Shigaku Zasshi* has an article entitled "The Christians of Kurosaki, Hizen," in which it is stated that a number of images and Christian relics have been found concealed in the walls and roofs of old houses in Kurosaki. These were no doubt placed there at the time of the Tokugawa persecution.

It is stated in the same magazine that under the superintendence of Messrs. Okakura Kakuzō and Fukuchi Mataichi a history of Japanese Fine Art is in course of preparation, which will be translated into French and sent to the Paris Exhibition in 1900.

Writing on Formosa, the same journal says that a paper contributed to the German Asiatic Society by Dr. Riess on Formosa, since expanded into a book, is undoubtedly the most scholarly account of the island that has been published in Japan. The *Shigaku Zasshi* purposes issuing a translation of Dr. Riess' work in successive numbers of the magazine.

In order to celebrate the Tenth Anniversary of its foundation, the Hakubun-kan issued last month a special edition of the *Taiyō*, covering 700 pages and selling at 38 sen per copy. The number is well worth preserving on account of the stock of information it contains. We think its contents merit a fuller notice than we usually accord to a single magazine. A number of first class writers have contributed to its pages and to crown all Mr. Takayama Rinjū, until recently a teacher in the Sendai Second Higher School, now one of the staff of the *Taiyō*, contributes an able article entitled *Meiji no Shōsetsu*, Fiction in the Meiji Era. It is stated that since its establishment the Hakubun-kan has issued 1,176 books and magazines. In commemoration of the anniversary a foreign magazine appears this month called *Gwaikoku Gogaku Zasshi* (A Magazine for the Study of Foreign Languages). It prints contributions in English, German, French, Italian, Russian, Spanish, Chinese, and Korean. The special number of the *Taiyō* referred to contains Mr. Tsubouchi Shōyō's "Character of students at the present time"; Mr. Ayeba Kōson's "Modern merchants"; Mr. Hasegawa Shimei's, "Floating Cloud"; Mr. Yano Ryūkei's *Ukishiro* (浮城) *Monogatari*; Mr. Kōla Rohan's "Great Poets," Mr. Mori Ogai's 選木 *Umorigi*, and Mr. Ozaki Kōyō's *Futari Ayōbo*. The object of reprinting these works is to give specimens of the style of the best modern writers of fiction. Mr. Takayama has made a special study of Japanese fiction and his long essay on this subject is by far the best thing that has been published in recent times. We can only find space for a short epitome of this interesting article. The essayist in his introductory remarks observes that there is no similarity whatever between the development of fiction in Europe and Japan. In Europe this class of literature commenced with tales about the gods, which developed into epic poems; these being followed by Romances, called in Japanese 傳説 *Denki*. But in Japan there was no such process

of development. In the early days of Japanese literature there was no fiction worth mentioning. The only compositions of any merit in the 14th and 15th centuries were the Operatic Songs (*utai*), composed by Buddhists. But these have no real connection with the modern novel. Fiction, strictly so called, began in the Tokugawa era, and consisted of three distinct classes (1) 浮世草紙 *Ukiyo-Sōshi*, (2) 讀本 *Yomi-hon* and (3) 滑稽本 *Kokkei-hon*. The first class, of which Saikaku was the chief representative, consisted of an adaptation of the ancient *monogatari** to the understanding of the lower orders. Writers of the second class drew material from the history of the Ashikaga era and extracted a flavouring from the popular *jōruri* of the age; Santō Kyōden and Kyokutei Bakin being their chief representatives. The most noted of the writers of the third class of fiction, the great wis of the age, were Shikitei Samba and Jippensha Ikku. Judged by comparison with European romance writers Saikaku and Bakin are pre-eminent among Japanese *littérateurs*, reminding one very much of the works of the Sir Walter Scott and Jane Austen. In reviewing the fiction of the Meiji era, Mr. Takayama's first period is from 1868-1885. The chief thing to be noticed, proceeds the essayist, about the novels of this period is the extent to which they are permeated with western thought. The Chinese and Hindu ideas previously introduced into this country found no affinity in our native thought and only acted as an obstacle to progress (*Nihon no shimpō wo samatagarari*). Among the various notions which from time to time Japan has borrowed from other countries nothing has taken such hold of the national mind as English thought and English institutions. During the first decade of the Meiji era the interest of thinking men was centred on politics, and the first successful novels were distinctly political in type and purpose and drew their material from Scott, Lytton and Disraeli. Such were Mr. Shiba's 佳人の奇遇, *Kajin no kigō*, Mr. Suehiro's 雪中梅 *Setchūhai*, and 花間鶯, *Kwakan-ō*; Mr. Fujita's 文明東漸史, *Bummei-tōsen-shi* and Mr. Yano's *Keikokubidan*. But the writer who brought to his task a thorough knowledge of Eastern and Western thought, who was permeated with poetical ideas, and who thoroughly understood the need of the age, was Mr. Tsubouchi Shōjō, whose *Shōsetsu Shinsui* (小説神髓) and *Shōsei Kishitsu* marked an era in the history of literature. Mr. Tsubouchi's wide influence was all exercised in the direction of making the novel a picture of actual life and discouraging the publication of moral-purpose works like those of Bakin and other writers.

Subsequent to the appearance of the above named works a new class of fiction took possession of the public mind. The period of the pre-eminence, with certain modifications, of the realistic novel may be said to be from 1885 to 1895. The most noted writers of this school are Kōjō, Rohan and Bimjō. The last is noted for his attempt to introduce a style in which the colloquial and written language is blended. But it cannot be said that Bimjō succeeded in effecting this laudable purpose. Under the impression that Bimjō's novels were too vulgar to suit the public taste, Kōjō and Rohan took Saikaku's writings as their model and steered the literary ship far away into the seas of polished speech. But this movement had one serious drawback. With admiration of Saikaku's style there revived a love of the minute descriptions of profligate life the portraiture of which was Saikaku's forte.

The realistic novels that were published during the period under review were by no means

of one type. In addition to the class of books referred to above were Namiroku's *otokodate* (chivalry) stories and Riukō's Detective tales. In the latter Japanese fiction reached its lowest point of deterioration. The demand of the best readers of modern times is for historical novels or novels of an ideal type. It cannot be said that the effect of the opposition of the realistic writers to the moral-purpose novel have been satisfactory. The life which these writers have portrayed is of a very limited area. The plots of their novels are all of one type. That busy region, peopled by men and women whose minds are full of newly imported ideas and who are trying to act on them, each in his or her own way, has not been invaded by these novelists. None of the great events of modern times furnish them with subjects. Even our war with China, on which so much depended and whose consequences will be felt for generations to come, has failed to kindle literary and patriotic fire in the minds of our poets and novelists. Most of the tales that have poured forth from the press during the past ten years have left untouched the greatest of themes connected with our human life and have dwelt to a tedious length on its trifling details. The indifference to the burning questions of the day shown by our novelists justifies to a certain extent the theory, propounded in some quarters, that literature is conducive to national ruin (文學亡國論). We wait anxiously to see what the future has in store for us. What species of fiction will gain the ascendancy with us, the romance or the novel? If the latter, we trust that it may be raised here to the position it occupies in the West. Mr. Takayama does not profess to have done more than present leading features of the fiction of the Meiji era. This accounts for the omission of a number of well-known writers. We understand that Mr. Takayama is now in permanent employ as a member of the editorial staff of the *Taiyō*. Hence we may look for farther contributions of an equally valuable character to the essay which we have epitomised.

In the preface to the *Shina Bungaku-shi* (History of Chinese Literature) noticed in our last summary, Dr. Inouye Tetsujirō contends that whatever be the attitude assumed by the nation as a whole to Chinese ideographs, it is quite certain that to Japanese literary men the Chinese language will always occupy the position that Greek, Latin, Hebrew, and Sanscrit do in Europe. A thorough knowledge of Japanese literature must always involve a close study of its original sources. The application of Western methods of study and criticism to Chinese literature is not, in Dr. Inouye's opinion, a task that can be successfully performed either by Western students or by the Celestials themselves. The former find the difficulty of understanding the ideographs enormous. The latter lack the critical faculties and the power of generalising so essential to work of this kind. The Japanese student is specially qualified to deal with Chinese literature in a way that it has never been dealt with before. The *Shina Bungaku-shi* is the first attempt that has been made in the direction indicated. Dr. Inouye has been constantly consulted as to its compilation and in his preface expresses the opinion that the work will supply a long felt want in this country.

According to the *Waseda-bungaku*, the various printing houses of Tōkyō are suffering from insufficiency of compositors and from a low supply of suitable paper. The Kobe paper does not reach Tōkyō in sufficient quantity to supply the large demand of the numerous publishing establishments of the metropolis, and hence paper of an inferior type, such as that manufactured by the Senju Seishi-kaisha, has been in request for some time past. The wages of compositors have been raised over twenty per cent., but still the supply is deficient.

The *Waseda-bungaku* says that biography is in great request at the present time, but that many of the lives that have been written in recent years are by no means accurate, the writers thinking more of style than of the faithfulness of their records.

The same organ calls attention to the paucity of works on Rhetoric in Japan. The writings of Messrs. Kikuchi and Owada on the subject are very elementary. Mr. Takata Hampō's *Bijigaku* makes use of illustrations drawn from Chinese and Japanese sources, but there is still room for more thorough work on the subject, and it is reported that Mr. Shimamura Hōgetsu has for several years had in hand a treatise on this neglected but useful study.

As a result of the examination of some 20 or 30 provincial newspapers, the *Waseda-bungaku* observes that the practice of filling up a large portion of a paper with novels or novelettes is universal. The subjects of these novels relate to bygone days, life in the Tokugawa era and vendetta stories figuring largely. The style of these compositions is neither the colloquial nor the written, but a somewhat inelegant combination of both.

Another sign of the times noticed by the organ quoted above is the increasing demand for Chinese books, a fact on which the *Kokumin Shimbun* and other journals dwell. The price of standard Chinese works is in some cases four times and others seven times what it was a year or two ago. Three reasons for this change are given (1) An increase in the number of specialists engaged in the study of Chinese. (2) A wide-spread reaction from the excessive attention paid to Western learning. (3) An increase in the number of persons who have decided to devote themselves to literature, and a wide-spread conviction among these that a thorough study of Chinese is essential to the formation of a classical style. We learn from the above source that the library known as the Teikoku Zushokan, now situated at Ueno, is to be located in a new building in course of erection. The dimensions of this structure are given as 150 ft. by 210 ft. It is to be built in fire proof compartments, so that in case of a fire breaking out, only the books in one room would be destroyed. There will be accommodation for 565,000 volumes. The total number of books now in the library or stored elsewhere is 400,000, and it is proposed to increase the number by 15,000 every year.

A writer in the *Waseda Bungaku* complains of the varied senses in which the term 意匠 *ishō*, the Japanese equivalent of design, is used, and says that when it is announced by the Bijutsu-Tenran-kai that exhibits will be classified according to their superiority of design (*ishō*) and execution (*gijutsu*) some people are in doubt as to the sense in which the term *ishō* is used. There is, we venture to think, no ground for such an objection. There are hundreds of words in the Japanese language that are used in a variety of senses, but that does not prevent their being perfectly intelligible in any given context. Like the English word design, *ishō* is used sometimes in other senses, but in the instance quoted it can only mean the idea that is embodied in shape in each exhibit, by which the amount of originality possessed by the artist is expressed.

The *Kōko-bungaku* has made its farewell bow to the literary world and, after an existence extending over a few months only, after uttering its usual string of anathemas on things in general, and, with charming modesty, comparing itself to a gem that is degraded by associating with tiles and ordinary stones, makes its exit from life. But it threatens to reappear under a new name. Never were prayers more needed for the souls of the dead, than that these defunct writers may rest in their graves and trouble the world no more!

The *Kyōiku jiron* publishes a sort of lecture delivered by Mr. Izawa Shūji on Education in Formosa, from which we cull the following details. Up to the end of last year there were 14 Native Language Schools. This year two more institutions of the kind have been started, and additional branches of already existing schools have been established. There are 3 Normal Schools and a number of Girls' Schools. The educational establishments hitherto existing are

* This word is used in a variety of senses. As Tsubouchi indicates in his definition of the term, it is applied to writings in which no attempt is made to separate fact from fiction, in which traditions concerning persons and events are retailed without any attempt at criticism. Perhaps it would be true to say of the numerous tales which bear the title *monogatari* that they are a species of romance, Mr. Takayama to the contrary.

† The latter is printed in full in the number of the *Taiyō* which we are reviewing.

of three classes. (1) There is the 書房 Shōbō or Elementary School, which is chiefly attended by poor children, over a thousand of these schools are to be found on the island. (2) There is the 義學 Gīgaku, an elementary school for the rich. (3) And there is the 書院 Shōin, the highest school of all, 3 or 4 of which exist in every Prefecture. The latter are supported by dues collected on land belonging to the schools and the school fees. They are what we should call endowed schools. The aim of Mr. Izawa and his fellow-workers is to improve the condition of existing schools by confining instruction to important subjects and to endeavour to supplant the Chinese influences which have hitherto hindered progress in these institutions. In Formosa children are expected to attend school at the age of 8, spending six years in elementary and four years in what are called in Japan Middle Class Schools. The hours of study are 28 per week in elementary schools and 33 in middle schools. Special measures are to be taken to meet the educational wants of the barbarians who live entirely apart from the ordinary inhabitants.

We learn from the *Kyōiku jiron* that Dr. Inouye Tetsujirō and Dr. Tomi-i Masa-aki have been sent to Paris by the Mombushō to attend the Oriental Congress to be held there in September next.

A German-Japanese Dictionary compiled by Messrs. Taniguchi Hidetaro and Watanabe Jun, the first edition of which was published last year, has now passed through a second edition. The subscription price, the time for which has passed, was 1 yen 35 sen, the Okura-Shoten, Tōri, Ichome, Nihonbashi being the publishers.

Mr. Shimada Yutaka's *Wayaku jijū* has now reached its fifteenth edition. It sells at 1 yen 85 sen at the Okura-Shoten.

Mr. Tokutomi Kenjiro has published in Japanese a life of Tolstoi, which is said to be very eloquently written and to be founded on a special study of the career of the great reformer.

A work called *Sekai kakugen-shū* (a Collection of the World's Proverbial Sayings) has appeared, says the *Taiyō*, but the task of collecting and publishing the proverbs of Japan and the compilation of a good Dictionary of *Fukugo* (compound words) still remain unaccomplished.

Mr. Takahashi Gorō has started a magazine called the *Ei Doku Shibun Kensa* (研鑽) "Studies in English and German Literature," which is to appear monthly, the object being to explain the difficult passages met with in the writings of English and German authors. The first number, which appeared on the 1st inst., discusses Byron, Pope, Tennyson, Emerson, Goethe, Schiller, Lessing and other poets and also a part of Carlyle's prose writings. The price of each copy is 50 sen.

Mr. Takahashi Gorō has also published a work entitled *Yebun taishū chūshaku*, "A Collection of Extracts from Great English Authors, with explanations." It sells at the Yūhikaku, Kanda, Tokyo, at 30 sen per copy.

The *Kokumin-no-Tomo* is noted for its statistics. A recent number furnishes us with a table which shows the number of students that have graduated at the Imperial University in the course of twenty years, arranged according to subjects. The period embraced extends from 1877 to 1896. Law and Political Science stand first, with a total of 821 students, 577 Law, and 244 Political Science. Next comes 工業 *Kōgyō*, Industries, with a total of 645, Engineering being at the head of the lists included under industries, with 210 students; Mining standing next, with 117, followed by Mechanics, with 94. Then come Applied Chemistry, with 80, and Electricity with 63; next stands Medicine, with 563 students, 46 of whom are pharmacologists. Agriculture has been followed by 456 students. Science shows a total of 196, being divided up as follows: Physics, 64; Chemistry, 56; Zoology, 31; Zoology, 17; Botany, 12; Mathematics, 12; Astronomy, 4. Literature, 146;

divided as follows, Philosophy, 48; General History, 30; Japanese History, 23; Japanese Literature, 20; Chinese Literature, 8; English Literature, 7; Philology, 7; German Literature, 4. The total number of graduates is 2,777. In commenting on the above figures the *Kokumin-no-Tomo* approves of the prominence that Law and Medicine have assumed, and thinks that the times demand lawyers and doctors in larger numbers than engineers and farmers. But at the same time the statistics show grave deficiencies. The manufacture of gunpowder has been studied by one man only, the manufacture of guns by two, and there are only 31 naval architects and 63 electricians.

The next table presented by the *Kokumin-no-Tomo* includes the students at Government Schools, giving the number of graduates in each subject up to the end of 1894.

1.—Education.....	6,497
2.—Military Science	1,971
3.—Telegraphy and Postal Communication	444
4.—Navigation	364
5.—Industry	348
6.—Commerce	338
7.—Agriculture	231
8.—Fine Arts	203
9.—Naval Science	122

Lastly we have statistics referring to public (公立) private (私立) special or industrial Schools. The third table published by the *Kokumin-no-Tomo* is as follows:—

Subjects.	A.D. 1879.	1890	1891.	1892.	1893.
Law	5,476	5,521	6,622	6,259	4,166
Philosophy	346	288	277	287	290
Agriculture	313	427	445	601	470
Commerce	1,220	1,338	1,473	1,500	1,628
Industry	474	593	569	610	539
Medicine	1,930	1,562	1,701	1,758	1,947
Veterinary Science	104	74	70	90	121
Mathematics	1,202	1,257	922	897	907
Fine Art	130	94	131	99	113
Miscellaneous.....	394	575	1,053	566	522

It cannot be said, observes the *Kokumin-no-Tomo*, that these statistics show a due appreciation of the two great sources of revenue on which the nation has to rely in the near future: commerce and industry. It behoves the Government to pay special attention to this subject and to mould its educational policy so as to supply the demand of the times.

The *Shakai Zasshi* writes on the difficulty of determining what are national characteristics. Last year Mr. Kishimoto Nobuta delivered a lecture entitled *Nihonjin no go takushitsu* "Five National Characteristics of Japan," which we observe is being reproduced in Romanji in the *Yachi gusa* (八千草). Mr. Kishimoto's characteristics were (1) A love of cleanliness. (2) Activity, brightness and æsthetic taste. (3) A love of the practical (器用 *Kiyō ni shite*) and high development of the assimilative faculty. (4) Quietness of manner and great respect for the laws of polite society. (5) Incorruptible, because caring little for money, with a deep regard for what is just and right. The *Shakai Zasshi* thinks that it is somewhat premature to generalise in the way Mr. Kishimoto has done, but is in favour of a study of provincial mental peculiarities as a preparation for an understanding of the far more complicated subject, national characteristics. This topic has been treated in a partial manner by various organs, some of which are quoted by the *Shakai Zasshi*. In the *Meiji hyōron* Mr. Sakata Shinken discusses the peculiarities of the Tosa men in the following terms. "The Tosa men excel with neither the pen nor the sword, but with the tongue. In the matter of speech they are not to be beaten, but they possess the usual faults of glib talkers, what is lightly projected is as lightly relinquished. Few of their enterprises are brought to a conclusion. Their levity of spirit results, among other things, in the prevalence of divorce in Tosa to an extent not found elsewhere, unless it be Kumamoto. They think of reputation rather than of profit. Anything made to appear plausible is likely to succeed in Tosa. To de-

ceive them names only are required." In the *Kokumin-no-Tomo* some little time ago an article entitled "Northerners and Southerners" discussed the prevailing dispositions of the two classes and traced them to the effect of the climate, &c. In the *Nihonjin* Mr. Kuga Minoru instituted a comparison between the inhabitants of Oshū and Kyūshū and Mr. Miyake Seisuei discussed the unassuming and sympathetic character of Kaga men, together with some of its causes. Owing to ages of oppression the spirit of the inhabitants of Kaga grew so servile as to supply a term to the Japanese language which is used even now, namely *Kashū-Konjō*. Such studies as these appear to the *Shakai Zasshi* to be worthy of encouragement and likely to lead to results not to be attained by generalisations of a vague type.

"OF TRIFLING MOMENT."

Of trifling moment, do you say, Mr. Editor? Well, have your way. Yet, I would have you recollect that poor humanity delights most in affairs that appear of trifling moment. Life, in fact, is principally made up of trifles: though Young, in one of his least remembered Satires, and viewing the matter from another standpoint, solemnly warns us:—

Think naught a trifle
..... Moments make a year
And trifles life.

Master Young notwithstanding, we do consider ourselves and our chief pursuits, in all verity, nothing but trifles—trifles light as air. What wonder then that we delight in trifles; dwell fondly on trifles; talk of trifles; entertain trifles; fret over trifles; are more than satisfied with trifles; slave hard for trifles—only to despair of those trifles when the object is at last attained! Trifling things of little moment, but mainly concerning ourselves, can generally provide a pastime for most of us when other and more weighty matters bore and weary. And so, methinks, I will go my way—as so it please you—a mere Chatterer, dealing of things "of trifling moment."

In sober truth, however, there has been little stirring this past week in our small Sleepy Hollow. Yet I would not have you believe that our minds have been absolutely bereft of subjects on which to chatter. Far from it. For instance, White's bowling trick on Saturday last caused some slight talk for an hour or so. It was a surprise—more than a trifling surprise—even unto himself. That is the best of cricket, as in other good forms of sport, it is full of surprises, and you never know your luck.

And this reminds me that during the stay of H.M.S. *Narcissus* at Kobe, about Jubilee week, the Ladies of the southern port met the representatives of Her Majesty's senior service upon the tented field. I wonder if the Captain of the Y.C.C. could induce the Ladies of Yokohama to emulate the achievements of Kobe's fair dames and dainty damsels? I am sure a Ladies' Match would prove a most attractive sight and would even draw a larger crowd to the Cricket-field than gathers at a baseball match.

Another agreeable triviality for which all would be thankful these dull days, would be a living Chess-match. Some years ago a very pleasant afternoon's amusement was provided on the lower lawn of the Bluff Gardens by a living Chess match, the memory of which lingers still in the thoughts of many who were present. Why cannot the project be revived? It only wants some one to take the initiative, and the thing would work as smoothly as did the last.

Trifling among the papers that came in by the last mail I came across the following gem of a story which is said to be going the rounds of the Press. It concerns Chang Yin-hwan, who went to London for the Jubilee festivities. Chang was the Chinese Minister Plenipotentiary at Washington during the Harrison Administration, and he gave many elaborate dinners. At his first large reception his American friends coached him as to the etiquette of the occasion.

As his guests passed out he was told that they would say they had spent an enjoyable evening, and he must reply: "I am very glad." Chang Yin-hwan played his part as host very well until a tipsy official came along and said, "Well, I must go now." "I am very glad," said the Minister, in a way as if he meant it.

Notwithstanding the cold, wet weather that attends so persistently upon our present poor apology for a summer, the little village of bathing houses that have sprung up of late years along Honmoku Beach are occupied nearly every evening. I have, however, noticed but few of the fairer sex indulging in natatory diversions: they leave the sport to their harder brothers and cousins, preferring to look on at the fun from the cosy ease and shelter of verandah chairs.

I hear dismal reports from Nikko and Karuizawa of the samples of weather that are being doled out this summer at these hill-retreats. Rain, fog, rain, is the burden of the cry from both places. But the missionaries, notwithstanding, are flocking in larger numbers than ever to the latter place. Nikko and Chusenji are quite given over to Legation officials and School-men nowadays.

The sub-editor of a Hongkong contemporary observes that "knotty points" are always cropping up at cricket. This remark is *apropos* of an incident that occurred in the match between Gloucester and Surrey. In playing forward at Hayward, Murch, the Gloucester professional, was beaten, and Marshall, handling the ball very smartly on the leg side, appealed for stumping, and threw the ball up without waiting for Barlow's decision. Barlow's reply was "Not out," but Murch, who is rather deaf, did not hear this, and left his ground. Marshall immediately pulled a stump up, appealed for the run-out, and got the decision. The same thing occurred in a match with the Australians, but Murdoch, with that sportsmanlike spirit which characterises our Australian cousins, allowed the batsman to resume his innings.

I notice the papers at Home—capital H, please Mr. Printer—are all "going one better" with anecdotes about the Queen. Here is one retailed by the *Daily Telegraph*:—"Pray, my lord," asked the then Maiden Queen of the Duke of Norfolk, Earl Marshal, "where am I to wear the Garter?" The Duke said he fancied he had seen a print of Queen Anne wearing the Garter on the left arm. This and other authorities were duly consulted, and, accordingly, Her Majesty has ever worn the Garter on the left arm upon all occasions of State. Good Queen Anne to be so conveniently far-sighted.

Monday evening's concert deserved much better support than was accorded it. The gem of the evening was the trio by Miss Fiske, Mr. Morse, and Mr. Twinning—Braga's "La Serenata"—the violin, voice, and piano being in perfect accord. If little Miss Fiske's teaching and musical training proceeds on sensible lines she should develop into a beautiful violin-player, a naturally good ear being allied to remarkable musical sensibility.

I understand that \$2,500 have been promised towards the building fund of the new cricket-pavilion in Yokohama. The other \$1,000 ought not to take long in raising. Why cannot it be raised by a few autumnal smoking concerts? There is plenty of idle talent laying around in our big port ready for the organizer.

The case heard in the U.S. Consular Court at Kobe this week, in which a *jinrikisha* driver unsuccessfully charged an Ensign in the U.S. Navy with assault and battery, illustrates most fully the curious and aggravating tendency that many of these men have to badger a person who has paid more than the legal fare. The story told in the Kobe Court reminds me of a scene I once witnessed on the verandah of the old Oriental Hotel—now long-since burnt down. An old resident had been over to the Homeland on a year's vacation and returned by an American mail steamer. At the hatoba he was met by the usual group of wel-

coming friends, and after the usual preliminaries got into a *jinrikishi*. He gave in English the address of the Oriental Hotel, thereby undoubtedly giving the coolie the impression that he was fresh to Japan. Landing at the entrance to the hotel the fare pulled out some small change and gave the coolie ten *sen*. "More five *sen*" was the immediate cry. Then to the astonishment of the coolie, my friend, in courteous Japanese, asked the man to return him the ten-*sen*-piece. Which was done, and the proper fare, five *sen*, was then placed in the outstretched palm. The situation was too much for the astonished fellow—"there wasn't a word," as the story runs—and he left the hotel steps the most crest-fallen *jinrikishi* man I have ever seen.

Life is full of subtle ironies. Chatting the other day with a friend intimate with many officers in the P. & O. service, I learnt that the chief engineer of the unfortunate *Aden* was taking home to a widowed sister-in-law the personal effects and belongings of his brother, also an engineer, who had been drowned in Bangkok some time last year. Could Fate have been more ironical? I think not.

The CHATTERER.

NEWS OF THE WEEK.

The new U.S. Consul at Hiogo and Osaka, will be Mr. Samuel S. Lyon, of New Jersey.

Prof. Miki Kasawa, of the graduating Class of 1890, has received the degree of M.A. at Wabash College, Crawfordsville, Ind.

Judge Yamamoto, of the Kobe Local Court, before whom the case of assault brought by Ensign Everhard against the *jinrikishi* coolie Takamoto Genzo, was heard, acquitted the defendant on the ground of insufficiency of evidence.

The *Forodsu Choho* learns that the torpedo picked up on the 15th inst. by a fisherman off Honmoku, has been returned to the British Naval authorities, to whom it was found to belong, and that the fisherman who found it, Mase Kokichi, has received from them a reward of 50 *yen*.

The *Nippon* announces that all arrangements are now complete for minting the 20-*yen* gold coins at the Osaka Mint. Owing to the withdrawal of the silver one-*yen* pieces, five million *yen* worth of 50-*sen* pieces have to be minted this year. Working hours at the Mint now extend from 6 a.m. to 9 p.m. and all Sundays stoppages and holidays are abolished for the present.

The *Tokyo Shimbun* reports that Mr. Doi, Chief of the Correspondence Section; Messrs. Iwata and Takiguchi, engineers; Oku, Commissioner, and Imai, Director of the Post and Telegraph Office in Taipei; and Kada Kin-saburo, Inspector in the service of Messrs. Okura & Co., have been arrested and their houses searched on charges of suspected fraud.

While the British steamer *Saint Ronald*, Capt. W. H. Clements, was lying at anchor outside the breakwater early on Sunday morning, a small Japanese steamer, outward bound, collided with her, loosening four of the *Saint Ronald's* plates and doing damage to the extent of about \$5,000. As the *Saint Ronald* was at anchor at the time of the accident it leaves the Japanese steamer to blame, and we believe satisfactory arrangements have been made by her owners to repair the damage.

An extraordinary general meeting of shareholders of the Nagasaki Hotel, Ltd., has been held to decide upon adding a third storey to the building. At an ordinary meeting held the same day, the Directors' report and accounts, after a little discussion, were adopted. The Company proposes to carry a stock of wine of the value of \$20,000, which would be imported at once in view of the rise about to take place in import duties.

We learn that it was owing to Marquis Ito's advice that Prince Arisugawa changed his return

route, and decided to come home by the C.P.R. line. He is expected on the *Empress of India*, that leaves Vancouver on August and. Marquis Ito, according to a private letter received in Tokyo, was exceedingly pleased with the Canadian Pacific Railway Company, who did everything in their power to add to his comfort and convenience.

Mr. Consul-General Hawes gave a brilliant reception and ball in Honolulu to celebrate the Diamond Jubilee. The Hawaiian journals devote columns to descriptions of the decorations and the festivities, which appear to have been on a grand scale. Mr. Hawes, during his residence in Japan, often showed that he fully understood the science of hospitality.

The deficiency therefore amounts to 14,025,100 *yen*. If it is found to be impossible to put the new tariff into operation from next year, there will be a further deficiency of seven million *yen*, making a total deficit 21,025,104 *yen*. The enforcement of the Tariff, together with the increased taxation on *salt* would augment the revenue by eleven million *yen*, and the deficit then remaining would easily be supplied by some alterations in the ordinary taxes, even without resorting to revision of the land tax, an invariable source of strife between Government and people.

The thirty-seven cabin passengers rescued from the wreck of the steamer *Sultan* by the P. & O. steamer *Valetta*, have presented a letter of thanks to Capt. Gadd, expressing their admiration for his able management of the work of rescue. The *Sultan* was lost in the Arabian Sea on the 10th June, and the crew of the *Valetta* managed to save 123 persons—a marvellous feat considering the heavy sea that prevailed and the helpless condition of the pilgrim passengers on the *Sultan*.

Mrs. Lightfoot has won the Ladies Singles in the Kobe L. T. Spring Handicaps, defeating Miss E. Smithers in the final by three sets to love. The Ladies and Gentlemen's doubles were won by Mrs. Lightfoot and H. Grimble, who beat Mrs. Matt Smith and F. E. Wilkinson by three sets to love. The Gentlemen's Doubles fell to E. Buxton Forman and F. E. Wilkinson, who met in the final H. C. Brushfield and H. Grimble—three sets to one. Buxton Forman (owe 40) also won the Singles, beating H. Grimble (scratch) by three sets to one.

On Tuesday, June 29th, fire broke out at Folsom-street Wharf, San Francisco, and spread to the ship *Commodore* and the little schooner *Katie Mc*. The latter was completely destroyed, while the former was badly damaged. The wharf, was soaked with tar and burnt quickly, involving a loss of \$28,000, while other damage to ships and stores brings the bill up to \$62,000. The Japanese training-ship *Hiyei* sent a fire-party to the scene which rendered efficient aid in subduing the flames.

Carrying this excess into the extraordinary expenditures a considerable deficiency for the 31st year is still apparent, as may be seen from the following:—

	YEN.
Extraordinary Revenue	80,945,331
Excess of Ordinary Revenue.....	18,163,940
Total	99,134,375
Extraordinary Expenditure	69,134,375
Extraordinary Departmental Expenditures	17,000,000
Total	113,134,375

The *Hochi Shimbun* says:—The export trade of Japan during the six months from January to June of this year shows an increase of *yen* 21,138,565 as compared with the same term last year. Raw silk shows an increase of 1,048,806 *caties* and 7,952,180 *yen* in value as compared with the first half of last year; brocade silk, an increase of 15,011,510 *tan*, of 4,840,006 *yen* in value; *habutae*, an increase of 125,141 *tan*, of 2,154,130 *yen* in value. Tea shows an increase of 5,307,946

catties, or yen 1,907,995. The import trade during the period shows an increase of yen 18,674,422 as compared with the same term last year. Rice shows an increase of 2,271,656 piculs, valued at yen 7,210,401; raw cotton, an increase of 31,888,746 catties, or yen 5,454,691; sugar an increase of 47,018,539 catties, of yen 2,738,072 in value. The import of machinery is increased by yen 3,630,553; locomotives and cars, an increase of yen 1,427,889.

The *Kokumin Shimbun* declares that the postal business of Japan has entirely outgrown the capacities of the present governmental system. In Tokyo alone, the staff is undermanned to the extent of 300 assistants. Of course one of the chief reasons why the postal service is so unpopular in Japan is the low wages paid to employés; but there is no gainsaying the fact that the Government fail to perceive that the methods and staffs of ten years ago are wholly insufficient to serve the needs of the present day. In other words, the Authorities make no effort to keep the Post Office up to date either in the number of men employed on the staff or in methods of dealing with the ever increasing business of the Department.

The *Yorodsu Choho* now gives particulars of the plot recently organised for the purpose of destroying the commercial supremacy of the Mitan Bishi and its kindred companies. The journal declares that the association is called the "Alliance for the protection of practical industry," and in its ranks are to be found many learned men who have studied very thoroughly the question of national economy. These gentlemen will accordingly call on the Ministers of State and the head officials of the Bank of Japan, and in that way endeavour to promote the ends the Alliance has in view. The resignation of Baron Iwasaki from the Presidency of the Bank of Japan is also to be accomplished. In other words, an intrigue is to be set afoot against Baron Iwasaki.

According to a paper by M. Gauttard, read before the Société d'Ethnographie, "there have been striking changes in the Japanese national type of face since they began to adopt European customs. Many of the children seem to be losing the yellow tinge of the skin and the flat nose of their ancestors. On the other hand, Europeans long settled in Japan have lost their red and white complexion, and come to resemble the Japanese. A similar change has been observed in Europeans resident in Gambogia. Pigmentary spots on the bodies of Chinese and Japanese infants would seem to point to the remote origin of these Far Eastern peoples in some black race of Oceania."

The *Kokumin Shimbun* remarks that despite the lack of apparent activity on the part of foreign silk firms in Yokohama, orders have been steadily given for fresh supplies during the past week. But foreign buyers appear willing to fill only such orders as are absolutely necessary. On the 20th instant, filatures were sold to Messrs. Robison & Co., at the rate of \$810, and to Messrs. Sieber, Brennwald & Co., at \$775, while hanks were taken delivery of by Messrs. Bavier & Co. at \$815. The last two firms appear desirous of continuing purchases, and should sellers come down in their ideas considerable business might be done. As for tea, the market continues prosperous. Prices exhibit a higher tendency, even inferior quality teas having risen by one dollar within the past few days.

On Thursday morning last week two young men embarked in a small boat at Yokohama and rowed round the coast to Kanazawa. After landing and having a stroll, they returned to their boat and passed the night in it. On Friday morning they rowed to Tomioka and landed there in a very exhausted condition, having no provisions in the boat. Some farmers in the village however hospitably gave them food, and thus refreshed they started at 3 p.m. to row back to Yokohama. A violent squall sprang up suddenly shortly after, and the boat was capsized. Fortunately for the occupants of the boat the accident was observed from a steam launch moored at Nagahama, and

the officer at once went to their rescue and taking the exhausted men on board, brought them to Yokohama. The *Boyeiki Shimbun*, from which we take these particulars, gives the names of the young men as Thomas Crapes, 21, a British subject, and John Campbell, 17, American.

The *Nichi Nichi Shimbun* has some notes of the progress made on the O-U section of the Government railway, from which we gather that the work is progressing very satisfactorily. The celebrated precipice between Fukushima and Yonezawa has been most successfully negotiated. Fifteen out of the sixteen tunnels along the track have been cut, and the last is expected to be completed by September. The bridges and permanent way are found to answer all requirements, and it is within the range of probability that traffic will be run over the line between Fukushima and Itaya within this year. Through communication with Yonezawa may therefore be expected soon after March, 1898. Surveys are being conducted over the second section of the work, that between Yonezawa and Yamagata. Traffic has already commenced between Ikarigasaki and Aomori, while the work between Ikarigasaki and Odate is proceeding quickly, despite the eight tunnels that have to be constructed within a distance of only sixteen miles.

This is the Poet Laureate's Ode on the Diamond Jubilee:—

The dew was on the summer lawn
The roses bloomed, the woodys were green,
When forth there came, as fresh as dawn,
A Maiden with majestic mien.
They girt a crown about her brow,
They placed a sceptre in her hand,
And loud rang out a Nation's vow,
"God guard the Lady of the Land!"
And now the cuckoo calls once more,
And once again June's roses blow,
And round her Throne her people pour,
Recalling sixty years ago;
And all the goodly days between,
Glory and sorrow, love and pain,
The wifely Mother, widowed Queen,
The loftiest as the longest Reign.
She shared her subjects' bane and bliss,
Welcomed the wise, the base withstood,
And taught by her clear life it is
The greatest greatness to be good.
Yet while for Peace she wrought and prayed,
She bore the trident, wore the helm,
And, Mistress of the Main, she made
An Empire of her Island Realm.
So gathering now, from near, from far,
From Rule whereon ne'er sets the day,
From Southern Cross and Northern Star,
Her People lift their hearts, and pray:
Longer and longer may she reign
And, through a summer night serene
Whence day doth never wholly wane,
God spare and bless our Empress-Queen!

In order to investigate various preliminaries with regard to the enforcement of the revised treaties, commissioners were appointed from among the high officials in each Government Department. The scheme of investigation is said to be very wide, and directly connected with the Departments of Education, Communications, Justice, Agriculture and Commerce, Finance, Foreign, and Home Affairs. The most important questions under discussion refer to the incorporation of the foreign Settlements into the Japanese communes; the ownership of industrial institutions, and the protection of copyrights. The second of these problems had already been investigated by the Department of Agriculture and Commerce, but the first and the third require fuller consideration. Should Japan join the International Copyright League, not only will it be impossible for her to translate and publish works under the League's protection, but considerable trouble will also be incurred in keeping control over translators. Moreover, the progress of her civilization may be seriously affected by these circumstances. The incorporation of the foreign settlements into the Japanese communes will no doubt be attended by difficulties, and questions will arise in dealing with property owned by foreigners, and in other matters concerning religion and

public health. Schemes are now being considered to minimise friction as far as possible, though it is unlikely that the Committee can determine all the minor points that may arise. To facilitate matters, part of the work of investigation has been transferred to the respective Departments concerned, the commissioners taking upon themselves the responsibility of formulating a general policy. The summer vacation is already at hand, and no remarkable progress can be expected until autumn or winter.

The vernacular press has been publishing various rules drawn up by different Guilds of artisans throughout the country, having particular reference to the hiring of workmen, the service of apprentices, etc. The Paper Industry Guild of Shizuoka declares that all engagements of workmen or apprentices must be for a certain period of time, such period to be stated in the agreements drawn-up between the parties. Employers of labour are not to induce workmen to leave another master's employ under any consideration whatever. If a workman or apprentice fraudulently leaves service, he is not to be engaged by another employer of labour belonging to the Guild. The Guild of Silk Weavers have resolved that all engagements of artisans must be for a period not less than one year. Two days in each month are given to apprentices for rest, but this provision does not cover Government festivals and holidays. All apprentices and workmen are to be entered in the Guild's books and their movements, fraudulent and otherwise, are to be notified to every member. Similar rules have been drawn up by the Lacquer dealers of Wakayama and the Porcelain Corporation of Matsuura, Wakayama Prefecture. The latter will only take apprentices from the Apprentices School (Toei Gakko) of the Prefecture.

The *Mainichi Shimbun* remarks that the financial difficulties of the Treasury in regard to the forthcoming budget are not so great as was at once time expected. After rigorous cutting down of all unnecessary expenditures, it is found that the ordinary revenue expected next year may reach yen 130,845,334 and the ordinary expenditures will be yen 114,681,294, leaving a surplus of yen 16,163,940. Such, at least, are the figures given in a memorandum drawn up by the Finance Department. It has been semi-officially announced that all export duties will be abolished from the 31st year of *Meiji*, and none are included in this preliminary estimate. The new tariff, the *Mainichi* understands, will be enforced at the same time as the export duties are abolished. That means an increase in Customs duties of about 7,000,000 yen. The estimates given above do not include the 20,000,000 that will be required by the various Departments to efficiently carry out the reforms and developments now under discussion, but this money will be provided under the head of "extraordinary expenditures." We arrive at the following figures for the next Budget:—

	YEN.
Ordinary Revenue	130,845,334
Ordinary Expenditure	114,681,294
Excess of Revenue	16,163,940

Another periodical has appeared in Tokyo. It is called "The *Gaikoku Gogaku Zasshi*," or foreign languages magazine, and its principal object is to assist students to acquire English, French, German, Italian, Spanish, Russian, Chinese and Korean. The book is a portly volume, containing 200 pages of reading matter, and the price is 25 sen a copy, or 2.70 yen per annum. The enterprising publishers (the *Hakubun-kwan*, Tokyo) must anticipate a very large sale if they hope to recoup expenses at such a price. Mr. B. Ohashi is the editor. We judge that he has no English assistant, for though the book—we refer to the English portion—is wonderfully free from errors and does much credit to his scholarship, there are a few solecisms that could not have escaped an English eye. On the front page is an excellent portrait of the Queen, and on succeeding pages

are pictures of Dr. Florenz, the Rev. A. Lloyd and Mrs. Lloyd, Mr. N. Omura and Mr. N. Kanda. As for the contents, they are very varied—essays, lessons, conversations, letters, poems, extracts, news items, current events; something for every-body in short. Mr. Lafcadio Hearn contributes a fine rendering of *Fiso no Wasan*, that infinitely pathetic ballad of the dead children; and Mr. Yone Noguchi finds a corner for his "Opium vapours rocking about the dreaming shore of April-earth." We can not but admire and respect the courage and industry that preside at the composition of the numerous works now issuing from the Tokyo press, and we can not but look forward with misgivings to the prospects that await many of them. The *Gaikoku Gogaku Zasshi*, however, ought to find a purchaser in every student of any of the many languages to which its pages are devoted. It is a substantial aid to national enlightenment, and we wish it a large measure of success.

The *Nichi Nichi* says the Government is in possession of a report that the rioters lurking among the Auchen-pun hills in Formosa, are dressed in light green garments. They number about 200, and possess rifles and swords. Some of them are not conversant with the Formosan tongue. While a section of the natives are hiding in the woods and hills, in fear of the rioters, others disclose a reluctance to afford the Japanese any information regarding the whereabouts of the insurgents. Many isolated attacks on small villages are reported as well as encounters of bands of armed insurgents with Japanese soldiers and gendarmes. The result is always the same, defeat and flight of the rebels, with little or no casualty to the Japanese forces.

Yokohama, observes the *Mainichi Shimbun*, is fully maintaining its reputation as the leading port of the Empire. A year or two ago it seemed as though Kobe would wreat the palm for business activity from the older port, but the returns for the past eighteen months disclose the fact that these anticipations are not yet realized. The trade of Yokohama for the first half of this year shows an increase of four times over and above the figures for the corresponding period of last year. The following table of the trade of the port—compiled from Customs returns—should prove interesting:—

Exports.	First half 1897. Yen.	First half 1896. Yen.	Increase.
Copper	1,663,968	321,833	1,452,439
Rice	31,592,804	12,570,319	19,022,485
Waste silk	1,453,177	678,804	774,373
Cottoncrepe	341,127	153,180	187,947
Cotton yarn	669,889	221,409	448,480
Habutsu	6,985,366	2,162,899	4,822,467
Tea	4,344,949	1,659,017	2,685,932
Wheat straw braid	1,149,794	458,758	691,036

Mr. Yokoyama Masao, manager of the Statistical Association, says the *Mainichi*, presented at the ordinary meeting held on the 3rd instant a comparative table showing the increase in population throughout Japan. The following shows the average increase of population arising from the difference between births and deaths for the past ten years, the percentage taken per one hundred inhabitants:—

	Increase.	Population per square ri.
Hokkaido	1.13	48
Japan proper		
Northern Division (Fukushima, Niigata and all place northward)	1.00	1197
Central Division	0.85	2525
Western Division (Wakayama Nara, Kyoto, and all other places westward)	0.43	2642
Shikoku Division	0.53	2414
Kiushu Division	0.56	2183
Average throughout the empire	0.71	1617

From the *Mainichi Shimbun* we learn that a special general meeting of the Nippon Railway Company is to be held on the 7th proximo to discuss matters relating to the subsidy and the increase of capital. The reasons for the increase of capital are as follow:—An increased capital of twenty-six millions of yen is to be raised to cover the expenses incurred in constructing subordinate lines for a length of 140 miles in the most important parts of the 1st, 2nd, 3rd, and 4th sections of the railway, as well as the Shinagawa and Tsuchiura railways;

and for purchasing and extending the Ryomo Railway. The cost of these undertakings is estimated at 9,862,872 yen. The augmentation of trains required by the progress of railway enterprise, as well as other extensions, demands an outlay of 15,854,900 yen, while reserve funds are required of no less than 282,228 yen. The above outlays together amount to twenty-six million yen. This capital of twenty-six million yen will be divided into 520,000 shares to be distributed among existing shareholders at the rate of 1/2 share for every two shares held by them on the 3rd October, and the remaining shares are to be offered to the public.

The *Mainichi Shimbun* publishes a report of the Finance Department compiled up to the end of June showing the number of companies and banks in Japan, as well their capitals, which is as follow:—

Companies.	Numbers.	Capitals. Yen.
Commercial	939	130,351,815
Industrial	932	159,102,268
Agricultural	88	2,176,815
Total	1,959	291,630,917
Banks.		
Nippon	1	30,000,000
Specie	1	12,000,000
Industrial	1	10,000,000
National	98	28,520,000
Savings	191	16,570,000
Joint Stock	974	177,240,920
Ordinary Partnership	27	5,453,900
Limited Liability	95	8,340,674
Private	96	4,490,020
Total	1,457	285,774,514

The *Kobe Herald* devotes two columns and a half to the case brought in the U. S. Consular Court there by a *jinrikisha* man against Ensign L. H. Everhart, of the U.S.S. *Yorktown*. The alleged assault and battery took place on the 14th inst., when accused hired the man's vehicle for conveyance to the Tokiwa, Suwayama. It appears that the man was paid off and then requested more money, and when this was refused, pulled accused by the coat-sleeve. Accused warned the man that if he did not desist he would strike him. Then the coolie tried to pull Mr. Everhart round, whereupon he struck the man over the head. Complainant at once seized the cane and then accused pulled out a revolver and pointed it at the man. A mob collected as soon as the coolie cried out for help and accused had a run for it until the Rev. W. P. Turner's house was reached; there he obtained shelter. The complainant in his statement said that accused had cut him with a knife, but this he retracted during cross-examination. The Consular Judge having carefully considered the evidence was of opinion that the complainant was the aggressor from beginning to end and that the accused merely used just such force as was absolutely necessary to protect himself from danger. In view of what he had said he honourably acquitted the accused.

I learn (states the London correspondent of the *Manchester Guardian*) that the Foreign Office has made up its mind that the present system of British representation in Shanghai, by which the Chief Judge of the Supreme Consular Court is also Consul-General, is a failure, and must not be continued, after Sir Nicholas Hannen's retirement from the joint offices. The Shanghai community has constantly protested against it as ill judged and not conducive to British commercial interests, and some of the important Chambers of Commerce at home have joined in the protest. It was introduced in the first instance by Sir Philip Currie when he was Under Secretary, and the scheme of uniting the two offices, heretofore held separately, was designed to save money, an object which, in fact, was not secured. Sir Nicholas Hannen, it is understood, will shortly retire on a pension, and then the old system of a judge for the judicial duties—which include every treaty port in China, and are both appellate and original—and a wholly independent Consul General for the consular and diplomatic duties, will be revived. I may mention that Mr.

Mowat, the chief judge at Yokohama—where, oddly enough, the old system was left undisturbed, although the Legation at Tokyo is only twenty miles off, and the inconveniences of the new one would not have been felt to the same extent—is about to retire on a pension. Some makeshift arrangement will be made there for the short remainder of the time during which consular jurisdiction prevails in Japan.

THE FORMOSAN RAILWAY.

The following Ordinance, No. 8, has been issued from the Governor-General's Office in Formosa, and has reference to the exemption from taxes of goods imported for the use of railways built by the Formosan Railway Company:—

Art. I.—The materials mentioned below, which are required for the railways built by the Formosan Railway Company, shall be exempt from import duties:—

1. Locomotives, passenger cars, and appliances thereon.
2. Rails and fittings.
3. Iron for bridges.
4. Iron for use on the railway.

The goods mentioned in the foregoing clauses are limited to materials imported direct by the Formosan Railway Company or its agencies.

Art. II.—If any of these exempted materials are sold, transferred, or exchanged for other articles, a certificate must be obtained by the Formosan Railway Company from the Governor-General's Office, and the duties must be paid at the Custom House through which they were imported.

Note:—This provision does not apply to materials which have become unfit for use after being employed by the Company, and which are sold for that reason, transferred, or exchanged for other articles, with the sanction of the Governor-General of Formosa.

Art. III.—The amount of goods to be exempted from duties must previously be determined by the Company, and receive the approval of the Governor-General.

Art. IV.—The Company must provide a ledger in which the goods landed free of duty are to be entered. The method of entry shall be determined by the Governor.

Art. V.—In case import duties are not paid, in contravention of Article II., or in case goods are sold, transferred, or exchanged for other articles without the sanction of the Governor-General having been obtained, twice the amount of duties will be levied in the form of a fine.

Art. VI.—This Ordinance shall remain in operation for five years from July of the 30th year of Meiji.

CORRESPONDENCE.

THE CHRISTIANIZATION OF JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

Sir,—Apart from its humorous side, so well exploited by Mr. E. Snodgrass in his letter to the *Japan Times*, the newly opened controversy concerning the Christianization of Japan calls for little comment save that it illustrates the extraordinary sensitiveness of the missionary nerve here in the East. One wonders whether a like indignation would be evoked by a suggestion of the impossibility of the subjection of the Empire to the sway of Mohammedanism. So far as Christian propaganda is concerned it is certainly a matter of surprise that an expression of opinion on the outcome of what is confessedly an age-long experiment of doubtful success, especially when that opinion is shared by a large majority of intelligent people in Christendom, should be characterized in your valued editorial columns as "pitiable bigotry or an insulting libel." I would fain believe, however, that you have been betrayed into a departure from your accustomed fairness by basing your strictures upon a quoted half-statement rather than upon the chapter from which the quotation had been made. Had I in that chapter or anywhere else said that "Japan is beyond the reach of any religious influence coming from without" I agree with you that it would have evidenced "pitiable bigotry" on my part. But inasmuch as the chapter in question is mainly an exhibit of the unusual openness and susceptibility of the Japanese to religious influences from without, I am sure I can depend upon your well known fairness to correct the impression given by your editorial. If there is any question worthy of discussion it is not as to the openness of the Japanese mind. There can be no two opinions about that. It is

the question whether, in the light of past experience or in the outlook upon the trend of religious thought in Christendom itself to-day, it is among the possibilities that Christianity as an institution or as the body of doctrine set forth in its creeds, will supersede the present instituted and underlying religious faith of this Empire. In the light of history it is a fair question. As an institution, after nineteen centuries of devoted propagandism, Christianity is, to-day, nowhere in force among *civilized* nations outside the limits of the Aryan race. It is wholly fair therefore to ask whether it is going to be possible for it in the case of the Japanese, a civilized people, to surmount this hitherto impassable barrier of race.

Again, as a body of doctrine fairly described as a scheme of salvation based upon the tradition of the Fall of Adam, Christianity is to-day becoming hopelessly discredited in the West. The Hebrew tradition of the origin and early history of man, the intellectual foundation of the entire scheme, has ceased to be a factor in intelligent religious discussion. It is superseded by an entirely different conception of man's origin and nature. It is therefore a fair question to ask whether it will be possible for the Japanese, with the intelligence which is credited to them, to accept a scheme of salvation the logical basis of which is hopelessly shattered, and which the intelligence of Christendom, inside as well as outside of its Church, is already rejecting.

I am, yours truly,

ARTHUR MAY KNAPP.

Tokyo, July 13th, 1897.

LAW THAT WILL EVENTUALLY AFFECT FOREIGNERS.

BUSINESS TAX LAW.

(Published by Imperial Decree of March 27th, 1896, and enforced from the 1st January, 1897.)

Art. I.—The business tax shall be levied on persons carrying on the following businesses:—

The selling of goods.	Contracting for the supply of labour.
Banking.	Printing.
Insurance.	Photography.
Money-lending.	The letting on hire of goods.
The letting on hire of goods.	Inns.
Manufacturing.	Restaurants.
Transport.	Agencies (including
Warehousing.	* <i>Shin-sen-giō</i> and
Canal transport.	* <i>Dai-ben-giō</i>).
Landing-stages.	Middle-men.
Docks.	Brokers.
Places for mooring vessels.	
Jetties for landing goods.	
Contracting for building or other work of construction.	

Art. II.—By the business of selling goods, which is subject to the trade tax, is meant the establishment of a fixed shop, or other place of business, and the sale therein of goods by wholesale or retail. The following businesses are also regarded as those of selling goods, although they do not come under the preceding clause.

1. The selling of goods by persons who, without having a fixed place of manufacture, and without hiring work-people, have caused goods to be manufactured by supplying the raw material and paying the cost of workmanship.
2. The sale of goods, principally by retail, by persons who, without having a fixed place of manufacture make them in their shops.
3. The procuring of food and rearing in places other than farms of domesticated animals and poultry and the selling of these or of the eggs and milk, etc., produced.
4. The breeding and sale of fish and shell fish.
5. The sale of living things and plants and of other things which are not generally termed goods.

The business tax will not be levied in cases where the annual value of things sold is less than *yen* 1,000.

The sale, by persons carrying on the business mentioned in Article IV, of goods manufactured on the premises of a place of manufacture, and the establishment by them of a special place of business, and the sale therein by wholesale of the said manufactured goods, are not regarded as the business of selling goods.

Art. III.—By the business of money-lending and

* There is little if any difference between these, so far as the nature of the business is concerned; but the agency understood by the word *Shin-sen* is often conducted by a Company, while that expressed by the word *Dai-ben* is limited to an individual, or to two or more acting in partnership.

the business of letting goods on hire, which are subject to the tax, is meant the establishment of a fixed shop, or other place of business, and the lending of money and letting on hire of goods therein. The letting on hire of things which are not generally termed goods is included.

Art. IV.—By the business of manufacturing which is subject to the trade tax is meant the establishment of a fixed place of manufacture, and the employment of workmen and labourers, and the manufacture therein, in whole or part, of goods.

The supply of gas and electricity, the repair of instruments and machinery, the hulling and grinding of grain, dyeing and laundry work are regarded as the business of manufacturing mentioned in the preceding clause.

The trade tax will not be levied in cases where the capital employed is less than *yen* 500, or where not more than two work-people or labourers are continually employed.

Art. V.—The transport, upon payment of freight or fees, of passengers or cargo, or the management thereof, is regarded as transport, and is subject to the trade tax. But the tax will not be levied in cases where the number of employes does not exceed two.

Art. VI.—The establishment of warehouses and the storage therein of goods upon payment of warehouse dues, or for remuneration given under any other name, are regarded as the business of warehousing and are subject to the trade tax.

Art. VII.—The trade tax will not be levied in cases of printing and photography where the number of regular work-people or employes is not more than two, or in cases of contracting for building or other work of construction, and of contracting for the supply of labour, where the annual value of contract work is less than *yen* 1,000.

Art. VIII.—The letting on hire upon payment of rent, or for remuneration given under any other name, of guest-rooms, or meeting-halls is regarded as the business of letting rooms on hire, and is subject to the trade tax. But the tax will not be levied in cases where the hire of a building is less than *yen* 50.

Art. IX.—The business of inns, which is subject to the trade tax, is that in which, whether food and drink are supplied or not, guests are lodged for one night or for a longer period, and three, or more than three, employes are kept.

Art. X.—Restaurants subject to the business tax are those in which more than three employes are kept, in which guest rooms are established and food and drink are sold.

Art. XI.—The following businesses are not subject to the business tax:—

1. The sale of stamps issued by the Government.
2. The sale of minerals extracted from mines by the seller or obtained by him indirectly.
3. The manufacture, repair or sale of weights and measures.

Art. XII.—The basis and rates of assessment of the business tax are as follows:—

Name of Business.	Basis of Assessment.	Rate of Assessment.
Sale of goods	Value of goods sold.....	Wholesale. $\frac{5}{10,000}$
	Amount of rent of building.....	Retail $\frac{15}{10,000}$
	Persons engaged in the business.....	One yen per head.
Banking.....	Amount of capital.....	$\frac{5}{1000}$
Insurance.....	Amount of rent of building.....	$\frac{40}{1000}$
Money-lending.....	Persons engaged in the business.....	One yen per head.
The letting on hire of goods.....	Amount of capital.....	$\frac{2}{1000}$
Warehousing.....	Amount of rent of building.....	$\frac{40}{1000}$
	Persons engaged in the business.....	One yen per head.
	Amount of capital.....	$\frac{2}{1000}$
Manufacturing.....	Amount of rent of building.....	$\frac{40}{1000}$
Printing.....	Persons engaged in the business.....	One yen per head.
Photography.....	Work-people and labourers engaged in the business.....	30 sen per head.
Transport.....	Amount of capital.....	$\frac{2}{1000}$
Canal transport.....	Persons engaged in the business.....	One yen per head.
Landing Stages.....	Value of work contracted for.....	$\frac{2}{1000}$
Docks.....	Persons engaged in the business.....	One yen per head.
Places for mooring vessels.....	Amount of rent of building.....	$\frac{40}{1000}$
Jetties for landing goods.....	Persons engaged in the business.....	One yen per head.
Contracting for building or other work of construction.....	Amount of rent of building.....	$\frac{40}{1000}$
Contracting for the supply of labour.....	Persons engaged in the business.....	One yen per head.
The letting on hire of rooms.....	Amount of rent of building.....	$\frac{40}{1000}$
Restaurants.....	Persons engaged in the business.....	One yen per head.
Inns.....	Amount of remuneration received.....	One per cent.
Agencies.....	Persons engaged in the business.....	One yen per head.
* <i>Shin-sen-giō</i>		
* <i>Dai-ben-giō</i>		
Middlemen.....		
Brokers.....		

Art. XIII.—Persons who are liable to taxation under this law shall draw up a statement giving the name of their business and the basis of assessment and submit it to the Government not later than the 31st January in each year. Persons establishing a business shall make the report prescribed by this Article when the business is opened. When a business is closed the fact must be reported to the Government.

Art. XIV.—If several businesses are carried on by the same person, the trade tax will be levied separately in accordance with the basis of assessment fixed by Article XII. If the persons constituting the basis of assessment are employed in more than one capacity, the tax will be calculated according to one only of the bases of assessment; if the rates of assessment are different, the highest will be taken.

Art. XV.—In the case of businesses of selling goods, of contracting for building or other work of construction, of contracting for the supply of labour, of letting on hire of rooms, of inns, of restaurants, of agencies, of middlemen and of brokers, the tax will be levied on each shop or place of business.

Should there be several such shops or places of business, where the capital is divided the tax will be levied separately, and where it is not divided the tax will be levied in one joint assessment.

Art. XVI.—The bases of assessment to be reported to the Authorities shall be calculated in accordance with the following classification. In the case of newly opened businesses these shall be determined by estimates:—

1. The value of goods sold, the value of work contracted for, and the amount of remuneration received, shall be fixed at the total amounts of the previous year. But in the case of business newly opened during the previous year, these shall be determined by estimates.
2. The amount of capital and the amount of rent of a building shall be fixed on the averages of the previous year.
3. The number of persons engaged in a business shall be fixed by the greatest number employed at any time during the previous year.

The method of calculating capital shall be fixed by Imperial decree. Art. XVII.—If it is considered that the amount of capital stated by a person engaged in business is incorrect, the Government may examine into the amount of his business receipts, and after deducting from this amount a suitable sum for business expenditure, fix the capital at twenty times as much as what remains.

Art. XVIII.—The amount of rent of a building is regarded as corresponding to the rent of a shop or the rent of land and houses for business purposes. But premises which are occupied for the purpose of residence, or which are not directly used for business purposes, are, so long as they are situated in the same compound and serve the personal requirements of the occupant, included in the calculation as business premises. In cases where houses are rented, everything paid in connection with the lease by the hirer to the letter, under whatsoever name, is included in the calculation of the amount of rent of a building. In cases where houses are not rented, the amount of rent of a building is fixed on the basis of the rents of houses in the vicinity. If there are no rented houses which can be taken as a basis of comparison in the vicinity, the current value of the land and of the house will be calculated separately, and the amount of rent of the building in question will be fixed by adding together 5 per cent. of the former and 10 per cent. of the latter. The same rule will apply to rent-free houses.

If it is considered that the amount of rent of a building stated by a person engaged in business is incorrect, the Government may fix the amount of rent according to the method explained in the preceding clause. Art. XIX.—All persons engaged in business under whatsoever designation are counted as persons engaged in business. But a person's family is not included. Art. XX.—The trade tax is divided into two instalments which are payable in May and November of each year. When a business is closed, tax not yet paid will be regarded as tax which has not been paid.

Art. XXI.—Persons establishing a new business shall pay the business tax from the commencement of the following year. Persons opening the following businesses shall not be called upon to pay the trade tax until three years, counted from the commencement of the following year, have expired. This rule may be extended to cases where persons have established businesses prior to the operation of this tax-law, and three years counted from the commencement

of the year following such establishment have not yet expired:—

Boating, insurance, warehousing, manufacturing, printing, transport, landing stages, docks, and places for mooring vessels.

Art. XXII.—A person who within the period of 6 months establishes a business which is the same as that carried on in the same place by his predecessor, shall pay the trade tax from the commencement of the month in which the business was established.

Art. XXIII.—If a business is continued, or if there are facts which lead to the inference that a business is being continued, the trade tax will be collected at the regular season from the person carrying on the business.

Art. XXIV.—When a business is closed, the tax will be collected up to the month of closure. If the business is continued by others, the provisions of the preceding Article shall be followed.

Art. XXV.—If in cases coming under Articles XXII. and XXIII., the predecessor was enjoying the benefit of the period mentioned in Article XXI., this benefit shall be extended to his successor.

Art. XXVI.—If the Government consider that the statements of a person engaged in business are incorrect, and determine by calculation the amount of his capital or the amount of rent of his building, they shall notify the fact to the person in question.

Art. XXVII.—If the calculation mentioned in the preceding Article is objected to, the objection may be stated within 20 days after the receipt of the notice, and a fresh examination be applied for. Under these circumstances no delay for the payment of the tax will be granted by the Government.

Art. XXVIII.—If objection is raised to the calculation of the amount of rent of a building as provided for in the 3rd clause of Article XVIII., the amount shall be fixed by means of appraisers. If the appraisements differ, an average will be taken.

There shall be four appraisers, two of whom shall be appointed by the Government and two by the Governor of the city or the chief official of the town or village in which the land and buildings are situated. The expenses of the appraisement shall be borne by the tax-payer.

The duties of the Governor and chief officials mentioned in the preceding clause shall be performed in cities where Special City Organization exists by the Head of Urban districts (*Kuchō*), in places where the City Town and Village Organization (*Shi-chō son-sei*) is not in force by the mayors (*Kochō*), and in Okinawa prefecture by the chief local officials (*Yakusho-chō*).

Art. XXIX.—In the following cases persons engaged in business may submit a statement of facts to the Government:—

- i. If the amount of capital, the value of goods sold, the value of work contracted for, the amount of remuneration received, or the amount of rent of a building which serves as the basis of assessment is reduced by more than one half.
- ii. If the number of persons engaged in the business which serves as the basis of assessment is reduced to less than half the number reported.

Art. XXX.—If, as a consequence of the representation mentioned in the preceding Articles, it is considered by the Government necessary, on reference being made to the actual condition of the person engaged in business, to reduce the business tax, the levying of the tax may be delayed until January of the following year.

Art. XXXI.—The Government may meet the representation mentioned in Article XXVI. by instituting, in January of the following year, an examination into the basis of assessment, and, if the representation is found to come under any of the following cases, may reduce the tax:—

- i. If the value of goods sold, the value of work contracted for, or the amount of remuneration received which serves as the basis of assessment, is less than half of the total amounts of previous years, or if the amount of capital or the amount of rent of a building which serves as the basis of assessment is less than half the average amounts of previous years.
- ii. If the number of persons engaged in the business which serves as the basis of assessment is less, at the time when the greatest number is employed, than half the number reported.

In cases where the basis of assessment is thus reduced below the lowest limit fixed for taxation, the tax will nevertheless be levied proportionately.

Art. XXXII.—The persons engaged in the business mentioned in Art. I. shall keep books in to show the purchase, sale, receipt, letting on hire and transport of goods, the number of persons engaged in the business, and the money received and expended in connection with their

business, and shall enter in these books all facts relating to their business.

Art. XXXIII.—Tax collectors may inspect the books and commodities which are connected with a business, and may also put questions to the person engaged in the business.

Art. XXXIV.—Persons who fail to make the report mentioned in Art. XIII., or make a false report, or willfully omit to make the entries in their books which are prescribed by Art. XXXII., or make false entries, shall be punished by a fine of not less than one *yen* and not more than one *yen* and ninety-five *sen*. Those who evade payment of the tax shall be punished by a penalty of thrice the amount of the tax evaded, or by a fine.

Art. XXXV.—In the case of persons committing infringements of this tax-law, the provisions of the Criminal Code relating to the condonations of offences, the reduction of penalties, the increase of penalties for offences which are repeated, and the concurrence of several offences, will not be applied.

Art. XXXVI.—A supplementary tax not exceeding in amount $\frac{1}{10}$ of the trade tax payable under this law, may be levied in Prefectures upon persons engaged in business who are liable under this law to taxation. But prefectural and local taxes cannot be levied in addition to this supplementary tax.

SUPPLEMENTARY CLAUSES.

Art. XXXVII.—This tax-law shall come into force on the 1st January, 1897.

Art. XXXVIII.—Prefectural and local taxes belonging to the financial year 1896 are not subject to the provisions of Article XXXVI.

Business upon which the prefectural and local taxes belonging to the financial year 1896 have been levied, will, so far as the year 1897 is concerned, be subject only to $\frac{1}{10}$ of the annual trade tax.

Art. XXXIX.—The season for payment of the trade tax which is fixed by Article XX. in May, will, for this year only, be altered to July.

THE GRAND HOTEL, LIMITED.

The sixteenth ordinary half-yearly general meeting of shareholders of the Grand Hotel, Ltd., was held on Monday afternoon, the 19th instant, at the Hotel. There were present Mr. J. F. Lowder, in the chair, Messrs. B. C. Howard, R. Howie, C. K. M. Martin, E. V. Thorn, Dr. Hall and J. Tornoe, Secretary.

The CHAIRMAN, in proposing the adoption of the report and accounts, said:—I have much pleasure in presenting the report and accounts of the last half-year, which, as usual, I presume will be taken as read. Before attending the meeting I looked into the past accounts of the Company and was gratified to find that in the eight years of its existence it has paid in dividends to the shareholders \$287,500, or 125 per cent. of its nominal capital, which represents an average of over 14 per cent. per annum. A larger sum still has been written off for depreciation in the same period, whilst the value of the assets has been increased by \$40,000 or \$50,000, without taking into consideration the appreciation in value of the ground, which still appears in the accounts at \$60,000. The shareholders therefore have good security for their investments, and the history of the Company shows that its earning powers are steadily increasing. I shall be glad to propose the adoption of the report and accounts.

Mr. HOWIE remarked that the Chairman had referred to the value of the ground as an asset. In 1890 it was valued at the same amount, but the value of ground in the Settlement had since largely appreciated. He would suggest a re-valuation and that the figures arrived at be inserted in future accounts.

The CHAIRMAN said he believed the accepted rule in stating the accounts was to state the liabilities exactly, if possible, and in the case of a doubtful item, to carry it to suspense account. With assets it was the rule to give the prime cost, less a generous writing off for depreciation, the result being that the account is stated more or less against the company. If there was an appreciation he saw no reason why it should not appear in the accounts. It would be easy to have the ground re-valued, and although it would not be possible from the accountant's point of view to insert it in the next account, he would undertake that it should be inserted in a note to the account, so that although the ground will appear in the accounts at \$60,000, they would be able to see its appraised value.

Mr. HOWIE said that would meet the case and having seconded the Chairman's motion the report and accounts were passed as follows:—

REPORT.

The Profit and Loss Account, and Statement of Assets and Liabilities for the half-year ended the 30th June, 1897, accompany this Report. The net profit for the half-year, including balance brought forward from the 31st December, 1896, and after providing for general expenses, Directors' and Auditor's fees, bonus to Manager, interest, and writing off bad and doubtful debts, amounts to \$38,313.15

Which it is proposed to apply as follows:—
In payment of a dividend of 11 per cent. for the half year 37,100.00
Balance to be carried to new account 10,813.15
\$38,313.15

A sum of \$25,540.25 having been written off for the half-year ended the 31st December, 1896, it is not considered necessary to write off anything for the half-year under review.

In carrying forward a larger cash balance than usual, the Directors have in view the fact that debentures to the value of \$5,000 are to be redeemed on the 15th October next.

Dr. Hall and Mr. Martin retire from the Board by rotation, but offer themselves for re-election.

Mr. Keil retires from the office of Auditor, and the Directors have much pleasure in recommending his re-election for the current year.

According to Article 86 of the Articles of Association, the amount of the Directors' fees for the current year will have to be decided at this meeting.

It is proposed that the dividend shall be payable on the 30th day of July, when the warrants will be issued.

J. F. LOWDER, } Directors.

I have examined the foregoing accounts and compared them with the vouchers of the Company and certify them to be correct.

O. KEIL, Auditor.

Yokohama, July 7th, 1897.

The CHAIRMAN stated the next business was to elect two Directors, and he proposed that the two retiring Directors, Dr. Hall and Mr. C. K. M. Martin be re-elected.

Mr. HOWIE seconded the motion and it was carried *nam con*.

The CHAIRMAN said it was also necessary for the meeting to fix the remuneration of the Directors for the current year.

Mr. HOWIE proposed that the Directors' remuneration be the same as last year, namely \$400, and while proposing this said the thanks of the shareholders were due to the Directors and the management for their very successful conduct of the business of the Hotel during the past half-year.

The CHAIRMAN said that as there were no dissentients, he would take Mr. Howie's motion as carried, and at the same time, on behalf of the Directors, thank him for his kind remarks.

On the motion of the CHAIRMAN, seconded by Mr. MARTIN, Mr. Keil was re-elected auditor, and this concluded the business before the meeting.

LANGFELDT & CO., LIMITED.

REPORT.

Report of the Directors, and Statement of Accounts, to be submitted at the thirteenth semi-annual ordinary general meeting of shareholders, to be held at No. 61 Main Street, Yokohama, on Friday, the 23rd day of July, 1897.

YOKOHAMA CHARITY ORGANIZATION.

The annual meeting of the subscribers to the Yokohama Charity Organization was held at Keil's Buildings on the 22nd instant. There were present Messrs. A. O. Gay (Chairman) C. K. M. Martin, B. C. Howard, W. F. Mitchell, Rev. E. C. Irvine (Hon. Sec.), and Jas. Martin (Hon. Treasurer).

The CHAIRMAN read the report and financial statement and also a supplementary account, which showed the financial position of the Society up to date. These were as follows:—

The Committee beg to lay before the Subscribers the following report and statement of finance.

The largest item in the expenditure is the amount incurred for the relief of destitute seamen, which is the prime object of the Society's existence. These men were housed and fed at Mr. John Kernan's till the end of 1896, when Mr. Kernan intimated that he was about to discontinue his boarding-house and was, therefore, obliged to terminate his agreement with the Society. Fortunately the Salvation Army had just then established a branch in Yokohama, and an agreement was effected with them to receive men from the Charity Organization on the same terms as Mr. Kernan's. The agents of the Salvation Army have done their work very thoroughly, and have taken much pains to improve the moral and physical condition of the men. Their new premises and management meet an absolute want. During the period covered by this report, tickets for 1,081 days' board and lodging were issued by the Honorary Secretary without any

distinction of race or creed. The recipients were principally British, American, Canadian, Swedish, Danish, and Norwegians, the remainder belonging to various countries, namely, Austria, Belgium, Horno, Brazil, Chili, Egypt, Finland, France, Germany, Hawaii, Holland, India, Italy, Manila, Mauritius, Mexico, Peru, Portugal, Russia, and Tahiti.

The great majority of these were seamen, firemen, stokers, and seal-hunters, the rest being of the following occupations: auctioneers, bar-tender, bicycle-maker, book-keeper, boat-swin circulator, clerk, cook, constable, engineer, electrician, gas-fitter, hosier, house-painter, huckster, iron-founder, iron-moulder, jockey, machinist, medical student, mechanic, piano-tuner, plantation-hand, soldier, railway engineer, reporter, runner, ships' boy, shop-keeper, teacher, steward, supercargo, tailor, tally-clerk, whaler.

The greatest care has been exercised in granting relief-tickets, hundreds of applications being refused which upon examination were found to be unwarranted.

The scope of the Society's operations has been extended in a few instances to the part-payment of passages from this country, but neither its scale of subscriptions, nor its constitution permit of this to any large extent. Indeed, it would be unwise that any Society should exist in Yokohama, with large powers of transshipment, as it would soon be perverted into a carrying company for the nomadic mendicants of the world.

Sunshine and strong-drink, rice and vice are more easily procurable here than in the sterner lands of the Occident, and if outdoor relief were extended to the gang of idlers who infest the purlieus of China-town, as some busy-bodies advise, they would stagnate there in ever-increasing numbers. The aim of our organization is to relieve distress, and encourage men to work, not to pauperize them with doles.

The Committee in presenting this report and statement now beg to tender their resignation, and to thank the community for their response as shown in the Subscription List for 1897, here appended.

JAS. DODDS, Chairman

H. BAEHR.

B. C. HOWARD

JAS. MARTIN, Hon. Treas.

THOS. ROSE.

E. CHAMPEYNS IRWINE, Hon. Sec.

STATEMENT OF RECEIPTS AND DISBURSEMENTS FROM JULY 1ST, 1895, TO MARCH 31ST, 1897.

On the motion of Mr. HOWARD, seconded by Mr. ALITCHKILL, the report and audited accounts were passed as presented.

With regard to the election of a Committee, the CHAIRMAN proposed that the members of the retiring Committee be re-elected, but as Mr. Dodd was away for a time and Mr. Baehr had resigned, it would be well to elect two other gentlemen to the Committee.

On the motion of Mr. IRWINE, seconded by Mr. C. K. M. MARTIN, Messrs. Mitchell and J. C. Hartland were added to the Committee.

After some desultory conversation, Mr. Irwine read the following letter, which he had received that day from Mr. Troup, H.B.M.'s Consul:—

British Consulate, Yokohama,

July 22, 1897.

My dear Mr. Irwine,
I have read the report of the Charity Organization

Society's Committee, which has been kindly placed in my hands, and as I regret that I am prevented from being personally present at the meeting of the subscribers which is to take place this afternoon, I venture to ask you to lay the following statement from me before the meeting. I feel that some explanation from me is called for on the points to which I am about to refer.

In their report the Committee say "the largest item in the expenditure is the amount incurred for the relief of destitute seamen, which is the prime object of the Society's existence." And further down, "among the principal recipients of relief are enumerated British and Canadian, Indian, etc."

In passing, let me state that at this Consulate, Canadian, British and Indian seamen are treated as classes of British seamen, and that firemen, stokers, seal hunters, ships' cooks, stewards, etc., are comprehended in the term "seamen," for purposes of relief.

In the financial statement I observe that the considerable sum of \$747 has been expended for assistance (in this place I presume) to destitute seamen.

Now I ought to state that ample provision is made by the Imperial Government and by the Canadian British, Indian, and Colonial Governments, through the agency of the British Board of Trade and Her Majesty's Consulates abroad, for the relief of all destitute seamen (whether of British birth or otherwise) who have left British ships in the regular way of discharge on account of sickness, shipwreck, imprisonment for any offence, the sale of the ship to a foreign flag, mutual agreement between the master and seaman, or termination of the agreement abroad. If therefore distressed seamen out of British ships, who are not entitled to relief from this Consulate, are found in this place, I am unable to account for their being found distressed here, unless on the supposition that they have either deserted from their ships, at this port, or have done so elsewhere and found their way here, or that they have been illegally discharged here or elsewhere. In by far the majority of cases my experience leads me to believe that such seamen are deserters from their ships and a grave question arises as to how far it is expedient to help, in the name of charity, such men to subsist at this port.—unless in cases of real sickness.

I remain, my dear Mr. Irwine,

Yours very truly,

JAMES TROUP.

P.S.—Will you allow me to take this opportunity of adding, what is already known to yourself personally, that the above provision for relief is limited to the relief of *seamen* and that the instructions of the British Government with regard to the relief of distressed British subjects who are *not seamen*, require the Consular officer in the first instance to make every effort for relieving them by recourse to local charitable agencies, or other available sources."

J. T.

After reading the letter Mr. IRWINE explained that though the sum of \$737 expended in aid of distressed seamen might seem large, it extended over two years. Some of the destitute men assisted had deserted, some had been left behind, or had served on other than British ships, and it was easy to understand how \$360 a year could be expended in these cases. H.B.M. Consul appeared to deem it inexpedient to help them. When it had been possible he had sent the men to their Consul, and to others he had refused assistance after making enquiries. In the other cases all that remained was to help the men for a day or two to save the community from having the men begging at their doors. At the same time they were obliged to Mr. Troup for his information as to the powers of the Consulate in cases of distressed British subjects.

After Mr. IRWINE had read a letter from Mr. Baehr, resigning his post on the Committee, which was received with regret and hopes that Mr. Baehr would join them again in the future, the meeting terminated.

RAMBLES IN FORMOSA.

NARRING TAKAU.

The Kholai plain is a very fertile stretch of alluvial soil extending over about 20 square miles, and is as yet very little developed. All tropical plants could advantageously be grown there, and if only quiet is restored and the savages are pacified, there is no reason why an extraordinary prosperity should not blossom here. The anchorage, though, presents some hindrance to a flourishing trade, being very rough and unstable even in the best of times. We had rather a hard time of it, getting from the steamer ashore. Mighty waves overflowed the small boat, driving it to and fro at their mercy, and landing proved exceedingly difficult. But when we were at the top of the last huge wave, rolling coastward, dozens of savages came to our rescue and safely towed the little craft to the shore. At first, at the sight of that howling band of naked

men, that sprung suddenly upon us unawares, one would have fancied he beheld the fierce attack of wild vikings, bent upon bloodshed and booty. Indeed the aspect of these children of nature, guileless of any garment whatsoever, was anything but reassuring. It certainly was fine sport for them—boat-towing—not a business, for, as we were told afterwards they did not require any pay for such work, but were just content with the fun of the thing. And then, of course, after finishing their cargo job, they would find their way to the steamer, have their fill of astounding miracles and all sorts of queer devices and mechanical deviltries to feast their eyes upon, pick up a cigar here and a bowl of rice there, and feel amply rewarded for a day's hard toil. It was the most grotesque and fantastic sight I ever witnessed, when those nude tribesmen, drifting to the state-room of the *Katsuyama*, saw, evidently for the first time in their lives, a looking-glass, and beheld, with grinning delight, their own copper-coloured bodies reflected in the huge mirror on the wall.

The customs of the Lam-si-huan, as the dwellers of the Kholai plain are called by the Chinese, are very accurately described by Dr. Mackay in what may perhaps be considered the best chapter in "From Far Formosa." The learned and versatile doctor seems, however, to lay a little too much stress upon the severe regularity of the tribe's constitution and the power of the chiefs. As far as I could ascertain, the prerogatives of the chosen chieftains are very limited; they do not even wear any insignia of rank to distinguish them from the rest. Dr. Mackay further asserts, that "their dialect is peculiar and quite distinct from the Pepohuan and the mountain savages," but, while endorsing the latter part of the observation, I must affirm that, on the contrary, I was much struck by the thorough-going similarity between the idioms of the Kapsalumi and Kholai plains. I may mention here that in the mountains east of the Lam-si-huan, a young Japanese anthropologist, Mr. Torii, of the Imperial University, who spent nearly half a year among the tribes of the central interior, claims to have discovered a race of dark pygmies, occupying several villages. It would be exactly the region where the late naturalist Swinhoe, from the accounts of Chinese peddlars, located the Formosan pygmies, whose existence has, however, always been exposed to grave doubts. The samples of language which Mr. Torii showed me, while in Tokyo, are most assuredly of a Malayan description, but it is a well known fact that the Negrillos of the Philippines also lost their original speech, adopting Malayan dialects. The problem deserves, in any case, further investigation.

The Japanese forces, which are at present led by Lieut. Col. Yukichi, are engaged in the north of the Kholai plains making roads, to get a safer basis for their operations against the mountaineers. Captain Hiroyama, who at the time of our arrival had just returned from the savage-infested districts, reported continual fighting, especially with the Taluku, who dwell in the villages of Kyuwansha, Ekarinsha, and Tokiresha. The captain also mentioned that there were two deserted Chinese camps in the north, at Sokusha and Sansanki, adding that Chinese soldiers first came there from Sao bay some eighty years ago. Following the soldier, numbers of Sao Pepohuans drifted to those parts and founded the villages of Karewan, hard by the Taluku territory, and Tabaron, west of Kholai plain. The Pepohuan had incessant bloody feuds with their warlike mountain neighbours. As to the Chinese camp at the mouth of Kholai river, I learned that the soldiers stationed there, the only Chinese force that still remained in Formosa after the Japanese occupation, left in August last. They were taken to Amoy by a Japanese man-of-war, as none of the destitute men, cast adrift by their own government, could afford to pay a junk passage to China. Many of them, in order to buy food, had previously sold their muskets to the savages, who were being furnished also with excellent repeating rifles of Austrian manufacture by the firm of Mandl & Co. A few of the soldiers had preferred to remain in Formosa, betaking themselves to peddling and husbandry.

Following closely the coast southwards, towards the picturesque Black Rocks, we sighted another deserted Chinese camp at Shindyn, a few miles from the shore, north of Lattan, and plenty of native villages picturesquely surrounded by gigantic bamboos and banyan trees. A little south of Lattan I observed two perfectly shaped craters, showing all around deep erosion made by lava streams. The craters are rather low, scarcely reaching 200 or 300 feet, and of small size, thus resembling the low volcano of Chi-han at the north of Takau, the latest eruption of which took place, according to the Chinese Annals of Formosa, in 1722. The village of Lattan affords a splendid

and thoroughly safe anchorage in the time of the South-West monsoon, being protected from all parts except the north-east, and it might be a recommendable site for a harbour, were it not for the extreme depth of the sea immediately by the shore. As it was, we saw only a solitary junk riding on the smooth waves. The people of that region, a branch of the Sao-mo-huan, were said to be rather unruly and not over friendly to the Japanese. A Major of mounted police, however, whom I met, had been able to ride on horseback in five days from Chocke-dong to Pilam, without any trouble. It was perhaps in the neighbourhood of Lattan—the locality is in our maps only vaguely indicated as being in the centre of the east-coast—that Count Benyowsky, that adventurous Pole, made his second landing during his cruise in Formosan waters, about 120 years ago. Benyowsky had been made prisoner in Poland by the Russians and dragged away through dismal Siberia to Kamtschatka. Here the daughter of the Governor, falling in love with the handsome chevalier, freed him, and he escaped with his friends on a Russian sloop. Having navigated the Japan sea and visited Lin-kin, the Count reached Formosa, where, after some skirmishes with the natives, he availed himself of the good services of a Spanish refugee who lived amongst the savages, and by his aid made a treaty, by which he was recognised as a kind of king of eastern Formosa. He promised to drive the Chinese from the island. Benyowsky stayed quite a while on the fair island. His comrades, indeed, having eaten of that lotus that makes mortals forget their homes and family, urged him to settle down in the new-found paradise for good. But the wandering knight resolved to offer Formosa to King Louis XIV. of France and to return to the delightful isle as French Governor. When the Spaniard, who had married a chief's daughter, was asked to go back to Europe too, he answered, that he was quite content to remain where he was: he had had enough and to spare of Europe. Benyowsky's career thereafter was as varied and romantic as it had been previously. Louis sent him to Madagascar, the western-most point of Malayan expansion. The restless Count went even to America, but he never forgot the delight of his early youth, fair Formosa. There are many similar romances clinging to this wonderful island and many still unsolved mysteries. Strange things happened within the memory of the present generation. There is a whisper of an Englishman, who strayed into the depths of the Formosan Alps and was bound in happy wedlock with a chieftain's beautiful daughter—and there are beautiful women among the savages—and I heard from an old resident the tale of how two strangers, some decade or so ago, made their appearance in Tam-sui, and how these Europeans, without having communication with any of their race, deliberately set their faces toward the cloud-bearing mountains of the interior, and hid themselves away from their old friends and former associations, leading an unknown life among the savages of the virgin forests, where no white man's foot had trodden before. Once in a while, it is said, the strangers were seen by some stray wanderer, but nobody has ever solved the mystery of their life.

There are few places in Formosa more curious at present than Pilam. Decaying traces of the once powerful rule of the Chinese here show side by side with the newly erected and spacious buildings of the Japanese. The beginning of Chinese influence upon the customs and habits of the natives was checked by the sudden advent of Japanese civilisation. I saw taciturn soldiers, merry, garrulous shopkeepers from Nippon; tattooed, grim-looking Lin-kin Islanders; Chinese grocers and tiny-footed ladies; stout Pepohuans and a strutting procession of Ami braves, mingled with a deputation of Tsubhuan warriors and straggling descendants of the Pinan tribe. A deputation had arrived to submit a quarrel of succession to the Japanese authorities, and the deputies, in their gaudy costumes of green and red colours, with beautiful black eyes, firm-set lips, lovely crowns of grass and flowers, which exquisitely contrasted with their bluish-black hair and their chocolate-skin, presented a very striking and a very picturesque sight; an embassy indeed, that might well have deserved to be immortalised in an arch of Trajan or Septimius Severus. I secured specimens of all the different dialects and found undoubted Polynesian traces in them. Some writers say that the Ami were descendants of the Japanese vikings who came to Formosa in the beginning of the 17th century; perhaps so, but they must meanwhile have dropped their mother-tongue.

The military commander of Pilam is Major Kawamura, who had been three years in Berlin. He tendered us a hearty welcome, showed us all over the place and told of his interesting adventures on the southern slopes of the Formosan

giant, towering Mount Morrison. I had a delightful social evening with the genial major and his jolly officers. From what I learned from other quarters, the major seems to be universally liked, and as the welfare of the subjects largely depends upon the spirit of the masters, I should be disposed to consider the placid atmosphere of Pilam and the rare good understanding prevailing there between the Japanese and other races, as the immediate consequence of the major's amiable and conciliatory character.

KOBE FIRE INSURANCE CASE.

JUDGMENT.

We reprint from the *Kobe Chronicle* a summary of the judgment delivered by Mr. John Carey Hall, British Consular Judge, in the case brought against Messrs. Lucas & Co., agents for the Union Insurance Co., by Mr. J. A. Sylva. His Honour said:—This is a claim for fire insurance. The facts of the case are simple. On the 8th of May last, the plaintiff effects an insurance upon goods in his godown for \$3,000, making, together with the previous insurance on his furniture in the same establishment, a risk of \$4,000. The next incident occurs two days afterwards, when, according to the testimony of the plaintiff and his witnesses, the last lot of straw braid in the first contract with the dealer Inouye, and also 160 coils of special straw braid from Inouye, were delivered at the plaintiff's godown. On the 17th of May, a fire occurs, which was almost extinguished at its commencement. Thereupon, the plaintiff claimed from the defendants the sum of \$3,400 odd for a total loss of his furniture and goods in the godown. It was one of the conditions of the fire insurance policy, as stated in Article 16, that "any dispute relating to the claim if there be no suspicion of fraud shall be submitted to arbitration." There appeared a certain amount of reluctance on the part of the defendants' witnesses to state explicitly what was abundantly evident from the whole course of the procedure from the beginning—that they did suspect fraud, and very reasonably suspected fraud. In face of the fact that no less than ten cases of bamboos and nine cases of straw braid were found practically intact, or only slightly injured, that the office furniture was found to be untouched by fire or water—when such an amount of salvage was before the eyes of anyone who entered the godown, to claim as the plaintiff did on the 18th May that these goods were totally destroyed by the fire was simply an audacious falsehood—no less strong a term could apply to it. Defendants therefore were fully justified in resisting the claim for total loss as a claim for a total loss was in itself preposterous, and gave justifiable grounds of suspicion of even more deliberate fraud; and when the case comes to be looked into by the jury—and herein myself and the assessors are perfectly agreed—there was ample evidence of fraud. Defendants in their pleadings assert that the first so-called list (supplied to them by the plaintiff) was imperfect, which it undoubtedly is, containing simply four items: and the second list on which he is suing they assert to be false and fraudulent. His Honour then proceeded to review the evidence at length, and then said:—I will notice now the always suspicious circumstance, the absence of dates in the plaintiff's purchase book. In the first three pages of that book, which appear to extend over several months, dates are properly made, but on the page relating to this claim and even on the preceding page not a single date is entered. There is a similar absence of dates in the plaintiff's so-called godown-book. In regard to the plaintiff's conduct in claiming for a total loss when in fact the damage was slight, in charging excessive values on some articles, as for instance \$400 for the small lot of samples upstairs; in regard to the false entries, six being fraudulent; in regard to the book kept by the godown-man not having been produced; in regard to the fact that when plaintiff called an expert to examine the straw braid he was able to give the dates, but was not able to give them to the defendants or to this Court in the course of his evidence—these discrepancies in the quantity of goods, in prices, in dates, and the absence of dates, and the variations between the evidence and the purchase book, all combine to show that the claim is corrupt and fraudulent, and there must therefore be judgment for the defendants with costs. I consider that the defendants have done a public service in driving this claim into the light of a court of law. I see in the correspondence now in Court that at one time they contemplated paying a reasonable amount as on a partial loss. I think they have been well advised in not taking this course, and that they rendered a signal service to public opinion and commercial morality in allowing this

case to come into Court. In these findings the assessors agree.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE TRANSVAAL RAID INQUIRY.

London, July 14.

The Committee of Inquiry into the Transvaal Raid has completed its report, in which the Hon. Cecil Rhodes is strongly censured, as having organised the raid and deceived Lord Rosmead, and also as having concealed his designs from the co-directors of the Chartered Company.

The Cape Cabinet refrains from suggesting any course of proceedings against him.

Mr. Alfred Beit, who is also held responsible, entirely absolves the Colonial Office from the charge of having had any cognizance of the raid being projected.

BRITISH NAVAL MANŒUVRES.

The British Naval Manœuvres have ended in a fiasco, apparently owing to a misconception of the Admiralty's instructions.

THE U. S. TARIFF.

Washington, July 12.

The Senate Committee of Ways and Means struck out the clause which the House of Representatives had inserted in the Tariff Bill, in connection with the duty on sugar, with a view to annulling the Reciprocity Convention with Hawaii. The Senate in its full sitting has rejected the Committee's recommendation and revived the clause as sent up from the House.

London, July 19.

In the United States Congress, the conference of the Upper and Lower Houses on the tariff has resulted in an agreement on all the important points which were in dispute. Raw cotton is restored to the free list.

Washington, July 20.

The Deputies of the two Houses of Congress submitted the result of their deliberations on the 19th inst., as follows:

JAPANESE SILK GOODS.

Dyed, 3 dollars per pound; printed, 3 dollars and 25 cents per pound.

FANCY MATTING.

Mats valued at less than 10 cents per square yards, 3 cents per square yard; those valued at more than 10 cents, 7 cents, with additional 25 per cent. *ad valorem*.

TEA.

Included in the free list.

RUGS.

Reported as amended by the Committee of Ways and Means of the Senate.

(The amendment by the said Committee is to impose a duty of 5 cents per square yard and 35 per cent. *ad valorem* upon goods valued below 15 cents per square yard, and of 10 cents and 35 per cent. *ad valorem* on goods valued above 15 cents per square yard.)

SUGAR.

A compromise between the opinions of the Lower and Upper Houses has been adopted. (By compromise may be meant the imposition of duty upon imported sugar in general, but excepting the sugar coming from Hawaii from this rule.)

THE RECIPROCITY CONVENTION.

The paragraphs relating to the Reciprocity Convention between America and Hawaii have been retained, as in the Bill passed by the House of Representatives.

(Hence Hawaiian sugar is to be placed on the free list in consequence of the Reciprocity Convention.)

The foregoing report was carried

through the House of Representatives on the evening of the 19th inst. It will, in the same way, be carried through the Senate within a few days.

THE SILK MARKET IN ITALY.

[Received July 14.]

The output of cocoons this year is about equal to that of last year. The quality, however, is inferior. The average quotation is 2 lire 40 centimes per kilogramme; the Japanese and mixed varieties 2 lire to 2 lire 20 centimes, and the Italian yellow variety 2 lire 30 centimes to 2 lire 70 centimes. Raw silk is cheaper than last year, the ruling quotation being 33 to 36 lire per kilogramme, according to quality.

FOREIGN LOAN TO CHINA.

Peking, July 14.

The Hongkong and Shanghai Bank will probably undertake the floating of 4.5 per cent. foreign loan bonds at the rate of 85.5 per cent.

KOREAN INTELLIGENCE.

Söul, July 16.

The trial at the Supreme Court of those arrested on the charge of conspiracy has been concluded and judgment has been declared to-day. Hong Hyön-chhöl (Kokentetsu) and Song Chong-yong (So Chinyo) have been sentenced to be hanged, two others to exile, one to penal servitude, and another acquitted.

Having offended the King by opposing the engagement of Russian military instructors, Foreign Minister Li recently tendered his resignation, which was at first rejected, but on the 23rd inst. Cho Pyong-chik was appointed Foreign Minister. The new holder of the portfolio is said to have already attempted resignation but without success.

Commanders for the Local Military Forces, already arranged to be distributed all over the peninsula, are expected to be appointed shortly.

On the 22nd inst. a ball was given at the British Consulate to celebrate the long reign of the Queen. Foreign Minister Li delivered a speech interpreted by a Korean. Some 100 persons were present, including the foreign representatives, consuls, military officers, advisers, missionaries, and journalists.

The Ninsen Shogyodan, or Itinerary Merchants' Guild, will hold a conference convoking the chiefs of various branches to discuss the expansion of the business on July 5th.

Drought prevails all over the Kingdom, and farmers are anxious for a rainfall, as it is most needed at this season when the rice-planting is to be done. The current price of rice is said to have been raised accordingly.

Mr. Minoru Yasuda, Vice-director of the Kanjo Hospital, in Söul, has developed the work of the hospital with the object of helping to lead Korea towards civilization by treating native patients kindly and ably, he himself occupying the position of director. He held a social meeting on the 24th inst. inviting our Minister, Consul, and others numbering over 100.

The aggregate amount of customs duties collected at the three ports of Ninsen, Fusan, and Gensan for the five months ending May 31st this year is estimated at 371,425 yen.

THE CAREW CASE.

London, July 15.

In the case of Mrs. Carew, of Yokohama, convicted of murder, the Privy Council have refused the application for leave to appeal.

REPORTED FIGHTING IN CRETE.

SIXTEEN BRITISH SOLDIERS KILLED.

In a conflict between British troops and Bashli-Bazouks at Candia, sixteen of the British were killed, in consequence of which three hundred more British Marines have been landed, and the Allied Admirals have sent five war-ships to repress any further violence on the part of the Mahomedans.

A FALSE ALARM.

London, July 16.

The report of fighting between British troops and Bashli Bazouks at Candia, which was published in *The Times*, has now turned out to be unfounded.

THE BEHRING SEA SEALING QUESTION.

The Hon. John Sherman, United States Secretary of State, in a dispatch to the American Ambassador in London, under date May 10th, comments with the greatest bitterness on Great Britain's refusal to join a conference of the Powers concerned, with the object of preserving the seals in Behring Sea. He virtually accuses Great Britain of bad faith, and concludes by casting upon her the responsibility for causing embarrassment in the relations between the two countries.

Later.

Several American papers criticise Mr. Sherman's dispatch (on the Behring Sea sealing question), which they characterise as needlessly irritating in its tone towards Great Britain, amounting, they assert, to a display of bad manners.

CRICKET.

The "Players" in the return match beat the "Gentlemen" at Lord's Cricket Ground by 78 runs.

THE U.S. SENATE AND ANNEXATION TREATY.

Washington, July 16.

The Committee of Foreign Affairs of the Senate reported favourably on the Annexation Treaty on the 14th inst. But it is expected that no action will be taken by the Senate during the present session.

BRITISH NAVAL EXTENSIONS.

The Bill for Naval Works has been read a second time in the House of Commons. The estimates for Dover Harbour Works are increased to £3,500,000. The estimates for extending Hongkong Dockyard are also increased. It is further proposed to advance half the cost of new docks at Colombo.

TURKEY AND THE POWERS.

London, July 18.

Tewfik Pasha (Turkish Minister for Foreign Affairs) has informed the Ambassadors that he will be able to resume negotiations on Saturday.

Marshal Djavad Pasha, formerly Grand Vizier, has been appointed military commander of Crete.

Later.

Tewfik Pasha (Turkish Minister for Foreign Affairs), at the last moment, has accepted the proposals made by the Ambassadors of the Powers.

SANDOWN PARK RACES.

The Eclipse Stakes (Sandown Park), run yesterday, resulted as follows:—

Prince of Wales' Persimmon 1
Lord Rosebery's Velasquez 2
Mr. T. Phillips' Bay Ronald 3

HENLEY REGATTA—DIAMOND SCULLS.

The American oarsman Ten Eyck has won the Diamond Sculls at Henley Regatta.

THE EARL OF DERBY.

The Earl of Derby, G.C.B., P.C., late Governor-General of Canada, has been made a Knight of the Order of the Garter.

THE SINKING OF THE "TAIHOKU MARU."

FURTHER DETAILS.

Paris, July 18.

On learning that the *Taihoku Maru* had been sunk after colliding with a British steamer off the Portuguese coast, near Lisbon, Mr. Kurino (Japanese Minister in Paris) at once requested the Portuguese Government, through its Minister of Foreign Affairs, to extend speedy assistance to the survivors. The Government accordingly dispatched a war-vessel promptly to the place where they had landed, and gave them every assistance. They were afterwards sent back to England. There was no loss of life whatever on the *Taihoku*.

INDIAN LOAN.

Tenders are invited for a 3½ per cent. rupee loan to the amount of three crores (thirty millions), which will be closed on the 16th August.

ARCTIC BALLOON EXPEDITION.

M. Andrée has started from Dane's Island in a balloon, with the object of reaching the North Pole. A favourable southerly wind prevailed at the time of departure.

RUSSIA & KOREA.

London, July 20.

In the House of Commons, during the debate on the Budget, a discussion arose on the vote for the Foreign Office, in the course of which the Right Hon. G. N. Curzon, Parliamentary Under-Secretary for Foreign Affairs, stated that the interests of Great Britain with reference to Korea mainly consisted in securing that the Kingdom be not joined to Russia, and that Korean harbours be not made a base for operations which would be calculated to disturb the balance of power in the East.

THE ANGLO-ABYSSINIAN TREATY.

In the course of the same debate, Mr. Curzon stated that a treaty had been concluded between Great Britain and Abyssinia, but that it would be imprudent at present to make any statement as to the nature of the agreement.

FRENCH DISASTER IN AFRICA.

A French cavalry detachment sent out from Timbuctoo in pursuit of a band of robbers had been attacked, and suffered the loss of two European officers, two non-commissioned officers, and 29 Spahis.

(SPECIAL TELEGRAM TO THE "JAPAN MAIL.")

U.S. ENSIGN CHARGED WITH ASSAULT.

Kobe, July 19, 8.20 p.m.

A *Yirikisha* coolie charged Ensign Everhart, of the U.S.S. *Yorktown*—in the U.S. Consular Court at Kobe—with assault and battery, but the Court, after hearing the evidence, honourably acquitted the defendant. The allegation that the accused used a knife upon the coolie was unproved, but he admitted that he pointed a revolver at the man and used his stick, but this was in self-defence.

(FROM THE JAPANESE PRESS.)

RUSSIAN TROOPS FOR SOUL.

Soul, July 21.

In accordance with the commercial treaty between Russian and Japan the Russian Authorities are reported to have dispatched over 30 officers and 800 soldiers to be stationed at Soul and other open ports in Korea.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following is the solution of Problem 328:—
SOLUTION OF PROBLEM No. 328.

Correct Solutions of Problem No. 328, received from W.H.S.

PROBLEM No. 330.

By J. M. K. LUTON.

BLACK.

WHITE.

White to play and mate in three moves.

"JAPAN MAIL" CORRESPONDENCE TOURNAMENT.

We have decided to start this Tournament on Monday, August 9th. Four names have already been sent in and we hope two more players will come forward ere the entries close on Saturday, July 31. The rules are shortly as follow:—Each competitor to play one game with the various players all round; games to proceed simultaneously. The moves must be sent in to the Chess Editor direct each day, for publication in the daily issue of this journal. Forty-eight hours is the time-limit: this rule will be strictly enforced. The Rules of the B.C.A. are to be adhered to, and any disputes that may arise will be adjudicated by the Chess Editor, his ruling to be final. Any further information will be readily afforded by the Chess Editor on personal application by any member taking part.

A silver cup, we may mention, has been offered by the Chess Editor, as a trophy in this Tournament.

NAGASAKI V. KORE.

We learn from the South that, after the recent defeat of the Kobe Chess Club in the correspondence games with Mr. Jordan, two champions have come to do battle with the victorious Dane. Messrs. Hazeland and Marshall have sent a challenge to Nagasaki for two simultaneous games: dictating the openings as Ruy Lopez and French Defence! In the former they to have the attack, and in the latter the defence. Mr. Jordan, in the true spirit of a chivalric chess player, has accepted the *défi*: and the games are proceeding. We admire his pluck. Marshall we know, but who is Hazeland? Probably he will act as Secretary to the Kobe game and forward on the moves which Marshall decides to make. At any rate we are in for a worthy contest between the Lion of Scotland and the Viking. One, the ex champion of his native land, and the other the friend and pupil of the Danish master Röm, Løvensen and Jespersen. Now we should see some Chess worthy of records.

OVER THE CHESS BOARD.

Tschigorin and Schiffers are arranging to give a performance in St. Petersburg similar to that which took place in Prague recently:—a game of chess, with living pieces numbering 300, with twenty horses, will be played.

Our very good friend "Black Bishop" of Hongkong, remarks:—In the second of his two volumes about Siberia and the Exile System, Mr. George Kennan alludes to the Soyots as isolated, almost unknown, and leading a nomadic life in the rugged mountainous regions of the Upper Vene-sei. They had been described to him as the

wildest, the fiercest, and the most savage of the native tribes of Northern Mongolia. But he found in the Miusink Museum a set of their strange-looking chessmen "in which the Bishops were double humped Bactrian camels, and the Pawns were dogs and wolves;" and when he had ascertained that—among other things—"they knew how to checkmate in three moves with a two-humped Bactrian camel," he felt that he had met along-lost tribe of Asiatic cousins. He became quite impervious to any attempt to impress him with their wildness and ferocity. "Any tribe that could play backgammon, the Mongolian Jew's harp, and open a game of chess with the Khan's double-humped Bactrian camel's dog gambit was high enough in the scale of civilization to teach social accomplishments even to the Siberians. It is true that the Soyots last year lay in wait for and captured the distinguished Finnish archaeologist Professor Aspelin, and held him for some time a prisoner, but they may have done this merely as a means for getting him to teach them some new Jew's harp music, instruct them in Finnish backgammon, or show them the latest method of cornering a king with two camels and a dog." At all events Mr. Kennan is right in holding that chess is incompatible with savagery!

"Black Bishop" complains that the Jubilee Celebrations have interfered with the Hongkong players. The Chess Club's Problem Competition had to be abandoned, as no solutions have been tendered for any of the problems set on the notice board. Play is languishing also in the All-against-all Tournament, and no Challenger has come forward to contest the Championship Cup with Mr. Pollock.

The Singapore Club, which was formed a month or two back, has arranged its first handicap Tournament. Seventeen players have entered, Mr. P. A. Reutens being placed in a position by himself, and the others divided into five classes.

Blackburne was once beaten in one move. He was playing with an irritable old gentleman who was most particular in enforcing all the rules of the game, and when in a bad humour quite incapable of seeing the point of a joke. It was his move first, and he played P to K 3. "Ah," said the champion, grimly, "now I resign." "All right," said his touchy opponent, "and that is one game to me." And nothing that Blackburne knew would alter that determination, so it was duly scored. It is the shortest game on record!

You can get as much fun from a study of the chess laws as from the pages of a comic paper—e.g., a game proceeds as follows:—1—P to K4. P to K4; 2—B to QB4. B to QB4; 3—Q takes KBP mate! Black says: "Move not possible. Illegal, sir." Umphie is referred to, but White demands a reference to authorities and not an umpire's judgment. He finds the law says:—"The Q can move in the manner of a R and B combined." White, by this law, is justified in mating at move 3 (the Q first moves to KB3 as a B and then takes P as a R, the mover not taking his hand off the piece while moving it). Again the law says:—"A player must never touch any of the men except when it is his turn to play." Hence, Black may not set up his own men without saying, "J'adoube" sixteen times. Another, the laws enact that "while a player holds the piece he has touched he may play it to any other than the square he took it from." Any other square! Mark that chess-players! thirty-one squares at the very least, if not sixty-three to choose from. There are scores of other comicities—or absurdities if you will—existing in the faulty collocation of our existing laws.

CRITIQUES ON PROBLEMS.

Mr. J. J. Gynn sends us a most interesting letter in this connection, from which we take the liberty of quoting as follows:—"Solvers are invited to award marks to problems in accordance with the following scale:—Difficulty, 2½; originality, 2½; beauty, 2½; economy, 1½; correctness, 1=10. The solver should ask himself—(1) Was the key move well concealed? Were there several plausible methods of attack? Was the second move concealed? If all affirmative, then 2½. (2) Is the idea absolutely original? Is it a distinctly new rendering? Are two old ideas well combined? If so, 2½. (3) Did the key-move surprise? Are other solutions artfully avoided? Did the solution give pleasure? Then, 2½. (4) Have the pieces been put to the best use? Has the defence been ingenious? Then, 1½. (5) Are there no dual or other fault which could be avoided? Then 1." The necessity of some such system is evident, two solvers sending in such different awards as 5 and 10 or 6 and 10 for the same problems.—*Sydney Morning Herald* (Solvers of problems should cut this out for future guidance.)

THE U. S. CHAMPIONSHIP.

Towards the end of this year, it is probable that Max Judd, the U. S. Consul General at Vienna, will contest the United States Championship with Pillsbury. Mr. Judd has been known for many years at a strong amateur. He recently played a magnificent game with Herr Steinitz at Vienna. We give the game, with notes from the *American Chess Magazine*:-

GAME No. 735.

RUY LOPEZ.

White—Max Judd.		Black—W. Steinitz.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	18 Kt Q3	B K3

16 B R2	P KR4	33 Bx Kt (k)	Px B
17 P R4	Kt Kt5	34 Qx BP ch	

NOTES.

(a) Mr. Steinitz' singular aversion against the recognized defence of the Ruy Lopez has caused him no end of worry and trouble. In the Vienna tournament he defended with 3—K Kt to K2, and thereby nearly ruined his chances for first prize. He discarded it after losing to Blackburne and drawing with Dr. Fleissig. In the Vienna tournament of 1882 he somewhat improved upon this defence by combining 3—P to Q R3 with K Kt to K2, and he cast his lot with it until 1888, when he experimented with the move above. In his "Modern Chess Instructor" he proclaimed this as the best defence, but his experiences with Lasker and at Hastings compelled him to look for something better, which he, however, has failed to find. In the present game he reverts to his pet defence, with the upshot that he gets a wholly lost game, although his opponent is certainly not in his class.

(b) Mr. Steinitz' original thesis of the defence included 4..... P takes P, followed by 5—Q takes P, B to Q2, forming a variation of the Philidor's defence, which in his opinion, is not unfavourable for the second player. Later on he adopted the above line of play on account of the reply, 5—Kt takes P. We, however, are of the opinion that his first plan is the better one if Black continues with 5..... B to Q2; 6—Kt to Q B3. Kt takes Kt; 7—Q takes Kt, B takes B; 8—Kt takes B, Kt to K2, followed by Kt to B3, as Blackburne did at Hastings against Lasker.

(c) First played by Makovitz against Blackburne at Dresden, 1892, and adopted by Lasker in the first part of their match in this city. Later on he played 6—B to K3. Tarrasch and Tschigorin first play 6—B to K Kt5, forcing Black to still further weaken his position by 6..... P to B3, and then retreat 7—B to K3.

(d) With a slight transposition of moves the same position is arrived at as in the fifth game of the championship match. Steinitz, at this juncture, played 11 B—K2, Castles; 12 Castles KR. B takes Kt; 14 B takes B, whereupon White not only retained two Bs vs. B and Kt, but also forced Black to weaken his QP by 14..... P—QB3.

(e) This retrocession does not look well, but is, in fact, his only good move.

(f) An excellent response, which effectually prevents Black's intended B—K2, for all time, as it proves.

(g) B—K2 instead, though tempting, would not answer, White replying with 22 Kt—KB4, followed by 23 Kt takes KP if 22..... B takes B.

(h) Evidently Black did not take into consideration the master stroke which White has in store, but his position is precarious. If 25..... K—Q2, the likely continuation would be: 26 Kt takes RP, Q takes Kt; 27 R takes P ch, R takes R; 28 Q takes B ch, and mates next move.

(i) This fine sacrifice, in conjunction with his pretty twenty-ninth move, should have insured a speedy win.

(j) If instead 30..... K—B sq, White wins by 31 R takes Kt ch, B takes R; 32 B—R6 ch, K—B2 (if Q—Kt2, then 33 Q takes P ch, if R—Kt2, then 33 Q takes Q); 33 Q takes Q ch.

(k) Instead of thus releasing the Rook, White should have continued 33 B—K3, R—R4, 34 B—B5 ch, R takes B, 35 Q—Q6 ch, winning easily. The play in the text leaves him with Queen against two rooks and he should have won, but he eventually committed a blunder and lost.

TEA.

During the week there has been a brisk business done. Prices are firm and in lower grades have slightly advanced. In Yokohama sales were, on the 17th, 49,700; 18th, 88,600; 19th, 125,800; 20th, 72,400; 21st, 90,800 cattie. In Kobe, the sales amounted to 81,000 cattie on the 15th, 217,400 cattie on the 16th, and from 75,000 to 77,000 cattie each on the 19th and 20th. The *Belgic*, sailing on the 17th for San Francisco, took 6,227 packages from Yokohama and 4,760 from Kobe, and the *Olympia*, same date, for Tacoma, 6,460 packages from this port and 3,226 from Kobe.

GREY WHISKERS

EYEBROWS, &c.

GEO. COURTICE'S

CONCENTRATED

EXTRACT OF NUT GALLS

Has been thoroughly tested and approved in all parts of the world for over a quarter of a Century.

It is NOT A DYE, but the colouring principle of the Nut Gall in a concentrated form, perfectly harmless, and will positively restore the colour true to nature in two weeks.

NOTE.—Thirty years Professor of Hair Specimens to the Honourable Benchers of the Inner Temple.

GEO. COURTICE & CO.,

Laboratory, 8, Bishop's Court, Chancery Lane, London

(Late 234, STRAND).

PRICES: 2s. 6d., 3s. 6d., 5s., 10s. 6d., £1 1s. per BOTTLE.

This EXTRACT is INVALUABLE to LADIES, as it restores the Colour close to the Skin.

June 5th, 1897.

A. SAVY & CO., ENGINEERS.

162, Rue de Charenton, Paris.

THE OLD G. HERMANN DEBATISTE WORKS.

ESTABLISHED 1830.

The Oldest and Largest Makers in the World of Chocolate, Cocoa, and Confectionary Plants.

Over 2,500 Chocolate Factories fitted up to January 1st, 1896.

GRINDING MACHINERY for all kinds of dry or wet substances, colours, printing inks, toilet soap, perfumery, and chemicals.

MIXING, CRUSHING, AND PULVERISING MACHINES FOR ALL MATERIALS.

Address MESSRS. BOYES & Co., YOKOHAMA.

It's a Far Cry

FROM FOREIGN
LANDS TO

Chicago, U. S. A.

But no matter where you live, we are anxious to do business with you in Clothing, Shoes, Dry Goods, Watches, Jewelry, Sewing Machines, Harness, Saddles, Hardware, Tools, Guns, Revolvers, Ammunition, Bicycles, Agricultural Implements, Vehicles of all kinds, Furniture, Books on every subject. We handle only dependable goods—no trash.

We believe we can send to any clime, goods of any kind, perfect in quality, at lower prices, laid down, than the residents thereof can obtain them anywhere else. Our belief is founded on a quarter century's experience. To acquaint you with our facilities we will send you, or any other foreign resident, free of all charges, our "BUYERS' GUIDE," a 2½ pound book, 700 pages, 13,000 illustrations, 40,000 descriptions—it is unique, useful, valuable—and also our "HAND BOOK FOR FOREIGN BUYERS," which contains all necessary information to put you in close touch with our marvelous methods. WILL YOU ASK US TO DO SO?

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL HARRIS, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JULY 31ST, 1897.

SUMMARY OF NEWS.

THE British fleet has left Otaru for ports in the Gulf of Tartary.

It is reported that 800 Russian soldiers have been despatched to Korea.

THE new Tariff Bill has passed the U.S. Senate and been signed by the President.

It is now reported that the Emperor will return to Tokyo on or about the 7th August.

ONE hundred and seventy-nine Japanese labourers returned from Hawaii by the *Gaelic*.

MR. IRWIN, Hawaiian Minister to Japan, arrived at Yokohama by the *Gaelic* on the 25th instant.

HEAVY rains and floods occurred in Formosa from the end of last month to the 15th instant.

THE Japanese Government has decided to submit the immigration question with Hawaii to arbitration.

THE limit of letters per word for foreign telegrams received by Japanese telegraph offices has been raised from ten to fifteen.

LIEUT. H. B. HRYGATE, of H.M.S. *Algerine* shot himself fatally with a revolver at Shanghai on the 19th July. The verdict of the Coroner's

jury was to the effect that the evidence did not show whether the act was intentional or accidental.

AN Agricultural and Industrial Bank is to be opened in the Hokkaido under the auspices of the Colonization Department.

THE Japanese battle-ships *Fuji* and *Yashima* will leave England for home early in August, calling at very few ports *en route*.

AN order for Japanese-made bicycles has been received from Chefoo, China, through a Chinese merchant, by the Morita Bicycle Factory, Tokyo.

THE work of constructing a telephone line between Tokyo and Kobe is to be started in October next and will be finished during the current year.

TURKEY has given in to the demands of the Powers regarding the Greco-Turkish frontier and the discussion of the preliminaries of peace has commenced.

SENHOR E. Galbardo, new Portuguese Minister to Japan and China, will present his credentials to the Emperor of China during the Autumn, in the meantime he has returned to Macao.

THE second dock of the Yokosuka Shipbuilding Yard is to be greatly enlarged so as to accommodate the battle-ship *Fuji*, and it is hoped that the work will be completed within two months.

MR. AKIYAMA, Councillor in the Foreign Office, who has been in Hawaii assisting Mr. Shimamura, Japanese Minister, in the emigration affair, arrived at Yokohama by the *Gaelic* on the 25th inst.

ACCORDING to statistics compiled by the Sanitary Board in the Home Department, the number of dysentery cases in Japan from the 1st of January up to the 30th of June totalled 1,016, of which 185 proved fatal.

WITH a view to the construction of an extensive Dock at Kobe, the Mitsubishi Company have purchased a site covering 1,500 *tsubo* at Wadasaki and are negotiating for the purchase of several adjoining lots.

A large junk was run into and sunk by the steamer *Sokai Maru*, off Shinagawa on the 26th instant. The owner of the junk, and crew were saved. An action for damages has been laid against the owner of the steamer.

SINCE the hot weather set in, a week or so ago, the water supply of Yokohama from the reservoir at Noge has been found insufficient to meet demands and the supply has been cut off at all the hydrants from 8 p.m. till 5 a.m. daily.

DREDGING is to be commenced shortly in Nagasaki harbour, which has been seriously silting up of late. The central Government will grant a subsidy towards the cost of the work and the local Government will have to defray the balance of the expense.

THE 27th instant being the 25th anniversary of birth of the Emperor of China, Count Okuma, Foreign Minister, and other high officials, as well as various Foreign Representatives, proceeded to the Chinese Legation to offer their congratulations.

THE Nippon Yusen Kaisha, whose steamers between Yokohama and America have hitherto run irregularly, has now decided to open a regular line with four steamers, namely the *Kago shima Maru*, *Matsuyama Maru*, *Ryofun Maru*, and *Yamaguchi Maru*.

THE Korean Government, which has had no Representative at the Chinese Court since the

War, has decided, according to the *China Gazette*, to send a Minister to Peking at an early date, and negotiations are now going on for a site for the Legation.

THE buildings of the proposed Foreign Language School, which are to be opened in September next at the Higher Commercial School, have already been completed and all the instructors in the various sections are expected to arrive in Japan at an early date.

THE railway line between Kashiwazaki and Hachizaki on the Hokuyetsu Railway will be opened for traffic on the 1st of August. The line between Kashiwazaki and Kitade (five miles) and that between Nuttari and Sanjo (24 miles) have also been finished and will be opened for traffic at an early date.

SOME unexplained disease is said to attack Japanese fishermen engaged in their avocations in the waters around Fusan, Korea, and for a time has driven all the fishermen from the neighbourhood. Some charitable persons, however, have engaged to employ some medical men to accompany the fishermen in their boats, and it is expected a fleet of fishing vessels will leave the Inland Sea for Korean waters shortly, accompanied by the doctors, to fight the new disease.

THE steamer *Kusana Maru*, of the Osaka Shosen Kaisha, while on her way from Osaka to Hosojima, stranded, on the 23rd inst., near the Komane islands, but the vessel escaped without sustaining serious damage. The passengers and cargo are reported to be safe. On the same day the steamer *Kogane Maru*, of the Koryutsu Steamship Company, collided with the steamer *Taban Maru* while the former vessel was about to enter the port of Kobe, and both vessels received some damage.

THE Import market is utterly stagnant, and in some lines of goods matters are likely to remain so for a month or more. The *doyo*, or dog-days, are upon us, and the *dolce far niente* loving Japanese merchants and dealers will take things very easily till the hot weather is past. In piece goods, woollens, and yarns there is practically nothing doing, dealers having provided themselves with all they will want until business awakens after the rice harvest. In metals, there has been some enquiry after pig iron, but no considerable business done. Arrivals of Brown sugar continue both from Manila and Formosa, but sales have only been effected for immediate wants, prices having advanced ten cents per picul. In White refined a small steady business has been transacted at former rates. There have been considerable deliveries of kerosene, in settlement of former orders for the most part; the market is firm and prices unchanged. The Export market has been brisker than the Import. A movement has at last been made in Raw silk, holders having made concessions in rates to start buyers, with the result that some business has been done. The demand for re-reels has been greater than the supply. The stock of all kinds in the market is only some 4,000 piculs, not quite half the amount at the same time last season. Nothing has yet been done in Waste silk, the stock of which is estimated at 3,200 piculs. Purchases of Tea continue on a large scale, at firm rates, some 573,000 catties having been bought in Yokohama and 390,000 catties in Kobe. A very large quantity of tea is now afloat on the Pacific, the *Peru* for San Francisco, *Yamaguchi Maru* for Seattle, and *Empress of Japan*, for Vancouver having left during the week with an aggregate of 13,272 chests and 112,000 catties for America. Exchange, after several fluctuations, closes $\frac{1}{4}$ lower than last week.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Once more the *Jiji Shimpō* returns to its pet and patriotic theme, a coalition cabinet. The project is urged in general terms. No statesmen are named, but since the public understands very clearly that the lines of cleavage in the political sphere have hitherto been, on the one side, Choshu and Sashu, on the other, Kishu, there is no obscurity about the *Jiji's* meaning. The basis of our contemporary's argument is Japan's altered position. Formerly, she used to be regarded with eyes of patronizing tolerance, and a certain amount of amusement. Now the nations of the West begin to look at her with jealousy and some apprehension. Development is a necessity to her. Having put her hand to the plough, she can not turn her face backwards. Yet every symptom of her development threatens to produce new opposition. The brotherhood of man (*shikai keitei*) is a favourite expression on the lips of Occidentals, but their conduct towards each other is regulated chiefly by racial and religious prejudices. The colour of a man's skin, the character of his creed—these are the things that determine his title to equal and courteous treatment at the hands of the nations constituting Christendom. Japan's expansion means an access of foreign opposition. Her progress begins to be watched no longer in a spirit of amiability or indifference. Her position may be compared to that of a railway projector who, when he comes build his road, finds himself in the presence of unanticipated obstacles that upset all his calculations. What is he to do? Is he to choose another route or should he apply himself resolutely to remove the obstacles from his path? Such is the question that Japan has now to answer. She has reached a critical stage in her national career, demanding for its safe passage the best talent that she has at her disposal. It is not a time for domestic squabbles. Whatever statesmanship, whatever administrative experience the country possesses should now be at its service.

There is evidently a good deal of uneasiness in Japan about financial affairs. The nation is beginning to discover the smallness of its capital in comparison with the magnitude of its various undertakings. People observe the large increase that the State expenditures have undergone in connexion with *post-bellum* measures, the preponderance of imports over exports, the extraordinarily high rate of interest ruling in the market, and the growth of paper currency—212 millions against 154 millions in 1893—contemporaneously with the paucity of capital available for industrial and commercial enterprises. Under these circumstances some publicists are beginning to complain that they find themselves hampered by uncertainty as to the Treasury's financial programme. The *Mainichi Shimbun* is among the critics. It thinks that business men are unable to shape their course until they know clearly whether the Government intends to pursue or reduce its programme of public undertakings. Upon the Cabinet's decision in that respect a great deal evidently depends, for if large sums are to be disbursed by the Treasury on account of these undertakings, the money market will be correspondingly affected. Hence the *Mainichi* thinks that all possible despatch should be observed by the Government in determining and declaring its policy.

The *Nippon* has an article on the subject of railway expansion. It thinks that the country is suffering from a railway epidemic. Not that the development of that essential means of communication is too rapid, but that many of the projected lines do not appear to have been chosen on genuinely economical grounds. They find supporters and subscribers not so much on account of the solid advantages they offer, as because of the skill with which they are introduced to public notice. In 1895 the total length of State and private lines open to traffic was 2,337 miles. Since then, charters have been

granted for the construction of 1,323 miles, with a capital of 66,154,000 yen; temporary charters for 1,429 miles, with a capital of 70,242,000 yen, and applications have been made for the building of 7,554 miles with a capital of 374,359,000 yen. All this enterprise is primarily an outcome of the spirit of the time, but its proximate incentives were the publication of the Private Railway Regulations in 1887, and the enactment of a law in 1892 fixing the programme of State Railways. The Regulations indicated the steps to be taken by projectors of lines, and the Law showed not only the districts within which private enterprise would be free from public competition, but also the scheme of State Roads which might be taken as a basis by companies in general. It is plain that the main purpose kept in view by private projectors should be the ultimate establishment of connexion between their roads and those of the State, so that each might derive a maximum of benefit from the other, and the country a maximum of convenience from both. Some of the private lines have been planned on that principle, but a very great number ignore it altogether, and are laid down to run through isolated districts in such a manner as to leave very little hope of independent success and none of co-operative usefulness. That want of prevision on the part of projectors bears witness to the fact that they obey the impulses of a mania rather than the dictates of calm business enterprise, and it is precisely in controlling and checking such impudence that the Railway Council may find its most valuable function. The *Nippon* doubts whether the point is fully appreciated, and suggests that the Minister of State for Agriculture and Commerce, who is the final court of appeal in such matters, should instruct the President of the Council to regard the various schemes not merely from the point of view of their separate prospects, but also as parts of a national system.

One would suppose from many of the criticisms published by Japanese newspapers, says the *Hochi Shimbun*, that the statesmen charged with the management of the country's foreign affairs were not common mortals, but possessed some supernatural ability. Even when a Committee of the French Senate raises some difficulties about a treaty which has been duly negotiated by the French Minister for Foreign Affairs, Japanese journalists cry out that the Foreign Office in Tokyo is to blame. Of course, much of that extravagance is due to the fact that foreign affairs are dragged into the arena of party politics. But there is another explanation. It has hitherto been the inviolable custom of Japanese cabinets to conceal everything relating to the country's foreign relations, excepting the successes achieved. Complications and failures were carefully hidden from public gaze, and fortunate *coups* alone exposed to it. A false estimate of diplomatic ability was thus suggested, and people congratulated themselves that the empire's foreign relations were controlled by Bismarcks and Beaconsfields. The policy of the present Cabinet, on the contrary, is to be as above-board as possible; to make secrecy the exception rather than the rule. It does not seek to escape censure by officially gagging the mouth of criticism, nor yet does it endorse the wisdom of keeping the nation in ignorance of the nature of the problems that have to be solved abroad. Simultaneously with this adoption of a candid course, the country's foreign affairs have received a great development owing to its altered status, and the net result is that the hitherto sealed book having been laid open contemporaneously with the addition of many interesting chapters, undiscerning folks imagine that the volume is radically changed, and that the spaces previously blank or filled with pleasant records, are not occupied by catalogues of complications and failures. Party politicians, whose patriotism is of the lips only, rejoice at the change, and busily manufacture capital out of it for the purposes of their selfish enterprises. But the Cabinet goes on its way unconcerned. It has taken the nation into its confidence and has the satisfaction of knowing that

its doings are now judged by the nation's intelligence and that the people at large understand their country's position. That is the home policy of the present Foreign Minister of Japan.

A long article appears in the *Yomiuri Shimbun* on the subject of aids to navigation, with special reference to the Niigata-Vladivostok and Hakodate-Korsakovsk services. At least, both services are nominally discussed, but our contemporary's remarks are in reality confined to the Niigata-Vladivostok line. The service is included in the category of national, as distinguished from purely commercial, enterprises. In other words, it is a service which the country lies under an obligation to maintain, irrespective of profit or loss. Parliamentary sanction has been obtained for paying a subsidy of 140 yen per mile to steamers plying on the route, but for a time no one was willing to make the venture. Finally, Mr. Oya Shichihei purchased a steamer—the *Aikoku Maru*—and put her on the line, the result being that her first trip, made last October, involved a loss of six thousand yen, and her second, made in April, showed a loss of five thousand. Of course Oya does not propose to continue squandering money on a steam-ship romance of that nature, and the *Yomiuri's* article is intended to draw public attention to his case. The trade between Niigata and Vladivostok is of a most limited character. Pears and melons are the outward commodities; broken glass, bones, and scrap iron, the inward. There is a large demand for bricks and cement at Vladivostok, but as Japan's production of those articles does not even suffice for her own wants, she has none to export. Still, the *Yomiuri* thinks that Niigata has a future. It is evidently the quickest port for correspondence between Japan and north-eastern Asia, and it will probably become, by and by, the Japanese terminus for steamers plying to America. Moreover, when the Siberian Railway is opened to Vladivostok, Niigata must immediately become a place of prime importance. There are several lines of steamers now plying to Vladivostok from foreign ports. Among them is a highly subsidized Russian company, and our contemporary thinks that the Vladivostok-Niigata route will be inevitably occupied by it, should Mr. Oya withdraw the *Aikoku Maru*. It is not explained why a Russian company should turn its attention to an enterprise involving such losses as Mr. Oya has suffered. The gist of the matter is that a more liberal subsidy must be granted by the Diet, unless Japanese ships are to be driven from another route of national importance.

Formosan affairs furnish the *Nichi Nichi Shimbun* with a weapon for attacking the Government, especially Viscount Takashima and Baron Nogi. Setting out with the assertion that the administration of Japan is a topic of anxiety to the Emperor, of lamentation to the people, and of ridicule by foreigners, our contemporary proceeds to comment in strong terms on the conduct of the Cabinet which, at one moment, desired to promote Mr. Mizuno, Chief of the Civil Administration Bureau in Formosa, to the post of Vice-Minister of Colonization, and the next summarily removed him from office. The *Nichi Nichi* seems to think Mr. Mizuno largely to blame for the abuses that have disfigured the management of Formosan affairs, and to agree that his retirement is proper. But it maintains that the Government attitude towards him has been most reprehensible. Turning then, to Baron Nogi, it declares that, though he has occupied the position of Governor-General for nearly a year, he appears to have effected no improvement whatever in the administration of the island, and that, instead of trying to transfer his responsibilities to the shoulders of Mr. Mizuno, he ought to resign at once. In this context a very repellant picture is drawn of the evils existing in Formosa, and it is asked how Baron Nogi can possibly be acquitted of failure to correct them. The same argument applies with no less force to Viscount Takashima, to whom the duty of supervision rests. He, too,

is unworthy to remain in a position where he has permitted such abuses to continue unchecked. The *Nichi Nichi* also thinks that Viscount Takashima's recent attempt to change the leading civil official in the island without consulting the Governor-General was a worthy preface to his being obliged, so soon as he came in contact with the Governor-General, to dismiss the person whom he had proposed to promote. The article is very long, but what we have set down represents the pith and kernel.

The *Osaka Asahi* reverts to its old contention that a sum of 50 million yen should be included in the *post bellum* expenditures for the purpose of developing Formosa's resources. It compares the Government's action to that of a man expecting to obtain water without digging a well, and contrasts it with the methods of Peter the Great, who, at a time when his empire's treasury was exhausted and the need of money keenly felt, set himself to dig canals, build docks and lay the foundations of a splendid city. It has been said of Peter that he *lost in war and won in peace*. It may be said of Japan, so far as Formosa is concerned, that she has won in war and lost in peace. The present revenue of the island is 8 million yen. In three or four years that sum will probably be 10 millions. But the ordinary expenditures are 12 millions, without making any provision for the construction of harbours, roads, and other agents of production. Unless Japan intends to face the perpetual necessity of putting her hand in her pocket to support Formosa, she must invest a certain amount of capital to make Formosa self-supporting. At present she is only tinkering at the problem, for all the world like a surgeon trying to heal a big wound with tiny fragments of sticking-plaster. Even in the matter of railways a practical commencement has not yet been made, and with the exception of one or two roads, no addition has been effected to means of communication. It is the falsest economy conceivable, in the opinion of the *Asahi*.

HONMOKU AND THE MILITARY.

The only seaside suburb of Yokohama, the village of Honmoku, has again been converted into bathing quarters for the Japanese military. On the 23rd instant, over five hundred men of the 1st Infantry Regiment of the Imperial Guards, under the command of Colonel Nakano, took up their quarters in the village, and are to be replaced, after a fortnight's stay, by others. Tide, time of day, and sun appear to be of very little importance to Japanese troops so far as bathing is concerned. On Saturday and Sunday the men were sent out "to learn swimming" at 9 a.m. and 3 p.m., when a broiling sun was pouring down on their unprotected heads, and owing to the tide being low, they had to wade out a quarter of a mile to get into water deep enough to reach their knees. One of the men, on Saturday, we hear, started a disturbance in the village by taking possession of a bath house, and on payment of the trifling fee of 8 *rin*, refused to allow any one else to use the bath while he was there. He knocked down the old man who was in charge of the place and a policeman who was sent for, but a crowd of the villagers eventually overpowered the warrior and conducted him to his quarters, handing him over to his superior officers to be dealt with.

It seems unaccountable that with the scores of other seaside villages in the vicinity of Tokyo, unfrequented by foreigners, the little Yokohama bathing place, with its long row of bathing-houses rented by foreigners largely for the use of their children, wives, and grown-up daughters, should, year after year, be selected by the military authorities for the natatory evolutions of the Tokyo garrison. We have no hesitation in saying that the matter has never been properly brought to the notice of the military authorities. In all western countries the greatest care is taken to consult public convenience in such matters, to say nothing of decency, and the singular want of consideration shown in Japan redounds little to her credit.

HOKKAIDO.

The *Fiji Shimpō* publishes the following accounts with regard to Hokkaido:—According to official investigations the number of convicts in Hokkaido and their offences are as follow:—

Offence.	Males.	Females.	Totals.
Escapes from prison	2	—	2
Violation of police supervision	184	5	289
Counterfeiting coins	3	—	5
Gambling	1,217	32	1,349
Murder	54	3	57
Wounding	2	1	3
Desertion	2	1	3
Theft	1,230	97	1,327
Pickpockets	4	—	4
Theft of farm and forest products	123	1	124
Armed robbery	15	—	15
Robbery with murder	4	—	4
Fraudulent obtaining of money	543	24	567
Incendiarism	4	5	9
Other offences	900	88	988
Totals	4,940	367	5,307

Police offences	9,869	3,680	13,549
Offenders against taxation laws	775	199	974

Grand Total 15,584 4,246 19,830
The influence of Christianity in Hokkaido is extremely small, according to the *Fiji*. The people in general regard this form of religion with detestation rather than with mere indifference. The energy and enthusiasm of missionaries and pastors, displayed in the form of preaching and affording protection to the poor, seem to have produced no tangible effect toward the propagation of their doctrine. There are many nominal Christians, but they are wanting in the deeds that proclaim their faith. Hakodate and Nemuro alone present a comparatively prosperous state from the missionary's point of view. The following table gives details:—

Sects.	Chinese.	Pres. etc.	Foreign.	Native.	Believers.
Methodist	6	12	5	7	715
Congregational	5	7	1	—	183
Japan Episcopal	12	22	8	14	475
Greek	7	8	1	—	925
Japan Christ	5	8	9	8	320
Roman Catholic	4	10	5	3	397
Baptist	3	2	2	2	81
Independent Christian	1	1	—	1	267
Total	43	70	19	51	3,363

As for schools under sectarian supervision, they are in most cases maintained by voluntary contributions from natives and foreigners. The institutions under the control of the Episcopal Church belong to the Mission Board of England, while those under the Roman Catholics are chiefly supported by funds from the French Mission. The Greek Church receives the assistance of Bishop Nicolai in Tokyo; the Methodists are supplied with funds left in the will of a certain American lady, and others furnished by the Female Mission Board. The schools maintained by these various sects are of about equal grade, and their management is, in most cases, anything but unsatisfactory. They are looked upon by their societies as a source of public benefit, and it must be acknowledged that their teachers show a remarkable degree of assiduity in their work. The school which the Episcopal Church maintains is absolutely devoted to the instruction of girls in the higher course provided for Elementary Schools; while the Methodists have adopted the schedule of the Intermediate Schools, with slight alterations. There are at present ten schools, with thirty-one teachers including foreigners, and the number of students aggregate 401, of whom 76 have graduated.

The exodus of labourers from Yamaguchi Prefecture to foreign countries has increased year by year. According to statistics made up to the 29th year of Meiji the number of single men who emigrated were 5,726 and of married men and women 1,794; the amount of money brought or sent home by them during the period amounted to yen 1,265,118.

THE FINANCIAL SITUATION.

It is obvious, says the *Mainichi*, that the Bank of Japan, at this critical period of the financial year, will scarcely be able to satisfy the demands of the public unless it resorts to one of three schemes, viz:—The issue of loans beyond its legal limits; the paying in of increase deposits by the Government; or the raising of the rate of interest. A few days ago the Finance Department granted the Bank permission to issue notes beyond its warranted power, while the *Official Gazette* of the 20th instant announced that such permission was granted according to the third clause of Article II. of the Convertible Note Regulations. It may be worth while, for the purposes of this note, to reproduce the Article referred to. It runs:—"If the Bank of Japan, according to the condition of the market, deems it necessary to increase the amount of currency in circulation, steps may be taken, with the sanction of the Minister of Finance, to issue convertible notes beyond the amount specified (in the two foregoing clauses) under the security of Government loan bonds, debentures of the Finance Department, and other substantial bonds or commercial notes, provided that the Bank pays a tax on the amount of issue at the rate of not less than five per cent. per annum, under the direction of the Minister of Finance."

If the Bank of Japan does not raise the rate of interest, it seems necessary that recourse should be had to increasing the deposits of bullion by the Government. Unless it adopts such a step the Bank cannot escape the necessity of issuing notes beyond its legal powers. Is it owing to the lack of bullion deposited by the Government, that the Bank had to adopt a scheme of over-issue in defiance of its former policy. We (*Japan Mail*) think that the Bank has resolved to avoid as far as possible assistance from the Government in matters concerning the circulation of currency. In regard to the money market generally it may be noted that although there are unmistakable signs of a vast amount of capital being absorbed into the Treasury in the form of taxes, and various companies are also calling in payments on shares, the principal banks in Tokyo are feeling no serious pressure on their funds.

THE KOBE LOCAL COURT AND MR. EVERHARD.

The Kobe Local Court dismissed the charge of assault and battery brought by Mr. Everhard against a *jinrikisha* coolie. The assault and battery consisted in seizing Mr. Everhard's arm and trying to turn him round. The ground of the Court's verdict was insufficient evidence. We do not see how any other judgment could possibly have been rendered. Mr. Everhard was the only witness for the prosecution. He declared that the *jinrikisha* drawer had seized his arm. The drawer denied that he had done anything of the kind, and the man that pushed the *jinrikisha* emphatically corroborated the denial. Both men had made precisely the same statements in the American Consular Court. Perhaps they both lied. We think they did. But the Court had no right to act upon such a theory. Mr. Everhard might have saved himself the trouble of prosecuting the coolie unless he had some testimony to offer other than his own.

Now that the incident is closed we have to say that if we refrain from severe criticism of the manner in which the case was conducted in the United States Consular Court, it is simply because we believe in the justice of the decision and are anxious to avoid comments that have ceased to have special utility. We have written *ad nauseam* against the radical imperfection of a system which obliges a man to be at one moment an advocate and at another a Judge. The American Vice-Consul, sitting as Judge in this case behaved as an advocate from first to last. The ends of justice were not defeated, but every impartial observer must condemn the way in which they were attained.

JAPANESE TOPICS.

Vernacular newspapers say that, at a Cabinet meeting held on the 23rd instant, it was decided to accept Hawaii's proposal for arbitration.* The view taken was that practically no other course presented itself. The alternative of employing force to assert Japan's rights could not be adopted against such a weak State without injury to Japan's reputation. As for the arbitrator, it will probably be the King of Sweden, that monarch being in a position to take a perfectly impartial view of the affair.

On the 24th instant, judgment was delivered by the Tokyo Local Court in the case of the three journals—the *Nichi Nichi Shimbun*, the *Tokyo Shimbun*, and the *Chuo Shimbun*—and the Tokyo News Agency, the editors, publishers and printers of which were arraigned by the Public Prosecutor on the dual charge of insulting officials in the discharge of their duties, and circulating matter calculated to disturb public good order. We need scarcely remind our readers that the incriminated matter was the "marching song" of which we recently gave a translation. The Court found the accused guilty on the first count—insulting officials—but acquitted them on the second. The sentence was one month's major confinement, and a fine of 5 *yen*. The publisher of the Tokyo News Agency alone escaped, the Court holding that there was no evidence to prove that the editor had consulted him about the song before causing it to be printed and distributed. All the condemned men appealed from the sentence.

It is suggested by the *Fiji Shimpō* that if the Cabinet can not persuade itself to abolish the Colonization Department, the Minister, Viscount Takashima, ought to undertake the duties of Governor-General of Formosa, Baron Nogi being removed to some other post. The Viscount, says our contemporary, need not remain in Formosa for 365 days in the year: he might return to Tokyo while the Diet is in session or the Budget in process of compilation. That is a delicate way of saying that a Minister of Colonization is altogether a superfluity.

Under the pretty caption of "Count Okuma's Great Treachery," the *Yorozu Choho* devotes a considerable part of its columns to prove that Count Okuma is revolving and practising various schemes to effect a union with Marquis Ito. We do not suppose that even the *Yorozu Choho* imagines itself to be serving its country by such writing. It is simply making mischief, a *metier* to which it has of late devoted itself with much assiduity.

It seems an idle task to reproduce the many reports published by vernacular journals about increased taxation for the purposes of next year's Budget. The latest, however, is that the price of rice in assessing the Land Tax will be altered from 3 *yen* per *koku*—at which price it was estimated when the present tax assessed—to 7 *yen*. The assessment for purposes of taxation is effected by compounding four factors, the superficies of the land, the gross yield, the price per *koku*, and the net profit. The proposed change would give an increased income of about 15 million *yen*.

The *Fiji* alleges that it has been decided to re-arm the Japanese troops with a

repeating rifle entirely different from, and far superior to, the "Murata" now in use. The new weapon also has been designed in Japan, but our contemporary says nothing about the inventor. It is declared to be superior to even the Spanish rifle, which the *Fiji* calls the best in Europe.

We have not for a long time heard of any theatre in Japan being closed by the police on the ground that its representations were *contra bonos mores*. That fate however, has now overtaken no less an institution than the celebrated Kobuki-za in Tokyo. A curious feature of the incident is that the incriminated piece was put upon the stage on the 10th instant, and that its evil tendencies were not discovered by the police until 22nd. We expect that the press will have a good deal to say about this.

The latest weapon of attack employed by the Opposition journals against the Cabinet is that, for lack of engineering experts, the progress of the post-bellum public works is hopelessly retarded, and the money raised for carrying them on lies idle in the Treasury's vaults. The *Chuo Shimbun* ventures into arithmetic. It alleges that 20 million *yen* remain unexpended from last year's appropriations, and that, out of 63 millions collected this year, only six hundred thousand *yen* have been expended as yet. Where, we wonder, did these sixty-three millions come from. The *Chuo* seems to be under the impression that the second installment of the Public Undertakings Loan has been floated. If so, the operation must have been performed in some other planet. When the *Chuo* asks us to believe that 83 million *yen* are lying unused in the vaults of the Bank of Japan because experts are not forthcoming to carry on the post-bellum works, it shows great faith in our credulity.

The military authorities are said to have concluded the survey of the Sanin and Sanyo districts, and to be now engaged on the Kiushu, Iki, and Tsushima sections. Kiushu, it is alleged, will be finished this year, and Iki and Tsushima next year.

The *Sekai-no-Nippon* has a note about the much talked-of *Wa-Ei Ginko* (Anglo-Japanese Bank), which is regarded as a channel for the inflow of foreign capital into Japan. The capital of the Bank is put at 30 million *yen*, of which 20 millions are to be taken by foreigners. On the English side the chief promoter is said to be the Hongkong and Shanghai Bank, and among the Japanese specially mentioned in connexion with the project are Messrs. Abe, Yokoyama, Amenomiya and Ono. The idea, according to our Tokyo contemporary, is that Government protection should be obtained in the form of a guarantee to make good any deficit between the net earnings and ten per cent. on the paid up capital, the limit of the Treasury's liability on that account to be five per cent. Count Matsukata is said to have been approached, but of course he declared his inability to give a special undertaking. The Japanese promoters are consequently making arrangements to bring the matter before the Diet next session. It will be understood, of course, that we take no responsibility for these statements.

It is stated in the columns of the *Fiji Shimpō* that reports begin to be frequently received about suspicious-looking foreigners loitering in the neighbourhood

of the new Japanese coast defences, apparently for the purpose of making surveys. At present there exists no manner of dealing with such persons except to arrest them and hand them over to the Consuls of their nationality, and it is doubtful whether the latter have competence to punish them. At all events, prevention is the great object in such matters, and until the Japanese military authorities draw up some definite regulations and take steps to enforce them, a most inconvenient practice must remain unchecked. We (*Japan Mail*) are not at all surprised that there should be considerable anxiety on such a subject, but it seems to us that the Japanese have the remedy in their own hands. They need only post notices at certain points to indicate lines within which any person trespassing will be prosecuted. Foreigners would have to observe such notices, and every foreigner would be happy to do so, unless he were one of the gentry whose room is preferred to their company from the point of view of the military authorities.

The indefatigable M. Blowitz did not lose the opportunity of Marquis Ito's visit to Paris. He sends the following to *The Times*—

Paris, June 16th.

I had the honour of being received this afternoon by Marquis Ito, who has been twice Prime Minister of Japan, and who on the second occasion held that post for five years, being in power during the eventful period of the Sino-Japanese war. He is a man of average height, with broad shoulders, and gives the general impression of energy and decision. His eye is keen and penetrating, and very expressive. The mouth easily falls into an agreeable smile. The complexion is bronzed; the hair and beard are dark and thick. The Marquis received me with the somewhat timid and distrustful reserve which is peculiar to his race, and which with the diplomats of his country is traditional. Gradually, however, during a long and desultory conversation, he became more communicative, and was even lively when a topic came up which interested him. I pass over my questions and give simply what he said—which is the main thing, for men who have held high office have always something interesting to say.

"After the war," he said, "I carried through Parliament the measures which seemed to me urgent. I wound up, as far as possible, the affairs of my Cabinet, and then offered my resignation to the Emperor. The Ministers of Finance and War and several others followed my example, and in spite of the Emperor's gracious objections we adhered to our decision. The Minister of Marine retained his office in the new Cabinet. It did not seem to him nor to us that his task was accomplished. But, as for me, five years of office appeared to me quite enough, and I thought that a new situation required new men. Victory, like defeat, has its shadows and disappointments, and the former often called for as much resignation as the latter. The unexpected intervention of the three Powers changed the results of our long efforts. Port Arthur is a cooped-up port and a bad choice for an arsenal. China had not sufficiently perceived its inadequacy. I do not think that Russia, in making it the terminus of her Trans-Siberian Railway, can make much out of it; but by remaining in our hands it would have been a tangible sign of our victories. The attitude of the three Powers did not allow us to insist upon it. Korea remains in an uncertain state. Japan and China retain equal influence in it, but when there is a third Great Power between two rival Powers the force of circumstances always gives it the ascendancy. The Russian railway to Port Arthur, however, is, or rather will be for a time, the sole tangible sign of a transformation produced by the war in the Chinese Empire. I am aware that many railways are laid down in China on paper, but I do not see many in real existence. I do not think China will alter on account of the war, or will draw a lesson from it. I believe that her opinion of herself is, and will remain, unchanged. But she is signing treaties which, thus far, are wishes rather than realities.

"We, who are a rising race, have begun to have not merely a Parliament, which would not be enough, but a Parliamentary spirit. The Ministers, it is true, are responsible only to the

Emperor; but if a Cabinet had a majority against it in both Houses the Mikado would not screen it, so that a Cabinet is always dependent on Parliament. Still, I twice dissolved Parliament—once on a financial question, and the second time for its opposition to the revision of treaties. Such opposition was contrary to our national dignity, to the spirit of toleration, and to our true economic interests. We have now signed treaties with nearly all the Powers—to wit, England, France, Germany, Russia, Italy, Spain, Portugal, and Sweden. They await merely the ratification of Parliament, which cannot, I think, be long delayed. They comprise the abolition of the Capitulations and commercial conventions. With Austria and Belgium alone, which have no great trade with us, we have not yet agreed, and to them we shall not accord a conventional tariff, for we cannot incur the reproach of making special concessions to them from Powers having a large trade with us. I think they will be satisfied, however, with the most-favoured-nation treatment, which we are ready to give. We have no preference, I venture to say, for any nation, yet we cannot forget the inviolable neutrality maintained by England; and the Emperor, by sending his nephew, who is an Admiral, to represent him at the Jubilee, proves the veneration enjoyed among us by the illustrious Sovereign of Great Britain. Being out of office and at leisure I have been glad to accompany him.

"We have now to devote ourselves to our internal development and our moral and intellectual culture. We feel that the moral greatness of a country doubles its material force, and that even prosperity is bound up with the march of intelligence. Our Emperor himself sets us the example. He has large and profitable domains and a civil list of £600,000. He applies a large portion of it to charity and education and to diffusing comfort and a love of industry. Our financial position, moreover, is excellent. We have no foreign debt. We have an internal debt of £48,000,000, which was much increased during the war; but we are about to resort to foreign credit, not to issue a loan, but to dispose of internal paper on foreign Exchanges. China has now paid us 116,000,000 taels, and owes us 84,000,000 taels, to be spread over five years. But this has not increased our national wealth, for war always costs more than it brings in, the latter being only momentary, whereas the costs are permanent. When war breaks out we are forced to buy immediately without bargaining. When the war is over war prices remain, for after once rising they do not drop. Thus the cost of living has doubled with us since the war began. Speculation, too, has made great strides. In the exuberance of victory every one thought himself rich. Factories were built, mines were opened up, companies and enterprises of all sorts were brought out or undertaken, and not all of them, as you can readily imagine, have succeeded. A little time will still be required for matters to settle down again.

"People here seem to fancy that we are to have difficulties because of Hawaii. I do not think so. As you know, the only difficulty for us is that, contrary to treaties, our countrymen have not been allowed to land. At the outset it was the Hawaiian Islands which solicited the immigration of the Japanese, and we had some difficulty in getting our people to go there, for they were chiefly put to work on the sugar plantations. But they gradually learned the way thither until there are to-day 25,000 Japanese in the islands; and as those who decide whether they are to be admitted or not are Americans who call themselves, or really have become, Hawaiians, they naturally refuse to admit them. They fear their becoming too numerous and eventually becoming the masters. Moreover, you know that the Hawaiian Islands are not the only quarter of the globe where such anxieties exist; but we shall certainly not create international difficulties because of these islands. Events have taught us to reflect. We not seek quarrels; we wish only to defend our rights and our honour. We did not desire the war with China, but we accepted it without fear or vexation. We knew that we should surprise Europe, imperfectly informed as to our strength. But we seek no other surprises; we seek only truth and justice."

[This is not all Marquis Ito; there is an admixture of M. Blowitz. The Marquis never spoke of Russia as having actually arranged to run a railway to Port Arthur, for he does not believe in anything of the kind. He has no more faith in the so-called "Cassini Convention" and other sensational documents of like import than has any other Japanese statesman of note. He spoke of these things in the hypothe-

tical mood and M. Blowitz put them into the indicative. As to his declaration about the Cabinet's being practically dependent on the Diet though nominally responsible to the Emperor alone, it is a remarkable admission, but true enough. It goes without saying that the Marquis did not make the mistake of doubling the Emperor's annual allowance, which is the equivalent of three hundred thousand pounds, not six hundred thousand.

Tokyo newspapers allege that seventeen foreigners, of whom twelve are Americans and five Germans, have become adherents of the *Shinto* cult. The names of five of the converts are given, these being the heads of the families which make up the total. We can not attempt to reconstruct the names from their transliterated forms. The most impressive part of the matter is that these searchers after truth are said to have been chiefly influenced by the fact that the chief *Shinto* official of the *Izumo Taisha*—the *Izumo Taisha Kyokas* is the name of the religious body which the seventeen have entered—traces his descent back to the Age of the Gods. Of course that is a conclusive proof of the divine character of the creed.

On the 3rd of July, says the *Mainichi Shimbun*, the Government's deposits in the Bank of Japan totalled 165,500,000 yen, but between that date and the 10th, there was a diminution of 6,430,000 yen, then by the 17th, a further diminution of 9,580,000 yen, and by the 24th, a further one of 4,240,000 yen, making in all 20,250,000 yen, so that the sum now remaining is 145,250,000 yen.

The little Imperial Princesses Tsune and Chika set out for Nikko on the 25th inst., where they are to spend the hot weather. The Princesses Fumi and Yasu started on the following day for Miyanoshta.

It is now stated that the "Opening of the River" will take place at Ryogoku on the 7th prox.

TAXATION OF FOREIGNERS.

It has long been a question under discussion in Kumamoto prefecture, says the *Osaka Asahi*, whether or not foreigners residing outside the settlement for more than three months, in the capacity of school teachers or missionaries, keeping distinct households of their own just in the same way as the Japanese, should be subjected to taxation according to the 2nd clause of Article LIX of the City and Prefectural Regulations, which provides that "any person keeping a distinct house or family in a city or prefecture for more than three months shall be liable to a prefectural tax, which will be collected from the time the party first established a distinct household." No tax has been levied until recently. Steps, however, were taken to exact local taxes for the first half of the 30th fiscal year from foreign residents in the city of Kumamoto. Considerable trouble ensued, the foreigners strongly protesting against taxation. The Town Office of Kumamoto was compelled to ascertain the propriety of its proceedings by making enquiries of the *Kencho*, whence the matter was referred to the Home Department for instructions. The necessary instructions having been obtained, the *Kencho* has lately issued a notice to the Towns and Districts urging the strict enforcement of the 2nd clause of Article LIX, mentioned above, and requiring a report from the responsible functionaries in the event of failure on the part of foreigners to pay the tax.

CONTROVERSIAL HONESTY.

The *Japan Times* writes:—

The *Japan Mail* observes as follows:—"It is probably true, as the *Japan Times* says, that the great majority of the villages throughout the country have shrines dedicated to their tutelary deities, and that 'the first thing a villager does after morning ablution is to clap hands and worship *Shinto* deities.' That may be true, but of what value is it as an argument against the possibility of Japan's Christianization?" Our contemporary knows perfectly well that we referred, among other things, to the fact of the villagers' worshipping *Shinto* deities in the morning, as an illustration of the truth that the people in general have not been conquered by Buddhism, but remain essentially *Shintoists*. To argue as though we had adduced this fact in direct support of our argument against the probability of the Christianization of Japan, is an obvious perversion reflecting little credit upon our contemporary's controversial honesty.

It is serious matter to charge an opponent with controversial dishonesty, nor does there seem to be the slightest ground for any such accusation in the present instance. The fundamental question in this discussion was the possibility or impossibility of Japan's Christianization. The *Japan Times* denied the possibility, and one of its arguments, as we understood, and do still understand, was that the Japanese are so wedded to their indigenous faith that even Buddhism, though propagated under special auspices, had to adjust itself to that faith. In direct proof of Buddhism's partial failure, and therefore in indirect proof of Christianity's impossible success, our contemporary adduced the fact that the first thing a villager does in the morning is to clap hands and worship *Shinto* deities. We find in such a state of affairs nothing that suggests the impossibility of Japan's Christianization. If the *Japan Times* did not intend to suggest that the failure of Buddhism, as evidenced by the continued prevalence of *Shinto* worship, constitutes an argument against the probability of Christianity's success, what does it now intend to suggest by saying that "the lesson drawn from the history of Buddhism in this country" is among the things that "lead to the belief that the Christianization of Japan is well nigh impossible?" Our contemporary has either misapprehended us or failed to follow the logical sequence of its own arguments. Our comment was made in perfect good faith, and that it should have exposed us to a charge of controversial dishonesty is very surprising.

OSAKA FESTIVALS.

A correspondent in Osaka sends us some particulars of the Tennenmangu Festival held in Osaka on the 25th July. He says that the rivers and canals were crowded that day with boats containing hundreds of people who had gathered to witness the sight. Every boat was illuminated, while many hundreds of people on the banks carried torches, the whole effect being very fine. The god Tennenmangu is supposed, on this particular night of the year, to make a visit to Matsushima, some two miles south of his shrine at Temma, and a torchlight procession is accordingly organised in his honour. Every now and again the god prefers to make the trip by water and return by land, and this year being an occasion on which he indulged this whim, his festival-jant was more than usually elaborate. The priests in charge of the arrangements had to go through a ritual lasting into the small hours of the morning, and consequently the god's return journey was not quite so numerous attended as the outward march. But this year the crowds both out and home were enormous.

Another festival, that of the god Sumiyoshi, will take place on the 20th and 30th, when a huge procession is expected to leave Osaka for his shrine, some ten miles south of the city. One peculiarity of Sumiyoshi's festival is the opening of an all-night fish market at the terminus of the procession.

JAPAN AND CHRISTIANITY.

THE thinking-section of the foreign public is always interested in learning the opinions entertained by educated Japanese on the great problems with which this nation has to deal in its new progressive rôle. None of those problems is more important than the religious problem, and we have therefore devoted some space to the consideration of arguments adduced by the *Japan Times* in support of its contention that the Christianization of Japan is extremely improbable. At the outset, a peculiar phrase diverted the controversy, if such it can be called, from the lines that are now seen to have been contemplated by our contemporary and the author quoted by it. The phrase was that "Japan would remain politically and religiously the unconquered country." It will be agreed, we think, that such a phrase suggests ideas not usually associated with the Catholicism of truth. It suggests that some credit, or glory, would accrue to Japan from the mere fact of repelling the invasion of any alien creed irrespective of its intrinsic merits or demerits as a system of religious doctrine. Mr. KNAPP, emphatically, and the *Japan Times* constructively, have both disavowed all intention of advancing such a proposition, and their disclaimer had impaired the relevancy of our rejoinder that Buddhism, essentially an alien creed, having conquered Japan in the past, there appeared to be no reason why another alien creed should not perform the same feat in the present. But an independent interest is imparted to our allegation by the *Japan Times'* unexpected denial that Buddhism has conquered Japan. We find the denial very surprising. It does not appear possible to contend seriously that Buddhism is not the faith of Japan. The country is dotted with temples throughout its length and breadth; the people flock thither by millions to worship; the name that rises to their lips at every crisis of their existence is the name of BUDDHA; scarcely a household is without its altar of the Budh. Surely such things justify us in saying that the people of Japan follow the faith of TATHAGÂTA. Would there be any hesitation about calling the Japanese a Christian nation if Christianity held among them the position that Buddhism now holds? We think not. Perhaps the *Japan Times* takes a more rigid view of the question. We gather that it does, for it affirms that "a religion must succeed in establishing a dominant and exclusive sway over the hearts of the people in general before it can be said to have made the conquest of the nation." Not exclusive: not by any means exclusive. We call the English nation a "Protestant nation," yet it includes a large element of Roman Catholics, of dissenters, of free thinkers, of positivists, of agnostics,

and what not. If the *Japan Times* is willing to concede that no special obstacles exist to the adoption of Christianity by Japan in the sense and to the degree that Buddhism has been adopted, we are perfectly content to abandon the discussion.

Incidentally a historical question has been introduced. We said that Japan had been conquered by Buddhism twelve centuries ago. It must have been quite evident that our assertion was to some extent figurative. Twelve centuries ago, that is to say year 697 A.D., Buddhism had been known to the Japanese for little over a hundred years. We can not be suspected of having intended to assert that it had already established dominant sway over the minds of the people *en masse*. What we meant to say was that its victory had become practically assured. It had been accepted by the Imperial Court; it had been accepted by the great officials; it had been accepted by the educated class. Were Christianity in the same position to-day, we should have no hesitation in affirming that the conquest of Japan by Christianity was virtually an accomplished fact.

In this context some pages of very curious historical lore have been unfolded. The *Japan Times* explained that Buddhism owed its progress in this country twelve centuries ago, not to its religious qualities but to the fact that it was used as a political weapon to weaken the tie between the aboriginal tribes and their hereditary chieftains, and thus pave the way for the unification of the nation. It further alleged that, even when propagated by Imperial and official authority with that intent, Buddhism failed to obtain vogue until it had been modified so as to include the indigenous creed of the people. Naturally the questions at once presented themselves—who were the aboriginal tribes; who were their hereditary chieftains, and what was their indigenous creed? The *Japan Times* now answers. "Strictly speaking," it tells us, "these semi-independent local tribes were not aborigines, for there is reason to believe that they were made up of people who had migrated there at different periods before the so-called conquest of the country by Emperor JIMMU and his followers. * * * They had been in the country for centuries when they were nominally subjugated by the later arrivals." As for the hereditary chieftains, they "had for the most part been originally appointed from the Court and belonged to the conquering race, but centuries of residence among the people, the bulk of whom were the conquered aborigines, endeared them to the latter so much that the bonds of union between them were justly regarded by Prince KATSURAGI and KAMATARI as a serious danger to the contemplated scheme of national unification." Finally, as to the indigenous creed of the people, the same authority tells us that it was

Shinto, and offers the following explanation of the remarkable fact that the conquered tribes had the same creed as the conquered:—"Long previous to the arrival of Buddhism, the *Shinto* creed of the conquering race had to undergo a transformation before it was generally accepted by the conquered subjects. They agreed in worshipping ancestors, but disagreed in that their ancestors were not the same. It was only in the reign of the Emperor SUJIN, a little before the Christian era, that frightened by a state of disquiet throughout the country, the Court hastened to propitiate the conquered subjects by formally adopting the hitherto neglected deities of the latter among the objects of State worship." To be perfectly frank, we must here lower our controversial pen to the *Japan Times*. We know nothing of JIMMU, except that a chieftain of that name was the first traditional ruler of the Toba Tartars; we know nothing of SUJIN, except as a personage with no historical existence until seven centuries after his alleged reign; we know nothing about tribes that inhabited Japan prior to the Japanese proper, except what kitchen middens and pit dwellings tell us; we know nothing about the religious belief of those tribes, we know nothing of any modification that the creed underwent prior to the Christian era. We must be content to take our place among the "Japanese scholars" concerning whom the *Japan Times* says that "the political history of the period under consideration is not very clearly understood even by them."

But there is one fact which does not belong to the realm of tradition and conjecture. According to our contemporary the creed of the Japanese to-day is essentially polytheistic, and has been polytheistic from time immemorial. The peoples that migrated to Japan—if there were any such peoples—before the advent of JIMMU—if there was any such monarch—worshipped their ancestors, and would have nothing to do with any creed that refused to admit the objects of their worship to the same rank with its own deities. The pre-JIMMU and post-JIMMU peoples held Buddhism at arm's length until it, too, agreed to inscribe their dual multitude of divinities, upon its own supernatural roll. And now, "the first thing a villager does after morning ablution is to clap hands and worship *Shinto* deities." Yet this is the nation which monotheistic Christianity has no chance of converting. We hope better things for Japan.

THE CHRISTIANIZATION OF JAPAN.

IN his celebrated anti-Christian Edict, published on January 27th, 1614, IYÉYASU said:—"Japan is called the land of BUDDHA, and not without reason. It is written:—'This is the country where the divine brightness re-appears; this is the national land of the Sun.' The Lotus of the Law says:—'The power by which

Buddhas save the world resides in their perfect omniscience, whereby they make happy all living beings, wherefore they make manifest immeasurable divine power.' This is a golden saying, a miraculous passage. GOD and BUDDHA differ in name, but their meaning is one, just as if two halves of a tally be placed together. The priests and laymen of antiquity, by the divine aid, sailed over the ocean and visited the far-off land of China in search of the law of BUDDHA and the doctrines of the principles of benevolence; unweariedly they bore hither the esoteric and exoteric books. Since that time the doctrine has been handed down from teacher to teacher in unbroken succession, and the glory of the Buddhist Law has been far greater than in other lands. This exemplifies the truth that 'the Law of BUDDHA gradually travels eastwards.'"

We quote this with reference to the contradiction elicited by our statement that Buddhism has conquered Japan. The word "conquered" is, perhaps, unpleasant to the ear. The great TOKUGAWA statesman himself might object to it, despite the edict translated above. But it is not a term of our choosing. The text upon which we originally based our remarks was taken from the columns of our Tokyo contemporary, the *Japan Times*, which said that in religion as well as in politics Japan would remain the "unconquered" island empire. The phrase conveyed an unfortunate impression. It suggested that to reject a foreign system of religious doctrine or ethical philosophy merely because it is foreign, should be counted a credit to Japan. We, on the contrary, would count such prejudice discreditable, and it was to protest against it that we first entered the lists. The *Japan Times* has more than once noted, with some appearance of surprise or semblance of reproach, that we have confined ourselves to that special phase of the problem. The answer is simply that we did not undertake to discuss any other. Our contemporary has also shown much persistency in probing the chronological issue; has been solicitous to prove that we were above all mistaken in fixing twelve centuries ago as the date of the alleged conquest. It must have been readily understood by our readers that we referred simply to the era when Buddhism first gained a firm footing in the country. For the purpose of our argument it did not signify a pin whether the event happened twelve centuries or one century ago. Our essential point was that Buddhism had conquered Japan. If anybody, discussing a cognate subject, were to allege that England was conquered by Christianity twelve centuries ago, we should not think of disputing the fact whether on patriotic or on historical grounds, though it might be truly urged by a controversialist like the *Japan Times* that EDWIN'S conversion

by PAULINUS had taken place only seventy years prior to that date. These petty questions are quite insignificant. We say that Buddhism occupies a very large space in the moral vista of the Japanese nation, and if we err in so saying, we are content to err in the company of IYEFASU.

But there is another point to be noted. The interest of this discussion centres wholly on the estimate that it enables us to form of the views entertained by an erudite and well-informed Japanese about the moral condition of his own countrymen. The mass of the nation, we learn from the *Japan Times*, is so strongly rooted in its *Shinto* belief that it declined to receive Buddhism except as a graft upon the ancient stem, and that no similar compromise with Christianity being possible, the creed of JESUS has little, if any, chance of success. Various attempts have been made to number the Shinto deities; the objects of the people's worship. We are not aware that any arithmetician has ever succeeded. By some the total is put at three thousand. By others a far larger aggregate is named. As for us, we know only that there are gods of the heaven and gods of the kitchen, but concerning the legions of divinities occupying the space between those extremes, we can not speak. AUGUSTE COMTE, classifying the stages of religious belief in ascending scale, puts fetichism at the bottom, then polytheism, and then monotheism. HERBERT SPENCER does not endorse COMTE, but neither HERBERT SPENCER nor any other great thinker has even suggested that a belief in one Supreme Being is not an incomparably loftier and more advanced form of faith than a belief in several thousands of deities each working in a circumscribed sphere. If the bulk of the Japanese nation be in the condition described by the *Japan Times*, the contention that the Christianization of the country is hopeless is inconsistent with the whole history of moral progress.

JAPAN AND ENGLAND.

IT was not to be expected that the movements of a statesman occupying such a prominent position as Marquis ITO does would fail to suggest various inferences. Indeed, from the very day of the unexpected announcement that the Marquis intended to visit Europe in company with Prince ARISUGAWA, journalists on this side of the water began to formulate conjectures as to the political significance of the trip. On the other hand, it could be assumed with tolerable certainty that the Marquis would not fail to utilize for his country's benefit any diplomatic opportunities presenting themselves during his stay in Europe. Thus, from every point of view, there is not much reason to be surprised that the fact of an interview's having taken place between the British Prime Minister and Marquis ITO should be regard-

ed with interest and curiosity by the Japanese. The *Yomiuri Shimbun* discusses the incident in an article which, so far as concerns the art of not committing a writer to anything conclusive, is a model. Our contemporary sets out by declaring itself deficient in any means of ascertaining the truth about the results of the interview; then goes on to say that no rumour could be less improbable than that of an alliance between Japan and England; then gives a list of proofs that the two countries are linked together closely; then collects several fragmentary incidents and pieces them into an argument pointing to the reasonableness of inferring that an alliance has been formed; then belauds England's policy of isolation; then declares that Japan wisely follows the same policy: and then, asking itself boldly whether there is an alliance or whether there is not, answers frankly "no and yet yes." The article deserves admiration in its way, and so do many other light and unsubstantial trivialities. It will mislead a good many persons, doubtless; especially those that want to be misled. When a journal enjoying close access to good sources of information, says—under cover of "report," indeed, but still clearly enough—that a mission of grave national importance led to a reconciliation between Count OKUMA and Marquis ITO before the latter's departure for England, folks, in the outer sphere of knowledge will at once conclude that a state secret has been divulged. We venture to assert, however, that there was no mission of national importance; that as to a reconciliation, none took place because none was needed; and that, as to an alliance no attempt has been made to effect it. England never forms alliances unless the occasion to use them practically is imminent. There is no such occasion at present. Korea's fate is the only question of immediate moment, and the British Government has made an emphatic and unmistakable declaration of policy with regard to Korea. There can be no ambiguity about the significance of Mr. CURZON'S statement in the House of Commons—no such ambiguity as unfortunately attended Lord JOHN RUSSELL'S despatches about the "three-Duchies problem," or Lord PALMERSTON'S announcement about Poland. Korea has weathered a dangerous crisis "by the skin of her teeth," but whether she owes the preservation of her independence to her own manœuvring or to the timidity of others, is a question that we prefer not to discuss at the moment. At any rate the crisis is past, and England now steps forward to say that she objects to such crises. Japan objects to them also, and ought to be greatly relieved by finding herself in such close company with England. But an alliance—that need be scarcely considered. We have often remarked that England

and Japan are gradually being drawn together in the Far East by the steady march of events over which neither of them independently, nor both together, can exercise complete control. An alliance, we venture to think, is an unnecessary as it would be mischievous. If each has a clear and trustful understanding of the other's policy, nothing more is needed. To such an understanding interviews between statesmen like Marquis ITO and the Marquis of SALISBURY must greatly conduce. That is probably the sum and substance of what the public can be honestly asked to believe with reference to the Japanese ex-Premier's visit to London.

DISEASED JOURNALS.

WE observe that the old mare's nest about the "enforcement" of the Revised Treaties has again been discovered by one of our local contemporaries. A delightful somnolence distinguishes the habits of certain journalists in this Settlement. They seem to fall asleep periodically, and after awaking they light upon the fragments of some fact which was disposed of in its entirety during their slumber, but which naturally strikes their newly opened eyes as a startling and refreshing, or distressing, novelty. One of the consequences of this Rip-van-Winkle tendency is that they occasionally extract from China-port newspapers paragraphs copied by the latter from the *Japan Mail* without acknowledgement, and reproduce them as novelties in Yokohama, where they originally saw the light of day weeks before. The irony of the fates that punish indolence could not be crueller, for in addition to laying flaccid chesnuts before their readers, these third-hand editors are thus betrayed into the inadvertent misery of borrowing from the *Japan Mail*. We have often pitied them too much to expose them, for nothing human looks picturesque when it writhes. This ancient mare's nest, however, partakes of the nature of a nuisance and must be scavenged away for good and all. It relates, as we have said, to the "enforcement" of the Revised Treaties. A few months ago, one of the evening newspapers happened upon this term "enforcement," and shrieked at it through half a column. "Enforcement"! What a horrid notion! Could anything more clearly illustrate the anti-foreign undercurrent of Japanese motive? Here, actually two years before the time for submission to Japanese jurisdiction, here were the Japanese preparing to "enforce" submission. Well they knew the bitterness of the pill, and ruthlessly they were preparing to force it down our throats. And then the naked, the indecent, insolence of the thing! Openly appointing a committee of prominent men to prepare instruments of torture for the ordeal of "enforcement"! It was our pleasant

duty to provide an anodyne on that occasion for our suffering contemporary. We pointed out that "enforcement" was pure phantasy. Prejudice sometimes assumes the dimensions of *delirium tremens*, and drives its victims to mistake for tangible horrors the creations of their own diseased imaginations. That has been a familiar spectacle in Yokohama for the past five-and-thirty years, and the marvel is that such a long spell of monster catching has not yet been followed by the complete dissolution, but only by the partial paralysis, of the poor minds doomed to it. The "enforcement" bogie may not have been entirely of the D. T. order. Perhaps a blundering translator was responsible for it. But in the original Japanese there was no such word. *Fisshi* means "operation." It might be applied to putting into practice a new system of good-service rewards or out-door relief for superannuated editors. The Committee was a committee for making preparations in view of the approaching operation of the Revised Treaties. Its functions had no more connexion with enforcement than with alchemy. All those things we explained fully at the time, and our perturbed contemporary had a lucid interval. Its fluttering heart beat calmly once more. But it chanced just then that the other evening paper was involved in one of its periodical slumbers, and when it partially woke up, which it did a few days ago, its familiar demon began to torture it with a visitation of monsters, among which "enforcement" showed its nasty shape here and there. Not one "enforcement" but many "enforcements"; not one committee but many committees. It is among the horrible faculties of these uninvited insects that they multiply themselves *ad infinitum*. "We read from time to time," moaned the second victim of the phantasy, "that official commissions have been appointed to investigate preliminaries with regard to the enforcement of the new treaties. When a phrase of this kind is continually made use of, it would seem that the authorities regard it as a foregone conclusion that foreigners will offer some sort of resistance to the carrying out of the provisions of the new compacts.* * * The ignorance of the police as to the proper exercise of their duties is likely to prove a fertile source of complaint, more especially should their erroneous ideas be attempted to be enforced directly by themselves or with the help of their comrades." This seems to be a worse attack than the one that we prescribed for some months ago. The recurrent character of the "enforcement" spectre and the "commission" phantom is a bad symptom, and the dreadful jumble of apprehensions about the police is a sad evidence of mental derangement. The stages of the seizure are painfully apparent. The apparition presents itself at first "from time to time,"

then it becomes "continual," and then the unhappy patient sees a mob of policemen engaged in some nefarious operation, some agonizingly intricate business of attempting to enforce their ideas directly by themselves, or, still more labyrinthine scheme, with the help of their comrades. The comrades of the police! Their wraiths. Shadowy figures with transparent batons and opaque spectacles engaged in the devilishly ingenious trick of helping real policemen to enforce their erroneous ideas directly by the themselves. And the whole tumultuous fabric built upon imaginary "enforcement." It becomes a melancholy duty to call the attention of the Committee to this incident, lest among the preparations made by them for the new order of things they should fail to provide a hospital for incurables.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

If it were announced in England that Mr. Herbert Spencer, Mr. Leslie Stephen and Mr. Frederic Harrison had all decided to champion the cause of Roman Catholicism, the astonishment of the whole reading world would be great, and every religious periodical of Europe and America would earnestly discuss from its own point of view the extraordinary phenomenon. Something of this kind has occurred in Japan. There is no denying that Dr. Inouye Tetsujirō and Dr. Mōtōrō Yūjirō occupy the very first rank among Japanese scholars. They have received the very best education in Japan and Europe, and have both proved themselves to be philosophers of a most advanced type, and yet they have both come forward in a most pronounced manner and signified their intention to support and defend, to the very utmost of their power, *Japan's ancient creed* as explained by the two great leaders of new Shintō thought, Messrs. Kimura Takatarō and Takenouchi Nanzō. That is the one absorbing topic of the magazines this month. Its prominence and importance warrant our giving a full summary of the utterances of the various religious organs.

It will be seen that some writers discuss the character of the whole movement represented by the starting of the periodical known as the *Nihon Shugi*, while others concentrate their attention on the support afforded to the movement by advanced modern thinkers. The *Teikoku Bungaku*, though, as its name implies, not a religious journal, pays a good deal of attention to religious topics and invariably has something decided to say on the questions of the day. In the number before us there are two articles on the new Shintō movement, the first by the editor, the second by Mr. Omachi Keigetsu, which we now proceed to epitomise. This agitation, argues the *Teikoku Bungaku*, is to be regarded as ethical rather than religious. It is an attempt to find a taking basis for morals. One of the chief results of the introduction of western ideas has been the thorough undermining of our native system of morals. So great have been the ravages of destructive criticism through a series of years that thoughtful men have grown alarmed and, in the hopes of averting the greatest of all calamities, denationalisation, now preach the importance of Japan's retaining her national religion and her code of morals, with slight modifications to suit the times. The doctrine of nationalism may be regarded as the protest of individualism against cosmopolitanism, or as an attempt to insist on the superiority of man to everything that exists in the world. The question is, can the State ever become a satisfactory foundation whereon to build a system of morals? Who is to decide what is State teaching? And how can the obligation to bow to the decrees of the State oracle be

reconciled with that clause in the Constitution which declares that Japanese subjects are free to choose their own religion. What puzzles us is, how in the minds of the scholars who have lent their names to this cause, the national principle and pure philosophy (純正哲學 *Junsei-tetsugaku*), the latter of which is independent of place and time, are reconciled with each other. The broad basis of one set of principles is surely incompatible with the narrow basis of the other.

Mr. Omachi Keigetsu singles out Mr. Kimura Takatarō for special attack. His sins are enumerated under six heads, which, stated briefly, amount to charges of unscrupulousness in the manner in which old legends and pretended revelations are twisted and shaped so as to be made to appear suitable for modern use, and of readiness to appeal to men's self-interest instead of to their higher nature. "One note from a stork is more worth hearing than the chirpings of a hundred sparrows." For this note Japan waits, while it treats with indifference such common utterances as those of Mr. Kimura and his fellow-thinkers.

The *Bukkyō*, under the title of *Shintō Fukkō* (Revival of Shintō), discusses the new movement very thoroughly. It regards Messrs. Kimura and Takenouchi as its chief originators. Mr. Takenouchi, the *Bukkyō* reminds us, for some time figured as a Christian evangelist, but his connection with Shintō was originally of such an intimate character that it was not surprising that he should have returned to his old belief. The part played by earnest Shintoists in this affair calls for no special comment, but the attitude of Dr. Inouye and Dr. Motora has caused, says the *Bukkyō*, universal astonishment. The known opinions of the chief promoters on philosophical and general subjects are at variance with each other. Mr. Kimura has always shown his dislike of metaphysics and his aversion to Buddhist doctrines of whatever kind. Dr. Inouye, on the other hand, is one of the greatest metaphysicians and an ardent student of Buddhist lore. It is hard to see how men with such diverse tastes and proclivities can work harmoniously. Nationalism is of course the topic on which they are agreed. There is no movement in modern times that has affected the whole of the religious world in Japan so deeply as this. Buddhists and Christians have felt it quite as much as Shintoists. In Buddhist ranks the action of Onchi Seiran and others in founding the 上宮教會 *Jōgū Kyōkai* corresponds to the *Shintō* action which we are now discussing. The idea of the founders of this Association is that the 17 Laws made by the Prince Shōtoku (also called Jōgū Taishi) should be utilised for the purpose of reforming Japanese morality at the present time. So here we have two nationalistic schemes projected at the same time, with the same object in view, and yet so constituted that it is impossible for them to work in harmony with each other. The feeling which has found expression in this action may be briefly stated as follows:—Mixed residence is near at hand and means that Christian cosmopolitanism will be pushed to the utmost extent, with the result that the national feeling of loyalty to the Emperor will be weakened on every hand, which may at any time lead to disastrous results. Now with nationalism pure and simple we have the greatest sympathy but we see no use in trying to prop up the nationalistic cause in any such ridiculous manner as is attempted by the New Shintō School. By associating nationalism with effete rites and ceremonies the would-be leaders of the new patriotic movement are degrading a cause that ought to be held sacred. If the term nationalism is to be considered a synonym of bigotry, blindness and superstition, the less we figure as nationalists the better for our reputation in the world.

The *Tōyō-tetsugaku* complains of the unscholarly and unphilosophical manner in which the new teachers have stated their position and object. The narrowness and prejudice that characterise the views expressed remind one more than anything else of the attitude assumed by the *Yōi* party at the commencement

of the *Meiji* era. These new satellites have assumed a serious responsibility. There is no saying to what outrages against foreigners their narrow interpretation of the term nationalism may lead. Just as our intercourse with foreigners is becoming closer the consequences of raising this new national flag may be anything but agreeable. The only consolation we have is that for every thousand blind persons there are a thousand who can see:—(Proverb. *Mekura sen-nin, meaki sen-nin*).

The *Meiji Hyōron* regrets the whole movement. It thinks that the Japanese people need no stimulus of the kind offered by Dr. Inouye and his associates. They are in no danger of de-nationalism. Patriotism is a sentiment far too deeply implanted in their nature to allow of its being uprooted by foreign influences. They borrow, but they assimilate what they borrow without affecting their own identity. The whole controversy on this subject is foolish and tedious.

The *Kokumin-no-Tomo* observes that for men like Kimura to be interpreting ancient Shintō so as to make it a vehicle for modern thought resembles the Unitarian movement in Europe and America. The *Nihon Shugi* party may fan the flame of national vanity, but certainly will not tend to raise Japan's reputation in the world at large. Designed as a check on the influence of Confucianism, Buddhism and Christianity, it will only tend to make these creeds more highly valued.

The *Rikugō Zasshi* takes a similar view. The movement cannot be regarded as patriotic by any means, as the inflation of the vanity of the ignorant can lead to no good result. The danger which the projectors of the scheme fear is purely imaginary and the noise they are making may be compared to the senseless barking of dogs when unknown persons are approaching their abode.*

In the *Shinri* Mr. Minami, in a very temperate and sensible article, points out that Christians generally entirely agree with the new Shintoists as to the desirability of cultivating a national spirit, but they dissent altogether from the measures proposed by the new sect with a view to attaining that end. In this scientific age, doctrines based on mythology can have little influence. What ancient writers on Shintō have to say about the gods can have no authority with thinkers of the present day. The attitude that Mr. Kimura and his confidères have assumed towards Christianity is uncalled for. Christianity is not opposed to patriotism. Nor does it, as is affirmed, exalt the life to come at the expense of the life that now is. The originators of the new movement would have done better if they had enlisted the sympathy of the members of other sects in the cause which they are so anxious to promote by adopting more conciliatory methods.

The *Shūkyō* adopts a similar line of reasoning. It laughs at the idea that Japanese who adopt Christianity lose their patriotism. The Japanese can be left to choose what form of faith they please; their feelings on all national questions will be unaffected thereby. To attempt to put a stop to the spread of Christianity or any other form of faith is a proof of weakness. What do the new Shintoists mean by their *Nihon Shugi*? Do they intend to imply that foreigners should be despised? That we should figure in the world as vociferous proclaimers of our own importance to the rest of the nations? In Dr. Motora's explanation of the principle of nationalism the obligation to act in a friendly manner to members of other nationalities in time of peace is acknowledged. But how far the party to which he belongs approve of this interpretation of the principle is another question. In Mr. Kiyono's enunciation of the principles of the sect these words occur:—"We are not of the number who are ignorant enough and prejudiced enough to think that Japan is perfect. We are conscious of Japan's defects and are advocates of the progress that shall gradually lessen the number of these defects. The difference between new Shintō and old Shintō is this; the

latter seeks to hide its weaknesses, the former to reveal and to find a remedy for them." This spirit cannot but meet with approval in all quarters, but it would seem that the exposition of the object of the association given by its leading members differs according to the bent of each man's mind. Even the ten articles of belief,† what may be called an enumeration of principles under ten heads, are by no means consistent with each other. It is not to be wondered at that few people seem to know precisely what is the ground taken by the new reformers. The magazine which professes to define the position of the sect has indulged in so much mud-throwing that it has been nicknamed the *Akkō Zasshi*.

The *Fuku-in Shimpō* observes that the projectors of the movement represented by the *Nihon Shugi* differ little from the authors of the movement represented by the *Nihon Shukyō*. Both parties aim at making the State the basis of ethical teaching, they are nevertheless at logger-heads with each other.

The *Kirisutokō Shimbun* thinks the platform of the new sect far too narrow for effecting any great reform. This organ sees nothing lasting or effective in the movement.

The *Taiyō* writes in a cautious tone. The early professions of the sect lack discrimination and are altogether too one-sided, but whether the views of its leaders will gain in breadth as time goes on and embody the results of religious thought and inquiry carried on in other sects remains to be seen.

The following items are from the *Fuku-in Shimpō*. According to statistics published in the *Yorozu Chōhō*, certain classes of crime have greatly decreased since the war, but other classes have increased. House burglary, petty thefts, and the making of counterfeit coins are among the former, and crimes involving a violation of the laws of society, including various kinds of indecent behaviour, are among the latter. Though it is true, as stated in these columns previously, that representative government in the Otani sect has been sanctioned by the Chief Abbot, yet since out of the 60 candidates who are to be chosen to represent the sect 30 are to be selected by Otani himself, freedom of action will be hardly possible under the new form of Government.

Mr. Ozaki Hiromichi, the late President of the Dōshisha, expresses himself in somewhat despondent tones on the subject of the independence of Japanese Christians. He says that throughout India the churches are largely dependent on foreign aid, and that all hope of independence has died out, and in some directions this seems to be what Japan is coming to. Evangelists are vigorous where foreign money is plentiful, but where it is scarce they make a very poor show. The only help that we ought to receive from foreigners is temporary help towards independence.

Mr. Uemura Masahisa, in reviewing Dr. Hozumi's new book, the *Aikokushin*, says that though Dr. Hozumi makes a great many statements which have no historical foundation, the tone of his work is decidedly religious. Dr. Hozumi dwells on the benefits to be derived from religious belief, and maintains that no country can prosper without adopting some form of religion. The learned Doctor's ideas on Japanese ethnology are not up to date. The notion that the whole nation sprang from the same ancestors is no longer entertained by leading ethnologists.

Mr. Yebina Danjō contends that monogamy is older than polygamy in Japan and that the latter was introduced with Confucianism. According to Mr. Yebina, Confucianism is responsible for many other mistaken views of life.

The *Kirisutokō Shimbun* reports that the

† Given in the last summary.

‡ We have our doubts as to the accuracy of this statement, though we are at the moment without recent statistics on the subject.

* The allusion is to mixed residence.

Fukuin-Dōmei-kai, which has been in existence since 1879, has been reorganised. It now employs ten evangelists, who preach at over 400 places. The total expenditure of the association annually amounts to 600 yen. It purposes devoting attention to education and to reformatory work in addition to its ordinary functions.

The same organ is informed that the revision of the criminal code, embodied in a draft which will be presented to the Diet next session, is in the direction of replacing the individualism that characterises French Law by the nationalism and state predominance of the German.

* * *
The *Koye* (Roman Catholic) continues its even course of writing up the praises of St. Peter and of writing down all forms of belief outside the Roman Catholic Church. It is to be regretted that the body to which this organ belongs do not take steps to start a magazine on a higher level.

* * *
Under the heading of *Tema-tori Dendōsha* (Hiring Evangelists) the *Seikyō Shimpō* (Greek Church) asserts that certain mercenary Christians who hitherto have acted as evangelists, because for the money received the work (consisting for the most part of talking) is less arduous than that by means of which men of equal capacity make a living, have been tempted by the recent rise in the pay of policemen to join the ranks of the guardians of public peace. We turn away with utter disgust from such miserable specimens of Christianity, writes the *Seikyō Shimpō*.

To the *Shinri*, the organ of the German Church, the Rev. R. Minami contributes an article entitled *Yesu no Kyūshu-teki jikaku shin* (The Messianic Consciousness of Jesus), in which the writer gives a summary of the progress of thought in the matter of the interpretation of the Scriptures. After observing that Mr. Maruyama Mitsukazu is the only other writer that has given much attention to the subject, Mr. Minami says that the notion that Christ knew that he was the Saviour of the world is entirely without proof. (*Ware wa sono ronkyō nashi to shinsu.*)

In the July number of the *Shukyō* (Unitarian) appears a lecture in English by Mr. George D. Herron, the well-known American preacher of Socialism, entitled "The Religion of Jesus, A Social Ideal." A translation will be published in the next number of the Magazine. Mr. Herron maintains that the religion of Christ has been entirely transformed by ecclesiastics. To quote his own words: "The age that finally changed the revelation of Jesus from a social ideal to an official religion, from a mode of life to a theological system, was one of moral and religious anarchy, insanely wicked and licentious. . . . The Nicene Council which laid the foundations for all subsequent theology, was so without sense of right and human honour as to appal even the ethical decency of Constantine, who scarcely pretended to be other than an atheist as to morals and a sceptic as to faith, though fabled the first Christian emperor. It is a far downward journey from Jesus to Athanasius, (the Italics are those of Mr. Herron) further than from Athanasius to either Hildebrand or Calvin." Mr. Herron proceeds to argue that stripped of all forms of supernaturalism, simply as a high class social ideal, Christianity may yet prove the saviour of the world. "The religionist whose chief concern is his own soul is heathen, and not Christian. . . . In their search for justice, John Stuart Mill and Frederic Harrison find an unrecognized fellowship with God unconceived by the most tireless and entreating self-seeking Bernard of Clairvaux and Francis of Assisi. . . . Organised love is the social destiny of man. . . . The Christ we need is not in the tomb of metaphysics, where theology has stood guard these many ages, obedient to ambition in the

† The proverb *Susume taka wo umasu*, "Sparrows don't produce falcons" is applied to the conduct of these Christians. Nothing noble can be expected to proceed from a source so insignificant.

Church, agreeable to craft in the State. . . . Jesus is no more the author of existing Christianity than Moses was the author of the Judaism out of which Christianity was born."

The *Senshin gakuen*, the Unitarian School where Messrs. MacCauley, Droppers, Onishi, Kishimoto and others teach, held its Fourth Graduation ceremony some weeks ago. There were about 100 persons present and an interesting address on his own special subject was delivered by Mr. Taguchi Ukichi. The Unitarians announce that a Summer School will be opened at some picturesque spot in Akashi, Harima, on August 25th and remain open till September 15th.

* * *
The *Rikugō Zasshi* calls attention to the publication of a book containing the most unflattering exposure of the weaknesses of modern Japan that has been published for many a long day. The title of the work is *Shō Nihon Ka? Dai Nihon Ka?* (Little Japan? or Great Japan?) The work covers 220 pages and its author is Mr. Suzuki Tengan. The *Rikugō* is of opinion that the treatise is a faithful picture of the Japanese of the present day and agrees with Mr. Suzuki in thinking that it is no time for Japan to be boasting of her attainments. Much of the noisy reiteration of Japan's supposed greatness, says Mr. Suzuki, is most childish and only excites the ridicule of foreigners. Such castigation is apt to make the reader feel sore, says the *Rikugō*, but it is called for.

* * *
We are very much surprised to find that even Mr. Takayama Rinjiō has expressed sympathy with the new Shintō movement. Nationalism at the present moment seems to lead scholarship and even common sense captive. It is impossible to escape from the conviction that many very highly educated Japanese minds are altogether lacking in balance and are engaged in experimenting with this creed and that, this philosophy and the other, without perceiving how entirely contradictory are many of the theories which they profess to have adopted. Mr. Takayama, in an article on the new movement published in the *Taiyō*, confesses that the new school of would-be reformers have no right to the title of Shintoists, but that is a minor point, says the writer. The chief thing to be borne in mind is that they represent a national feeling and hence ought to be supported. Anything that will free Japanese from the foreign yoke in religious thought is to be welcomed. Mr. Takayama fears that Japan will have all its nationalism stamped out of it by foreign influences.

* * *
The following items of information bearing on the Dōshisha are taken from the *Kirisutokyo Shimbun*. Since Mr. Yokoi Tokiwo has filled the Presidential Chair the fortunes of the institution have mended and the prospects of ultimate success are brighter than they were. Several teachers of note have been engaged. Among them Dr. Yoshida, Professor of Chemistry at the Kyōto University, a graduate of Harvard, Mr. Y. Iwasaki, and a foreigner whose name we cannot identify, a Mr. Kett or Ketty. The 29th Annual Report of the Dōshisha has just been issued. From it the following statistics are culled by the organ we are quoting. The property of the Association is valued at 192,202 yen, which yields an annual interest of 7,541. The area of the land belonging to the Dōshisha is 48,500 *tsubo* and the size of the buildings 5,135 *tsubo*. The expenditure last year was 21,739 yen. The numbers given bearing on the attendance of the school are somewhat puzzling. We are told that between 1875 and 1896 3,125 male students entered the school, that 547 of these graduated and 2,257 left the school without graduating. What became of the rest we are not told. Of female students 741 entered the school, 185 graduated and 491 left the school without graduating.

* * *
The *Fukuin Shimpō* publishes a report of the Ninth Annual General Meeting of the

Nihon Kirisuto Kyōkai held in Tōkyō from July 6th—10th. A resolution having for its object the observation of the day of the promulgation of the Imperial Rescript on Education as a sacred day, was negatived, and the subject declared not to be one for discussion in such an assembly. The subject of independence received a good deal of attention, but a motion to dissolve such churches as were unable to support themselves was thrown out, as being too extreme. The necessity of laying more stress on the social aspects of Christianity instead of preaching individualism in the way that is common, was declared by the leading members of the conference to be very important. Sunday schools are to be reorganised and are to make it their aim to supply the deficiencies of the system of education followed by government schools. The subject of marriage and the general relation of the sexes, demands, in the opinion of the Conference, special attention at the present time. Economy and method in the use of Church money ought to be studied. The Church should always teach that work of every kind is sacred.

* * *
The Buddhists are beginning to prepare their minds for the altered state of affairs incidental to mixed residence. They predict a very strong crusade on the part of Christians and express the conviction that Buddhism will have to put forth its utmost strength if it is to maintain its ground. The *Bukkyō* has a number of articles bearing more or less on this subject. In one of these the writer says that notwithstanding the fact the majority of professing Christians do not actually believe in the Christianity of the Churches, the idea that Civilisation and Christianity are inseparable still prevails in many minds, and that Christian evangelists are wont to make capital out of this notion. Then there is no denying, continues this writer, that Christians are ahead of us in the way that they provide employment for the lower classes in the form of various industries. Their methods of ingratiating themselves by supplying the temporal wants of the needy are well worth our imitation. If we neglect to employ the various hand-maidens of religion on which Christians depend so much we shall be regarded as an inferior sect.

* * *
The *Kyōyū* (教友) *Zasshi*, the *Narita Shinrin*, and the *Meikyō* all have articles on mixed residence and the necessary preparations therefor. One of these articles goes as far as to maintain that to teach the English language in order to prepare for mixed residence is the way to ruin the country. Various expedients to meet the impending evil (viewed from the Buddhist stand-point) are suggested, one of these being the registration of every believer and close vigilance over existing Buddhist professors; and another the occupation of vacancies in elementary schools by Buddhist priests. Commenting on the various proposals, the *Bukkyō* pronounces most of them to be utterly impracticable. Its chief object in drawing attention to them is to show how great is the flutter in Buddhist dovescotes at the approach of the dreaded falcon—the foreign Christian evangelist! We observe that there is still an agitation in some quarters in favour of the resuscitation of the Kyōbushō. As our readers will premise, the chief movers in this affair are Buddhists and Shintoists who fear the results of competition with Christianity on equal terms. They do not seem to realise that the assumption now-a-days of any such power as was wielded by the old 教部省 Kyōbushō, would involve a breach of that article of the Constitution which insures liberty of belief to Japanese subjects. Apart from the above proposals comes one which commends itself to a large number of religious people. It is suggested that there is need of some kind of police superintendence of religious affairs. The following instances of abuses calling for suppression are given. (1) The propagation of doctrines that are injurious to morals, such as those of the Tenrikyō, known as 天理教 *Inshi*. (2) The interruption of services and lecture meetings by persons of alien

belief. (3) The want of respect to the Emperor shown by Christians. (4) The neglect of cemeteries on every hand, specially those attached to Buddhist temples. (5) The existence of religious altercations that disturb the public peace and do much harm. (6) The appropriation of ecclesiastical property by Buddhist priests for their own purposes.

The Shintō organ, the *Yui-itsu*, in discussing the examination to which the Shintō priests are subjected before ordination, says that far too little attention has been paid to the fact that religion is not learning, but an exemplary life, not the knowledge of words, but the practice of virtue. Of this fact the history of the Jikkō-kyō (實行教) "Practical Religion," the sect represented by the *Yui-itsu*, has furnished many brilliant examples, among them is the life of its founder, Hasegawa Kakugyō, by whose instrumentality the heart of Tokugawa Iyeyasu was permeated with religious feeling. Learning is all the rage now-a-days, and hence the men drafted into the priesthood in many cases lack the quality which alone can render them influential in the world as teachers of religion.

The *Kyōrin*, the organ of the Jingukyō, has an article on the same subject. There are distinct signs of fresh activity among Shintoists of all classes.

The semi-religious and semi-educational organ representing ultra-conservative thought, the *Kun-min dō*, publishes a lecture delivered by Mr. Hosokawa Junjirō entitled "The origin of the high rank of women in western countries" in which the lecturer highly approves of the position occupied by woman in the West and suggests a change in this matter in Japan. Among the articles published in the number before us is one by Mr. Takashima Kayemon on the book, of which he never wearies and whose teaching he considers to be the foundation of all high class moral thought, the *易* *Yi*.

THE SHANGHAI FATALITY.

Shanghai papers to hand this morning give some particulars of the inquest held at that port into the circumstances attending the death of Harry Beaumont Heygate, Navigating Lieutenant on H.M.S. *Algerine*. Lieut. Heygate retired to his cabin about 9.30 p.m. on the 19th instant, after instructing the quarter-master to call him about a quarter of an hour before the evolutions in the morning, but he added, "I don't suppose there will be any." Three minutes afterwards a pistol shot was heard, and upon James Symons, a gunner, entering the cabin he found the deceased lying on his back in his bunk with something burning on his breast. He died soon after from hemorrhage of the lungs, the bullet having entered between the fourth and fifth ribs on the right side, passed through the lower part of the upper lobe of the left lung, cut the pulmonary artery, passed out at the back, smashing the fifth rib and through the shoulder blade on the left side. Evidence was tendered that deceased was in no pecuniary trouble, nor was there any fear of trouble or punishment from a Service point of view. He was a man of shy disposition, but usually cheerful and healthy. The Jury found the following verdict—"That the said Harry Beaumont Heygate came to his death by a shot from a revolver fired by his own hand, but whether accidentally or intentionally inflicted there is insufficient evidence to show, there being no motive revealed for suicide."

Lieut. Heygate was formerly in the *Redpole* on this Station, but was invalided to England owing to an affection of the eyes, returning in the *Algerine* after about a year's leave. He was well liked by his comrades in the Service. Commander Domville is captain of the *Algerine*.

BIG THEFT IN YOKOHAMA.

Messrs. Boyes & Co. of Yokohama are reported to have been made the victims of a somewhat substantial theft by two of their employes, one Kashimazaki Matsuyemon and his son Matsujirō. Both father and son are said to have been living a very gay life for a long time past and to have embezzled sums of money aggregating a very considerable amount. A fortnight or so ago, circumstances led the two employes to believe that their depredations were about to be brought to light, and worry and anxiety caused the older man to fall sick and to lay up at his home at Noge. The son, fearing arrest managed, on the 13th instant, to possess himself of a sum of 4,500 yen belonging to the firm, with which he absconded. He was, however, very quickly tracked and arrested by the police, upon a report being made to them. At the request of the firm, however, the thief has escaped prosecution, and, we are informed, is at present back in the firm's employ. We do not vouch for the accuracy of all the details of this report.

BICYCLING IN ENGLAND.

The *Field* of the 19th ult. reports two cycling records during last month, namely that of the one hour track racing and the 24 hours' road race. The hour's record was the object of a ride undertaken by the professional bicyclist, J. W. Stocks, at the Crystal Palace track on the 10th June. Stocks was the first to make a great lift in this record when he covered over 29 miles in the hour, and since that time the distance compressed within the space of sixty minutes has gradually increased, until at the tag end of last season, J. Linton rode 31 miles 582 yards in the time, McGregor and Nelson being just ahead of this with a tandem record of 31 miles 610 yards. With fine weather, a fast track, the best of pacemaking, and personally in the pink of condition, Stocks was able to do himself ample justice, and to put up a set of figures that will probably remain unsurpassed for some time to come. From six miles to the finish he made faster times than have ever been accomplished, and at the expiration of the hour he had ridden 32 miles 448 yards. The following table shows the rate of progress made during the race:—

Miles.	Time.	Miles.	Time.	Miles.	Time.
1	5.53	10	25.15	20	42.41
2	5.38	11	25.54	21	43.37
3	5.06	12	26.45	22	44.37
4	4.53	13	27.41	23	45.39
5	4.21	14	28.38	24	46.42
6	3.59	15	29.36	25	47.46
7	3.28	16	30.35	26	48.50
8	2.58	17	31.34	27	49.55
9	2.28	18	32.33	28	50.59
10	1.58	19	33.32	29	51.59
11	1.28	20	34.31	30	52.59
12	1.00	21	35.30	31	53.59
13	0.59	22	36.29	32	54.59
14	0.38	23	37.28	33	55.59
15	0.18	24	38.27	34	56.59
16	0.00	25	39.26	35	57.59
17	0.00	26	40.25	36	58.59
18	0.00	27	41.24	37	59.59
19	0.00	28	42.23	38	60.59
20	0.00	29	43.22	39	61.59
21	0.00	30	44.21	40	62.59

Although road racing has gone out of vogue road records still excite the cupidity of certain bicyclists, says the *Field*, but their acquisition has been rendered very difficult by reason of the great pace maintained in the rides which put the records where they now stand. M. A. Holbein's performances in long distance riding excited much interest, and he has made and held a succession of records for such rides. His last attempt was in July, 1895, when he rode 397 miles in the day. He has always been credited with a feeling of dissatisfaction that he did not then succeed in reaching the 400 miles, and on the 15th June he made another attempt to gratify his ambition in this respect. Leaving Peterborough at 7 p.m., and riding in the Wisbech and Spalding district, he covered the first 165 miles in 8hr. 45min., and put up a score of 219 miles for the first half of the time, this being two miles more than he had previously accomplished and he eventually succeeded in riding 402 miles in the twenty-four hours. Through the first part of his journey he had the services of a motor-car as pace-maker until this instrument broke down. The result of this ride is that the distance has been increased by five miles, the previous record being the 397 miles made by Holbein in 1895.

ST. PAUL'S CATHEDRAL.

How many of us, when passing St. Paul's Cathedral, have given much thought to the historical antiquity of its site; and a large majority might be found who have never paid even a moment's attention to the pagan figures that ornament the roof. "Edes Pollucis," in a letter to the *Globe*, gives some of these things in a concise form, which is worth quoting. He says:—The edifice was originally founded by the ancient Phœnician settlers in Britain, and built on the highest spot of ground in honour of their god, Elon-don, from whence the City to this day retains its name of London, or vulgar Lounen. It was a bishop's see three centuries before the country acquired the name of Christianity. The Bishops of London and York, being present in the Council of Arles in France, held under Constantine in 314—283 years before the Monk Augustine introduced Christianity into England, 597. In the tympanum of the western pediment is an alto-relief, or hieroglyphic, clearly showing that the edifice was originally dedicated to the honour of the sun. On the centre of the western pediment appears a very ancient figure wearing a judge's robe, and holding in his hand the sword of justice. If we stand with our face westward on the north side and look up immediately in the point of the pediment over the entrance of the edifice we shall see a statue evidently, of Hercules, with his well-known characteristic club, and the skin of the Cleonœon lion. Then on the pediment over the southern entrance will be seen the self-same Hercules under the Greek name Andrew (signifying the strong man), holding a cross in shape of an X, or double pair of compasses, exhibiting the precise angle which the sun makes at its two crossings of the equator at the time this form of sun worship was first introduced, and which angle is gradually decreasing until day and night become of equal length all the year round. At its western pediment are the emblematical figures of spring, summer, autumn, and winter.

THE TROUBLES IN INDIA.

The news of the seditious troubles in India is confirmed by the latest mails to hand from Calcutta. It appears that pamphlets of the most inflammatory nature have been scattered broadcast over the Empire, the Plague Commissioners coming in for a violent shower of abuse. In a leaflet circulated in Poona and Calcutta during Jubilee Week the following paragraphs appear:—

Slavery is said to be abolished; but here are three hundred millions reduced to the position of starving slaves and exposed to the devastation of famine, plague, and earthquake. But in spite of all this her Majesty is advised to celebrate her Jubilee, and the people are asked to indulge in illuminations and rejoicings. The English nation has violated all its pledges to the people, and it seems that they were given simply to embitter our fall by the disappointment of broken pledges. The Royal proclamation of 1858 has remained a dead letter for 40 years, and recent operations regarding famine and plague have convinced the people that the English government at the zenith of its power is not ashamed to disgrace its administration by heartless apathy for the suffering of the people by invading our zannas and polluting our temples and mosques under cover of plague operation.

We appeal to you, therefore, that you will not set the seal of your approval on these rejoicings over the starving wretchedness of India. By the grace of God you have in your hands the destinies of the backward nations, and on several occasions you have exercised the power for the welfare of backward nations and communities. Can you not do the same for India and help her to come out of her present miserable plight? Never in the history of the world was such a systematic oppression practised. An ancient and a noble nation is being killed by Christian Government, and it will be an indelible stigma on the boast of civilisation of the 19th century and Christianity itself.

Will none lift his finger to check the excesses of the English tyrants, riding roughshod over us for more than a century? Not even a demon

would venture to celebrate his conquests at the time of famine, plague, and earthquake. But we have the misfortune to face the fact this year. May God inspire you to help us and then we shall gladly celebrate the Jubilee. You have constituted yourselves the arbiters of the world, and the powers which you thus possess cannot be better utilized than for the purpose of preventing an ancient and a noble nation from being trampled to death by your arrogant and insolent brethren.

KOREAN TOPICS.

It is curious to read the account of the closing exercises of the Paichai School, held in the new Methodist Church in Söul on the 8th July. Korean lads making orations in English on the independence of their country, debating a resolution as to the necessity of accepting Western civilization, and voting in the affirmative "by an overwhelming majority"—these are spectacles strange to the eyes of folks who can look back two or three decades. If Korea can preserve even a shred of autonomy until the rising generation gets a grip of the reins, she may yet give an account of herself among the nations.

A Decauville railway has been laid down in Söul to carry away sand dug from the main drains which are about to be constructed. By and by the good old habit of using the whole streets for sewers will have passed into ancient history.

The students of the Russian School inform the *Independent* by letter that they have "unanimously agreed to have a student expelled" whose disorderly acts were noticed by that journal. They did get him expelled, too, by appealing to the Department of Education. The power of the press is phenomenal in the Korean capital.

Messrs. Townsend & Co., Agents for the Standard Oil Company of New York, have built extensive store-houses on Moontail Island at Chemulpo. The structures were originally reported by Japanese sensationalists to be Russian fortifications, as our readers doubtless remember.

The German commercial Commission to the Far East were in Söul on the 13th of July. The members are thus spoken of by the *Independent*:—"Mr. Krause-Hichmaun is an expert engineer; Mr. Hartig looks after the wool industry; Mr. Schanz, cotton; Mr. Reinhart, leather; Mr. Keussen, silk weaving; Messrs. Jores and Crous on raw silk. Dr. Schümacher is the Secretary of the Commission. Five of the commissioners are on their way from China to Japan and the other four members are also going to Japan after a short visit in Korea. They were presented to His Majesty last Tuesday afternoon (13th July) by Mr. Krien, the German Representative, and a cordial greeting was exchanged between His Majesty and the visitors. They left for Chemulpo yesterday morning" (14th July).

The German Asiatic squadron—the *Kaiser*, *Princess Wilhelm*, *Arcona* and *Cormoran*—visited Chemulpo in the middle of the month.

With the object of excluding from Söul the various political intriguers whose cozenage of official appointments is said to have been at the root of most of the disturbances in recent years, the police have issued regulations requiring every inn-keeper and boarding-house-keeper to report the name, place of residence, occupation, sex and age of every guest within 24 hours of his arrival. The proprietors are further forbidden to let idlers loaf in their inns, and are warned that unless they produce and hand over any one charged with an offence, they will themselves become liable to the offender's penalty.

Chemulpo was visited by a severe storm on the 12th instant. Six Korean junks were wrecked and three lives lost.

CHINESE TOPICS.

The Belgian-Syndicate loan is said to be faring ill in Peking. It would seem that the fact of other Powers being behind Belgium is scaring the Chinese. The little kingdom had been favoured for the sake of its supposed independence in finance.

It is rumoured that Captain Lang's objections to re-enter the Chinese service have been overcome, and that instructions have been sent to Sir Chi Chen Lo Fêng-lo to engage him at once. The report sounds apocryphal.

An American syndicate is in treaty for a large tract of land at Peitaho, the new summer resort in the north of China.

Shanghai had four terrible days, from the 13th to the 16th July. The thermometer registered 100° F in the shade every day. On the 17th a thunder-storm broke up the spell of suffocation.

The Foochow correspondent of the *N.-C. Daily News* writes:—

The export of tea to Europe to the end of June was 4,849,926 lbs. against 5,976,756 lbs. to the same date last year. The tone of the market has continued quiet. The assured short supplies have had no effect beyond keeping sellers firm. Tea prices are very much the same as last year at this time for common and medium Congous; fine Panyangs are about 20 per cent under. Arrivals of Congou to date are 272,000 half-chests against 400,000 half-chests last year. Settlements are 143,977 half-chests, against 235,744 half-chests, and stocks 128,000 half-chests against 234,744 half-chests. Exchange is 1/11½ for 4 m/sight credits and freight to London 40s per ton.

Something like a deadlock in the river traffic is reported from Ichang. The authorities, whose business and duty it is to have rice carried quickly to the starving folks in Chungking, impose such low rates upon the boats and trackers they employ that the men prefer to absent themselves, and that, of course, reacts upon the junks loaded and chartered by foreign firms. They can not get crews and are lying hopeless. It would be a fine coup if some Japanese company ran steamers right through to Chungking. Apparently foreign enterprise is not equal to the undertaking.

LITERARY NOTES.

Mr. Houston Steward Chamberlain, brother of Mr. B. H. Chamberlain, has produced a work upon Richard Wagner that seems to be a remarkable success alike from a literary and a biographical point of view. Mr. Chamberlain must be a wonderful linguist. He has published several works in German, and he is a constant contributor to the *Revue des deux Mondes*. Curiously enough, he has preferred to have his last work translated into English by Mr. G. Ainslie Hight, confining himself to the task of revision. We observe that Professor Goltner is very enthusiastic in his praises of the new book—so, indeed, all the reviewers seem to be. He says:—

A splendid work, a work to which we may all turn for instruction, has appeared just at the right moment. Mr. Chamberlain's book stands high above the rest of the voluminous literature upon Wagner: its value lies not only in what it tells us about Wagner himself but in its being a model of what all biographies of great men should be. Unfortunately it is the only one of its kind; I know of no other, unless it be Carlyle's writings on Goethe. Mr. Chamberlain approaches his task from a very high standpoint; he judges in the way that genius ought to be judged; his receptivity is akin to the creations of art, and he possesses the faculty of communicating his impression in words with admirable perspicuity. His knowledge is both wide and deep, and extends to all the related branches of study, especially philosophy and literature; he turns it to admirable account in his discourse. In him the German's loftiness of thought is united with the penetrating and well-balanced judgment of the Englishman, while his literary style is both forcible and convincing. . . . The numerous portraits, illustrations, facsimiles, etc., are excellent, and possess high historic value. The whole book, based as it is upon thorough and scientific research, appeals to us like a work of art. . . . Students generally delight

in dwelling upon the "influences" by which they conceive the thoughts and creations of genius to have been determined; they love to trace relations, and regard genius as the resultant of the totality of different forces. Mr. Chamberlain's method is quite different; he grasps the problem of the hero and his time at its root. External influences are only active in causing the many contradictions and inconsistencies which are so evident to the superficial observer; but the hero himself stands alone in his grandeur; his aims are firm and immovable, and proceed directly from within himself. For a moment he may think it possible to come to terms with the intellectual current around him; he may descend from his lonely heights to join with the great in their onward struggle, and to the majority it will always appear as if circumstances had cast their spell over him. Mr. Chamberlain however shows us what is far more important—that under all circumstances Wagner remained himself.

Mr. Paul Creswick is making his, as yet, most important bid for fame in a romance entitled "The Temple of Folly" which Mr. T. Fisher Unwin is publishing in his Colonial Library. The title is an allusion to Medenham Abbey, the scene of the famous orgies of George Bubb Doddington, the favourite of George the Second. Mr. Creswick has, in fact, essayed a historical romance in which he has brought Doddington in, in the picturesque double rôle of perfect gentleman and infamous rake. Doddington, it will be remembered, founded an impious order of Franciscans who worshipped the devil. The names of eleven of the twelve members of this order are handed down to us. The twelfth is unknown. Mr. Creswick has made his hero the twelfth and thus fiction steps in where history fears to tread.

Mr. J. Maynard Saunders, who, in 1887, was a member of the *Japan Herald's* staff, and subsequently editor of the *Hyogo News*, has just been appointed News editor of the *Pall Mall Gazette*. We believe that Mr. Saunders had not been with the *Pall Mall Gazette* for more than a year when he was fortunate enough to secure this marked promotion. All his *confrères* and friends in Japan will learn the news with much pleasure.

Miss Amelia E. Barr has gained a deservedly high reputation as a writer of romance, marked by vigour of incident, freshness of local colour and tenderness of sentiment. Her remarkable story "Jan Vedder's Wife" has gone into one of those very cheap editions which speak more than anything else for the popularity of a book. She is now returning to the scene of her early triumph in a powerful story of Shetland fishing life which Mr. T. Fisher Unwin will issue in his Colonial library, under the title of "Prisoners of Conscience." There is a strong religious interest in the story, which is, however, owing to the simplicity of the characters, untrammelled by the arguments of theology. It may be added that some suitable pictures accompany the text.

Mr. Arthur Morrison made a great sensation when he related to Londoners, in some strong pieces of realism cast in fiction form, some of the things that go on in the Bethnal Green district. It has been reserved for Mr. W. Somerset Maugham to study the slums of Lambeth, and the very surprising result is to be published by Mr. T. Fisher Unwin under the title of "Liza of Lambeth." There, as it were under the very nose of the Archbishop, the great ruling passions of life disport themselves with a frankness that were almost amazing, were it not so true. Yet the grim story is essentially a romance, and, even, in the opinion of the author, an idyll.

NEWS OF THE WEEK.

The finding of the Court of Enquiry on the stranding of the *Tokio Maru* was given at the Marine Bureau, Tokyo, on the 27th instant, when Captain Barstow was found to blame and his certificate suspended for five months.

According to the *Fiji Shimpō*, a scheme for the reform of the Formosan administration was decided upon at the Cabinet Council held on the 23rd instant. The principal points in the scheme consist of the abolition of the Civil

Administrative Bureau and the appointment of a Vice-Governor-General of *chokunin* rank. Count M. Tsukata will at once submit the decision of the Cabinet to the Emperor for his sanction.

It may not be generally known that Bishop Corfe, of Korea, was in the Aahantee Expedition of 1874, and in consequence is entitled to wear the war-medal then granted.

Sir James Reid, private physician to Her Majesty, has been created a baronet. The new baronet is a brother of Mr. J. P. Reid, of Yokohama.

The last tie but one in the Lawn Tennis Handicap of the Y.C. & A.C. was played on Tuesday afternoon, by Messrs. P. S. Bent and K. Wilson, the former winning by three sets to love. Mr. Bent has now to play Mr. Pinckney in the final.

A Hongkong contemporary understands that M. Doumer, the Governor-General of Indo-China, has issued a confidential order to the Departments throughout the Provinces under his control to the effect that all future Japanese "missions" of inquiry are to be received coldly and are to be discouraged.

The *Nichi Nichi Shimbun* states that the number of immigrants to Hokkaido during last year reached 50,003, of whom 30,000 engaged exclusively in agricultural pursuits. According to investigations of the Hokkaido Office, the land leased to immigrants for reclamation during last year amounted to 160,480,000 *tsubo*, each settler receiving an average of 5,347 *tsubo*.

Public opinion, remarks the *Fiji*, recommends the abolition of the Colonization Department and the radical reform of the Formosan Administration. Individually the Ministers of State also approve of the adoption of such a decisive course, but the truth is that no one has dared to suggest it openly in the Cabinet. The real condition of the present Ministry can easily be judged, adds the *Fiji*, from this procrastination.

The First Bank held its regular general meeting of shareholders on the 25th inst. The net profit during the first half-year amounted to *yen* 400,655. Out of this, *yen* 100,000 were set apart as a reserve, *yen* 20,000 as a special reserve for building new premises, *yen* 29,600 voted as remuneration to officials, *yen* 202,500 appropriated for payment of a dividend at the rate of 9 per cent. per annum, and *yen* 51,555 carried to new account.

A marine belonging to the U.S. flagship *Olympia*, who had overstayed his leave, was arrested by the Japanese police on the 27th inst., on a warrant issued by the U.S. Consul-General. The man was being escorted back to his ship by three constables and an interpreter, at about 7 a.m., when, on reaching the hatoba, he was rescued from the hands of the police by a party of his shipmates, who were embarking in the *Olympia's* steam launch to return to their ship after leave ashore—very much to the mortification of the police and the satisfaction of the marine.

The beer brewing industry in Japan has made steady progress, says the *Shogyo Shimpō*. Ten years ago the import of beer from Germany and other countries did not fall short of 400,000 *yen* annually in value. Foreign beer, however, has been gradually displaced by the home-made liquor, and the amount of its importation does not now exceed 50,000 *yen* in value. On the other hand, exports of Japanese beer now realize nearly 100,000 *yen* per annum, and when imported beer is subjected to the 25 per cent. duty after the enforcement of the new Tariff Law, the import will doubtless be still farther reduced.

A charity hospital, to be called the Eiraku Byoin, is shortly to be established at Eirakucho, Kojimachi, Tokyo, under the auspices of the Home Department. The object of the institution, the *Nippon* says, is to treat poor patients gratis, and also to afford practical instruction to medical students desirous of obtaining licences

as medical practitioners. It is intended to so organise the hospital that it may serve as a model for similar institutions in other cities and prefectures. The hospitals in Japan, both public and private, in their organization and management, leave much to be desired. The remedy it is hoped, will be supplied by the Eiraku Byoin.

According to the *Tokyo Shimbun* the Railway Bureau is shortly to be divided into two distinct Bureaux: of Railways proper, and Civil Engineering, the former consisting of two Sections, Superintendence and Miscellaneous Affairs, and the latter of four sections, Engineering, Construction, Transport, and Accountancy. The investigations of the Section of Superintendence in regard to private railways have hitherto been limited to ascertaining the feasibility of lines for which licences were to be granted. But in view of the numerous accidents and other abuses arising from the growth of railway enterprises, steps are now to be taken to inspect the railways already laid, and to order, if necessary, the reconstruction of lines so as to enforce a certain standard of efficiency.

A serious inundation occurred in Feng Shan, Formosa, on the 30th ultimo. Owing to a continued heavy rainfall the Tamsui and other rivers overflowed and flooded the surrounding country, making communications completely impracticable. In Tankong, in particular, the streets were all inundated, the water rising two or three feet above the floors of the houses. Communication was for a time effected by means of rafts, while many of the inhabitants tried to save themselves by running along the roofs. A sugar manufactory was demolished, and two Chinese junks were washed away. On the 4th of this month the two rivers Tamsui and Tankong again overflowed and presented the appearance of a great sea.

The *Yorodzu Choho* says that the Department of Communications contemplates greatly extending its telegraphic lines from next year, in order that communication with every part of the Empire may be effected within thirty minutes. The scheme demands an outlay of over twenty millions of *yen*. The annual expenditure of the Department has already been increased by fifteen million *yen*, and in view of the scheme now under contemplation all possible reductions have been made in the ordinary estimates for next year. Yet it was found that no more than four million *yen* could be curtailed. Nevertheless the project has been decided upon, and the expenditure is to be defrayed out of the receipts of the Department in the form of a continuing outlay.

Another case of assault preferred by Japanese against foreigners has engaged the attention of a Consular Court in Kobe. In this instance the accused—there were three—were Britishers and they were charged before Mr. F. W. Playfair that on June 10th at Nakayamadori, Nichome, Kobe, they did unlawfully assault and beat Hamanishi Kumakichi and Hamanishi Ryotaro; and further that F. A. da Silva did on the same day and place unlawfully and wantonly fire off a gun or pistol within fifty feet of the centre of a certain public street called Nakayamadori, to the personal danger or interruption of the persons travelling thereon. After hearing the evidence for the prosecution and the defence, His Honour found the statements so contradictory that he dismissed the charge and refused the claim for medical expenses based upon it.

A severe sea-fight, in which over 200 fishermen took part, is reported to have occurred at Dan-no-ura, Choshu, in the west of the Inland Sea. On the 23rd inst. about 6 p.m., while some fishermen of Tano-ura, Moji, were casting their nets from 16 boats on the waters between Tano-ura and Dan-no-ura, the fishermen on the opposite shore of Dan-no-ura, in 40 or 50 boats appeared on the scene and challenged the 16 to fight. A sanguinary struggle at once commenced between the two parties. The fishermen of Tano-ura, who saw the struggle from the dis-

tance, soon manned their boats, over 60 in number, and went to the assistance of the 16 boats. Severe fighting then ensued for some time, the vessels engaged being over 140 in all, the fishermen numbering over 200. Upon the matter being reported to the nearest Police stations a strong force of police embarked for the scene of action, and through their exertions the fighting was at last put down. It is reported that about 10 fishermen were seriously wounded in the struggle, and many others more or less hurt.

Cremations in the capital have considerably increased of late. According to official investigations the number of deaths, interments, and cremations during the past nine years were as follows:—

Year.	Deaths.	Interments.	Cremations.	Increase per 100 deaths.
21st	32,346	21,324	2,022	34.07
22nd	35,743	23,076	3,367	34.50
23rd	37,052	21,687	15,326	41.30
24th	36,994	23,325	13,666	36.90
25th	40,022	23,527	16,495	41.20
26th	37,068	24,537	13,531	36.00
27th	34,764	22,592	12,172	35.72
28th	40,691	23,817	16,874	31.50
29th	40,327	24,072	19,254	40.30

The remarkable increase of deaths in the 25th year is simply the result of the incorporation of three Rural Districts within the jurisdiction of Tokyo *Fu*. The sudden increase of cremations in the 23rd year is accounted for by the prevalence of cholera, and the figures after the 23rd year show but a natural increase.

The extraordinary rise in the price of commodities, building materials, and in wages, the *Asahi* notes, has seriously affected the progress of various public works undertaken by the Government. The Department of Colonization, in particular, suffers from this enormously increased cost in the construction of the railways, telegraph and telephone lines, the estimates for many of which were made out, and the sums voted, in 1893, when prices were at their lowest. Thus the estimates for the Hokuriku railway show a deficiency of two million *yen*, and those of the O-U line a very much larger sum, said, indeed, to amount to nearly a hundred million. The Department, so as not to interrupt the progress of work on these lines, has decided to appropriate the annual grant for expenditure in advance, until a supplementary vote can be obtained from the Diet to cover the deficiency in the original estimates.

The Sōul correspondent of the *Fiji Shimpō* recently sent a telegram to the effect that Russia had despatched over thirty military officers and eight hundred men to Korea, and intended to station them at the various open ports in accordance with the Japan-Russian treaty stipulations. No official information has yet been received by the Government in respect to this matter, but it may be worth while to note that Article IV. of the Sōul Memorandum empowers Russia to send troops to Korea. The number of men as well as the names of places at which they are to be stationed are as follows:—Sōul, 2 companies, or not more than 400 men; Fusan, 1 company, or not more than 200 men; Wonsan, 1 company or not more than 200 men. The despatch of such troops to the capital and the ports named, was however, only provided for in the event of disturbance in Korea, which necessitated the presence of troops to guard the Legation and Consulates. At the present time tranquillity prevails throughout the country, and the *Fiji's* telegram requires confirmation.

A Consular Report from Sōul says:—Trade in Sōul during May improved considerably as compared with the previous month. Commodities for the interior were sold to an enormous amount, this being the month immediately preceding the "sowing season." Miscellaneous articles have found the best sale, and the market was entirely cleared of umbrellas and cigarettes. Good business was also done in porcelain and mosquito netting. Chinese merchants are continually entering the capital, but seldom proceed to the interior, being content to stay in Sōul or Inchon. Hawkers or vendors, however,

penetrate into every part of the country, in companies of twos, threes, or fours, with goods supplied by wholesale dealers residing in Chhungchu and Kongchu. According to the investigations of the Sôul Chamber of Commerce imports and exports during April and May were as follow:—

	April. Yen.	May. Yen.	Increase. Yen.
Imports.			
Japanese manufactures...	29,509	29,600	91
Foreign do ...	9,309	15,556	6,247
Korean do ...	2,193	4,572	2,379
Total	41,012	49,726	8,714
Exports from Korea	41,629	59,006	17,377

The period for the settlement of accounts by commercial companies is generally fixed, remarks the *Osaka Asahi*, for June and December of each year, whereas the distribution of profits among shareholders is not made till January and July. A considerable amount of capital is therefore required for the time immediately preceding or following the periods above mentioned. The dividends of various companies in Osaka for the first half of last year were as follows:—

	Yen.
Banks	6,343,292
Transport	4,523,948
Exchanges	493,914
Manufactories	256,989
Electric light and gas works	191,159
Insurance	180,249
Various commercial occupations..	120,693
Paper mills	118,759
Breweries	109,571
Chemical manufactories	91,566
Cement	44,162
Mining	43,432
Warehousing	38,350
Silk factories	16,842
Agricultural industry	12,258
Porcelain	8,396
Total	13,698,051

Similar statistics for the first half of this year not having yet been completed, it is impossible to furnish exact details. But there is scarcely any doubt that the amount has increased this year in proportion with the development of trade.

In a previous issue we stated that Shirane-san was in a state of eruption, on the 8th instant. We now gather from the *Fiji Shimpô* the following particulars:—The mountain began to rumble at about 7 p.m. on the 7th instant; but the men engaged in the sulphur-mining works, supposing that the noise had come from the Yoneko mine in consequence of an explosion, scarcely gave any consideration to the matter. At midnight, however, a dreadful roaring was heard, and serious shocks of earthquake were felt. Meanwhile sand and stone mingled with ashes were emitted from the mountain about two hundred yards north-east of the spot where an eruption took place in August of the 15th year of *Meiji* (1882). Among matters so ejected were rocks over three or four feet in diameter while the melted lava is said to have run down as far as the hot springs at Kusatsu. At 5 a.m. on the 8th instant, a loud noise again reverberated through the mountain, but the emission of large stones had entirely ceased. After a few moments, however, at a distance of about two hundred yards to the south-west of the place where the present eruption took place, quantities of melted lava were seen issuing, in consequence of which rails for about sixty yards, together with some bridges, were destroyed. The lava did not cease flowing for about three hours. Fortunately there was no injury to man or beast. When the crater was examined on the 15th instant, a week after the eruption, it was still found to be in a state of ebullition, and looked as though quantities of mud were boiling in a pan of over four hundred yards diameter.

It will come as a surprise to most people to learn that there are yet on the active strength of the British Army, if one may apply that adjective in this regard, two veterans who enlisted, one in 1837 and the other in 1838. One fills the erstwhile gruesome office of Queen's Executioner at the Tower. Fortunately for this old hero, who

fought at Gujerat, in the Indian frontier war, all through the Central Indian campaigns, and the Indian Mutiny, the office of yeoman gaoler entails no lethal functions, and his headman's axe rests idly by his side. His brother veteran fills a nominally more grateful office, and still moves about, hale and brisk, sporting the ribbon of the recruiting sergeant in the Queen's good town of Woolwich. Of the first war of the reign, the Ghuzni war of 1838-39, only one man survives to bear its medals. He fought in that campaign, and also at Maharajapore in 1843. At Aliwal three years later he was wounded severely, and proudly wears the medal with the Sobranje clasp.

The Gambling-Bribery scandal at Hongkong has spread from the Police Department into the Office of the Registrar-General. In consequence of certain information obtained by the Hon. J. H. Stewart Lockhart, Mr. C. Osmund, First Clerk in the Registrar-General's Department, has been interdicted from office. Mr. Osmund has been for about thirty years in the Government service, says the *China Mail*, and was regarded with high respect amongst the officials. The Chinese clerk in the Registrar-General's department, who was supposed to have absconded several days ago, after a day's absence from office returned and reported himself to the Registrar-General. After an interview, however, it was deemed advisable not to allow him to resume work in the meantime. The two Chinese detectives arrested under banishment warrants have been transported to Canton, and the head district watchman has been released on parole. Meanwhile, Inspector Witchell has been committed for trial on the charge prepared against him in the Magistrate's Court, bail being increased to \$1,000. On June 20th, Inspector Hore, of the Sanitary Department, was suspended from duty.

The Singapore *Free Press* gives some further details regarding the piracy of the *Pegu*. It says:—"The *Pegu* was pirated by eleven Achinese and an Achinese woman, who came on board the vessel at Edie. Capt. Ross and the European engineer were attacked while at dinner, the Captain being killed on the spot, and the Engineer suffering several flesh wounds, not, however, of a dangerous nature. Besides Capt. Ross there were killed by the pirates three of the native crew, three Chinese passengers, and the Kling gunner. The wounded number fifteen, of whom eight were severely wounded. Of the latter number one has since died. The pirates plundered the vessel of about \$15,000 in money, and then made off to the shore in the ship's boats. The *serang* took the steamer to Teluk Semawi, where she now lies in charge of a detachment of troops. It is believed that the woman who came aboard at Edie had the weapons of her male companions hidden on her person. The men were examined for concealed weapons, but not the woman. Capt. Ross was a comparatively young man, being 34 years of age, and a native of Carnoustie, Forfarshire. He had a varied experience, serving his apprenticeship on the barque *Ranger* from Dundee. He then became second officer of a ship sailing out of Cardiff, and going down below to get a coil of rope, struck a match and ignited some explosive gas, which blew up the ship. The Captain and another, who were crossing the deck, were blown to pieces, and Ross was severely burned. He subsequently became chief officer of the *Elgin*, which was lost on the Bombay Shoal. He took charge of one of the boats and was picked up by a French man-of-war and taken to Hongkong. Capt. Ross saw that there was money in the Achene pepper trade and embarked upon it some years ago. He was a keen man of business and would buy the pepper himself, also forwarding it to London. Although he has been twice attacked by Achinese who have attempted to raid his boat, he was absolutely fearless. Told by a friend that the third time might be fatal, he simply ignored the warning, with a fatal result this time. The late Captain Ross leaves two children at Carnoustie, his wife having died about two years ago.

SOME ODDS AND ENDS.

The hot weather came in so suddenly at the close of last week, that something like demoralization appeared among the already too slim ranks of local cricketers. Only a dozen, including four *momban*, could be scraped together last Saturday afternoon, and these naturally were disinclined for much active exercise. Mr. Pattman, who made an over-the-fence hit, is an old Warwickshire County player.

Yokohama is, perhaps, a little too well served with mails from abroad. For instance, last Thursday week the Indian, Straits, Hongkong and China mails came tumbling in; next day a Tacoma boat arrived and deposited several mail-bags from the United States; Saturday saw the French mail delivered; Sunday, the American mail; while Monday morning brought the C.P.R. steamer with hundred-weights of ordinary correspondence and tons of Jubilee newspapers. And yet folks say that no news ever comes to Yokohama? Why, we positively suffer from a superfluity of it at times—though a drought of several days' duration sets in at intervals to balance matters.

Mr. Wilckens, of Messrs. Otto Reimers & Co., is leaving by the outgoing *Empress of Japan* for a holiday spell in the Fatherland. On his return, in the spring of next year, he joins the noble army of brokers, entering a very prominent firm of that persuasion in this port. So says gossip, at any rate. It is to be hoped that Mr. Wilckens will have a good time at Home, and much luck when he gets back. "The modest one-eighth tells" a very pleasant tale, the initiated say, within a very few years.

Despite the hot weather, Yokohama ladies are sticking bravely to their bicycles, though a good many of the men-folk have laid theirs aside for a while. It may be of interest to them to hear that a new and aggravated form of cyclomania has recently declared itself in England, where it is confined to the fairer sex. The patient rides all day when it is fine, and when it is wet she stays at home and runs her cyclometer!

The Lawn Tennis Handicap of the Yokohama Cricket and Athletic Club is drawing to a close, those left in for the final being Messrs. Pinckney and Bent—the favourites from the start. The first round, played off in June, was greatly marred by rainy weather, but the games in the other rounds have been much better favoured. One of the most keenly contested ties was that in which Messrs. Bent and Murray were engaged last Wednesday week. The score was:—2-6, 6-3, 3-6, 8-7, 6-3. After this the game between Messrs. Wilson and Bent in the semi-final, played on Tuesday, was very tame: Bent winning in this fashion, 6-0, 6-0, 6-0.

One of the broad-sheets that emanate from Shanghai declares that Richard Cœur-de-Lion was the real father of the English navy. It is generally thought that the Service went back to the time of the Heptarchy. But no matter. Richard framed and decreed its first articles of war—a point of prime importance. Any one who should kill another on board ship, he said, should be tied to the dead body and thrown into the sea. "Any one convicted of theft should have his head shaved and boiling pitch poured upon it, and feathers should be strewn upon it, and he should be set ashore at the first chance. If servants, mariners, or others, were found gambling, the servants were to be flogged naked through the army for three days, and the mariners were to be dipped every morning from the ship into the sea "after the manner of seamen" for three days, unless they could redeem themselves by paying a fine." What a fine time Richard's Provost-Marshal must have had!

"The stout, true heart of England beats high when its real heroes appear among the people." The phrase has lingered in the back corridors of more than one memory since the day when it was first heard, many years ago, ringing out on the autumn air at Castle Hedingham, dur-

ing one of Joseph Arch's tours in the Eastern Counties. Arch was then the agricultural hero *par excellence*, and the burly Radical who gave utterance to the sentiment was one of his staunchest admirers. The fact is recalled by a brief statement recently published that Lord Roberts, on Jubilee Day, divided popular honours with the Queen. There is no gainsaying the fact that Lord Roberts, as a military hero, occupies the foremost place in English popular estimation. The blunt, unassuming, but thorough soldier has won his way into the hearts of his countrymen through sheer force of character alone. No place-hunter has Roberts been, no truckler to political parties, no wary observer of the fickle currents of popular clamour. He knew his duty and without ado went forth and did it. Englishmen love such a man and hug his memory close. As Kipling wrote some time ago,

What 'e does not know o' war
General Bobs,
You can ask the shop next door—
Can't they Bobs?
Oh, 'e's little, but 'e's wise;
'E's a terror for 'is size—
An' 'e does not advertiss
Do you, Bobs?

No, Lord Roberts of Kandahar has never gone in for self-advertisement. But his reward has come along all the same.

Apropos of military subjects, it would have been pleasant to have been at Chelsea Hospital on July 5th, when the Queen and the Prince and Princess of Wales inspected the veterans there. It was an assured fact before the month of June ran out that there would be in the ranks that day men who had fought in every general action under the British flag since 1837. A sketch of the lives of those old warriors would almost be an epitome of British history during the most glorious reign in the annals of England. Ghuzni, Maharajapore, Aliwal, Sooranjee, the Crimean battles, the Mutiny, the two China wars, the Maori wars, the various South African campaigns, the rebellion in Canada, Afghanistan, Ashantee, and the Indian frontier campaigns were represented.

Among the old warriors was an ancient Cornishman who went all the way from Penzance to attend his last parade. In addition to the Victoria Cross, the brave old fighting man bore also the medal for conspicuous gallantry, the Crimean medal with three bars, the Turkish medal, and the Cross of the Legion of Honour for life-boat rescue. The veteran has no pension except the £10 a year which accompanies the bronze cross, and, up to a short time ago, was obliged to win his bread from the seas round the stormy Cornish coast.

The *Globe* remarks that the Delhi veterans must be a tough lot. The siege took place 40 years ago; yet with reference to the Delhi Dinner, which has just been held in London, it is noticed that out of the 178 survivors two are Field-Marshal, ten V.C.'s, and the rest account for two hundred and fifty decorations of one kind or another. 'Not a bad record, even for the survivors of so prolonged and terrible an ordeal as the siege of Delhi.

The address to the Queen, presented by Her Majesty's Judges on Jubilee Day, reminds one of the story that circulated soon after the Jubilee of 1887. A similar address was then drafted, and one judge suggested that it should contain the words:—"Conscious as we are of our imperfections"; but the late Lord Bowen, at the time a Lord Justice of Appeal, was of opinion that the phrase could be improved, and that a more accurate wording would be, "Conscious as we are of one another's imperfections."

"The Roman Empire collapsed because its great possessions were held, like India, by force." So says one of "our contemporaries." But 'tis a very inexact reading of history. The Roman Empire collapsed because the original Roman race became extinct, having been absorbed into the peoples that it conquered. Not so is it with the conglomerate mass that

technically goes by the name of the British race. Where the Britisher takes root he expands like a goodly tree set in the soil that it best loves. Weaker races go down before the virile people who carry their customs, prejudices, laws, and ideals wherever their wandering feet may take them. The Roman did otherwise and was absorbed, and in the course of time his Empire faded away by the operation of natural law.

A coloured philosopher is reported to have said, "Life, my breddren, am mos'ly made up of prayin' for rain, and then wishin' it would cl'ar off." There is much truth in the dusky philosopher's remark. A week or ten days ago every one in Yokohama was groaning and complaining—and justly so—at the long spell of cold, rainy, and tempestuous weather. Now that we have a bright sun-lit sky, with a temperature rendered endurable by pleasant southerly breezes, the inveterate grumblers are complaining of the heat and dust. If these good folks had found their lines thrown in the model Settlement of Shanghai a week or two ago, they might have had cause to growl. Whew! to think of it—100 degrees in the shade for a week on end; and the nights much more difficult to endure than the days—heavy, sultry and still. Truly we have much to be thankful for in our Treaty Port.

TRIFLES.

LAWs THAT WILL EVENTUALLY AFFECT FOREIGNERS.

RULES FOR ENFORCEMENT OF THE TRADES TAX LAW.

IMPERIAL ORDINANCE No. 269.

Art. I.—Any person who, being engaged in any of the occupations specified in Art. I of the Trades Tax Law, is liable to a tax according to the provisions of Art. II. *et seq.* of that Law, must present the report specified in Art. XIII. to the Local Governor of the district where he keeps his store or place of business. In the case contemplated in the last provision of the second clause of Article XV. of the said Trade Tax Law, the report must be forwarded to the Local Governor of the district where the principal store or other place of business exists.

Any person falling under the following categories must present a report giving notice of the opening of his business to the Local Governor within ten days from the date of the said opening, in conformity with the last clause of Article XIII. of the same Law.

1. Any person opening a business specified in Article I. of the Trades Tax Law.
2. Any person opening a new store or other place of business; provided that he does not fall within the category of the last clause of Article XV. of the said Law.
3. Any person increasing the branches of his business.

Art. II.—In case the same person is engaged in different branches of business whether in the same place or in different places, the basis of taxation specified in Article XII. of the said Law shall be calculated separately for each different branch store, or other place of business. But, if the basis be common to two or more of the businesses in question, then the business liable to the highest rate shall be taken for purposes of calculation; and if the rates are the same, then the tax shall be assessed on the principal business.

Art. III.—If any person is engaged in the same kind of business in several stores or other places of business, the basis of taxation shall be determined for each of the stores or places of business in accordance with Art. XII. of the Trades Tax Law.

Art. IV.—In cases where the trade tax is levied jointly on several stores or places of business, in conformity with the last provision of the second clause of Article XV. of the Trades Tax Law, the basis of taxation specified in Article XII. of the said Law shall be used in common for all such stores or places of business.

Art. V.—The amount of capital which is to be taken as the basis of taxation in case of a joint-stock company shall consist of the amount of shares paid up at the end of each month of the previous year, the amount of reserves of all denominations, and the value of property in the nature of reserves. The rates shall be calculated on the monthly average.

Art. VI.—The amount of capital to be taken as the basis of taxation in the case of Corporations

with joint funds shall consist of the funds in the possession of the corporation and registered at the end of each month of the previous year, reserves of all denominations, and other property of the nature of reserves, and the rates of tax shall be calculated on the monthly average of these funds.

Art. VII.—The amount of capital to be taken as the basis of taxation in the case of a private Company or Joint Partnership (*Gōmei Kaisha*) shall consist of the funds contributed by the entire number of members at the end of each month of the previous year, reserves of all denominations, and other property in the nature of reserves, and the rates shall be determined on the monthly average thereof.

If, in the above case, the contributions of members of the company include contributions in the form of labour, the value of such labour shall be determined according to the provisions under which the company was organised. If these provisions do not accurately define the value of such labour, then it shall be determined according to the rates of profit or loss to each member.

Art. VIII.—The amount of capital to be taken as the basis of taxation in the case of a private individual shall be determined on the monthly average of fixed and working capital possessed at the end of each month of the previous year.

In the case of the fixed capital mentioned in the foregoing article, the value of land, buildings, erections of all kinds, vessels, implements and machines, which are directly used for purposes of business, shall be calculated at the market price.

Art. IX.—In estimating the amounts to be taken as the basis of taxation the calculation shall be on the actual condition at the time the report of the estimate is made, past as well as probable future conditions being also taken into consideration.

Art. X.—The working expenses to be free from taxation, in conformity with Article XVII. of the Trades Tax Law, shall be such expenses only as are deemed absolutely indispensable for the business.

Art. XI.—If, in the case of the second clause of Article XVIII. of the Trades Tax Law, the rent for land or house be paid otherwise than in money, the value of the article in which payment is made shall be determined according to the market price thereof.

In case the trader owns buildings situated on rented land, the rentable cost of such land shall be determined according to the second clause of Article XVIII. and that of the buildings thereon according to the third clause of the same Article of the Trades Tax Law.

If the trader owns a portion of the buildings in a tenanted house, the rentable value of such buildings shall be determined according to the third clause of Article XVIII. of the Trades Tax Law. This provision also applies to persons owning the whole inner structure of the buildings.

Art. XII.—Under the head of "dealers" shall be included the headman of any business and all other persons who are directly engaged in trade, whether residing in the stores or other places of business or whether their attendance at the place of business is regular or special. This provision, however, is not applicable to those who are registered as constituting one family with the headman of the business.

Art. XIII.—Any person who succeeds to a business, whether by inheritance, cession, or other measure, must report the fact to the local Governor within ten days from the date of succession.

Art. XIV.—If any trader changes his name or residence or removes his store or other place of business, he must report the fact to the local Governor within ten days from the date of such change or removal. If the removal is to a place within another jurisdiction, a report must be presented to the local authorities of both places.

Art. XV.—If, in the case of the last provision of the second clause of Article XV. of the Trades Tax Law, the number of stores or other places of business is increased, the fact must be reported to the local Governor within ten days from the date of increase.

Art. XVI.—If the local Governor deems that the report of the trader is suitable and proper, he shall levy the Trades Tax at the rate specified by Article XII. of the Trades Tax Law.

In case of the absence of a report from the trader, the local Governor shall determine the basis of taxation according to the method specified in Article XVI. of the Trades Tax Law.

Art. XVII.—If the local Governor deems the report of the trader incorrect or unjustifiable, and determines himself the amount of capital employed, or the rentable value of buildings owned by the

latter, he must give notice of the fact to the trader, and furnish him with a copy of his estimate.

Art. XVIII.—If the trader has any objection to the estimate referred to, and desires to submit it for re-investigation, he shall prepare a statement of his reasons in detail and present the same to the local Governor within the period specified in Article XXVII. of the Trade Tax Law.

Art. XIX.—When the local Governor has received a request for a re-investigation as to the amount of capital, he shall examine the original accounts and the statement of reasons presented by the trader, and after making corrections, if necessary, give notice of his decision to the person who had raised the objection.

Art. XX.—When the local Governor has received a claim for re-investigation as to the rentable cost of buildings, he shall give notice of the fact to the Headman of the city, town, or village, where the land or buildings are situated, and cause the latter to select appraisers for the same, at the same time appointing other appraisers on behalf of the Government.

Art. XXI.—Appraisers shall be chosen from among men above twenty years of age, and shall not be selected from among the relations of those who have raised objection, or persons whose personal interests may be involved in the matter.

If the land or buildings are situated in several cities, towns or villages, and the value thereof is to be calculated conjointly, appraisers shall be chosen for each city, town, or village.

Art. XXII.—When the appointment of appraisers is settled, the local Governor shall fix the place and date to hold their meeting for determining the value.

When the appraisers have completed the appraisalment, they shall immediately prepare a statement specifying the amount appraised and the reasons therefor, and present the same to the local Governor.

The local Governor shall determine the rentable value of buildings according to the statement referred to in the foregoing Article, and give notice of his decision in writing to the person who raised the objection.

Art. XXIII.—If, as in the case specified at the end of the second clause of Article XV. of the Trades Tax Law, the trader is in possession of several stores or other places of business situated within different jurisdictions, the investigation of the amount of capital or rentable value of buildings shall be conducted by the local Governor of the district in which the principal store or place of business is situated. All matters, however, connected with the appraisalment of the rentable value of buildings, shall be entrusted to the local Governor of the district where such land or buildings are situated.

Art. XXIV.—The expenses to be borne by the person who raises an objection to the assessment in conformity with a note to the second clause of Article XXVIII. of the Trades Tax Law, shall include the fees for appraisers and the expenses for their meeting.

Art. XXV.—The fees for appraisers mentioned in the foregoing article shall be one yen and fifty sen each for each appraisalment, and the expenses for their meeting shall be limited to payment for a place of assembly and miscellaneous payments connected therewith.

Art. XXVI.—In case representations are made by the trader as specified in Article XXIX. of the Trades Tax Law, the local Governor shall, in accordance with the methods for determining the standard of taxation, investigate the actual condition of the business of the year concerned, and revise the rates of taxation when it is known that the case falls within the category of clause (1) or (2) of Article XXXI. of the said Law.

Art. XXVII.—If the trader resides elsewhere than at his store or place of business, or absents himself from such place of business by going on a journey, he must appoint a person to act for him in the payment of the tax and report the fact to the local Governor.

Art. XXVIII.—When the Revenue Inspectors have to examine the account books or stock of a trader, they must show to the trader their warrant for inspection from the local Governor.

APPENDIX.

Art. XXIX.—Any person to whom the note to the second clause of Article XXI. of the Trades Tax Law is applicable, must present to the local Governor a report showing the date of his commencement of business before the 31st of January of the 30th year of *Meiji*, together with a detailed account of matters necessary for making a report as specified in Article XIII. of the said Law.

THE INCOME TAX REGULATIONS.

IMPERIAL ORDINANCE.

We hereby give Our sanction to the present Ordinance relating to the Income Tax Regulations, and order it to be promulgated.

[His Imperial Majesty's Sign Manual.]

[Privy Seal.]

Dated the 19th day of the 3rd month of the 20th year of *Meiji*.

(Countersigned)

Count ITO HIROBUMI,
Minister President of State.

Count MATSUKATA MASAYOSHI,
Minister of State for Finance.

IMPERIAL ORDINANCE No. V.—INCOME TAX REGULATIONS.

Art. I.—Every one having an income of more than yen 300 per annum, derived either from investments from trade, or from any other source whatever, shall pay an annual income tax thereon in accordance with the present Regulations.

Moreover, incomes enjoyed by members of the same family, occupying the same house, shall be summed up with that of the head of the family, so as to make one single income.

Art. II.—Incomes shall be calculated according to the following rules:—

1. Upon the amount of interest derived from public securities or bills issued either by the Government or with its special permission; upon the amount of interest on money lent or on money deposited in trust for no explicit business purpose; upon that of dividends upon shares; upon that of salary, allowances, pensions, grants, or rewards, received either from the Government or from private sources: all these amounts shall be taken as net income.
2. With regard to revenue from property or from trade, not mentioned in Section 1, the amount to be taken as income shall be that representing the sum of money actually received, or the value of whatever articles have been acquired by way of revenue, less, according to circumstances, on the one hand, the sums paid out in the form of national taxes, local taxes, urban and rural rates, or contributions to the Agricultural Distress Relief Fund; or, on the other hand, the value of original materials used in the manufacture of such articles, the original cost of articles dealt in, the value of seeds and of manures, the rent and the cost of repair of premises and of articles hired for the transaction of business, the wages of employes, interest on outstanding debts, and miscellaneous expenses.
3. The income mentioned in Section 2 shall be calculated upon the average amount received for the past three years. Should three years not yet have elapsed since the first receipt of income, the average shall be taken upon monthly incomes, and when an average is not thus obtainable, some other standard of calculation shall be used.

Art. III.—In the following cases no income tax shall be levied:—

1. Upon the pay of persons acting in a military or naval capacity during a campaign.
2. Upon all travelling expenses, and grants to orphans and widows, whether allowed by the Government or by private individuals.
3. Upon extraordinary incomes other than from business undertakings.

Art. IV.—The classes and the rates of the income tax shall be as follows:—

Class.	Rates.
Class I.—Incomes of and above yen 30,000...	3 per cent.
Class II.—Incomes of and above yen 20,000...	2½ per cent.
Class III.—Incomes of and above yen 10,000...	2 per cent.
Class IV.—Incomes of and above yen 1,000...	1½ per cent.
Class V.—Incomes of and above yen 300 ...	1 per cent.

Fractions of a yen shall not be taken account of.

Art. V.—The income tax shall be paid in two instalments, one half in September and the other half in March.

Art. VI.—Every one having an income liable to taxation according to the present Regulations, shall, through the Headman of the locality to which he belongs, send to the Headman of the Rural or Urban Division thereof, by the 30th of April of each year, a return setting forth the estimated amount and the nature of his income for the current year.

Art. VII.—Under each Rural and Urban District Office, there shall be elected an Income Tax Commission, to consist of not more than seven members. A meeting of the Commission shall be held once every year to make inquiries respecting the income tax.

Beside the fixed number of the members of the Commission, there shall also be elected not more than five substitutes, who shall fill any vacancy occurring in the Commission.

No one that has been elected a member of a Commission, or a substitute thereto shall be permitted to refuse to serve without proper reason.

Art. VIII.—An Income Tax Commission shall be elected in each Rural or Urban Division.

Art. IX.—Qualifications for membership of an Income Tax Commission, and for electors of the same, shall be twenty-five years of age, male sex, actual residents in the locality, and payment of income tax. Non-conformance with the provisions of Sections 1, 2, 3, and 4 of Art. XIII. of the City and Prefectural Assembly Regulations, shall exclude persons from being elected; while non-conformance with Sections 1, 2, and 3 of the same Article, shall exclude persons from electing.

Art. X.—The Headman of each Rural and Urban Division shall fix the number of electors (not more than five) in each village or town, and those inhabitants of a village or town who possess the qualifications specified in Art. IX. shall be called upon to elect the number of electors from among themselves. According to convenience a number of electors (not more than five) may be fixed for several towns or villages in common.

The electors of towns and villages shall elect members of the Income Tax Commission and substitutes for the same, within the limits specified in Art. IX.

Art. XI.—The term of membership of the Commission shall be four full years. Half the number shall be replaced by a new election every second year. At the time of the first new election thereof, members shall retire by drawing lots.

Art. XII.—Allowances and travelling expenses of members of the Commission, and all expenses connected with the proceedings of same, shall be defrayed out of the Treasury.

Art. XIII.—The Headman of each Rural or Urban Division shall prepare a preliminary book of the accounts of income taxable, on the basis of the returns mentioned in Art. VI., and shall lay the book, together with the returns, before the Income Tax Commission.

Art. XIV.—When any one, whom the Headman of Rural or Urban Division deems liable to the income tax, does not send in his return within the date specified in Art. VI., the Headman shall make an estimate of the probable account of income received and submit it to the Commission.

Art. XV.—Meetings of the Income Tax Commissions shall be convened by Chiefs of Rural or Urban Divisions, and the president of the meeting shall be elected by the members of the Commission from among themselves.

Art. XVI.—No meeting of an Income Tax Commission can be held, unless there be present a quorum of more than one-half of the members thereof. Questions shall be decided by the voices of the majority of the members present, and in case of a tie, the president shall have a casting vote. No member of a Commission shall be allowed to take part in a debate when matters concerning his own income are under consideration.

Art. XVII.—The Headman of a Rural or Urban Division shall, in accordance with the decisions of the Income Tax Commission, fix the class and amount of income tax for which each tax-payer shall be liable, and shall notify the same to all tax-payers concerned.

Art. XVIII.—When the Headman of a Rural or Urban Division sees any objection to the decisions of the Income Tax Commission, he may make a full report to the Governor of the City or of the Prefecture, and apply to him for instructions.

Art. XIX.—When a tax-payer thinks that the classification and assessment of his income tax have been improper, he may, within twenty days from the receipt of the official intimation of his liability, bring the matter to the notice of the Governor of the City or of the Prefecture, together with a precise statement of his income, with confirmatory documents. But even in this case, the income tax must be paid on the amount assessed.

Art. XX.—In the cases mentioned in Art. XVIII. and Art. XIX., the Governor of a City or of a Prefecture shall cause the Standing Committee of the City or of the Prefectural Assembly, to make inquiries into the matter, and measures shall be taken according to the decisions of the said Committee. When the tax has been paid before these measures have been taken, any insufficiency of payment shall be re-imposed, and any excess thereof shall be refunded.

Art. XXI.—Income Tax Commissions or the above named Standing Committees may inter-rogate tax-payers, whenever they may think it necessary, in connection with the present Regulations.

Art. XXII.—No Income Tax Commissioner, and no one connected with the collection of the income tax, shall disclose any facts relating to the property or income of any tax payer.

Art. XXIII.—When a decrease of more than

five-tenths has taken place in the amount of an income before the due date of the payment of the tax thereon, the tax payer may report the fact to the Headman of the Rural or Urban Division. The latter shall enquire into the matter, and reduce the amount of income tax in accordance with the facts. Should the new account of income fall below *yen* 300, the tax shall be remitted; but any amount already paid thereon shall not be returned.

Art. XXIV.—Any one evading the payment of his income tax by false returning of his income, shall be liable to a fine equal to three times the amount evaded. But upon voluntary confession, he shall be taxed to the amount evaded, without further punishment.

Art. XXV.—Any person infringing Art. XXII. shall be liable to a fine of not less than *yen* 3 and of not more than *yen* 30.

Art. XXVI.—Failure to send in the return mentioned in Art. VI. shall render the delinquent liable to a fine of not less than *yen* 1 and of not more than *yen* 1.95.

Art. XXVII.—The provisions of the Penal Code relating to the increase and diminution of penalties, to the aggravation of penalties on account of repetition, and to the concurrence of several infractions committed by the same person, shall not be applied to infractions of the present Regulations.

Art. XXVIII.—The Minister of State for Finance shall make rules in detail respecting the carrying out of the present Regulations.

Art. XXIX.—The present Regulations shall come into force on and after the 1st day of 7th month of the 20th year of Meiji.

But in Hokkaido, in the Prefecture of Okinawa, in the Ogasawara Islands, and in the Seven Islands of Izu, under the City Government of Tokyo, the present Regulations shall not be carried out, except in so far as they relate to salary, allowances, pensions, and grants received from the Government.

SUPPLEMENTARY RULE.

The returns mentioned in Art. VI. of the present Regulations must be sent in, for the present year, before the 31st day of the 7th month.

METHODIST EPISCOPAL CHURCH.

JAPAN CONFERENCE.

The fourteenth session closed on Saturday the 17th June, when the appointments were read by Bishop Joyce. The following are the appointments of foreign missionaries:—

- Sapporo District—C. Bishop, P.E.
Hakodate District—G. P. Draper, P.E.
Hiroaki—R. P. Alexander.
Sendai District—H. W. Swartz, P.E.
Tokyo Publishing House—J. W. Wadman.
Tokyo Theological School—J. Spar.
Tokyo English School—J. O. Spencer and H. B. Schwartz.
Tokyo Mita Church—H. B. Johnson.
Yokohama District—J. G. Cleveland, P.E.
Yokohama Gospel Society and Pastor of Grace Chestnut Church, Kanagawa—W. S. Woodson.
Nagoya District—D. S. Spencer, P.E.
Nagoya 2 of Church—R. A. Morgan.
Nagasaki District—J. C. Davison, P.E.
Nagasaki English School—E. R. Falkerson.
Theological—M. S. Vail.
Revs. I. H. Correll, G. F. Shepherd, J. Weir and B. Chappel in U.S.A.
Appointments of the W. F. M. S.—
Hakodate—Miss A. Dickerson, Principal; Misses F. E. Singer, Miss M. S. Hampton, Evangelistic Work.
Tokyo—Miss M. A. Spencer and Miss C. H. Spencer.
Aoyama—Miss R. J. Watson, Principal; Miss M. H. Russel, F. Wilson, Daniels and Blackstock.
Shingu—Miss B. J. Allen, Evangelistic Work.
Yokohama—Miss B. J. Griffiths, Principal; Miss M. E. Simons, Supt. Day Schools; Mrs. C. W. Van Patten, Evangelistic Work.
Fukuoka—Miss L. Seeds, Principal; Miss L. B. Smith, Miss J. M. Gheer, Evangelistic Work.
Nagasaki—Miss E. Russel, Principal; Misses L. M. Kidwell, I. E. Lee, A. V. Bing, M. Young and M. Melton.
Sendai—Misses Imhof and Phelps.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for June, showing the foreign trade of the Empire for the month:—

	1896.	1897.
Exports	7,510,889.390	11,088,903.650
Imports	14,710,060.510	16,492,999.310
Total exports and imports	22,220,949.900	27,581,902.960
Excess of imports	—	5,404,095.660
Exports	167,619.428	395,611.401
Imports	—	20,075.183
Miscellaneous	—	583,306.012

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

SOME NOTES FROM CORNELL.

(WRITTEN SPECIALLY FOR THE "JAPAN MAIL.")

Ithaca, the little city in the very heart of the commonwealth of New York, is one of those typical American inland towns that would give a foreigner a far better idea of standard American life than even the great cities along the Atlantic sea coast, or those which have sprung up like giant mushrooms on the great lakes or rivers in the central part of the national domain, or on the Pacific coast. Laid out at the opening of this century by Simeon Dewitt, the first Surveyor-general of the United States, when all New York west of the Mohawk Valley was an unsurveyed wilderness of forest, lake and stream, it received a classic name from this first graduate of Rutgers College. He is not indeed responsible for sprinkling all the classical names which are so bountifully spread over this portion of the empire commonwealth. Looking at a map of Central and Western New York, one might suppose that canyons had been loaded with pages from Lempriere's Dictionary and fired in all directions. The Surveyor-general, after many wanderings and moving accidents by

flood and field, felt like the hero of Greek mythology. He therefore named the township Ulysses and the site of the future city Ithaca, laying it out at the southern end of the fairest and largest of that system of "finger" lakes in central New York which makes its scenery an endless chain.

How to connect this "little pocket among the mountains" with the ocean and Europe, the coast cities, the great Lakes in Canada, the vast coal and iron fields of Pennsylvania, was the problem. At first the solution was by turnpike and wagon road, which brought the lumber and coal to the foot of the lake. Then with long narrow "Durham boats" or batteaux, along the whole length of the gunwale of which men could walk and with a pole at their shoulder push the boat down the shallow streams and over the rifts, while in deep water and with a good wind sails could be raised upon a single mast, fair time was made. In this laborious way, the raw material of the region was carried down Cayuga lake to Wood Creek and the Mohawk river to Schenectady, whence it was transported overland on wagons to the head of navigation at Albany, and thence got to New York, the eastern and southern States and to Europe.

Of course, when the Erie canal and afterwards the railroads came in, these methods of transportation and commerce were paralyzed and killed at once. The people turned their attention to the new methods and lines of business. When Morse invented the electric telegraph, Ezra Cornell, the transporter and merchant, saw at once a force destined to eclipse both the canal and the railway in ultimate importance. How to lay the wires of the conductor was the first question. His plan, put in practice, was to drive a plow through the ground, of country, village and city alike, lay the insulated wires therein and bury again carefully. It was more difficult than it seemed. The wires and the plow got twisted together, stumps and stones made trouble and difficulties were so many that Ezra Cornell saw that the wires must be strung overhead and the earth used as a return circuit. Thereupon, as the Irish girl said, "he invented telegraph poles." From the mechanical phase he passed to the organization of the force and the personnel, being the father of the telegraph business in America.

By and by Cornell, having wealth and fame, conceived the idea of a university that should be typically American, in which work with the hands should be joined with work of the brain, handicraft with redcraft; and where, in any known department of human knowledge any person applying, whether male or female, and without regard to sect or colour, could find help and instruction. Side by side in the New York Legislature in Albany, sat Ezra Cornell, the practical man, and Andrew Dixon White, a scholar, who became president of the new university, which was opened in 1869, and of which Andrew D. White was made president.

Now the American idea is to have church and state entirely separate, and religion wholly voluntary, by which it is believed that religion is purer and stronger. Cornell University neither attacks nor propagates any creed. Yet to carry out this idea in the University, to invite Jews, Roman Catholics, Protestants of every stripe and even Pagans from Asia, to come and study together as inquirers after knowledge, though it is the fundamental idea in the national constitution, was almost as a matter of course misunderstood. The cry was raised about the Godless university. For several years Cornell was supposed to be the resort of atheists, infidels, and the ungodly and profane generally. Nevertheless, the idea has been steadily wrought out.

To-day there is no school of learning more thoroughly American in spirit and ideals, and more truly Christian. Its three presidents have been in succession Episcopalian, Congregational, and Baptist in their personal religion. There has always been preaching on Sunday by the leading clergymen of the country, Catholic and Unitarian, Episcopal, Baptist, and Jewish, and the chapel is almost invariably filled; while it is frequently necessary to go into the large Armory Hall, which holds thousands instead of hundreds. The first graduate is an honoured Lutheran clergyman. There have been for years, besides a flourishing Christian Association, Bible Classes, Prayer Meetings, and special religious occasions. In the household of two thousand students and professors it is within the bounds of absolute fact to state that at least once on Sundays a majority are found at church. It is doubtful whether a better religious spirit, or purer Christianity prevails in any university in the United States.

Furthermore, there is a democratic spirit at Cornell which is noteworthy. While the system of Greek fraternities is probably more fully carried

out at Cornell than anywhere else, each having its chapter house, yet everything under the direct control of the University is free to all. There is perfect democracy. The honours, the awards, the scholarships, the Christian Association privileges, the gymnasium, the military department, the various lines and avenues of honour and privilege are open without question as to whether a man takes the course in civil, mechanical, or electric engineering, in philosophy or the classics, in law, or in the various technical courses. The only limits are those of scholarship and length of time spent in study, but there are no limits put upon sex, colour, or creed, nor do these in any way disqualify a man. Hence, amid so much diversity, there is a wonderful unity of enthusiasm for the University and pride in the democratic spirit of the institution. Success so wonderful attained in a single generation is noteworthy.

All this is pertinent when we come to speak of the great event of this week, the University boat races at Poughkeepsie on the Hudson river. Heretofore Harvard and Yale have tried to keep these races as something exclusive, to be enjoyed only by the men of the two oldest universities of the country, that were founded a quarter of a millennium ago by the Congregationalists of New England. The Cornell men have made upon the water such a reputation, that their demands to be admitted to the University races could not be ignored, and so they were rather grudgingly given a position with Harvard and Yale. Yet, although beaten before by the Ithaca men, it seems pretty certain that both the Yale and the Harvard students thought that this year the Cornellians must surely be beaten. The Harvard men had imported from England a "coach" of undoubted abilities and established reputation, Mr. R. C. Lehmann, who has for months been training his rowers to the standard English stroke. The Yale men kept to their faithful trainer Robert Cook, himself a graduate of Yale of 1876, whose stroke was a modification of that of the English. Both the Yale and the Harvard crew were each of them heavier than the Cornell crew.

Courtney, the coach of the Cornell boys, is an oarsman from his youth up. By his personal prowess at the oar from 1868 to 1877, as an amateur, he won eighty-eight races. After 1877 he won one hundred and forty-four races and lost only seven, accumulating a household of prize cups and banners. Under his training, with an admirably fitted boat house on Lake Cayuga and a well equipped steam launch, Cornell crews, whether "Freshmen" or "Varsity," have had a record only occasionally notched by loss, and shining with a marvellous series of victories. Throughout all, Courtney has held to the stroke which he "invented"—short and quick. This year the races rowed on the Hudson river gave to Cornell the supreme prize of victory, for their University eight won over Harvard and Yale by four boat lengths, or 20.34 in four miles. The Freshmen were indeed beaten by Yale Freshmen, but though the Varsity crews from New Haven and Cambridge were heavier men than those from Ithaca, the light and lithe Cornell boys beat the tall and heavy Yale men, while the Harvard rowers were badly broken up. Their coach claims that they did not adhere to his stroke. Mr. Courtney's triumph is complete, but much credit also is due to the eight rowers. In a word, the victory at Poughkeepsie was the victory of the typical American University following typical American methods.

Mr. Andrew Dixon White, after having served on the Venezuela Boundary Commission and issued his report—two octavo volumes of which are now out from the Government Printing Office—having erected a handsome memorial gateway to the Cornell University grounds, having delivered two very scholarly and able lectures before the University here and at New Haven and Cambridge, on "Evolution versus Revolution in Politics," and "The Problem of High Crime in the United States," has left for his post as Ambassador of the United States to Germany. At Berlin he will have his hands full and his abilities will have a fine field for their exercise. Germany's tariff is even more prohibitive than that which our Congress is soon likely to pass, while Emperor Wilhelm shows many signs of being the kind of a ruler that King George III. of England was—rather young, and with a propensity to over-govern.

The universal postal congress of Washington, which began its sessions on the 5th of May in the old hall of the now disused Corcoran Art Gallery, closed its sessions on June 15th, and the delegates from sixty-two different nations have gone home. The room was handsomely decorated with the flags and insignia of the different nations, and the appearance of the Chinese, Korean, Japanese and

other delegates gave a visibly cosmopolitan air to the assembly. This postal congress is to convene again in Rome in 1902. If each of the sixty nations should have a meeting in turn our country will not have the postal congress in Washington until the year A.D. 2202; by which time, it may be, there will either be only ten or twelve great nations or several hundred small ones represented. The countries formally entering the postal union are Korea, China, and the Orange Free States. A uniform colour for postage stamps has been adopted, but the dream of creating a universal postage stamp was not actualized, because of the difficulties arising from the diversity of units of money in the various countries. For by-play, the congress had an excursion to Mount Vernon, and to the navy yards, where they saw the big steel ships-of-war, while at many garden parties there was much enjoyment. In a special train they made an excursion of thirty-seven hundred miles in circuit, to the Mississippi, Chicago, Niagara Falls, Boston, Albany, West Point, and to Washington again.

My old friend and fellow Monday-Club man in Boston, Rev. Francis A. Clark, whom I knew when he had just founded the Christian Endeavour movement, and when it had but a dozen societies, has returned to San Francisco after his second trip around the world to greet the thousands of young people who will represent millions. They will hold a convention in San Francisco from July 7th to the 12th, at which I imagine the Japanese Christians will be also represented. This movement, while undoubtedly in the interest of pure and undiluted religion, is something very dangerous to ecclesiasticism, for it has a tendency to wraken the fences erected by the various sects, denominations and church corporations. If it can only graduate its pupils into the higher ranges of service and actual usefulness in the churches, it will have a long and glorious history. In any event its development will be watched with interest.

W.E.G.

AUSTRALIA AND JAPAN.

[FROM OUR SYDNEY CORRESPONDENT.]

The question of Asiatic labour on board ocean steamers has again been raised by a case lately heard in one of the Sydney police-courts, in which George Bunney Ramsay, master of the steamship *Tsinan*, was charged in company with William Woodley, chief mate of the same vessel, with having unlawfully assaulted Ah Foo and Ah Ping, employees of the ship, whilst on the high seas. The captain was further charged with assaulting Ah Ku, Yee Yung, Yeh Yit, Ping Chong, She Hoo, and Sam Ching on the same date, 24th April. According to the evidence of the captain and mate the prosecutors declared to obey orders, and they then punished them. The others stated individually that they had not refused to obey orders. They were all handcuffed to a rail. The mate and the captain then flogged Ah Foo and Ah Ping with a stick, and the captain alone dealt similarly with the other complainants. So severely was Ah Foo dealt with, according to them, that he was rendered insensible, and water was thrown over him to restore consciousness. The captain and mate said they called the doctor to see him, and he said the man was only shamming. Ah Foo was then locked in a room for some time. On the advice of the doctor, who said—in the words of the captain—that the man was stiff after his caning, Ah Foo was not compelled to return to duty for two days. The other men stated that they were left handcuffed to the rail for about four hours after the captain had beaten them. They showed the Court the marks which remained on their legs, and which they said were caused by the beating. For the defence the captain and mate did not deny having committed the assaults. They said that such measures were necessary to enforce discipline, and they did not consider they had been too severe. "These men," said the captain, "are like school children; I punished them with a walking-stick in order to make them return to duty." He believed that he was nipping an incipient mutiny in the bud. The magistrate said he could see no reason for the captain to have imagined an incipient mutiny. There was no doubt the assault on Ah Foo was serious, and the captain and mate would each pay fines of £10, with court costs, professional costs, and interpreter's fee. Additional fines were inflicted in connection with the other cases, totalling, with the cost, nearly £70.

The leading Sydney paper, commenting on the circumstances of the case; remarks that "assuming the statements of the captain and mate to be correct, there is no reason to suppose that in what they did they were actuated by any other de-

sire than that of securing that obedience to orders without which the working of a ship is impossible. We may go somewhat further, and say there is no reason to suppose that the treatment the men received was any other than that which they would have received and perhaps have submitted to without a murmur had it been awarded to them by a Chinese captain on board a Chinese ship. But they knew or found some one to show them the difference when the occurrence took place on board an English ship. And this essential point the captain seems to have overlooked. It may be—we can offer no opinion on the point—that Chinese crews may sometimes require and perhaps almost expect some administration of discipline in the familiar form of the bamboo. But English captains may not resort to this method on English ships. That is to say, they may not to-day, though they did it freely enough in respect to English crews, and without blame from anybody, a century ago. The present-day English methods may be wanting in the vigour looked for by Chinese sailors. On the other hand, the Chinese methods are unsuitable for adoption by Englishmen. How is the difficulty to be overcome? Perhaps, could we wait for development to do its work we should find in due course of time that Chinese crews had become as amenable to milder forms of persuasion as English sailors are to-day. In the meantime the decision of the magistrate's court shows that if English captains cannot rule Chinese crews without resorting to acts which violate English law they must not attempt to work with Chinese crews at all."

Several of the leading Chinese in Sydney resent the idea of picked Chinese crews acting without some degree of provocation as those of the *Tsinan* are said to have done. They insist that the Chinese seaman when properly treated, is exceedingly tractable and trustworthy. The steamship companies are said to have under consideration the desirability of increasing the European element in crews consisting principally of Chinese. It has been suggested that Japanese labour might be more generally employed on vessels trading to Japanese and Chinese ports, but nothing has come of it, and it is probable that things will remain as they are, at any rate for a considerable time to come.

The arrangements for increasing the Japanese navy continue to excite uneasiness in Australia, where the colonists are beginning to discover that the question of restricting alien immigration is surrounded with graver dangers than were at first imagined. The *Queenslander* states that evidence taken by the Queensland Mining Commission at Thursday Island shows that the influx of Japanese, so long regarded as of small consequence, has assumed formidable dimensions, and is regarded by the residents with very serious apprehension. The Hon. John Douglass said that the Japanese influx was so serious that, if the rate of increase of last year were maintained, the whole place must eventually fall into the Japanese hands. He estimated the Japanese population in the town, on the ocean, and at seaside stations at 900, and said that a boat almost due was bringing another 200. More serious than the numbers of Japanese was their enterprise. Ship and boat repairing was absolutely in their hands. They were also property-holders, and their business men were becoming extensive land-owners. Other witnesses confirmed these statements. They even added that the Japanese were so intensely patriotic as not only to send the profits of their business to Japan, but to keep their work for their own countrymen. "The Japanese has no room for European labourers, mechanics, or merchants. He ousts them all, and imports, per *Omi Maru* and other Japanese vessels, direct from his native country." The *North Queensland Register*, which published this information in full, is sure that in three years, if the Japanese are not in some way excluded from the pearl shelling industry, it will be theirs entirely, and Thursday Island will become an appanage of the Mikado. Another Northern Queensland paper sees in the Australia of the future only a Japanese dependency. The *Queenslander* says that no one "can fail to see that the position at Thursday Island raises the big and broad question of Australian nationality. Is it to be a white Australia? Are we to aim at that, and take such means as may be open to us (always supposing them to be righteous means) to secure that? Or are we to allow free play to the influences which may bring to our shores men of all colours and races, and may in the end reverse the numerical majority and swamp the supremacy of the whites? There is no need to import anger or racial hatred into this discussion, and no need to denounce the races we seek to exclude. Enough that we claim the right to exclude them. We claim the right in taking possession of this new country to say, within fair limits, who its people are to

be, and by what races the government is to be conducted. And we imagine that Japan for herself claims precisely the same right."

The *Maitland* (New South Wales) *Mercury*, alluding to the report of the Queensland Mining Commission, says:—"Even if the Japanese do not invade us in numbers so great as to change the character of the population, they may easily come in such numbers as to constitute a political and a social difficulty. And therefore, the sooner the possibility of such a difficulty occurring is recognised, the better for Australia. Apprehension of it, we trust, will help what is understood to be the disposition of Queensland to come into the Federation Convention, and we also hope will induce the statesmen and the people of Australia to refrain from nifty about delay. All Australia is greater than any province of Australia; and if the interests of all Australia are in jeopardy, local considerations must be put aside as much as possible, and should not hinder a step essential for the safety of the nation. Prevention is always to be preferred to cure, and what especially Australia needs in one direction is an effective hindrance to the incursion of coloured races. We look forward to the day when over Australian waters shall resound the bellow of cannon fired in defence of our shores. Such a day must come—it is written in the destiny of the Australian nation. But the immediate danger of the continent, the more alarming menace, is not the approach of a war flutilla. If we do not take care, there will descend on our coasts, and gain a footing whence it will not be easy to dislodge them, denizens of those Eastern countries, who exist in millions, who find their native land too strait for them, and who may gradually, silently, insidiously glide into possession of ours. In this matter Australians are not called upon to take into account the general brotherhood of mankind. They have no welcome to offer to coloured races as citizens of Australia. The Australia of the future must be mainly British and white; the instincts of nationality, the demands of patriotism, must be obeyed rather than the promptings of a sentimental philanthropy. The question is one which on all sides is practical. Establishment of a mixed nationality would be good neither for Anglo-Saxon nor for Japanese or Chinese—it would be a union not of the better qualities of each people, but of the worse, and the result a lamentable degradation of the population of Australia. And British pride and the nobility of soul inherited from ancestors who have subdued a large expanse of this planet could not endure a Japanese or Chinese domination of Australia. We are an Imperial race."

The *Evening Times* (Newcastle, New South Wales) fully recognises the difficulty of the situation. It says—"If we exclude the Japanese, for instance, we cannot well compel Japan to admit us. Probably the Australian will say at once that he has no desire to go to Japan except as a tourist; but, seeing that the admission into Australia of Japanese and Chinese as "tourists" would speedily be abused, we must not complain if China, Japan, or Asiatic States, which are not under the English flag, were to deny access of any kind to Australians so long as Australia denies access to their people. . . . Australia, as a whole, will probably not feel much concern at being deprived of entry into Japan. The Attorney-General of New South Wales and other distinguished Australians have made it a rather favourite holiday resort for those who can afford to go there. But Mr. Want can easily find places as suitable for holiday making as Japan, and, indeed, is probably *blasé* with that country already. At the same time, as it is pretty certain that the threat conveyed by the Japanese Foreign Office, through the *Nippon*, is by no means an idle one, there will be considerable difficulty for the British Government in the fact that Japan may possibly be placed in a position in which, with international rights unquestionably on her side, she will put all visitors who claim to be British subjects through a kind of immigratory sieve which will permit those who are not Australians to pass through, but will strictly retain those who are. The circumstance that the Asiatics who are anxious to expel Australians outnumber the Australians who desire to perform a similar operation on Asia by at least a hundred thousand to one, only counts in so far as Australia is concerned with regard to the relations between the dominions of the Union Jack and those of the chrysanthemum. Otherwise it is not potent. The trade with Japan is of immense importance to the United Kingdom. That importance, however, immense though it may be, is scarcely worth considering as compared with the trade with Australia. Nevertheless, in the question under discussion, it must have considerable influence; and, in the discussions on the whole subject which are certain to take place be-

tween the Australian Premiers and the British Secretary of State, it will be found very potent."

"THE ADEN."

The steamer *Simla*, which arrived at Colombo on the 1st July, passed Socotra on the 25th June, and there saw the *Aden* lying a hopeless wreck on the rocks. The *Simla* was told at Aden that the steamer was missing, and was asked to look out for her, and just before she left Aden, the I.M. steamer *Mayo* was also despatched to learn about the wreck. The *Simla* and the *Mayo* kept in sight of each other till the 25th, and thus they found the wreck together. The P. & O. vessel was up well on the reef on the south-east side of Socotra, and there was no possible chance of hauling her off. The weather was very rough, and the waves were breaking even over her mastsheads. The funnel had gone, but otherwise she looked uninjured, and she had driven straight on without any list. There was no sign of life on board, and no signals were flying. The *Mayo* put in closer than the *Simla* did, but the weather was too bad to render assistance if wanted then, and, apparently none being required, the *Simla* came on to Ceylon, where the news was an agreeable surprise that the *Mayo* eventually saved so many lives from the wreck, as there appeared to be not a soul on board. The assumption is that those found were too worn out to signal.

The Russian steamer *Saratov* which arrived at Colombo in the 1st July from Europe, brought further particulars of the *Aden*, says the *Times of Ceylon*. It appears that the Russian Consul at Aden asked the Captain of the Russian steamer *Saratov* to keep a sharp look out near the Coast of Socotra for the steamer *Aden*. At Cape Rasul Khyle, she sighted the *Aden* on a reef in lat. 12, N. long. 54 31 E. and the direction of the steamer was W.S.W. at a distance of three quarters of a mile. The waves were rolling over her heavily and there was no sign of any person on board. Her funnel and fore top mast were broken off. The steamer *Mayo* was sighted leaving the wreck, and since she signalled "Passengers saved," the Russian steamer proceeded on her way.

The *Madras Times* says that the *Aden* sailed from Colombo on the usual course making for Ras Meme, off Socotra. It is usual for steamers to pass this point, at a distance of four or five miles, and trusting, no doubt, to the South-east current, the captain reckoned that he would be about twice that distance from the two shoals off Ras Meme. The cyclone in which the vessel was caught was blowing north-east, and blew the vessel on to the shoals.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

THE "ADEN" DISASTER. NO TRACE OF THE LIFE-BOAT.

London, July 21.

The P. & O. steamer *Rohilla* has returned to port after making a thorough search for the *Aden's* boat along the Arabian coast and the island of Socotra. No trace of the boat or occupant's can be found.

TURKEY AND THE POWERS.

REJECTION OF THE CONCERT'S PROPOSALS.

In consequence of the non-acceptance of the frontier-line proposed by the Ambassadors of the Powers, the Peace Conference at Constantinople has been suspended, and the decision now rests in the hands of the respective Governments.

THE FRONTIER QUESTION SETTLED.

London, July 22.

An *Irade* has been issued by the Porte, sanctioning the settlement of the Thessalian frontier line in accordance with the proposals of the Ambassadors of the Powers.

M. Nelidoff, Russian Ambassador at Constantinople, has been appointed Ambassador to Italy, and M. Zinovieff has been appointed his successor in Turkey.

London, July 23.

The Peace Conference at Constantinople has now formally agreed to the de-

limitation of the Thessalian frontier as originally proposed by the Ambassadors of the Powers and finally accepted by Turkey, and the discussion of preliminaries towards a treaty of peace has now commenced. The German Embassy prepares the indemnity proposals.

London, July 24.

It is understood that the Sultan will receive a frontier concession of minor importance, whereby the mountain passes will be rendered more secure in future.

CRETANS STILL TROUBLESOME.

London, July 26.

The Preamble and Article I. of the treaty of peace between Greece and Turkey have been drafted.

The Cretan insurgents fired on the Highlanders while route-marching in the vicinity of Candia.

GOLD IN BRITISH COLUMBIA.

London, July 22.

Great excitement has been caused in British Columbia by the discovery of very rich gold veins in the Klondyke district.

OBITUARY.

The Right Hon. Anthony John Muddella, M.P., is dead.

THE BELUCHISTAN PUNITIVE EXPEDITION.

London, July 23.

The British punitive expedition to the Tochi Valley has occupied Iserani Maizur without opposition.

BELGIAN TEA DUTY.

London, July 24.

A Bill has been introduced in the Belgian Chamber of Deputies to abolish the import duty on tea.

FRANCE AND SIAM.

A friendly reception by the Tsar of Russia has resulted in the settlement of the difficulty that existed between France and the King of Siam. The latter will visit Paris in September next.

["Friendly reception" is perhaps a mistake for "friendly mediation."]

THE SOUDAN.

No military force is being prepared in England for service with the Egyptian troops in the Soudan.

SILK CROPS IN FRANCE AND ITALY.

Tokyo, July 26.

This year's silk crop in France is estimated at 15 to 20 per cent. less than the previous year's yield, and that of Italy at about 10 per cent. less. The market is quiet, and quotations are firm.

THE NEW AMERICAN TARIFF.

London, July 21.

The United States House of Representatives has adopted a compromise with regard to the tariff, by a majority of 185 to 118.

[Probably this means the compromise embodied in the report of the Conference of both Houses, mentioned in a previous telegram.]

London, July 22.

President McKinley withholds his Message on the Currency question until the Senate has adopted the report of the Tariff Conference of the two Houses.

Washington, July 24.

The Tariff Bill has passed the Senate without further amendment and received the President's signature to-day. It will be enforced at once.

Washington, July 20.

(Tokyo, July 25.)

Silk Handkerchiefs.—An extra 10 per

cent. *ad valorem*, besides the rate fixed for silk goods in general, is to be imposed.

Porcelains.—*Ad valorem* duty of 25 to 60 per cent., according to quality.

Rice.—For cleaned rice, 2 cents per pound; for uncleaned rice, 1½ cents per pound.

Rugs, fans, straw-braid, camphor, and paper goods.—Assessed by the Deputies of the two Houses in the form as amended by the Committee of Ways and Means of the Upper House.

The amendment by the Committee is as follows:—

Rugs.—For goods valued below 15 cents per square yards, 5 cents per square yard and 35 per cent. *ad valorem*; those valued above 15 cents, 10 cents and 35 per cent. *ad valorem*.

Fans.—50 per cent. *ad valorem*.

Straw-braid.—15 per cent. *ad valorem* for plain goods, 30 per cent. *ad valorem* for goods dyed or painted.

Camphor.—Raw camphor free of duty, refined camphor, 6 cents per pound.

London, June 26.
The United States Senate has adopted the compromise (previously adopted by the House of Representatives) with regard to the tariff, and President McKinley has given it his signature.

The President has sent a Message to Congress asking for authority to appoint a Commission of nine members to examine the question of currency reform. The House of Representatives approved of the proposal, but the Senate did not, and Congress has now adjourned *sine die*.

THE "QUEEN'S PRIZE" AT BISLEY.

At the annual rifle-shooting tournament at Bisley, the "Queen's Prize" was won by Private Ward, of the 1st Devonshire Rifle Volunteers.

COUNTY CRICKET.

Essex has beaten Yorkshire by one run.
ADMIRAL SEYMOUR.

Admiral Sir Michael Culme Seymour, K.C.B., has been appointed to the command at Portsmouth.

CLOSE OF THE SESSION OF THE U.S. CONGRESS.

Washington, July 26.
The two Houses of Congress adjourned on the 24th inst., and the President will leave the capital within a few days. Till December therefore nothing can be done towards a ratification of the Annexation Treaty.

THE HAWAIIAN QUESTION.

London, July 27.
The New York *Herald* is of opinion that Japan's rejoinder to the Note of Mr. Sherman (Secretary of State) in reply to Japan's original protest against the annexation of Hawaii, indicates an intention to continue waging a diplomatic war, and that Japan may possibly go even further than that, in her desire to prevent annexation, as it is impossible for Japan to acquiesce in the probable consequences that may arise out of the extinction of Hawaiian Sovereignty.

It is believed in New York that what is here shadowed forth means only a rupture of diplomatic relations between the two countries, and not war.

PRUSSIAN MINISTERIAL DEFEAT.

The Lower House of the Prussian Diet has for the second time rejected, by a

majority of four, the Government's stringent Bill for amending the Law of Associations, which empowers the police to dissolve public meetings.

PRINCE ARISUGAWA RETURNING.

New York, July 25.
H.I.H. Prince Arisugawa Takehito and suite left for Vancouver to-day at noon.

THE TAI-WON-KUN.

Söul, July 26.
Yesterday the Prince-Parent visited the Police Board and afterwards the Palace, where he was received in audience by the King. The aged Prince complained to the King of constant espionage to which his servants and dependants were recently subjected, and of the arrest of some of them.

(SPECIAL TELEGRAMS TO THE "JAPAN MAIL.")

THE BRITISH FLEET.

Hakodate, July 24, 6.10 a.m.
H.M.S. *Peacock* arrived here yesterday.
Hakodate, July 27.
H.M.S. *Alacrity* has arrived here.
Otaru, July 28.
H.M.S. *Centurion*, *Grafton*, *Immortalité*, *Narcissus*, *Redpole*, and *Hart* arrived here yesterday.

MEN-OF-WAR AT HAKODATE.

Hakodate, July 28.
The Austrian man-of-war *Panther* has arrived here from Vladivostok. H.M.S. *Peacock* has also arrived here.

Hakodate, July 29.
The German warships *Kaiser*, *Princess Wilhelm*, *Irene*, and *Arcona* from Chemulpo, and the Japanese cruiser *Yoshino* from Aomori, arrived here to-day.

(FROM SINGAPORE PAPERS.)

ACCIDENT TO THE KAISER.

Paris, July 12.
The German Emperor, while cruising off the coast of Norway in his yacht, had one of his eyes injured by a piece of falling rigging.

DISASTROUS RAILWAY COLLISION.

Paris, July 12.
A collision between two passenger trains has occurred at Gjentofte, near Copenhagen. Eight carriages were broken up and forty persons killed and sixty more injured.

(FROM THE SINGAPORE FREE PRESS.)

ATTACK ON A GOVERNMENT STATION IN NORTH BORNEO.

Labuan, July 12.
The British North Borneo Government Station at Gaya was attacked by sixty rebels under Mat Salleh on Sunday morning. The town and Government Treasury were burnt and looted. One police corporal and two prisoners were killed. Mr. S. Nienbrunner, the Treasurer, has been taken prisoner.

Mr. Godfrey Hewett and Mr. Joseph Wheatley have left Labuan this morning in the steamer *Ranee* with eight Dyak police. They should reach Gaya at noon to-day.

[On the 23rd September last three North Borneo officials, Messrs. Flint, Dunlop and Little, with their police force, attacked the fort erected by Mat Salleh, the notorious brigand, outlaw and murderer, and compelled him and his followers to take to flight into the interior, leaving several dead unburied. The captured stockade was burnt.]

(FROM THE "HONGKONG DAILY PRESS.")

SUICIDE OF A BRITISH NAVAL OFFICER.

Shanghai, July 20.
Navigating Lieutenant Heygate, of H.M.S. *Algerine*, committed suicide by shooting himself on board last night. The inquest will be held to-morrow.

DEATH OF AN EX-MINISTER TO ENGLAND.

Kung, formerly Chinese Minister to England, died last night.

(FROM THE JAPANESE PAPERS.) THE KOREAN MINISTRY.

Söul, July 28.
Chin Shokun (Chhin Sang-bun), Minister of Finance and of War has tendered his resignation.

THE EMPEROR'S RETURN TO THE CAPITAL.

Kyoto, July 27.
It is rumoured here that Their Majesties will return to Tokyo about the 7th or 8th of August. Viscount Hirohata, an Imperial Chamberlain, left here for Shizuoka this morning to make arrangements for the accommodation of their Majesties *en route* to Tokyo.

H.I.H. Prince Komatsu had audience with the Emperor to-day.
Count Matsukata, Premier, was at the Palace to-day from 2 p.m. till 6.40 p.m.

July 28.
H.I.H. Prince Komatsu, Count Matsukata, Count Hijikata, and Viscount Nomura will take a pleasure trip to Arashiyama to-morrow.

MR. MIZUNO.

Bakan, July 28.
Mr. Mizuno, ex-President of the Formosa Administrative Office, Mr. Isogai, Governor of Taichu Prefecture, and Mr. Nakamura Yaroku, M.P., arrived here from Formosa *en route* to Tokyo.

KOBE TEA SALES.

Kobe, July 29.
Yesterday 137 900 cattie of new tea changed hands. Prices ranged from yen 29.50 to yen 15.50.

GENERAL KAWAKAMI TO VISIT VLADIVOSTOCK.

Kobe, July 29.
Lieut.-General Kawakami, Vice-President of the General Staff Office, is due here to-morrow after an audience with the Emperor at Kyoto. He leaves here for Vladivostok by the steamer *Tairen Maru* on the 31st inst. Major Aoki and Captains Hisamatsu and Furumi, who are to accompany him, have already arrived here.

COLONEL FUKUSHIMA ON HIS TRAVELS.

Kobe, July 29.
Colonel Fukushima Yasumasa left here for Tientsin to-day by the steamer *Genkai Maru*, his destination being Peking.

CHOLERA.

Nawa, July 29.
A fatal case of cholera has occurred here.
Chiba, July 29.
Several cases of cholera are reported in the vicinity.

RUSSIAN SOLDIERS IN SOUL.

Söul, July 29.
On the 28th inst. three Russian officers arrived here and the following day about 10 Russian soldiers entered the city.

STORM AT NAWA.

Nawa, July 29.
Since yesterday a severe storm has been raging here.

COLLAPSE OF A DOCK COMPANY.

Wakayama, July 29.
The Kishu Dock Company, started in August last year, has been dissolved on account of deficiency of capital.

THE PORTUGUESE MINISTER.

Kobe, July 29.
The Portuguese Minister, Senhor Galbardo, and family, left here for Macao by the *Empress of China*.

HEAT IN AICHI KEN.

Tsushima, Aichi Ken, July 29.
To-day the heat is intense and the thermometer registers 94 degrees Fahr.

EARTHQUAKES.

Mito, July 29.
Earthquakes were felt here twice this morning.

THE KOREAN MINISTRY.

Söul, July 29.
The resignation of Chhin Sang-lum (Chin Shokun), Minister of Finance and of War, is due to the fact that some Russian soldiers have entered Söul suddenly.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following is the solution of Problem 329:—

WHITE. BLACK.
1—B to K 3 1—P takes B (forced)
2—K to B 3 1—P takes R (forced)
3—P to K 4, mate

Correct Solutions received from W.H.S. and D.D.

PROBLEM NO. 331.

By M. LISSNER.

(First Prize Birmingham Post Problem Tourney.)

White mates in three moves.

END GAME STUDY.

By M. TROITZKY, in *La Strategie*.

With playing first wins.

SOLUTION.

WHITE. BLACK. WHITE. BLACK.
1 PK Kt8= KxQ 3 K B7 P K4
Q ch 4 B K7, mate
2 K R6 K R sq

OVER THE CHESS-BOARD.

Lady chess-players, beware of hypnotism! There is a Svengali in the chess world who exercises an evil influence on a certain lady partner, as the following incident will show:—She was playing a game with her opponent, when the latter wrote something on a piece of paper, which he handed to a friend. The lady then made her move, but this exposed her to a mate in two moves. It was rather an obvious trap, and she could not at all account for the reason why she had fallen into it. She had made the move without thinking and on the "impulse" of the moment. After the finish of the game her curiosity was aroused, and she asked the other lady what the contents of the paper were which she had received from her opponent. She was shown the paper by her friend, and it contained the following words:—"I will compel Miss F. to play Kt to K 4, which will expose her to a mate in two moves." Being taken to task by the lady to explain this mystic message, this Svengali of the Chess-board coolly asserted that at any critical point of the game he could influence most people to make any particular move which looked enticing and plausible on the surface by exercising his will power in that direction.

When your position leads you to think you have a win in hand never mind the so-called "artistic

finish." "In all true and safe chess the object is to reduce the other side to impotence as quickly as possible." If you can mate sooner with nine queens than with eight, do it. There is no limit to the amount of consideration to be shown to your opponent. Those are false notions of fairness and honour that would keep you from putting your crippled antagonist to rest. The quicker you mate him the more mercy you show. The cat playing with the mouse business being fun for the cat only, is rather one-sided.

Chess was the baccarat, the poker, of the middle ages. In vain a king forbade it in 1393. The women were almost as bad as the men. "Never play chess, save for love" said the Knight de la Jour to his daughters. And he proceeded to tell them melancholy tales of land, of money, and women's honour spent over the too enticing board.

It was probably some wandering crusader who brought over an Eastern chessboard and men to teach the royal game to Western barbarians.

One friend having unsuccessfully tried to bring two members of a certain chess club to the same way of thinking, said:—"Surely you must remember those two Johnnies who a year or so ago were playing together, and having cleared off every piece were chasing each other's kings round and round the board, and neither having effected a capture by eleven o'clock, took down the position for an adjournment to another day in order to continue the chase."

A British M.P., writing to the *Pall Mall Gazette* recently, says that the recreations of members while in actual attendance at the House are few. Hence when the first chess board was introduced years ago there was some excitement, and subscriptions were made, so that very soon eight more boards and men made their appearance. To-day, in the smoking room, the game is constantly practised, and while many celebrities may be observed enjoying a cigar or telling a good story, presumably without a disposition for the game, the chess devotees are busy at their favourite pastime. When it is remembered that no other game is allowed within the sacred precincts, and that the proceedings often become insufferably dull, it may easily be imagined what an excellent resource the chess-playing members have. But has not the Parliamentary contest a deeper significance? The British M.P. concludes by suggesting that possibly "one man among the players may prevent war because he has a chess-player friend in England or in the United States."

Mr. Steiniz recently received 1,600 francs for exhibiting Chess in Paris, the largest amount ever paid for such a performance.

The Lasker-Tschigorin match has not materialized. Mr. Lasker, declaring that he needs a long rest, will not play any match for at least a year.

Tit Bits recently printed the following answer to the question, in which match was the largest set of chessmen used?—Apart from living chessmen, the largest set of chessmen ever made were those used in some matches recently played at the Crystal Palace between Mr. J. H. Blackburne, the English chess champion, and Mr. R. F. Fenton. The board was 12ft. square, and the chessmen, 14in. in height, were made of light wood and hollow. Solid pieces of that size would have been too heavy to move about, for the players had to be seated on elevated chairs, and the pieces moved by a contrivance called a catcher, which very much resembled a huge toasting-fork. It required considerable care and dexterity to handle this "catcher" without accident. The object of the show was, that the board and chessmen should be big enough to enable a large number of spectators to witness games between experts as they do at a theatrical performance, the board taking the place of the stage.

The first number of *The American Chess Magazine* has been received. It is got up in a very handsome manner, and magnificently illustrated. It is full of interesting matter, and we hope that it has come to stay.

DUTCH OPENING.

White—Mr. Teed. Black—Mr. Deelmar.
WHITE. BLACK. WHITE. BLACK.
1 P Q4 P KB4 5 P K3 P KR4
2 B K5 P KR3 6 B Q3 R R3
3 B R4 P KKI4 7 QxP ch RxQ
4 B K3 P B5 8 B K6 mate

"Learn, reader, from this bit of Chess,
The penalty of carelessness.

'Tis also an apt illustration
Of greed leading to ruination."

—*American Chess Magazine*.

A LASKERISM.

When Lasker was a student he sat one evening in a Berlin café, when a stranger came in hungry for a game of Chess. Lasker announced that he could play a little, and so at it they went:—

White—Stranger. Black—Lasker.
1—P to K 4 1—P to K 4
2—Q Kt to B 3 2—Q Kt to B 3
3—P to Q 3 3—Kt to B 3

Lasker asks himself: "Can I give him a Rook or is he simply fond of a close game?"

4—P to Q Kt 3 4—P to Q 4
"Oh! at least a Rook," pursued Lasker to himself. "I must try some funny business."

5—B to Kt 5 5—P takes P
6—Kt takes P 6—Kt takes Kt
7—B takes Q 7—B to Kt 5 ch
8—K to K 2 8—Kt to B 6 ch
9—K home 9—Kt to Q 5
10—Q to Q 2 10—B to Q 5

Of course, White will try to save his Bishop.

11—B to Kt 5 11—Kt to K 5
12—Q takes B 12—Kt takes P mate

If P takes Kt, then also Kt takes P, mate.
The stranger complained that he was out of practice and couldn't play any more than day.

MAIL STEAMERS.

THE NEXT MAIL IS DUE

From America.....	per P. M. Co.	Tuesday, Aug. 3rd.
From America.....	per O. & O. Co.	Sunday, Aug. 15th.

PASSENGERS.

ARRIVED.

Per British steamer *Verona*, from Hongkong via ports:—Surg. J. C. Durston, R.N., Mr. L. L. Bailey and servant, Capt. Siopani, Mr. and Mrs. Smith, Messrs. T. Southall, Phillips, H. J. Webb, H. Roharit, and one Chinese in cabin.
 Per British steamer *Jawa*, from London via ports:—Messrs. L. Plummer, H. S. Verity, Hy. Bull, Hy. Neville, and E. W. Noel in cabin.
 Per British steamer *Gaelic*, from San Francisco via Honolulu:—Mr. R. W. Irwin, Mr. Geo. Hayes, Miss Lucille Wall, Mr. W. H. Furness, Mr. Chas. W. Richards, Mr. M. Akiyama, Capt. C. V. Girdley, U.S.N., Mr. S. Friede, Mrs. R. W. Butthwick, Mr. A. de Flesch, Dr. Riedel, Mr. and Mrs. Igarashi, For Shanghai:—Mr. Chas. Gubany, Mr. Fung Wing Hong, Mr. G. Gepprich, Mr. Fung Yin Sun. For Hongkong:—Mrs. L. Switzer.
 Per French steamer *Salazie*, from Marseilles via ports:—Messrs. Bohone Nicolas, P. Weidig, Brukeoff, Syromiatukoff, J. R. Alias, Chu Chui

Chong, Mrs. Massien, Mr. Laurence, Mr. Heathcote, Mrs. Francis, Messrs. Somminianikoff, Salmon, Gautier, Trousseau, Smar, C. Andrie, F. Wyen, Mrs. G. Touche and infant, Miss Bonneau, Messrs. Bonneau, Gustave Gilbert, Le D. Blanc, F. Hoyer, F. Bonnet, A. Levy, Hivon-nat, Dragon, Blum, Fred Taylor, Gause, Ebinar, and Mrs. Massien in cabin.
 Per American steamer *Peru*, from Hongkong via ports:—Capt. C. B. Little, Mr. W. J. Kenney, Capt. Stockton, U.S.N., Dr. Min Sandeman, Mr. I. Knoff, Mr. Kolod, Mr. F. Ball, Mr. H. Winat, Sung, Capt. Edye, Mr. I. M. Littlehale, Miss MacLagan, Mrs. Sandeman, Mrs. Kuten, Mr. P. Amhold, Mr. W. H. Peach, and Mrs. M. Berry. For San Francisco:—Mr. T. S. Ska, Mr. G. F. Thomas, Dr. Wigora, and Mr. K. Plusendale.
 Per British steamer *Empress of China*, from Vancouver:—Mr. E. F. Allford, Mr. A. E. Beaux, Mr. J. H. Bliss, Miss A. Baldwin, Dr. A. B. Ball, Mrs. A. B. Ball, Mrs. A. C. Clarke, Mr. J. H. Copman, The Misses Copman, Master Copman, Dr. J. H. Coit, Mr. R. G. Davidson, Mr. W. S. Davidson, Mrs. Geo. Flood, child and amah, Madam Hoshi, child and maid Mr. and Mrs. Ho Yin Shing, Mr. W. D. Hills, Lieut. J. T. Kerr, Mrs. J. T. Kerr, Mr. John MacLaren, Mr. C. Morse, Mr. H. Mutsu, Mr. Meredith Howland, Mr. W. H. Nicholson, Mrs. W. H. Nicholson, Miss Mary Oakley, Mr. S. F. Phillips, Miss L. R. Powell, Mr. M. K. Rand, Mrs. M. K. Rand, and Miss M. Williams in cabin; 3 in second class; 76 in steerage.

Per British steamer *Empress of Japan*, from Hongkong via ports:—Mr. and Mrs. Mansell, Miss Melvin, Mr. and Mrs. Whistler, Mr. E. W. Sharples, Count Bernsdorff, Mrs. C. Grant, infant and nurse, Mr. J. G. Schutte, Mr. and Mrs. W. Cope, Mr. and Mrs. C. A. Lord, Mr. R. B. H. Moore, R.N., Mr. C. S. Taylor, Mr. Strang, Mr. M. Ginsburg, Mr. Tabara, Mr. R. G. Forster, Mrs. A. W. Curtis and 2 children, Mr. F. C. Darbig, Mr. G. W. Brockhurst, Mr. and Mrs. Komor and child, Mr. F. G. Sale, Mr. Foin, Mr. and Mrs. Marsh and child, Mr. and Mrs. W. H. Kidson, and Mr. W. H. Kidson, Jr. in cabin; Mr. K. Yashima in 2nd class; Mr. Cheng Chung in steerage. For Vancouver:—Mr. L. Chapron, Mr. B. G. Greig, Mr. J. Harp, Mr. A. G. Carruthers, Mr. F. A. Morgan, Dr. Nover, Rev. and Mrs. J. A. Silsby and 3 children, Mr. and Mrs. Seaman, Miss Gaskin, Miss Cogdal, Rev. and Mrs. J. H. Corneli and four children, Mr. and Mrs. Th. de Berigny in cabin; 5 in 2nd class; 223 Chinese in steerage.

Per Japanese steamer *Satsuma Maru*, from Shanghai via ports:—Baton H. Iwasaki, Master Iwasaki, Mr. C. Hoshino, Mr. K. Machida, Mr. R. Tomiyasu, Mr. T. Yamada, Mr. T. Tsuno, Mr. Aoki, Mr. N. Akuzawa, Mr. W. Velling, Mr. J. Feichney, and Mr. Miyashima in cabin; Dr. H. Ishikawa, Mr. Y. Ise, and Mr. Chin Tien Tsu in second class; 32 Japanese and 2 Chinese steerage.

DEPARTED.

Per French steamer *Ernest Simons*, for Shanghai and Kobe:—Mrs. E. S. Patton, Miss J. Kimball, Messrs. R. Abenheime, Foin, Ting Tin Chu, Fioravanti, M. Heeter, Wong Kung San, C. Smith, Bourguigny, P. C. Binch, S. Abdoulally, J. R. Walder, Hung Chum and servant, Pattoy, Comoisson, S. Bockmery and servant, P. E. Radlev, J. D. Guinn, F. Horn, Mrs. d'Antun, Mr. Dumoulin, Mr. J. Poyat, Mr. K. Takeshi, and Mr. N. J. Boston in cabin.
 Per British steamer *Empress of China*, for Hongkong via ports:—Mr. Rawson Walker, Mr. F. G. Fison, Miss Hollowell, Capt. Dyson, Mrs. Arthur, Rev. A. Oltmans, Rev. H. V. S. Peeke, Miss E. J. Verbeek, Mr. and Mrs. Cheng Chung Ying and 4 children, Mr. M. A. A. Souza, Rev. E. R. Fullerton, Mr. B. A. Somekh, Miss L. M. Kidwell, Bishop Williams, Mr. J. McD. Gardiner, Misses M. M. Palmer, Alice Haworth, M. E. Kelly, Rev. J. W. Doughty, Mr. and Mrs. J. Kuhn, Mr. A. With, Mr. and Mrs. Robt Spur, Mr. W. H. Grant, Mr. F. Ball, Mrs. S. Komor and infant, Mr. H. W. Sale, and Mr. T. B. Pocklington in cabin.

Per British steamer *Gaelic*, for Hongkong via ports:—Miss F. Fuller, Dr. W. H. Furness, Commander C. H. Stockton, U.S.N., Mr. S. F. Phillips, Mr. W. S. Emens, and Mr. Geo. Hayes in cabin.

LATEST COMMERCIAL.

IMPORTS.

Nothing has been doing in piece goods and very little in yarns during the past week. The hot weather has set in, and as Japanese merchants and dealers put personal comfort before business, as a rule, all purchases have ceased for a time and there is little likelihood of anything of consequence being done for six weeks or so to come, by which time, after the rice harvest is over, a demand will spring up among the farmers in the interior and stocks in the hands of dealers will be reduced. Quotations remain nominally the same.

COTTON PIECE GOODS.

Grey Shirtings—81 yds, 38 1/2 yds, 39 inches \$2 50 to 2 80

Chinese	21.50 —

MARKETS.
The market continues firm and the rise in home prices has put a stop to business for the present. There are a few enquiries but no purchases of consequence.

Round and square 1/2 inch. and upward.	PER POUND
Iron Plates, assorted	4.15 to 4.60
Sheet Iron	4.40 to 4.50
Galvanized iron sheets	6.20 to 6.50
Wire Nails, assorted	10.00 to 10.50
Fin Plates, per box	6.00 to 6.50
Pig Iron, 10th	2.10 to 2.20
Hoop Iron (1/2 to 1 inch)	4.80 to 5.00

RUBBER.
Only a hand-to-mouth business has been done, at former rates. Total sales from June 25th are estimated at 55,000 cases American and 50,000 Russian oil.

American	\$2.60 to 2.66
Russian	2.00 to 2.06
Langkat	—

SUGAR.
Arrivals of Brown continue, but business is dull, with prices advanced about 10 cents. per picul all round. White refined has been in moderate demand at old rates.

Brown Takao	PER POUND
Brown Manila	\$16.00 to 3.70
Brown Daitong	43.5 to 5.00
Brown Canton	2.80 to 2.90
White Java and Penang	3.30 to 4.20
White Hained	6.60 to 6.70
	7.00 to 9.00

EXPORTS.

RAW SILK.

During the past week there has been a steady small demand for Raw Silk both from America and Europe, that for reeling being rather in excess of supply, though in other sorts supplies have been coming in more freely. Holders have been inclined to meet buyers by making some concessions when business on a fair scale offered, and sales in such instances have been effected. Quotations generally therefore show a decline from the rates of the early part of the month, but the business transacted has been very moderate. Total shipments from 1st inst. to the 29th are 1,851 piculs, stocks amount to about 4,000 piculs.

TEA.

There has been a steady demand during the week, at hardening rates, though the quality continues poor. Purchases for the period under review amount to about 573,000 catties in Yokohama and 390,000 catties in Kobe, mostly in grades below choice. The *Peru* on the 27th took 2,439 chests from Yokohama and 3,350 chests from Kobe, for San Francisco; the *Yamaguchi Maru*, on the 29th, 99,000 lbs. from Yokohama and 13,000 lbs. from Kobe, for Seattle; and the *Empress of Japan*, on the 30th for Vancouver, 4,411 packages from Yokohama, and 3,072 from Kobe.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Couvra, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith.

It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, AUGUST 7TH, 1897.

DEATHS.

On the 4th instant, at 8.40 a.m., at his residence, Minami-machi, Takanawa, Tokyo, Count GOTO SHUJIRO, aged sixty. The funeral cortege will start from the residence of the deceased at 2 p.m., on Sunday, the 8th inst., and the ceremony of interment will take place the same afternoon at the Aoyama Cemetery.

All friends are requested to be so good as to accept this intimation.

At the Yokohama General Hospital, August 4th, 1897, HAROLD C. REYNOLDS, aged 24 years.

At Edinburgh, on 5th June last, after a short illness, HARRIET BLAKE, wife of the Honourable The Master of Napier.

At his residence, No. 13, Bluff, at 6.20 a.m., August 5th, H. M. ROBERTS (Carroll & Co., Yokohama and Kobe), of secondary meningitis.

SUMMARY OF NEWS.

FLOODS continue in the north-western provinces.

DISASTROUS floods have devastated Prussian Silesia.

YOKKAICHI has been opened as a special export port.

THE King of Siam has had a long conference with Lord Salisbury in London.

MR. HOSHI, Japanese Minister to the United States, has received instructions from his Government to enter into negotiations with Chili

for the arrangement of a Treaty of Commerce and Navigation between the two countries.

THE Emperor has issued a Rescript regarding the administration of Formosa.

GREAT BRITAIN has denounced the commercial treaties with Germany and Belgium.

THE plague in Formosa has nearly died out. There were 609 cases from Jan. 1st to June 30th.

H.I.H. PRINCE ARISUGAWA and suite left Vancouver on the 2nd inst. by the *Empress of India*.

VISCOUNT AOKI, Japanese Minister to Germany, left Berlin on the 24th of July for home.

A COTTON mill was burnt down at Takamatsu on the 1st inst., the loss being estimated at \$5,000.

A TEA BOX factory in Kobe was burnt down on the 5th instant. Five persons were injured during the fire.

A PUBLIC Works Bureau is to be established in Tokyo to undertake the repair, etc., of the roads and bridges.

NEW regulations for the administration of Formosa have been submitted to the Emperor by Count Matsukata.

FREQUENT fighting is reported between the troops of the allied Powers and the Turkish force in Crete.

ENGLAND has agreed to take part in a Behring Sea Sealing Conference to be held at Washington in the autumn.

A COMPLICATION has occurred in the Settlement of the indemnity question in the Greco-Turkish peace conference.

A FIRE occurred in the native town of Yokohama at 4.30 on Friday morning, by which twenty small houses were destroyed.

SMALL-POX cases throughout the country from the 1st of January to the 30th June last totalled 39,031 and the deaths 11,782.

OVER a thousand Chinese who landed at various ports in Formosa without permission, have been arrested and sent back to China.

A BIG leather factory in Hongo, Tokyo, was destroyed by fire on the 31st ult. together with a large stock of skins. The loss is estimated at 220,000 yen.

A LONG continued, strong, but steady earthquake was experienced in Yokohama and over a very large area of Japan, at 9.15 a.m. on the 5th instant.

CASES of cholera during the month of July throughout the country amounted only to 149 and deaths to 25. Dysentery is very prevalent this summer.

THE officials and workmen employed at the Utsunomiya station of the Nippon Railway, have threatened to strike work unless their pay is increased.

It is stated that the Formosa Railway Company cannot carry out the work of constructing the proposed line, although a Government subsidy was to be granted.

THE reported proposed amalgamation of the Toyo Kisen Kaisha (Oriental Steamship Company) with the Nippon Yusen Kaisha, which was reported some time ago, is denied.

THE examination of witnesses in the Court of Inquiry held at the Marine Bureau, Tokyo,

in the case of the stranding of the *Tenshin Maru*, Capt. F. J. Brown, was commenced on the 3rd instant, the proceedings being conducted in camera.

MARQUIS SAISONJI, now in Paris, who was at one time in a critical condition of health, has quite recovered and will probably undertake a tour through Europe together with Marquis Ito.

ON the 22nd ultimo, the steamer *Wakanoura Maru* collided with a vessel which was flying no flag or signal near Kisen, Iwate Prefecture, and received some damage to her deck works.

THE Consular Convention between Belgium and Japan was published on the 30th of July. The regulations will come into force at the same time as the treaty of navigation and commerce between the two countries.

COUNT GOTO, who had been in failing health for some months, died on the 4th instant. Before his death, the Emperor conferred upon him the First Class of the Second Grade of official rank and the Grand Cordon of the Order of Merit.

AN employé of Messrs. Fraser, Farley and Varum named Uryu Tomekichi (30 years), living at Nichome, Hinode-machi, Yokohama, made off on the 30th ult. with over yen 4,000 which he had received on behalf of the firm from Japanese clients. It is believed that the man has escaped to America.

ON the night of the 3rd inst. the premises of Messrs. Murai Bros. and Co., tobacco merchants of Nihonbashi, Tokyo, were broken into and completely wrecked by a gang of *soshi*, the police being apparently unable to offer protection or prevent the wanton destruction of property.

TWO foreign residents of Yokohama were buried on the 5th inst. in the General Cemetery—Mr. H. C. Reynolds, a recent arrival on the staff of Messrs. Lane, Crawford & Co.; and Mr. H. M. Roberts, of the firm of Carroll & Co., an American resident of Yokohama for many years, who died from meningitis.

ON Friday morning, the 6th inst., an American Marine named Martin, employed as Orderly at the U.S. Naval Hospital, Yokohama, shot himself in the head with a revolver, and is not expected to recover from the wound. It appears that the unfortunate man was driven to make this attempt on his life by dread of a court martial by which he was to be tried shortly.

THIS has been a dull, dragging week for importers in Yokohama, and the market for shirtings and yarns closes very stagnant. A little business has been done, however, in fancy cottons and woollens, at unchanged prices. In metals, the market has relaxed somewhat since last week, owing to prices having fallen in home markets, but little business has resulted here.

Quotations are therefore nominal. Kerosene, as usual at this season of the year, is very freeless. Brown sugars continue to arrive freely from Manila and China, but prices have risen from 5 to 40 cents—a big jump—the latter being asked for Daitong. White refined moves steadily at late rates. Turning to exports, we find that in raw silk, filatures have been somewhat neglected in spite of apparent willingness of holders to grant some concessions. Shipments to Europe amounted during the period to 645 bales, while the *Coptic* carried 646 bales to America. Very little has yet been done in waste fibre and stocks are accumulating. Demand has continued brisk for tea and prices have steadily advanced, being now from \$5 to \$7 higher than at this time last season. Shipments to New York and Pacific ports have been on a free scale. Exchange closes weak with prospects of a further fall.

SPRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The spirit of conservatism, says the *Yomi Shimbun*, has raised its head once more and spread its influence among all classes. To preserve what is Japanese is the cry, but what there is really worthy of preservation one can not easily perceive. So far as the externals of civilization are concerned, the advantage is all on the side of the West. Any comparison is like comparing a tallow-candle and an electric light; an ox-cart and a railway-carriage. Nor is the case different when we consider the immaterial side. From the Occident we have to learn government, law, science, and the art of education. There is an unfortunate ambiguity about the intrinsic merits of religions, systems of fine arts, morals and customs. The bases of their superiority or inferiority perplex learned men, though they offer no difficulty to schoolists. It is in those fields that the conservative carries on his campaign. He relies on the vague and intangible nature of the subjects of discussion. It is not to be denied, of course, that in lands so far removed from each other as Japan and Europe, inhabited, too, by totally different races, the results of progress must show corresponding differences. That everything Japanese is not bad, nor everything European good, may be frankly admitted. But that among things Japanese there is anything of sufficient special and distinct merit to warrant its preservation—that is the proposition that we find difficulty in admitting. In the matter of religion, Buddhism is not without merits of its own. But Christianity has undergone centuries of refinement under the influences of philosophy and science, until it now stands on an incomparably higher plane than Buddhism. If the two have to be compared, Buddhism takes the place of an untended flower blossoming in a moor, where it has remained unchanged since the time of its planting, whereas Christianity is a mighty tree that has been cultivated and nurtured until it spreads its great limbs abroad. Then, again, it is claimed that in the matter of self-sacrificing loyalty the Japanese is superior to the European, nor can we dispute the fact that a Japanese is more ready than an Occidental to lay down his life for the sake of his sovereign. But in the West, the national flag takes the place of the monarch. The flag is everything to the European. For it he will lay down his life as readily as any Japanese will for ruler or lord. There is no difference in results whether a man worship the visible image or the principle. Turning to the much vaunted filial piety of the East, we are compelled to admit that the celebrated "twenty-four examples" do not deserve the praise bestowed on them. They indicate a total absence of reasoning discrimination. The parent recognizes one fact only, that the child belongs to it; the child takes no account of the propriety or impropriety of the parent's doings. Morality is sacrificed to sentiment. One field in which the conservatives deem themselves specially strong is that of art. They claim undoubted superiority for Japanese art. The claim is inadmissible. Japanese art having progressed along lines more or less different from those followed by Europeans, has developed some specialties, but when we come to examine the practical side of art, its industrial applications, its motives and its nomenclature, we are bound to admit the superiority of the West. Even without making any close scrutiny, it is easy to appreciate the error of supposing that nations which have so far surpassed Japan in all the other branches of civilization, can be inferior to her in the one department of art. National customs in matters of dress, etiquette, conventionalities of society, and so forth, do not offer themselves so readily for discussion. They are in some respects matters of taste and must remain so. The conclusion is that men who advocate conservatism on account of some one or two fancied excellencies, at a time when the nation is deriving all the elements of its moral and material progress from the Occident, and when even costume and

customs are becoming assimilated to those of the West, such men totally misinterpret the spirit of the time. They would keep Japan like a dwarfed shrub planted in a pot for the delectation of a few virtuosi, while the big tree of Western civilization is spreading its roots and branches everywhere. Smash the pot, transplant the shrub into the open field and make a tree of it!

The *Yomiuri Shimbun* writes about the meeting to be held next October in Brussels with reference to an international colonization union. The King of the Belgians has invited Japan to send delegates, and the Tokyo journal thinks that the occasion should be seized with avidity. It entertains very pronounced views about the capacity of the Japanese for purposes of colonization, and claims that their exceptional value as labourers has been fully demonstrated by experience. Not only ought delegates to be sent, but they should also be instructed to take the lead in presenting projects of law for the better regulation of colonists' affairs; e.g. the insurance of colonists' lives; arrangements for their care in case of sickness or accident; due provision of medical men; procuring burial grounds, and other matters which, under existing circumstances, constitute great obstacles to the successful prosecution of emigration.

Folks talk about reducing the armament-expansion programme or extending the time for its completion, says the *Tokyo Shimbun*, but they ought rather to talk of increasing it and shortening the time. Japan has been virtually without choice in this matter. Her national existence is at stake. It is easy to perceive the state of extreme tension that exists in the Occident. If peace is preserved, it is simply because the results of war within the limits of Europe present themselves under such an appalling aspect. But, on the other hand, the weight of the various national armaments has become almost intolerable, and a conviction, if not a desire, is gradually growing up that the sword should be drawn. Under such circumstances men's eyes have turned to the East. In the Orient they see a comparatively safe arena for combat. When that day of battle comes, who will protect Japan? Her own right arm is the only protector she can rely on. If she cares for her own security, she will press forward with her programme. No one held any other opinion at the time of the retrocession of Liaotung, but a short two years of peace have produced a spirit of perfectoriness, and the financial strain that ought to have been clearly apprehended when the programme was mapped out, is beginning to prove deterrent in some quarters. It is astonishing that people should be so blind to the interests of the empire and to the perils of the time.

The *Kokumin Shimbun* reverts to the class of homilies for which, in common with some other journals, it used to be noted, namely, an attack upon the so-called "Mori Statesmen" for clinging to office although the times have passed them by. For thirty years they have held the reins of government, and one would suppose from their present behaviour that they expected the tenure to be perennial and their own lives to be limitless. Up to the opening of the Diet they did good service, but from that day they became virtually useless, with one or two exceptions. Their great chance to step down from the official stage with *éclat* and honour was the conclusion of the war with China, but they missed that opportunity, and now they are feebly hanging on with the fate of decrepit bankrupts gradually approaching. They have no ambition to satisfy, no worlds to conquer, and are merely blocking the path of advancement for men of robust intelligence and vigorous expectations. This general tirade is somewhat particularized at the close of the article, when our contemporary warns the present Cabinet that if it pursues the temporizing, hand-to-mouth policy hitherto adopted by it, it will crumble to pieces as ignominiously as its predecessor did.

The *Sekai-no-Nippon* indulges in a good

deal of sarcasm and some severe censure of the "official organ" for attempting to deceive the public as to the formation of an alliance between Japan and England. Indirectly our contemporary's shafts are pointed at Count Okuma, who is vaguely charged with trying to blow his own trumpet by leading folks to imagine that he has achieved a great coup, without considering the effect that such an announcement must produce upon Russia. This article appeared in the columns of the *Sekai-no-Nippon* on the 30th ult. Had its publication been a little delayed, the ground would have been cut from under the writer's feet by the *Yomiuri Shimbun's* explicit withdrawal of the construction put by it on Mr. Curzon's statement in the House of Commons. But the *Sekai-no-Nippon's* promptness enabled it to strike a telling blow before its adversary had lowered his arms. There is an exhaustive exposition, in the Opposition journal's columns of reasons that forbid an alliance between England and Japan at present. The writer shows insight and judgment, but his arguments have no interest for English readers with one exception, namely, his assertion that such an alliance would be one-sided as yet. Coming down to practical details, which sound statesmanship does not fail to consider, the meaning of an alliance is that England would use her fleet against Russia in the East and that Japan must be prepared to put a hundred and fifty thousand soldiers into India, and to maintain them at that strength, for the purpose of warding off a Russian attack. But Japan is not yet in a position to make such an effort, and until she is "England would not be such a donkey" (*sic*) as to form an alliance with her.

An article remarkably illustrating the moral regeneration that is said to be taking place in Japanese commercial circles, appears in the *Osaka Asahi Shimbun*. It is a powerful appeal for trade integrity. The one great want of the Meiji era, according to our contemporary, is moral merchants. The esteem in which the man of commerce is held has undergone immense change. Instead of being delegated to the lowest class, as were the *Suchōnin* of pre-Restoration days, he is petted, respected, and received into the best society. It is not considered indeed, that the acquisition of wealth should be men's sole aim, but it is recognised that wealth is the foundation of a country's greatness, and those engaged in the pursuit of wealth are correspondingly esteemed. They have not, however, risen morally to the level of their new station. Among them, doubtless, are many men of upright character and honest methods, but the majority appear to obey the maxims of the old trader, that immediate gain is everything and permanent profit a secondary consideration. Yet the fact is that the adoption and maintenance of a proper standard of morality is of far more material importance to the development of commerce than are Government aids, or reductions of duties, or even the abolition of the trades tax. Without honesty there can be no mutual trust, and without mutual trust, trade is hopelessly hampered. The *Asahi* alludes here to an essay that appeared last year in the *Nineteenth Century* from the pen of Mr. R. Young, editor of the *Kobe Chronicle*, on the subject of Japanese commercial morality, but attributes it to the editor of the *Kobe Herald*, a confusion of titles very often observable among Japanese critics where the Settlement journals are concerned. When it first read the essay, the *Asahi* was indignant. It concluded that this was another instance of a rude foreigner unjustly criticizing the Japanese with whom he was engaged in trade. But the *Asahi* has changed its mind. It now acknowledges the justice of the criticism, and strongly urges the importance of profiting by it. Mr. Shibusawa Eiichi, the well known merchant, recently delivered a speech on the same subject, and the *Osaka* journal vehemently endorses the words of the veteran banker. *Per contra*, it adduces the case of a company said to have been formed in Osaka—at what era we can not gather—which required that every one joining it should swear three promises; the first, not to divulge the secrets

of the concern, and the second, not to be hampered by conscience in the pursuit of gain. Such an association is scarcely credible, but it illustrates the depth to which commercial immorality can sink. The whole article constitutes a powerful appeal to the economical sagacity and better principles of the mercantile classes. It is of great length, but the arguments being necessarily of a common-place character, need not be re-produced here.

The *Chuo Shimbun* has a long article on the subject of individual aggrandisement and national disaster, but the line of reasoning defies our comprehension. The purpose of the writer is plain enough: he seeks to attack, on the one hand, great firms like the Mitsubishi and the Mitsui, which are family corporations, and, on the other, the present Ministers of State, who are supposed to be allied with those firms. But the difficulty of demonstrating that the interests of the State are impaired because the members of a family combine for business purposes, has evidently proved insuperable to our contemporary, nor has it been able to hide its embarrassment. It contends that unions of nations for a common end are the basis of politics in the Occident to-day, and in support of the contention it adduces the combination of three Powers in the case of the Liaotung Peninsula, and of six in the case of the Cretan imbroglio. It further insists that isolation is Japan's chief drawback, and that, had she not been standing alone, the issue of her victory over China and the issue of the Hawaiian complication would have been different—on which latter peg, as our readers will readily conjecture, some bitter criticisms of Count Okuma are hung; but the connexion between these facts and the commercial phenomena presented by the Iwasaki and Mitsui families, eludes our comprehension. We judge that the writer is tilting at plutocracy, but he points his lance so vaguely round the horizon that its ultimate direction cannot be ascertained.

RISKS OF GOLD MONOMETALLISM.

The adoption of the gold system in Japan is to be accomplished on October 1st this year. For the enforcement of the system the present Cabinet is disposed to employ every means in its power. The *Sekai-no-Nippon*, in the most cordial terms, wishes the Government every success in the enterprise, but adds that its solicitude is simply for the sake of the country, and it can not express any approval of the risky schemes of the Matsukata Cabinet. The future of gold monometallism, however, says our contemporary, seems to involve numerous causes for apprehension. Silver on the 29th July had fallen to 26½ pence, an extraordinary depreciation seldom experienced, as must be well known to the Minister of Finance. By some it is regarded as the lowest price which the white metal is likely to reach in the natural course of events. Nevertheless, the constant sale of silver bullion by the United States has tended, and still tends, to increase its depreciation in view of the inauguration of the gold standard by Japan. The ratio between gold and silver was originally fixed at a higher rate than the market now presents, silver being then quoted at 28 pence. This quotation was at the time considered to be the lowest price for silver likely to occur. As there is now a difference of two pence in its relative value with gold, a considerable profit may be made by bringing silver to Japan and exchanging it for gold coin for export to London. Accordingly, it is obvious that the influx of silver which is likely to take place after October this year will immediately be attended by the drainage of gold from Japan to foreign markets. The Minister of Finance and some other officials are entirely opposed to these views on the ground that the Japanese trade dollar is circulated as legal tender in Singapore, Shanghai, and Hongkong and will scarcely fail to increase its credit after the enforcement of the revised system on account of its being exchangeable for gold. Admitting, they say, that this silver might be presented for exchange, the total

amount of Japanese silver coin in the three ports mentioned will not exceed forty million yen, the rest being in the hands of Chinese who have already defaced it with their stamps and consequently rendered it unfit for legal currency. That idea must be condemned as too shallow to be relied upon. According to a communication from Singapore received by an influential banker in Tokyo, it seems that Japanese silver there is being monopolized by a speculative merchant, and that its price is consequently rising over the British dollar. It is scarcely necessary to say that this scheme was evidently devised as a means of realizing considerable profit by the exchange of silver for gold in Japan in October next. Singapore is reported to have been entirely cleared of the Japanese dollar, and similar news has also been received from Hongkong. The correspondent of the *Sekai-no-Nippon* places the aggregate amount of Japanese silver in Singapore at forty or fifty million yen, of which thirty millions may be expected to flow back to Japan in October next. The authorities' estimates of Japanese silver in the Straits Settlements, Hongkong and China did not exceed altogether forty millions of yen, but now Singapore alone is found to contain a greater amount. How can they, in face of this, maintain the gold system?

We reproduce the above as an example of what some Japanese critics are saying on this interesting subject. But the truth is that the *Sekai-no-Nippon's* apprehensions have no tangible basis at present. Silver has not fallen to such a point that a speculator could hope to make any profit by buying up yen pieces in Singapore and Hongkong and carrying them to Japan to exchange against gold. The expenses of purchasing thirty or forty million yen, carrying them to Japan, exchanging them and shipping away the gold, together with the loss of four or five months' interest on the money, would more than swamp the small margin of difference between the present market price of silver and the price at which it is assessed in the Japanese currency system. Depreciation must become much more marked before there is any room for such an operation. It is further to be remarked that only silver in the form of yen coins can be manipulated in the manner alluded to by our contemporary. There can be no sales of silver bullion against gold in Japan, except for purposes of art or manufacture, with which the Treasury has nothing to do. Possibly the *Sekai-no-Nippon* does not contemplate anything of that kind, but its language is vague. The question of the silver yen was fully discussed in these columns at the time of the Gold Bill's submission to the Diet, but as yet the contingency then commented on has not become a visible danger.

COTTON WEAVING.

Ashikaga is well known as an important weaving district, possessing, as it does, more than seven hundred establishments for weaving that employ 17,000 looms and 38,000 weavers of both sexes. The annual output is estimated at not less than seven and a half million yen in value.

It may be worth while to note, observes the *Shogyo*, how the weavers in this district are trained in their apprenticeship and paid after acquiring proficiency. The larger number of weavers come from Ibaraki, Chiba, Niigata, Toyama, and Fukui. Taking the age of twenty as the standard for women weavers, it may be stated that girls of sixteen are apprenticed for four years, and those of thirteen or fourteen for five years. One of the chief objects of these apprentices is to acquire a reward at the expiration of the term, in addition to attaining proficiency in the art. At the time of making the contract, half the amount of remuneration is paid to the apprentice, and it is said that and the proficiency in weaving attained by the girls, are sure inducements for satisfactory marriage. Many of the women of Ashikaga are also employed in the work exclusively for board and a little pin-money. Ten hours

a day is the usual work-time for adepts, while female apprentices are required to work from twelve to fifteen hours. Wages for apprentices are as follow:—

	Annual rewards.		Daily wages.	
	Yen.	Sen.	Yen.	Sen.
1st class	25	25
2nd class	35	30
3rd class	20	20
Below 20	24	18
Below 17	20	17
7 years	25	15
5 years	40	16
3 years	20	8
.....	35	9
.....	13	7
.....	20	8

The best class of weavers receive a monthly salary of from 10 to 13 yen. On piece work, payment differs according to the material woven, but the stuffs for export are generally paid for at the rate of twelve or thirteen sen per four yards, while those for domestic use are paid for at the rate of sixteen or seventeen sen per tan. The average length of stuff produced in a day is ten yards in the case of first class weavers, eight yards in the second class, and even yards in the third class.

THE "SHOGYO SHIMPO" ON THE BANK OF JAPAN.

On the 24th July, says the *Shogyo Shimpō*, the Bank of Japan issued convertible notes to the amount of 455,306 yen beyond the legal limit, and mentioned in its report of the 27th that the average daily excess of issue had been 75,884 yen during the preceding six days. In order to ascertain the cause of this excessive issue of paper, the *Shogyo Shimpō* refers to the Bank's weekly statement of transactions, which shows a serious decrease in the amount of loans and notes discounted. The figures for the 17th and 24th of July were as follow:—

	July 24.—Yen.	July 17.—Yen.
Discounted Notes	33,428,270	33,940,586
Loans issued	148,911,799	149,213,685
Total	182,340,069	183,154,271

From the above it will be perceived that the loans issued during the past week decreased by almost 800,900 yen, as compared with the previous week.

Under these circumstances, the over-issue of notes by the bank cannot be ascribed to any necessity arising from an increase of transactions. As regards the deposits from the Government, the account stands thus:—July 24th, 145,255,325 yen; July 17th, 149,494,479 yen; difference, 4,239,154 yen. These figures show that the Government drew out of the Bank over 4,200,000 yen during the previous week. If the Government drew specie to that amount the reserve of the Bank must have correspondingly decreased. The following table shows the amount of securities in specie and convertible notes during the past two weeks:—

	July 24.—Yen.	July 17.—Yen.
Specie Reserve	111,680,292	115,816,242
Reserve Securities	78,878,126	76,622,086
Convertible Notes issued	190,658,418	192,538,328
Specie	4,135,950	—
Securities	—	2,256,040
Notes	1,879,910	—

Thus the reserve securities have been increasing during the past two weeks, but the specie reserve having decreased by 3,130,000 yen the withdrawal by Government of 4,200,000 yen from the deposits, seems to have had the effect of diminishing the Bank's specie reserve by nearly the same amount. The Bank was thus compelled to make an issue of convertible notes beyond the legal limit. If the above remarks are not mistaken, it may confidently be asserted that the overissue of notes was undertaken by the Bank for reasons connected with its own convenience, and is in no way to be looked upon as the result of any pressing demand for funds for commercial enterprises.

JAPANESE TOPICS.

We find it stated in vernacular journals, on the authority of statistics compiled by the Department of Agriculture and Commerce, that the average rice crop of Japan at present is 39,687,656 *koku*. The figure is based on returns for the past seven years, excluding one abnormally bad year and one abnormally good. The crop last year (1896) having been 36,199,770 *koku*, was, consequently, 3,487,886 *koku* below the average. The worst year in recent times was 1889, its yield having been only 33 million *koku*, in round numbers, and next lowest in the scale comes last year. The very high price at which rice is now quoted in the market may probably be attributed, in the main, to this question of production. As for the causes of the unproductiveness last year, the storms and floods of June, July and August, and the generally unfavourable character of the climate were chiefly responsible. This year, also, the weather during the early part of the summer promised very ill, but it mended from the beginning of the *doyô* epoch, and reports from the various districts, with one or two exceptions, indicate that a good crop may be expected.

Attention is drawn by the *Kobe Chronicle* to a case recently tried in the Kobe Local Court. According to our contemporary's account, a man arrested on a simple charge of assault, was kept under detention for twelve days before his public trial took place: was then remanded for three days; was then acquitted on the ground of insufficient evidence; and had finally to remain five days longer under arrest pending the Public Procurator's decision whether an appeal should be lodged. It will be evident, of course, that no grounds exist for criticizing this procedure unless bail was arbitrarily refused; for though the case seems to have been protracted to an extent out of proportion with the nature of the offence, we are not in a position to allege that such was the case unless fuller details are furnished. The *Kobe Chronicle* says that substantial bail was refused, but does not appear to be very confident about that part of the affair. However, there is no denying the fact that many instances of this kind of defect in Japanese criminal procedure have been brought to light, and that, though some of them may be more or less explicable, their number and frequency indicate a distinctly defective state of the law. We believe that the framers of the Code of Criminal Procedure, including M. Boissonade himself, have admitted that its provisions require amending, and it is understood that the revisions which have been made by a committee of experts, and which will be submitted to the Diet next session, are of such a nature as to obviate the recurrence of abuses of the kind now under consideration. Complaint has frequently been advanced by foreign local journalists that the *habeas corpus* law is not found among Japanese enactments; but on behalf of the framers of the Codes it has been replied that though the term "*habeas corpus*" does not occur in their legislation, the principle is duly embodied, and that the dangers against which the British statute is intended to guard, are fully obviated by cognate provisions of Japanese law. Practical experience, however, appears to indicate that the Japanese Codes leave something to be desired in this respect, and the amendments in

the revised code will be scrutinized with interest.

The *Hochi Shimbun* says that the media of exchange circulating in Japan at the beginning of the month of July were as follow:—

	Yen
Exchangeable Notes	194,644,520
Government Notes	8,431,337
Bank Notes	7,687,072
Gold Coins	5,264,308
Silver one yen Coins	34,540,889
Silver Subsidiary Coins	24,807,357
Nickel Coins	6,626,303
Copper Coins	9,354,692

Total 291,356,478

This total exceeds the figure recorded at the beginning of June by over 5 million *yen*, and is the largest for any month in the year, January excepted. January, however, always shows a big figure owing to the New Year's settlements.

Whether application shall be made to Belgium or to Italy to lend its good offices as arbitrator in the Hawaiian complication, is now the question of the moment, say the Tokyo newspapers. We trust that there is still a hope of settling the matter without recourse to arbitration. It is, after all, such a paltry business. Hawaii can not possibly hold to the manifestly untenable contention that by making a contract with a steamship company for a return passage in case of failure to find employment, an immigrant ceases to be a free labourer. The notion is almost laughable in its extravagance. That point conceded, nothing remains but the question of compensation, a paltry payment of something like a quarter of a million of dollars. Were there any principle involved, the case would be different, but the Hawaiian Cabinet, being composed of clear-headed men, must be thoroughly sensible that the position taken by them is impossible, and that to insist on carrying it to arbitration would be to incur ridicule as well as additional expense.

The *Yomiuri Shimbun* alleges that a sum of 50 million *yen* is to be raised next year for constructing railways, telegraphs, telephones, and so forth, but that, instead of attempting to sell the bonds in Japan, they will be placed at once on the London market. We presume that our contemporary refers to next year's installment of the Public Undertakings Loan. It would be much more to the point were we informed how the current year's installment of 63 millions is to be dealt with. It has not yet been issued, and its proceeds are required to establish equilibrium between the incomings and outgoings of the State. Nothing could be more perplexing than these hap-hazard notes about finance thrown at the heads of the public by vernacular newspapers. Their writers appear ready to dish up any item of floating gossip that comes to their ears without the smallest thought whether it consists or conflicts with the budgetary scheme already approved by the Diet.

It is stated that as the demand for Japanese *saké* in Vladivostok is largely on the increase, and as considerable quantities are also consumed by Japanese resident in Korea, a project is on foot to establish breweries in Shanghai and Gen-san, so as to avoid the heavy taxes now levied on *saké* brewing in Japan. Chinese rice and Korean rice are both cheaper than Japanese, and the questions of water

and climate, generally supposed to present serious difficulties, need not, it is now alleged, be much considered.

According to the *Hochi Shimbun*—whose information on such a subject is to be accepted with caution—the Russian Government has given orders for the despatch of nine thousand troops from Odessa to Vladivostok, and as only four thousand time-expired men are to return from the latter place, there will be a net increase of five thousand. The same authority alleges that half a million roubles have been appropriated for improving the forts at Vladivostok, and that other 1½ millions will be spent in changing the armament. Our contemporary conjectures that these steps are taken by way of response to Japan's programme of military and naval expansion, and asks what may be expected on Russia's part when her neighbour's programme becomes an accomplished fact and when the Siberian Railway is completed, if at this early stage she makes such an effort.

The *Kobe Chronicle* has now placed us in the position of having denied that bribery exists in Japan, and expresses surprise that we could possibly have made such an allegation with plain evidence before our eyes in the form of judicial prosecutions of officials for corrupt practices. We desire to remind our contemporary that the attitude it assigns to us is of its own imagining. We have not denied that bribery exists in Japan. We have neither denied nor affirmed. Astonished by the wholesale declaration of the *Kobe Chronicle* that virtually every official or commercial transaction is tainted by the vice, we asked whether proofs could be furnished in support of such a sweeping charge, and added that while we had often heard a similar, though never, indeed, so drastic, an accusation made, there had invariably been unwillingness or inability on the part of the accuser to adduce actual instances. We do not wish to be credited with statements that we have not advanced. With regard to judicial prosecutions for bribery, the construction that the *Kobe Chronicle* puts upon them can scarcely be called conclusive. They undoubtedly show that bribery exists, just as prosecutions for robbery show that thieves exist. But they show, at the same time, that bribery is not countenanced, and that, when discovered, it elicits severe condemnation. Such incidents are not to be reconciled with the theory that bribery is almost universal. If it were, there would be little disposition to take judicial action against recipients of bribes. We recognise the great difficulty of arriving at a definite conclusion on such a subject, and when we remember the uncompromising character of the *Kobe Chronicle's* assault upon Japanese integrity, we ought not, perhaps to be surprised that it has adopted an exaggerated view of our own contention also. But we decline to be made responsible for any such view. We simply invited the *Kobe Chronicle* to adduce proofs in support of its remarkable accusation. It would have been a strange method of controversy to deny the truth of the accusation before an opportunity of producing proofs had been afforded. We note now, however, that our contemporary has nothing to justify its charge except the public prosecutions that have taken place within the past few years, and the assertion of Count Itagaki that

certain members of the House of Representatives have shown themselves venal. That testimony leaves us exactly where we were originally. It shows that bribery and corruption exist—a fact which we have never doubted—but it certainly does not show that “scarcely a single transaction takes place, from the sale of merchandise to appointment to official position, without squeezes expected and paid.” The *Kobe Chronicle* seems to have unwarrantably overstated the facts, and we would now beg to remind it when it declared bribery to be “rampant among all classes in Japan,” it preferred the charge avowedly on its own experience. “We regret to say that, so far as our experience goes, bribery is rampant among all classes in Japan,” were its exact words. But when invited to publish some of its “experiences,” it replies by adducing cases of criminal prosecutions instituted by the Government; cases already known to everybody.

One word more. Our contemporary actually draws a sinister inference from the fact that we omitted the name of Count Oki from our enumeration of statesmen on whose account we repudiated the accusation of selling official appointments! The omission is twisted into an implied doubt of Count Oki's integrity. That argument is too shallow to need refutation.

The journalistic somnolence to which we recently alluded has been again illustrated. One of our evening contemporaries has awakened, and discovered a paragraph in our columns to the effect that the provisions of the Japanese Code of Criminal Procedure for securing the speedy trial of accused persons and their speedy release on acquittal by a court of first instance, require amendment. The paragraph is re-produced by the discover with great show of satisfaction. But it happens that we have said the same thing time and again during the past four years, and that we laid special emphasis on the apparent defect in connexion with the detention of a Christian in an Osaka jail in 1893.

On-kon-tsin is said to be the name of the island in the Pescadores in the neighbourhood of which the *Unebi-han* is reported to have been discovered. The vernacular press states that permission has been given to Mr. Yamashina Reizo, a professional diver, to undertake the work of raising her, from which we infer that her actual position has been discovered, though nothing is stated about the depth of water in which she lies, nor is any information given as to the nature of the coast. She was a cruiser of 3,615 tons displacement; her length, 98.6 metres; her beam, 13.1 metres; her draught, 8.5 metres; her horse power, 5,500; her speed 17.5 knots; her armament, 4 Krupp 24.35 cent. guns; 7 Krupp 15.35 cent. guns; two 6-pr. quick-firing; ten 35 mill. machine-guns and four Gatlings. The *Yomiuri* says that she had on board a quantity of articles ordered by the Imperial Household, which were of great value.

That dreadful scourge dysentery is only a little less destructive than cholera when the ravages of each for the same time are compared, and is, on the whole, far more destructive than cholera seeing that the latter's visitations are few and far between, whereas scarcely a year passes that dysentery does not claim a large tale of

victims. The returns from the 21st to the 25th of last month, an interval of 5 days, were:—

Place.	Number of Patients.	Number of Deaths.
Tokyo	136	23
Saitama	95	17
Chiba	76	17
Ibaraki	81	17
Gumma	51	6
Tochigi	43	6
Aichi	131	13
Gifu	22	2

Reports have been industriously circulated during the past few days to the effect that Russia is on the point of sending a force of troops numbering 800 rank and file and 30 officers to Korea, under pretext of guarding her consulates in that country, and that 3 officers and 10 men, forming the first installment of the force, have already arrived in Seoul. In order to ascertain the truth of the story, a representative of the *Yomiuri Shimbun* waited upon Count Okuma, and His Excellency is said to have made the following reply:—“It is untrue that Russia has sent a large force of troops to Korea. Possibly a few officers and men from Vladivostok may have taken advantage of the summer recess to pay a visit to the peninsula, but to talk of that as an entry of Russian troops and to make a fuss about it is simply hysteria. Russia is not such a lawless country. The occasions on which troops may be sent to Korea are defined in the Russo-Japanese convention. For example, Russia and Japan are jointly responsible for the preservation of tranquillity in the peninsula, and it is not for Russia to send so much as a single soldier thither without Japan's consent. But a mere visit for purposes of sight-seeing does not call for any remonstrance. Of course, if under the pretext of sight-seeing a larger number of troops were sent, and if they passed through Korean territory as an organized body, the effect might be to excite the people of the country, and in that event we should not remain silent. It would then be our duty to ascertain why Russian troops had entered Korea and why Korea had permitted them to do so, and these points being determined, it might be necessary for us to open negotiations with the Russian Government. The question would then enter the domain of foreign politics, but we are well assured that nothing of that kind need be anticipated on the present occasion. A Russian military force has not entered Korea. Why, indeed, should it, seeing that there is no disturbance or trouble of any kind in the peninsula? No one need be nervous, I assure you.”

The Japan Railway Company is stirring itself, if we may credit what vernacular newspapers say about it. It purposes increasing its rolling stock to 500 engines, 1,536 passenger cars and 5,172 goods vans. What additions to the present complement are involved in the change, our contemporaries do not say, however. Further, the company finds it necessary to double its lines through a length of 140 miles, and the consummation of these plans, together with the purchase of the Ryomo Railway, will require a total outlay of 26 million yen. It is stated that the capital of the Company will be increased by that amount, and that it will be called up in 12 installments, spread over six years from September next. The proposal is to be submitted to an extraordinary general meeting of shareholders at an early date.

The large-mouthed rumours assiduously circulated of late with reference to the Budget for 1898-9, are beginning to assume more moderate dimensions. The *Mainichi Shimbun*, which recently spoke of the Cabinet's being confronted by the necessity of raising an additional revenue of thirty million yen at least, now says that, at the last conference held in the Finance Department, it was decided that ten millions would suffice, and that, further, the Ministry have almost resolved to obtain that amount by interdicting the brewing of *saké* for domestic use and raising the rate of the *saké* tax to ten yen a *koku*. Such steps would easily produce the required sum, but it will be regrettable, we think, if the Government fails to correct the glaring anomaly presented by the taxation of urban lands as now assessed, and relies wholly on the brewing tax.

The instructions addressed to the Governor-General of Formosa, in connexion with the administrative reforms contemplated by the Cabinet, says the *Nichi Nichi Shimbun*, are these:—

- (1) The utmost pains must be taken by the Administration of Formosa to distinguish between undertakings of a pressing, and those of a less urgent, character, and precedence must be given to the former.
- (2) The chief administrative need in Formosa at present is to adopt measures for the complete security of life and property, so that the people of the new dominion may feel confident in the protection extended to them by the Imperial Government.
- (3) With regard to the education of the people, the most essential means of bringing about a thorough mutual understanding between rulers and ruled is to promote the study of language, the Formosans studying Japanese, and the Japanese, Formosan.
- (4) Improvement of means of communication by building telegraphs, railways and roads is of prime importance, but with regard to that point it seems advisable to pursue the method hitherto adopted, namely, to have the work undertaken as much as possible by the localities.
- (5) In matters of taxation, everything onerous should be avoided, the old rates being preserved as far as possible. All fiscal arrangements must be above-board and strictly honest.
- (6) A lenient policy should be adopted towards the native tribes, so as to establish good order among them without recourse to military force.

The *Fiji Shimpō* gives a somewhat detailed account of military operations undertaken from Taipei and Tamsui against a body of 600 insurgents at a place called Jipin-chin. There is nothing interesting in the record, however. It may be summed up by saying that a detachment sent out to make a reconnaissance, fell in with the insurgents and had three men wounded, inflicting, in return, losses the extent of which has not been ascertained, and, that, when a larger force reached the place by steamer, the rebels had escaped. It would seem that the Japanese find great difficulty in getting the Formosans to act as scouts.

The public has been hearing a great deal lately about what the Japanese, with the peculiar facility for brief but pithy expressions that an ideographic language enjoys, call *Rohai niukan*, or the entry of Russian soldiers into Korea. It was by the *Yomiuri Shimbun* that the story was first despatched upon its peripatetic, and a very fine “send off” it received at our contemporary's hands. So convinced, indeed, was the *Yomiuri* about the solidity of its information's kernel, that it boldly announced its own monopoly of the facts, denying even to the Minister of Foreign Affairs a share in the knowledge. After climbing to such a pedestal of preten-

sion, it is naturally difficult for the Tokyo journal to get down gracefully, and, so far as we can judge, it means to devote some time to the process. Our readers remember, doubtless, that the original tale spoke of 800 men and thirty officers who were to arrive in the peninsula immediately, and who had been already preceded by an advance guard of 3 officers and 10 privates. Well, the *Yomiuri* has now bid good-bye to 817 of the invaders, and coming down to the 13 pioneers only, covers up its arithmetical descent by a column of hypotheses as to the probable motive of the thirteen's movements. Perhaps, in consideration of the bewildering character of such gymnastics, we need not weary our readers by setting forth the details of the *Yomiuri's* conjectures, but as they are given on the nominal authority of a diplomat who, having spent a long time in Korea, returned recently to Japan, their outlines merit a little space. In the first place, then, these thirteen persons are the irreducible residuum of the big *mission militaire* for the advent of which Mr. Waeber nearly succeeded in concluding arrangements some months ago. The bargain, though interrupted, could not be completely cancelled. A compromise, to which Mr. Waeber alone was a party, was effected at thirteen, and their apparition in Söul, under pretext of seeing the sights, so perturbed the Minister of War that he abandoned his portfolio. In the second place, the thirteen are the first installment of a detachment of seventy or eighty troops of the line, who will relieve the marines now on guard at the Russian Legation. The Russian Authorities find it troublesome to be perpetually changing the marines, and purpose replacing them by regular troops. In the third place, the thirteen are really a surveying party, though nominally only tourists. The *Yomiuri* having scrambled down to those three hypotheses from the position of absolute knowledge that it professed a few days ago, the next step of its descent is not difficult to conjecture.

Another list is published of railways for which provisional charters have been granted:—

The Harima Railway; from	Miles.	Capital, Yen.
Akashi to Tanigawa	37	1,300,000
The Hawaki Railway; from		
Kofu to Tsuruoka	47	1,800,000
The Kaiman Railway; from		
Tokushima to Takamatsu	26m. 70c.	1,900,000
The Tosan Electric Railway; from		
Karabitsu to Nita ..	8	200,000
The Kichu Railway; from		
Nattai to Tsuruoka	96	4,000,000
The Chinozu Railway; from		
Wakatsui to Nakatsu	69	4,000,000
The Sakai Railway; from		
Yokohama to Zushi	22 m. 40c.	1,800,000

The *Fiji Shimpō* has a somewhat detailed note about instructions said to have been issued by the Government in Washington to the United States Minister in Honolulu and the naval officer commanding at that station. The instructions plainly indicate distrust of Japan's intentions, and a resolve to vigorously oppose any attempt on her part against the integrity of the little republic. We find it difficult to believe that any precautions of the kind have been deemed necessary by the Government of the United States, but if the tale be true, the less said about it journalistically the better. It is laughable to think that Japan should be suspected of such a wild scheme.

However, if, as rumour says, the conclusion of the Annexation Treaty was nothing more than a device to secure the passing of the Tariff Bill, if, in short, the United States Government played fast and loose with its foreign policy in the interests of domestic legislation, qualms of conscience may have subsequently dictated a strange course. At all events, it is not a matter for Japan and the United States to quarrel about, and the less attention paid to the tall talk of journalists on the Pacific slope, the better for both sides.

THE HAWAIIAN AFFAIR.

It is understood that the Japanese Government has now definitely announced its willingness to submit the Hawaiian complication to arbitration. For a time there appears to have been an idea that Hawaii might appreciate the hopelessness of her case, and perceive the wisdom of coming to an arrangement without further delay or expense. But that prospect does not seem to exist any longer. Rumour says that the Cabinet in Honolulu has exhibited remarkable inconsistency in its contentions, advancing one plea at one time and another at another. Originally the *bona fides* of the immigrant's possession of fifty dollars was called in question, but when it became apparent that such an argument could not hold water for a moment, being not only intrinsically valueless, but also palpably inconsistent with previous procedure, recourse was had to the still more inconsequential pretext that by making a precautionary agreement with a steamship company to provide for him a return passage, an immigrant ceased to be a "free labourer." Then that very fatuous pretence was in turn abandoned, having proved quite unequal to support the strain of discussion, and the Honolulu Cabinet attempted to revert to the plea which it had first put forward and then definitely abandoned, namely, the *bona fides* of the monetary test. There may be trouble in finding a firm foot-hold among such shiftiness, but of course Japan will hold Hawaii to her own deliberately chosen contention. We understand, however, that for the purpose of compiling an exhaustive statement of facts and claims, investigations of some minuteness will still have to be conducted in Hawaii, so that, all things considered, the date of submitting the documents to an arbitrator may be distant. It ought to be in the interests of the Government at Washington to have the complication swept off the stage before the curtain rises for the annexation scheme, and, indeed, there has been talk of pressure brought to bear from Washington on Honolulu in that sense. But Mr. Sherman's infirmity is not a helpful feature of the situation. He has certainly shown such a singular faculty for contradicting himself that it may be doubted whether any clear outline of the issues has impressed itself on his brain. American journals assert that when he denied to the Japanese Representative the imminence of any such contingency as an annexation treaty, he was fresh from a Cabinet meeting at which annexation had been definitely decided upon. It is alleged, we may add, that Belgium's good offices will be solicited in the capacity of arbitrator.

DEATH OF COUNT GOTO.

Count Goto expired on the morning of the 4th instant, at ten minutes past eight, in his Takanawa residence. The Count has been sick for some months, fatty degeneration of the heart being the chief source of trouble, though other serious complications were also present. All hope of recovery was long ago abandoned, but the distinguished patient's condition did not become critical until the morning of the 2nd instant, when a marked access of debility was observable. Telegraphic information was immediately conveyed to the Emperor in Kyoto, and His Majesty graciously conferred upon the dying statesman the First Class of the Second Grade of official rank and the Grand Cordon of the Order of Merit.

Count Goto may be justly described as one of the landmarks of new Japan. In the drama of the Restoration he played a part so important that his services received exceptional recognition in the form of a substantial life income. To foreigners he is best known, perhaps, as one of the two *samurai* who rendered brave and prompt assistance to Sir Harry Parkes and his escort on the occasion of the attack by *ronin* in Kyoto, twenty-nine years ago. Count Goto's assistant in that memorable act was Mr. Nakai Kozo, who died in 1894 in Kyoto, of which city he was then Governor. The Queen sent to each gentleman a gold-mounted and jewelled sword in acknowledgement of their gallant and timely service. Count Goto held many high offices during the past twenty-five years. He possessed great administrative ability, and showed uncompromising fearlessness in the assertion of his opinions, and by the staunchness of his friendship, and the geniality of his temperament, commanded much popularity. But it may be doubted whether he enjoyed as large a share of public confidence as his moral gifts would have ensured had they been supplemented by a little more tenacity of purpose, and a little less impatience of time's processes. Probably if a Japanese student of contemporary history were asked to choose among the *Meiji* statesmen the one to whom the epithet of "political agitator" is most applicable, he would name Count Goto, for though the *Daidō Danketsu*, Count Goto's very ephemeral creation, was subsequent in point of date to the *Fyū-to* and the *Kaishin-to*, it had not as logical a *raison d'être* as either, and the precipitancy that marked its formation as well as the abruptness of its dissolution and the brevity of its existence, imparted to it the character of a petulant demonstration rather than a grave public protest. Yet certainly Count Goto was not an agitator, in the ordinary sense of the term. He had nothing of the agitator's unscrupulousness in the use of agents, and the intimidating efficacy of an organized commotion does not seem to have entered his calculations. Perhaps the truest explanation of certain phases of his career is that he suffered from a tendency to manufacture opportunities before the materials were ready and to be content with results considerably short of his ideals. None the less he laid his country under great obligations, and his name will be handed down to posterity as one of the prominent makers of *Meiji* history. He had only entered his sixtieth year at the time of his death. We understand that the funeral is to be on Sunday next.

SOSHI AND "VIRGIN" CIGARETTES.

The *Soshi* of Tokyo, whose apparent banishment from the arena of politics must render their *metier* rather barren, had quite a congenial time on the night of the 3rd instant, when they raided the premises of Messrs. Murai Brothers, the vendors of the now celebrated "Virgin" brand of cigarettes. The Murai Brothers have adopted an American device—some say, indeed, that they are agents for an American firm—they advertise that every purchaser of a 4-sen box of their cigarettes shall receive a *keibutsu*. Among these promised premia are—or rather were, for the *Soshi* have wiped them out—a bicycle, a gold watch, 10 silver watches, 40 clocks of sorts, 30 rolls of cloth, and innumerable novels. After the system had been in operation for some weeks, the Chief of Police began to think that it partook of the nature of a lottery, which, as our readers probably know, is illegal in Japan. He stopped the sales, and summoned Messrs. Murai before the Tokyo Local Court. But the judges decided in favour of the defendants. Apparently the test of legality in Japan is that every ticket-holder shall receive a prize, and on that ground—a most slender ground, we think—the "Virgin" scheme seems to have escaped condemnation. Of course the trial and the comments of the press proved a magnificent advertisement, and the Murai Shokai did a roaring trade. But the most vigorous consumers of the "Virgins" never seemed to get any nearer to the gold watch, the bicycle, or any of the other plums. A one-sen novel seemed to be the boss *keibutsu*. Finally the public began to think that the whole thing was a swindle, and the *Soshi*, those rough redressers of all wrongs, saw their opportunity. On Tuesday night at 8 o'clock, about 30 of them having armed themselves with hammers, proceeded to Murai's store, and set themselves to smash everything they could lay hands on. They declared their intentions so vociferously when they reached the vicinity of the store, that two employes who happened to be within, made their escape incontinently and carried notice to the nearest police station. The solitary constable on duty in the neighbourhood adopted the same line of policy, and in the meanwhile the smashing operations went on merrily. A crowd of citizens quickly assembled, of course, but they were all *yajimma*, or sympathisers, and they loudly cheered the *Soshi's* performance against the alleged "swindling company." The decoy bicycle, having been reduced to the rank of old metal, was dropped over Nippon-bashi, and the watches, clocks, rolls of cloth and piles of novels were trampled underfoot. It is alleged that some forty minutes elapsed before the police could muster in sufficient force to restore order, and several of them were roughly handled by the *Soshi* and their sympathisers. We can not expect the police to be ready for all emergencies, especially such an extraordinary one as this, but forty minutes seems a rather long interval of inability. As for the "Virgins" their day is past, we imagine, and the public will not go into mourning over their demise. The Murai system was unquestionably a lottery, and its demoralizing effects were not confined to educating a spirit of gambling: they extended also to the injury of men's breaths by tempting them to smoke a vast quantity of cheap and

nasty cigarettes. Tobacco has quite a history in Japan, beginning with the times when members of the celebrated societies, the Brambles and the Leather Breeches, used to smash each other with colossal pipes in Kyoto, and ending with the smashing operations of the Nippon-bashi *Soshi*.

THE LIBERALS AND THE CABINET.

The representatives of the Liberal Party now in Tokyo repaired to the official residence of Counts Matsukata and Okuma on the 1st instant, and handed to Their Excellencies two letters, of which the following are translations:—

To His Excellency, Count OKUMA;

Minister of State for Foreign Affairs.

EXCELLENCY.—The question that arose with Hawaii in connexion with emigration to that country was not one of great importance, and we were persuaded that the portfolio of Foreign Affairs being in the hands of a statesman so able and clear-sighted as Your Excellency, a settlement would be effected with the greatest ease. But unexpected evils have grown out of the affair, and the country most unfortunately finds itself confronted by a serious complication. It is scarcely necessary, perhaps, to say that, according to our information, Your Excellency adopted a strong policy from the outset in dealing with the problem, and employed menacing language in your communications with Hawaii. His Imperial Majesty's ship the *Naniwa* was sent to that country, a procedure which, we think, must be interpreted as a display of power towards a weak country. The adoption of an attitude of intimidation towards a feeble State entirely devoid of military armaments could only impair the prestige and credit of this country, and we are pained to think that it may be the means of hereafter creating bad feeling between the United States and Japan. Your Excellency's policy of intimidation furnished to the Hawaiian Government a pretext for urging the advisability of annexation. That Government despatched to America Messrs. Smith, Thurston and others, keen advocates of annexation, and instructed them to explain to the Government of the United States that a solitary island like Hawaii, situated in the wide Pacific, could not hope to maintain its independence in the face of Japan's policy of menace. Doubtless those representations exercised some influence, seeing that Mr. McKinley, the American President, is in favour of annexation and that the Republican Party have a majority in Congress. We regard it as a result greatly to be regretted. On the other hand, considering the necessity of unflinching vigilance in the field of foreign politics, we could not doubt that a Minister so resourceful as Your Excellency would provide some plan for averting any national injury. With much surprise, therefore, do we learn that the Hawaiian Government has rejected Japan's demands in connexion with the emigration question, and has proposed arbitration by a third Power, to which proposal your Excellency has assented. Your Excellency, recognising the failure of your line of policy, has been compelled to reverse it, and to remain in office under such circumstances would be to disregard your responsibility. The American Senate having risen, the annexation question has not yet been carried to a final solution, but in view of the failure that has attended Your Excellency's foreign policy, we deem it unavoidable that you should accept the responsibility and resign your office. For the sake of maintaining the country's interests we regard your resignation as a necessity.

(Signed.)

Representatives of
the Liberal Party.

MATSUDA MASAHAISA.
SUZUKI JUBI.
SHIGOKA KUNGORO.
ISHIZUKA JUBI.
TANIGAWA SHOCHIU.
TAKAHASHI YASUJI.

To His Excellency, Count MATSUKATA.

EXCELLENCY.—As will be seen from the accompanying document, we have urged His Excellency Count Okuma to resign his office of Minister of State for Foreign Affairs, in consideration of the disgrace that has been brought upon the country by the failure of his foreign policy in the matter of the Hawaiian complication. The responsibility is not confined to the Minister of State for Foreign Affairs. We are persuaded that it must be shared by the Minister President of State. With much regret, therefore, we have no recourse in the interests of the nation but to advise Your Excellency also, for the same reasons, to resign your office.

(Signed.)

(As above.)

This incident endorses the familiar assertion that the standards of criticism to which we foreigners are accustomed, must in general be greatly modified before upplying them to things Japanese. Conceive what a laugh would be raised in England if Sir William Harcourt, Mr. John Morley and other representatives of the Liberal Party now in Opposition, were to proceed to Downing Street, and hand to the Marquis of Salisbury a document pronouncing his foreign policy a failure, and calling upon him to resign. It will, perhaps, be urged that there is a difference in the situations, since parliamentary Cabinets being the recognised system in England, no party represented by a minority in the House of Commons and therefore unable to speak with any semblance of authority, would be so silly as to invite the Premier and the Foreign Secretary to resign. They might advance the proposition in the House, and submit it to the test of a vote, but to bring it forward during the recess would be a little too inconsequential. In Japan, on the other hand, the Ministry claim independence of the Diet, and it is therefore within the competence of any political coterie, however feeble the force it can muster within the Diet, to tender any and every advice to a Minister. That point we say, may be made. But we have to remember that the Liberals insist, and have always insisted, on the Cabinet's responsibility to the Diet, yet now, although themselves hopelessly outnumbered in the Diet, they virtually assume the position that a Cabinet which has the support of the majority should nevertheless bow to the *fiat* of the minority. Having faith in the Liberals and in their future, we could wish that they were and little more richly endowed with the faculty of waiting for opportunities to ripen.

As for the indictment of Count Okuma, it is obviously extravagant. When we consider that its framers possess no knowledge whatever about the nature of the negotiations that have taken place between Japan and Hawaii, and that they are totally ignorant about the language used by Count Okuma in his despatches, their accusation that he has adopted a policy of menace and intimidation is plainly based on pure conjecture. The solitary fact that seems to support their assumption is the despatch of the *Naniwa*. But the *Naniwa* was sent to preserve order among the Japanese immigrants, not to threaten Hawaii, and her chief business while at Honolulu seems to have been the dining and winning of the citizens. So far as we have been able to learn, the negotiations with Hawaii have been conducted from the first in the most amicable and conciliatory manner, and considering that Messrs. Thurston and Smith had

proceeded Washington to lobby in the cause of annexation long before the immigration complication appeared upon the horizon, the Liberals' chain of reasoning is decidedly weak-linked.

TRADE WITH FORMOSA.

The trade of Japan with Formosa was included in the category of trade with China up to the end of the war, and it was impossible to obtain a separate report. Since the island was annexed to Japan in 1895 its trade, the *Asahi* notes, has shown remarkable progress. The exports from Japan to Formosa in 1895 amounted to 2,973 yen only, and imports from the island to 426,050 yen. In 1896, however, exports increased to 13,756 yen and imports to 1,301,299 yen, making a total of 1,315,056 yen. Compared with the previous year, there was an increase of 10,780 yen in exports and of 875,200 yen in imports. Exports for the first half of this year reached 22,675 yen, and the imports are calculated to be not less than 1,248,000 yen, the whole trade amounting to 1,271,500 yen in value. The following table shows the amount of imports from 1895 to the first half of this year inclusive:—

Year.	Exports. yen.	Imports. yen.	Total yen.
1895.....	2,973	428,050	429,023
1896.....	13,756	1,301,299	1,315,056
1897 (first half).....	22,675	1,248,907	1,271,582

The growth of the trade with Formosa, as shown by the above figures is, it is said, chiefly due to the increased facilities afforded for communication and to the steady increase of immigration from Japan. The principal commodities imported from Formosa, since 1895, and their values, were as follow:—

	1895. yen.	1896. yen.	1897, first half. yen.
Brown sugar.....	426,050	1,266,925	1,147,814
White sugar.....	—	33,214	92,963
Turmeric (Kyo.)	—	1,160	8,017

NEW JAPANESE WARSHIPS.

There is quite a respectable fleet of war vessels built and building in England and other countries at the present time for the Japanese Navy, as a part of the two programmes for the expansion of the warlike marine agreed to by the Diet. These two schemes have now become merged into one virtually, for it is difficult to say to which any particular vessel pertains. Two first-class battleships—the *Fuji*, built by the Thames Iron works, and the *Yashima*, by Armstrongs—are on the point of completion, and may be classed as ready. Amongst the orders given are one for a first-class battleship of 15,000 tons, to be constructed by the Thames Ironworks. She is to be called the *Shikishima*, will have a speed of 18 knots, and be finished in May, 1899. Another first-class battleship is to be constructed by Thomsons on the Clyde, and will substantially be a sister to our own *Jupiter*. She will be ready towards the close of 1899. A second-class cruiser, 4,350 tons, twenty knots speed, named the *Takasago*, is now being finished by Armstrongs. Two second-class cruisers, each of 4,700 tons, twenty knots speed, are being constructed in the United States, the *Kasagi*, by Cramps, of Philadelphia, and the *Chitose*, by the Union Ironworks, San Francisco. These two are to be ready at the end of next year. Besides these an order for two second-class cruisers is just about to be placed, one in France and one in Germany, the contracts for which are not yet actually signed. This list is completed by eight torpedo-boat destroyers of 250 tons each and thirty knots speed. Four of these have been contracted for by Messrs. Yarrow, of Poplar, and four by Messrs. Thornycroft, of Chiswick. Part of them will be ready in 1898 and others early in 1899. —*London and China Express*.

THE BUSINESS TAX.

The *Shogyo Shimpo* states that, according to official investigations, the amount of business tax to be collected this year in Tokyo is as follows:—

Classification	Amount. Yen.	Payers.
Selling Goods or Merchandise.....	404,767	27,397
Banking.....	196,645	42
Insurance.....	12,814	10
Money-lending.....	24,399	1,385
Manufacturing.....	2,930	393
Transport.....	2,211	16
Warehousing.....	141,219	612
Canal transport.....	2,211	16
Building Contractors.....	16,852	826
Labour Contractors.....	1,295	163
Printing.....	4,369	242
Photography.....	820	53
Lodging-houses.....	7,033	478
Inn keeping.....	8,660	498
Restaurants.....	20,217	720
Public Agencies.....	2,937	933
Private Agencies.....	1,319	19
Middlemen.....	11,027	478
Brokerage.....	7,395	212

Total 930,650 ... 38,219

It will be perceived that the sellers of goods will pay the largest amount of tax. Next comes banking and then transport, manufacturing, money-lending, restaurants, and building contractors. As regards the selling of goods the following table shows the comparative amount of taxes for the various urban divisions of Tokyo and the average borne by each dealer:—

Urban Division.	Amount. Yen.	Tax Yen.	Average. Yen.
Kyobashi, Shiba, Azabu.....	69,023	6,379	11.82
Kojimachi, Ushigome, Yotsuya, Akasaka ...	30,415	2,704	11.25
Koishikawa, Hongo, Kanda.....	60,683	5,309	11.43
Nihonbashi, Fukagawa, Asakusa, Shitaya, Honjo.....	184,539	7,071	26.10
Total.....	404,767	27,397	14.78

The highest average is set down for Nihonbashi and Fukagawa *Ku*, where large transactions are concluded year in year out. Manufacturing enterprises may be tabulated as follows:—

Urban Division.	Amount. Yen.	Payers. Yen.	Average. Yen.
Kyobashi, Shiba, Azabu.....	15,838	924	17.14
Kojimachi, Ushigome, Yotsuya, Akasaka ...	1,827	162	11.28
Koishikawa, Hongo, Kanda.....	7,019	648	10.83
Nihonbashi, Fukagawa, Asakusa, Suitaya, Honjo.....	21,671	802	27.02
Total.....	17,377	1,206	14.41

KEROSENE.

According to the *Fiji Shimpo* the import of kerosene oil from America, Russia, and Sumatra, and its reshipment from Kobe to other places for the first half of this year amounted to 1,222,947 cases and 1,199,441 cases of American and Russian respectively, making a total of 2,422,390 cases. The figures for each month are as follow:—

	From.	Arrivals. Cases.	Reshipment to other places. Cases.
January ...	America.....	95,140	178,364
	Russia.....	—	49,408
	Sumatra.....	—	12,370
February...	America.....	84,564	110,637
	Russia.....	30,034	40,687
	Sumatra.....	—	2,555
March.....	America.....	201,195	136,499
	Russia.....	59,478	68,218
	Sumatra.....	—	2,496
April.....	America.....	156,900	150,061
	Russia.....	147,430	39,243
	Sumatra.....	—	15,323
May.....	America.....	259,544	167,696
	Russia.....	—	37,374
	Sumatra.....	35,443	14,904
June.....	America.....	61,522	139,862
	Russia.....	54,599	22,002
	Sumatra.....	37,100	11,742
Totals ...	America.....	858,865	883,119
	Russia.....	291,541	256,932
	Sumatra.....	72,543	59,390

THE CHRISTIAN ENDEAVOUR SOCIETY.

The following statistics relating to the Christian Endeavour Society, should prove interesting:—

In 1881 there was one Society and fifty seven members. In 1897 there are 50,780 Societies and a total membership of 3,000,000. Of the States having more than 1,000 local Societies, Pennsylvania leads, with 3,443; New York has 3,049; Ohio, 2,383; Illinois, 2,013; Ontario, 1,783; Iowa, 1,336, and Michigan, 1,071. These figures do not include the Junior, Intermediate, Senior and Mothers' Societies. Pennsylvania leads the Junior Societies with 1,397; New York has 1,218; Illinois, 993; Ohio, 970; California, 551; Indiana, 549; Iowa, 518, and Massachusetts, 517. The banner given to the State that has made the largest gains goes this year to Ohio. The second junior banner goes from Mexico to Spain. There are 366 intermediate societies, California leading with 51, Illinois having 44; Ohio, 32, and Pennsylvania, 27. The Mothers' Societies number 70, Illinois leading with 30, Pennsylvania having 20 and Kansas 11. Twenty-seven senior societies have been organized, California, New Hampshire and Pennsylvania each having three and Connecticut two.

England has 3,925 Societies; Australia, 2,124; Scotland, 433; Wales, 311; India, 250; Ireland, 169; Madagascar, 93; France, 68; Mexico, 100; Japan, 66; West Indies, 63; Turkey, 41; China, 53; Africa, 52; Germany, 32—in all 7,919 societies in other countries. In addition Canada has 3,390. The badge banner for the greatest proportionate increase in the number of societies, now held by Scotland, will go to the Endeavourers on the Emerald Isle.

In the United States the Presbyterians have 5,531 young people's and 2,934 junior societies; the Congregationalists come next, with 4,156 young people's and 1,322 junior Baptists, 2,640 young people's and 1,080 junior; Cumberland Presbyterian, 867 young people's and 361 junior; Methodists Protestant, 971 young people's and 251 juniors; Lutherans, 869 young people's and 324 juniors, nearly 40 denominations being represented.

A missionary roll of honour contains the names of 10,468 societies that have given nearly \$500,000 to missions through their own denominational missionary boards.

During the last eleven months 25,264 of the juniors have joined the church, and from the young people's societies, 187,125—in all, 213,389.

HONGKONG'S GAMBLING SCANDAL.

On July 21st, by order of Hon. F. H. May, Captain Superintendent of the Hongkong Police, 2 Chinese Sergeants and 14 Chinese Constables, of the Detective Department of the Police Force, were arrested under banishment warrants for deportation.

By this sweeping stroke, says the *China Mail*, the Captain Superintendent practically clears out the whole of the Detective Department, which will thereby have to be entirely remodelled. The arrested are mostly men who have seen a large number of years' service and in many instances were entitled to pension. The section of the Gambling Ordinance No. 7 of 1811, under which the warrants are issued, reads:—If at any time it appears to the Governor in Council that any person not being a natural born British subject is a professional gambler or is engaged in the promotion of gambling contrary to the provisions of this Ordinance, he may issue an order banishing such person from the Colony for such period and generally in such manner as to the Governor in Council may seem expedient, and upon the issuing of such order a like consequence shall ensue in all respects as though such order had been issued under the powers conferred by the Banishment Ordinance No. 8 of 1882 and No. 4 of 1885.

At roll call on the morning of July 21st, it was discovered that five of the constables in the detective staff had absconded.

THE LATE COUNT GOTO.

The funeral of Count Goto takes place on Sunday. The coffin will leave the residence, at 18 Minami-machi, Takanawa, at 2 p.m. on Sunday and the ceremony will take place the same afternoon at Aoyama Cemetery.

THE C. D. ACTS AND FEMALE
OPINION.

THE Contagious Diseases Law is not a subject that we have any fancy for discussing in these columns, but it is almost impossible to leave entirely unnoticed a letter addressed to us by a lady correspondent, and an essay in the *Union Signal* of Chicago which she sends us with her endorsement. Reference is, at the same time, made by our correspondent to an article recently reproduced in these columns, advocating the re-inforcement of the C. D. Acts in India and speaking of their feminine opponents as "the shrieking sisterhood." The epithet was not ours, neither was the article, and we are not concerned, therefore, to defend either. Indeed, we count the term "shrieking sisterhood" to be at once rude and unjust, for it implies that in this matter the opinion of women is hysterical, an evident libel. Besides, the most prominent ladies of Great Britain recently signed a memorial advocating the very measure which our correspondent strongly denounces, so that if the views of some women are opposed to that kind of legislation, the views of others—and among the latter are now included the leaders of English society—are equally strongly in favour of it. All that, however, is of small moment compared with the singular misconceptions under which our correspondent and the editor of the *Union Signal* seem to labour, and since their erroneous beliefs are most injurious to England's fair fame, we shall devote a few lines to their refutation.

Our correspondent says:—"Our Father never ordained that one half of the human race should be ruined and made miserable, brought to the very gates of hell, simply for the selfishness and gratification of the other half." What that means we confess to some difficulty in understanding. There is no question of "one half of the human race." There is question of a very small fraction of the human race. Even in London the percentage, taking the female population alone, is only 2½—for every abandoned woman there are 39 respectable. Nor are "the selfishness and gratification" of men the sole factors in the situation. The women are voluntary agents. Why talk as if the fault lay entirely with men; as if their incontinence were alone to blame? Would not the remedy suggested by our correspondent, the leading of pure lives by men, be just as efficacious if women adopted it as their rule of conduct? Concerning the other point advanced by our correspondent, namely, that the British Government should allow the soldiery in India to have their families with them, the answer is simply that they do allow it. But the percentage of married men in every army, especially in an army raised by voluntary enlistment, is naturally small, and even were it doubled or trebled, the evil with

which the Contagious Diseases Acts are intended to deal, would not be appreciably mitigated.

We turn now to the article in the *Union Signal*, which our correspondent has been so good as to send us. The *Union Signal* is edited by a lady of distinction, Miss FRANCES E. WILLARD. Its Corresponding Editor is Lady HENRY SOMERSET. It has a Board of eleven lady Directors, and it is published in Chicago for "The World's and National Woman's Christian Temperance Union." Having premised that much, we reproduce the article:—

The theory upon which the state relation of vice is based is, "Man has lost control of himself, therefore, he must be given enlarged opportunities for controlling women." The depraved Anglo-Indian military element is again clamoring for recognition by the English Parliament. It assumes that the British soldier in India has gone far beyond the point of self-control, and asserts that disease is decimating the army, and therefore the defenceless native women—not sufficiently afflicted by plague and famine and the tyranny of native men—must now be made the scapegoat of all the infamy of a debauched soldiery which has been deliberately trained to vicious indulgence by corrupt superiors.

The India women will submit; they will weep and groan and writhe in mental agony, and because of the physical torture to which they will surely be subjected if the military authorities have their own way—but they will submit; they have been trained to silent, servile endurance from generations immemorial. The question is, will Christian women look on at the spectacle of a powerful nation thus trampling under foot the weak and helpless girls of a conquered people, and never feel a quiver of horror and resentment? We throw not; wicked men are laying up for themselves such an hour of retribution as they little dream of; the day of vengeance is near at hand; and God and His women will fight a warfare such as the world has never yet seen.

In 1893 it was hoped by the friends of righteousness that Lord Roberts, retiring Commander-in-chief of the British forces in India, had been relegated to a comparatively quiet life, because of his proved official responsibility in the continuance of governmental regulation of vice in that country, in defiance of the orders of the House of Commons, which had forbidden it. It was shown before the departmental committee, appointed to look into the whole question, on the testimony of his quarter-master-general, that he had, a few years before, ordered under-officials to secure "a larger number of young and attractive women" for the British soldiers. His profession of having tried to carry out the instructions of the House of Commons by abolishing the state regulation of vice in India, was proved to be false, on evidence produced by Dr. Kate Bushnell and Mrs. Elizabeth Wheeler Andrew, and Lord Roberts was constrained to offer a public apology to these two witnesses for having, in the first instance, denied their statements. Later, the report of the departmental committee was followed by special legislation in India, forbidding the whole iniquitous system.

Lord Roberts now comes forward with fresh plans for reaching out and laying his heavy hand on the poor, hapless native women, whom he has so cruelly oppressed in the past. He and a band of his aristocratic confederates have organized an association for the promotion of the C. D. Acts, and are coming before both houses of Parliament, pleading with crocodile tears for a little more mercy to the wolf, and a little more—yes, a great deal more—cruelty to the lamb. The British army is quite beyond all control, as far as licentiousness is concerned, and now, like the Russian mother of ancient legend, the one thing for Mother England to do is to throw out her Indian children to the wolves, and thus hope to keep ahead of the wolfish appetite of her own military element a little longer.

Thoughtful women are saying: "Small wonder that political England should smile serenely while the Mohammedan fiend brains the Armenian husband, and captures his wife and daughters for the harem! Small wonder that when Cretan Christians rise, in horror and despair, against similar atrocities, and brave little Greece rushes to the rescue, that the military power of England is massed to protect the wolf while it devours the lamb. British soldiers are being trained through-

out the world to believe that women are their lawful prey by the infamous C. D. Acts, which, since the days of Napoleon I, who first invented the abomination, have held sway over nearly the whole of the European Continent, and to-day disgrace England by their existence throughout a large portion of her colonies and dependencies."

"When a lunatic secures a weapon and runs amuck through a crowd, how great is the consternation! yet that is a trivial circumstance compared with the thought of whole regiments deliberately trained to believe in vice as a necessity, armed to the teeth by the government, and then given absolute power over women. This is what has happened in Armenia; this is what is swiftly becoming the menacing feature of military power the world over—armed force given the right by government to make its forays on defenceless women. This is what Lord Roberts and his high-placed abettors would have for India. God pity! God spare! Let every Christian woman cry, "In mercy, O God, rid us of our tormentors!"

We daresay that every one of our readers will rub his eyes after perusing this wonderful essay, and will examine it again, doubting the correctness of the first impression produced by it. For ourselves, while we here refrain—and we desire that our disclaimer be clearly understood—while we here refrain from either advocating or condemning the C. D. Acts, we frankly declare that the mere perusal of the *Union Signal's* article tends to influence us strongly against the opponents of the Acts. It would scarcely be possible to be more unfair, more misleading, and more intemperate, and nothing so effectually tends to put an advocate out of court as a conspicuous lack of justice, veracity, and moderation. The wretched slander against Lord ROBERTS need not be noticed. Such a man needs no defence against such libels. But the whole object of the essayist, the whole tendency of the essay, is to prove that the British Government contemplates an act of abominable and barbarous tyranny, and that the Anglo-Indian military authorities advocate the compulsory submission of Indian women to a life of vice aggravated by conditions that doubly shock modesty. "The defenceless native women must now be made the scapegoat of a debauched soldiery deliberately trained to vicious indulgence by corrupt superiors;" "the Indian women will weep and groan and writhe in mental agony, but they will submit; they have been trained to silent, servile endurance from generations immemorial;" "a powerful nation tramples under foot the weak and helpless girls of a conquered people;" "mother England throws out her Indian children to the wolves;" "whole regiments deliberately trained to believe in vice as a necessity, armed to the teeth by the Government, and then given absolute power over women." We have no right, and certainly no desire, to assume that any journalist deliberately undertakes the role of deceiving the public. The only alternative hypothesis is that the editor of the *Union Signal* has never read the C. D. Acts and has no knowledge of their provisions. To condemn them under such circumstances is a procedure of doubtful honesty, but we pass that by. Stated briefly, those much discussed

Acts provide simply that any woman who, of her own free choice, adopts a career of shame, must submit to sanitary arrangements which shall guarantee her against becoming an agent for transmitting to others, and being herself a helpless sufferer from, one of the most terrible diseases that exist among mankind. There is no compulsion of any kind: no making "scapegoats of defenceless girls;" no "trampling of weak and defenceless women under foot;" no giving of "absolute power to armed soldiers over females." Greater silliness and falser statements could not be penned. The woman is an absolutely free agent. Only, if she makes a certain selection, she must, so long as she abides by it, observe rules which, while they involve not a particle of physical pain or inconvenience, save her from being a destroyer of health as well as a corrupter of morals. It would really be amusing, were it not revolting, to see all this perverted sympathy lavished on the woman who makes of vice a profession. In one sense she is, indeed, an object of infinite pity. No one, we think, can fail to endorse LECKY'S immortal verdict:—"She remains, while creeds and civilizations rise and fall, the eternal priestess of humanity, blasted for the sins of the people." But it was reserved for the lady editor of a Christian Journal to call her "a lamb," and to describe the men by pandering to whose passions she earns a livelihood as "wolves." As a mere problem of abstract ethics, we do not think there can be much doubt about the direction of the moral indicator in this matter, but the cause in which the sympathies of the *Union Signal* are evidently enlisted will be injured rather than promoted by advocacy so unjust as to provoke indignation and so extravagant as to excite laughter.

LOCAL TAXATION OF FOREIGNERS.

A CORRESPONDENT writes:—

That foreigners residing in any part of Japan should be called upon by the local authorities to pay municipal taxes is reasonable. Hitherto these taxes have amounted to so little per annum that no one, as far as we are aware, has objected to them. But a case has come to our notice in which the Prefectural officials have assumed the right of taxing certain foreigners in the precise manner that the Japanese are taxed, that is by assessing the tax according to the salary received, the rate being approximately one per cent. per annum. These foreigners are connected with a government school, and hence the local authorities have no doubt as to the amount of their salaries. The taxes thus levied are described as *Kensei-kosuwari* (Prefectural tax on Business), *Dotsuika* (Supplementary Prefectural Tax), and *Shi-sei-kosuwari* (Municipal Business Tax). The ideographs 戸数 *Kosu* would seem at first sight to indicate that the tax is levied on the house. But that is not the case. The *Kaoku-sei*, or house tax, is quite a separate affair. The tax is levied on the occupant or occupants of each house in the town. It is a species of local income tax, to which, in addition to national taxes, the Japanese resident is liable. The foreigners concerned have refused to pay these taxes on the ground that the method of assessment is irregular. They have ascertained that no attempt has been made to tax other foreign residents of the town in the same way. The municipal taxes that the latter have been paying

have not amounted to more than one *yen* a year, though in some cases they are in receipt of higher salaries than the Japanese Government employé residing in the same town. It has been suggested as an explanation of the above case, that the Japanese may assume the right to tax all Government employé in the same manner. As far as we are aware, there is no evidence of the existence of any such claim. Government employés have not been called upon generally to pay any tax of the kind referred to. The case we have quoted is certainly peculiar and calls for explanation. One imagines that no local action of this kind would be taken without previous reference to headquarters or without special instructions from Tokyo. The point is of considerable interest at the present moment, for foreigners may well ask whether in addition to the national taxes for which they will become liable under the revised treaties, they will also be required to pay Prefectural and municipal taxes assessed on the basis of income. We do not imagine for a moment that the central Government approves of distinctions being made between foreigners that are in Japan's service and foreigners that are not. In every other particular foreigners are treated alike, and men in the employ of the Japanese Government are not thereby exempted from paying registration fees and the like to their own Consuls. Owing to the rate of exchange the salaries received by foreign school teachers throughout the country, in terms of gold in many cases, are lower than those paid by charitable institutions to Christian missionaries. If, in addition to paying his share of the national taxes, the Government school-teacher is to have his salary further reduced by percentage payments to Prefectural and Municipal authorities, men of ability and spirit will turn their backs on a profession which gives no adequate remuneration for the work expended on it.

It would be interesting to know whether in other Prefectures any attempt has been made of the nature of the one cited above. In the instance we have quoted, should the action of the local authorities be sustained by the Central Government, the foreigners concerned will be obliged to pay. But in that case they would do well to report the matter to their Consul and ask for an explanation. We are not aware of the passing of any new regulation under which the local action complained of could be justified.

Our correspondent's information with reference to this matter, does not altogether correspond with our own. In the first place, he does not appear to have gathered the precise significance of the term *Kosu*. We speak here with all reserve, recognising that the system applied in Tokyo may differ from that applied in the locality of which our correspondent writes, but we are disposed to think that there is no difference. Speaking broadly, and following the nomenclature of the Central Government's Statistics, there are four general divisions of local taxes, namely, the Land Rate (*Chiso-wari*), the Business Tax (*Yeigo-sei*), the Miscellaneous Tax (*Zasshu-sei*), and the House Tax (*Kosu-wari*). The Land Rate simply means local land tax, and requires no explanation. All the other taxes are levied on the basis of the house. Houses are divided into a number of classes, and each class has an index number. By multiplying together the area of a house in *tsubo* and the index number of the class to which it belongs, a product is obtained representing so many taxation units. Then the rate of impost per unit being fixed for each tax, whether House Tax, Business Tax, or any of the taxes falling under the heading of miscellaneous—as municipal tax, income tax, &c.—it is only necessary to multiply the number of units by the rate per unit, and the amount of the tax in question is found. That method of determining a man's income for taxation

purposes by considering the house in which he lives, is borrowed from Germany. Probably when an income is already known—as in the cases referred to by our correspondent—the tax is levied on it direct, without reference to the house. But we give this explanation because our correspondent seems to think that there is no connexion, as a general rule, between the house and the income for taxation purposes.

In the next place, our correspondent writes as if the question were quite new, and as though it had arisen only in the district of which he has experience. That is not the case. The question has been on the tapis for many years—fifteen, if we remember rightly. It arose originally in connexion with some American citizens, and after discussion in Japan, it was finally submitted to the Secretary of State in Washington, who decided that the Japanese Local Authorities were entitled to collect the tax. The decision evoked adverse criticism at the time, the critics, among whom we ourselves were numbered, taking the obviously just ground that an administration can not be said to be vested with a power which it is not competent to exercise. The Japanese Local Authorities in any city or prefecture may order foreigners residing within their jurisdiction to pay local taxes, but can they enforce the order? We think not. Certainly it is not within their competence to distrain a foreigner's goods, or even to enter his house, without the coöperation of his Consul, and we should be surprised to learn that a British or American Consul is authorized to furnish a remedy against British subjects or United States citizens refusing to pay local taxes in Japan.

Leaving aside the legal aspect of the question, however, many people will be disposed to ask whether the Japanese are well advised in taking such a line at the present juncture. There is no difficulty, of course, in appreciating their position. Local taxes are levied for purposes which every resident of the locality is interested in promoting, and from that point of view, the nationality of the resident is a wholly irrelevant point. If he enjoys the benefits secured by the expenditure of the proceeds of taxation, he ought to contribute his quota; and if he does not contribute, the tax-payers are entitled to complain that the commune is deprived by him of funds which would otherwise accrue from the residence that he occupies. But with at least equal justice the foreign employé may object that to take a per-centage of his salary by way of local tax is to deprive him, unexpectedly and arbitrarily, of a portion of the emoluments to which he is entitled by agreement. One per-cent. on a salary of 250 *yen* monthly, is 30 *yen* per annum. No foreign employé would neglect to take account of such an expenditure, had he any reason to contemplate it, at the time of making his agreement. It

is not fair, and assuredly it is not liberal, to reduce his stipend by that amount when thirty-five years of immunity from anything of the kind have deprived him of all ground to anticipate it. The matter must be a mere bagatelle to the communes, but it is not by any means a bagatelle to the foreign *employé*, who certainly ought to be the last person victimized in such a manner. In less than two years the revised treaties will go into operation, and foreigners will then be under an obligation to themselves to count the cost of living as Japanese subjects. Why raise a vexatious and profitless question in the meanwhile?

NOTICES OF BOOKS.

Mr. Mahlmann, Harbour Master at Kobe, has published a book entitled "The Revised Rules of the Road for Preventing Collisions at Sea." The method pursued by him is to set forth, first, the Rules themselves in their latest and most approved form, and then a number of questions and answers, intended to illustrate the meaning of each article and the cases in which its provisions are applicable. The system appears to be well conceived for the purpose of familiarizing the mariner not only with the text of the laws, but also with the manner of observing them in practice. When we consider how magnificently spacious are even the most frequented ocean routes compared with the dimensions of the traffic they have to accommodate, it seems strange that such a thing as a collision should ever take place. Yet, how often does it happen that even two pedestrians approaching each other on a broad highway, begin to tack and dodge, port and starboard, and finally escape impact only by a supreme effort at the last moment. Ships seem to get involved in similar difficulties, and considering that a code of 31 articles is deemed necessary to save them from smashing each other, it certainly is not less necessary that men of long experience and the gift of making things clear, should afford every possible assistance to bewildered mariners who, in moments of peril, must display complete familiarity with this elaborate code or expect terrible consequences. Captain Mahlmann's work will be received, we imagine, with great gratitude by his brother sea-men, and will probably be the means of averting many catastrophes.

One of the wholesomest and most readable books of travel we have encountered for many years is "A Padre in Partibus," by the Rev. G. M. Reith. The author has an eminently light and graceful pen, and he records his impressions with frankness and freshness altogether captivating. The scene of his travels is Netherlands-India, a region about which we have much to learn, though its most valuable portion was under British rule in the early years of the present century. Mr. Reith has made his way through Netherlands-India from N. E. Sumatra to Celebes—pronounced *Celêbes*—, a line of travel which, as he tells us, "forms an arc of nearly two thousand miles in length; and the fact that so long a line can be drawn in the Dutch Indies, and that, too, without touching Borneo, Timor, New Guinea, or the hundred islands of the Molucca Archipelago, shows the enormous extent of territory nominally under the dominion of Holland." He uses the word "nominally" because his observations lead him to conclude that in large tracts of the spacious realm there is little more than the shadow of Dutch power. Indeed, Java excepted, in no island visited by him is the European authority paramount. "Every one knows the state of affairs in Achin," he writes, "but there are other districts of Sumatra where the European official is unknown, and where I doubt if the natives know the colour of the Dutch flag. In Bali, beyond the Dutch settlements in Boedeling and Singaradja, the whole island is given up to na-

tive rule. Lombok is still unsettled in the interior, notwithstanding the recent military operations, Dutch influence does not seem to extend further than a few miles inland from the west coast. All Celebes, except the Dutch settlements in the northern arm (Menado, Gorontalo, etc.), and the little territory of Macassar in the south, is ruled by native chiefs, most of whom are not "advised." Elsewhere he calls the islands of the Archipelago Dutch "preemptions rather than possessions," but appends the opinion that the everlasting nature of the military operations is not due so much to the difficulty of terminating them successfully as to the local profit of keeping them up. It must be noted, however, that Mr. Reith never dogmatizes. He is careful to qualify his expressions of opinion with an explanation that they are simply his own, to be taken for what they are worth. That modesty, in truth, is one of the charms of his book. It has all the attractions of a strongly subjective individuality without a trace of egotism. The author is constantly in his reader's company yet never obtrudes his own personality. Some folks have an innate antipathy for books of travel; others tolerate them only when they describe places of special interest, but we believe that any one taking up Mr. Reith's work will not easily lay it down, however indifferent he may be to the condition of that huge region known as Netherlands-India. It should be added that Mr. Reith's sketches appeared originally in the *Singapore Free Press*.

A book that weaves a few historical facts into the web of its fiction has always a much more vivid interest than a pure romance, especially when the facts are taken from pages of our country's annals difficult of access without very special research. Most of us have heard in a vague sort of way about the Abbey of Theleme, Sir Francis Dashwood, and the "infamous order of Franciscans" who flourished in the ungodly days of George II. and were legislated out of existence in George the Third's time; but the story probably interested us little. We regarded it merely as one of the many strange outcomes of an epoch when vice and depravity held their heads higher than they do now-a-days; an epoch when the King of England found it in his heart to solace his dying Queen by promising to content himself with mistresses after her decease. More intimate has been our historical acquaintance with George Bubb Dodington, who made his *début* on the political stage as one of Prince Frederick's supporters in that extraordinary quarrel when Parliament was invited to decide between the sovereign and the heir to the throne. The Abbey of Theleme, Dodington and the mysteries of the Franciscan brotherhood form the historical backbone of Mr. Paul Creswick's "Temple of Folly." The names of eleven out of the twelve Franciscans have been handed down, but the name of the twelfth is not historically known. Mr. Creswick has made this unknown twelfth the hero of a very pretty romance, written in the quaint phraseology that our forefathers spoke a century and a half ago. The tale is keenly interesting from cover to cover, but it has one great fault—want of consequence. George Bubb Dodington make the acquaintance of the hero in a most unaccountable manner—Dodington, then a Minister of the Crown being engaged in the lucrative pastime of wrecking—and thereafter forces him into the fold of the Franciscans and displays an unceasing practical interest in him without the smallest apparent reason. There is nothing, so far as the reader can perceive, in the fortunes, family or personality of Anthony Fairfax to render him either useful or necessary to men like Dodington and Dashwood, yet, without explanation or query, they treat him from the outset as though not to secure his friendship and bind him to their party would be an irreparable loss to them. The same kind of mystery attaches to the heroine, Margaret Fitzgerald. How she got to the place where the story first finds her, and how she fared before she got there, one never discovers. These defects apart, the book is a capital companion for an idle hour or two.

It does not enlighten us much about Medmenham, the Franciscans, or the Court of George the Second, but it is good reading, and two characters at any rate stand out vividly in its pages, the hard-swearing, staunch-souled Master Culpepper, and the sweet, motherly Mistress Kate Courtenay.

"Liza of Lambeth" is one of those books that perplex the reader by suggesting queries about the motive of their author. Zola's works have the same effect and for the same reason. The great French realist would probably be indignant were he charged with writing merely for gain or fame, but it he was ever honestly inspired by a higher purpose, we have not been able to detect it. Nor can we think differently of "Liza of Lambeth." Even the painter, wide as are the limits of choice allowed to him, is not suffered to select an indelicate subject. Why should greater licence be permitted to a literary artist? However, we are bound to admit that this page from the annals of London life is a wonderfully vivid picture. Whether it is true, we do not pretend to say. Such phases of existence happily fall within the ken of very few observers. "Liza" is a flower growing in the gutter; a "lotus in the mud," as the Japanese aphorism has it; and there is much of the gutter and the mud about all her sayings and doings. Yet her story fills one with infinite pity. Is it typical? Do London factory girls develop a spirit of loyalty and self-sacrifice for the sake of men such as they have to do with and among surroundings that ought to educate only callous selfishness? "Liza" dances a *cancan* in the open streets and winds it up with a Catherine wheel, yet she will not be "treated" by a fine honest lover because she can not bear to inspire hopes that are not to be realized; she has no scruple about surrendering herself to another woman's husband, yet she refuses an offer of marriage though her wooer is willing to save her from shame; she is a patient dutiful child to a mother who never displays a spark of affection until she succeeds in engaging her daughter in a drunken carouse. These partial outlines will tell our readers as much as we are at liberty to say about the book. It will certainly add to Mr. William Somerset Maugham's literary reputation, and will find a multitude of readers, but that any one will be the better for reading it, or that it deserves a place on any easily accessible bookshelf, we strongly doubt. As long as "worldly shapes" move on this planet, life will have horrors like those described in "Liza of Lambeth," but why should they not be left hidden in the slums to which they belong? What good purpose is served by dragging them from their obscurity, and holding them up for public inspection, and, we think, for public demoralization.

"Prisoners of Conscience," by Amelia S. Barr is a pathetic story. Happily it is our privilege to think that the days are past when the lives of good men and women could be darkened by the gloom of such awful, blasphemous untruths as the early fathers of the Church promulgated; the days when the God of Love was represented as one of the most fiendishly cruel and unjust monsters that the imagination of fanatics could picture. But when the Queen, whose Diamond Jubilee we have just celebrated, came to the throne sixty years ago, many orthodox Christians were still held in the fetters of that appalling creed. Of such most unhappy persons we read in "Prisoners of Conscience." The scene is laid in the Shetland Islands, which the authoress evidently knows well and which she describes with power, and the characters are descendants of the Norwegians who bequeathed the *sagas* to all generations. We do not know whether there be people like those that Miss Barr writes of, or whether the acts and words of her heroes and heroines have derived rich colours in passing through the prism of a romantic woman's imagination; but certainly it is pleasant and profitable to spend two or three hours in the company of such folk, and to associate with them so intimately as she enables us to do. David Borson and Nanna Sinclair remain with us after we have closed the book,

and will long remain among the names—how few they are after all—that works of fiction succeed in investing with more than a momentary interest. They are difficult to conceive in the flesh, and even more unimaginable is Matilda Sabiston, but the authoress brings them before us in clear outlines and makes us share their sorrows only too closely. This book appears to us to be one of the best among the recent additions to Unwin's Colonial Library

NEWS OF THE WEEK.

San Francisco papers are filled with glowing accounts of the rich finds of gold recently made at Dawson City and Clondyke, Alaska. Of course "a rush" is now in progress.

The Mosquito Yacht Club had a race on Saturday last for the Balfour flag as first prize, and a second prize given by the Club. Four boats competed, *Sodesuka* taking first prize and *Kodeska* second.

An examination of Captain F. J. Brown, in connection with the recent stranding of the N.Y.K. steamer *Tenshin Maru*, was held on Tuesday at the Marine Bureau, Tokyo, with closed doors, reporters for the foreign press, contrary to former custom, not being admitted.

At a banquet given at the Peterhof Palace to the King of Siam, the speeches of both the Czar and the King were delivered in English, and were most cordial. The King said that the Siamese regarded the Czar as their faithful and powerful friend.

Sirdar Kitchener, in command of the Egyptian forces, went to the front in the first week of July. The news of important desertions from the Khalifa's followers at Abuhamed and Berber is confirmed, and little opposition is expected to the impending Egyptian advance on Berber.

At a second conference between the colonial Premiers and Mr. J. Chamberlain, Secretary for the Colonies, says an Australian paper, the treaty between Japan and Great Britain was discussed. All the colonies, except Queensland, declined to accept the treaty.

A London telegram of the 1st July to the Australian papers states that despite their fortnight's misery the survivors of the P. & O. steamer *Aden* celebrated the Queen's Jubilee on board the wreck by gathering together and singing the National Anthem.

The first week of July seems to have been very hot in all the cities of the eastern and middle States of America. The newspapers contain columns upon columns of matter dealing with the subject, the number of sudden deaths due to heat being above the normal.

According to a telegram appearing in the Australian papers, the Prince of Wales at the conclusion of the Jubilee Naval Review signalled that he was satisfied with the display, and concluded with the following message:—"I order the main brace to be spliced," meaning thereby that extra grog should be served out.

The Batavia correspondent of the *Singapore Free Press* wrote on the 9th July:—Mr. C. J. Boon, who is accused of appropriating to his own use the sum of 81,000 francs belonging to the Hongkong and Shanghai Bank, whilst acting as their Agent in Padang, has been arrested there and brought to Batavia, and he is now undergoing a preliminary examination. The Government have taken up the case, and are prosecuting.

From Manila exchanges to hand by the steamer *Zafiro*, the *China Mail* learns that numerous engagements are constantly taking place in the Central Luzon District between the rebels and the Spanish troops, notably in the Provinces of Bulacan, Pampanga, Nueva Ecija, and Bataan. In these many encounters, the Spanish report a few losses, which is all the more surprising considering the desperate valour

with which the loyal troops had to defend themselves against superior numbers.

By a recent edict, in answer to a suggestion of the Tsung-li Yamén, the Chinese Minister to Berlin is to be accredited to The Hague also, while the Minister at St. Petersburg will be commanded to look after Chinese affairs in Vienna. Formerly the Minister to Germany was accredited to all four countries.

The *Jiji* reports that the Sanyo Railway Company has devised a scheme, which will be put into operation from the 11th instant, for the sale of tickets at the various stations on its line, admitting persons who are not travelling by the trains, through the barriers on to the platform, for the purpose of seeing friends off, etc. The cost of such tickets is to be 1 sen each.

Some careless coolies on Tuesday morning upset, in the compound of the American Trading Company, Yokohama, a box containing a dozen bottles of sulphuric acid. The acid exploded, causing a lot of smoke to pour out of the yard, and a cry of "fire" was raised. When the Brigade arrived they found no damage had been done beyond the loss of the acid.

Mr. Arthur S. Hardy, of New Hampshire, who has been named by President McKinley Minister to Persia, was a Professor in Dartmouth College. His father, Mr. Alpheus Hardy, is the Boston merchant who befriended Mr. Niishima, founder of the Doshisha; and Professor Hardy has written a life of Joseph Hardy Niishima. Professor Hardy is also a novelist of considerable repute.

The raising of a municipal loan in Tokyo has hitherto been rendered inadvisable owing to the unfavourable condition of the money market, and the various undertakings of the City have been carried on by appropriations from funds raised in 1896. Nevertheless the progress of the work having brought about an exhaustion of funds, steps will, it is said, be taken to raise a loan to the amount of three million yen in October.

A Madrid telegram of the 15th July to the *Comercio* states that for the twenty-five million dollars of the Philippine loan of forty millions that are to be issued in Spain, applications had been sent in amounting to sixty-five millions, and details of the applications from some of the provinces not having yet been received it was expected the total would exceed seventy millions. A later telegram, of the 16th, states that the subscriptions amounted to \$105,000,000.

Two burials of foreign residents took place on Thursday in the Yokohama General Cemetery. In the morning at 8 o'clock, the funeral took place of Mr. H. C. Reynolds, a young man who recently joined the staff of Messrs. Lane, Crawford & Co., and who died in the General Hospital on the 4th inst from some head complaint. At 5.30 p.m. the remains were interred of Mr. H. M. Roberts, of the firm of Carroll & Co., an American citizen, long resident in Japan, who died on Thursday morning of meningitis.

The *Saturday Review* says:—

At any other time the earthquake which visited India on Saturday (June 12th) last would have attracted a much greater share of public attention than it has in fact done. There can be no doubt that it was one of the most serious seismic disturbances registered for a considerable period. At Professors Milne's seismological observatory in the Isle of Wight the record was of such a character as to negative the supposition that Calcutta was the actual centre of the disturbance. Had this been the case Calcutta would simply have been wiped off the face of the earth. Professor Milne's view is, we believe, that the centre of disturbance was suboceanic; but whatever light seismologists may be able to throw on the occurrence, there can be no question of the serious character of the results throughout a wide area of India. That distressful country, after having experienced famine and the plague, has now been subjected to a third infliction, the consequences of which we shall probably not adequately realize for some time to come.

Reports which are now coming in regularly from the Tochi Valley show that no gathering of the tribesmen has as yet taken place to resist the advance of the British force. The destruction of villages of the Chiefs responsible for the recent outrage is therefore likely to be the prin-

cipal chastisement possible. Full political power will be vested in Major-General G. Corrie-Bird during the operations in the Tochi Valley. That the Government intends doing the thing thoroughly is shown by the report that a survey is being made for a cart-road up the Tochi Valley as far as Datta Khel. This road is much needed, not merely for military purposes, but to encourage the caravan trade with Ghazni. Afghan traders will quickly recognise its advantages.

The great sums that a Chinese or Japanese virtuoso gladly pays for an ideographic script by some celebrity of old times find their parallel in the prices realized in England for manuscripts of renowned authors, statesmen, or captains. At a recent sale in London, Sir Walter Scott's autograph m.s.s. of "The Lady of the Lake" brought £1,290; and that of "Old Mortality," £600; the manuscript of Burns's "Private Journal" sold for £365, and Lord Nelson's autograph manuscript memoir was bid up to £1,000.

Mr. John MacAndrew, Chairman of the Indo-China S. N. Co., Ltd., in the course of his speech at the sixteenth ordinary general meeting of shareholders, said—I think the only other thing I have to allude to is the Company's claim for the steamer *Kow Shing*. We have still been unable to obtain a settlement of it. It ought to have been admitted and paid long ago, and the families of the sufferers by that disaster are also being kept out of what is justly due to them. We have done everything in our power to hurry the pace of the Foreign Office and of the Chinese authorities, and all I can say at present on the subject is that the case is still under negotiation with the Chinese, and that we hope for a satisfactory solution of it.

According to the *Hochi Shimbun*, the number of depositors in the Postal Savings Banks throughout the empire was 1,279,210 in the 29th year of Meiji (1896), their deposits amounting to 28,479,684 yen. These figures show an increase of 56,111 in depositors, but a decrease of 485,700 yen in deposits, as compared with the 28th year of Meiji. The latter fact is ascribed to the necessity that arose for withdrawing deposits for investment in practical enterprises in view of the growth of commerce and industry. On the other hand, the spirit of economy among the agricultural classes and those of no fixed occupation, accounts for the number of depositors having considerably increased.

The *Chuo Shimbun* says:—The Hawaiian Minister, Mr. Irwin, now in Tokyo, advocated the annexation of Hawaii by the United States during his recent visit to America. He appears to think that the annexation treaty will not be presented to Congress next winter, but that it is likely to be passed in the summer of next year. The pro-annexation party in America is disposed to make Hawaii, not a state, but a territory under the direct control of the Government at Washington. A governor will be appointed for its administration, but the present laws of Hawaii will be enforced without alteration for three years after annexation. The planters show a strong inclination to employ Japanese labourers, and it is probable that during the three-year period referred to above, a number of emigrants from Japan will be needed.

We note from a letter addressed to the Editor of the *Kobe Herald* by Mr. H. I. Chope, that the latter's little daughter, while stopping at the Beach House Hotel, Tarumi, one of Kobe's seaside resorts, was attacked on the hotel lawn by two dogs of doubtful breed, owned by a German resident of a neighbouring house. According to Mr. Chope's account, though the child was not bitten her clothes were badly torn by the dogs, and had it not been for the interference of onlookers, she would certainly have been mauled, as the owner of the creatures was looking on in absolute indifference. In answer to his protest, Mr. Chope did not even receive an apology or expression of regret from the owner of the curs. The dog nuisance is getting serious and dangerous, not only in Kobe but

also in Yokohama, and it would give great satisfaction to foreign residents were the Authorities to follow the advice tendered by the *Fiji Shimpō* the other day, and impose a substantial tax on dogs. It is wanted at all events to reduce the number of ill-bred and ill-tended curs that now infest the streets by day and make sleep impossible through their howling at night.

The *Peking and Tientsin Times* says:—Coming events are casting their shadows before them at Tangku, where the China Merchants S.N. Co. have raised a large tract of land immediately below the C. E. and Mining Co.'s property, preparatory, we are informed, to erecting wharves and godowns. The steamer companies will be forced to follow the example of the Mining Co., and make themselves independent of the river if the present state of things continues much longer. The Railway Administration, however, will have to bestir itself if it desires to make provision for the altered conditions which the movement we refer to betokens.

In regard to the telegram that we printed yesterday, telling of the death of Mr. Happer at Newchwang, from hydrophobia, we gather from China papers that the deceased was bitten by a dog on the 18th of December last, and accompanied by his wife, proceeded at once to the Pasteur Institute at Saigon and underwent the usual course of treatment there. Mr. Happer, who was a son of the late Dr. Happer of Canton, and a brother of Mrs. G. B. Glover, entered the Customs service in July, 1879, and became Commissioner in April, 1889. He was decorated with the Civil Rank of the 3rd class on the 2nd of July, 1893.

Mr. Lionel A. Tollemache relates the following story in the correspondence columns of the *Spectator*:—

The recent death of Professor Sylvester recalls a curious conversation in which I took part during my undergraduate days at Oxford. The conversation occurred at the table of the late Professor of Chemistry, Sir Benjamin Brodie. We were told by our host that in some primitive and, as a modern Lamb might say, *unstreamlined* part of the country (probably in Wales) Sylvester had been travelling on the box of a stage coach. As the coach halted at one of the inns, two odd-looking old ladies were seen talking to each other. Presently one of them, who was accosted by her friend as "Mrs. Gamp," walked away. The friend wanted to see the start; and, as the coach went off, Sylvester, not being shy, shouted to her from the box, "Goodbye, Mrs. Harris." The coachman stared:—"I thought, sir, that you were a stranger in these parts. How on earth did you know that that lady's name is Mrs. Harris?" The story went on to say that the old lady really was a Mrs. Harris.

The statement "Sylvester, not being shy," is startling. Certainly when he held the chair of mathematics at Woolwich Academy he was remarkable for shyness.

Commenting upon the prevalence of rabies among dogs, the *Fiji* insists that a tax ought to be levied upon these animals. The nature of the epidemic precludes any certainty as to the effect upon persons who may unfortunately be bitten by infected animals. Sometimes the disease develops after the lapse of many months and proves fatal. The best precaution, the *Fiji* thinks, would be the enforcement of a tax upon dogs. In foreign countries they are kept under strict control by the law, which proves admirably effectual in preventing the increase of wild or uncared-for dogs. The absence of such safeguards in Japan allows brutes of all descriptions to wander about the streets with impunity, and people are constantly exposed to peril from infected dogs. Taxation would to a great extent remedy these abuses, as responsibility in regard to the adoption of precautionary measures could then be enforced.

It has frequently been reported, says the *Yorodzu*, that Russia is taking pains to make herself acquainted with places of military importance in Japan. A despatch from Hiroshima dated the 27th ult. runs as follows:—On the 25th, a Russian, attired in Japanese dress, was seen in Kure, reconnoitring the neighbourhood of the Naval Station and Gunpowder Depot. The fact was immediately telephoned to the Police Station by one of the gendarmes in the port, whereupon steps were taken to track

and watch the man. Another communication, from Port Sakai in Tottori Prefecture, under date of the 28th ult., was to the following effect:—A number of Russian detectives who were supposed to be lurking in Yokohama for the purpose of completing their military investigations in this country, have one after another left the port for destinations unknown. It is said that a portion of them have proceeded to Sakai through Maizuru in Tango, with a view to ascertaining the actual condition of the naval ports.

Name that has been thy nation's shield
On many an alien shore and sea;
Name that in many a fateful field
Has taught the stubborn foe to flee;
Promise and proof of virtues three,
Valour unvanquishing, vigour, verve,—
We hail thy white-winged Sovereignty.
• Victoria!—whom God preserve!
Monarchs there are to whom men yield
Obedience in a bondman's key;
Monarchs whose sceptred right doth wield
Only the rod of Tyranny:
We, in free homage, being free,—
We joy that nought can shake or curve
thy reitude of Royalty.
Victoria!—whom God preserve!
Therefore from all our towers be pealed
The note of gladness; therefore be,
As from a thousand springs unsealed,
Outpoured the tide of mirth and glee:
For surely not to-day shall we
From sixty years' allegiance swerve,
Or shame thy twice-told Jubilee!
Victoria!—whom God preserve!

ENVOY

Queen! to whom true men bend the knee.
Our island heart and brain and nerve
Are loyal—loyal unto thee.
Victoria!—whom God preserve!

AUSTIN DOBSON.

On the 31st ultimo, Baron Yasuba gave an entertainment at the Kamesei Restaurant to General Nogi, Governor-General of Formosa, and other Formosan officials now in Tokyo, for the purpose of expressing his views with regard to the Formosan railway. One of the guests, Rear-Admiral Yamamoto, during the course of dinner, rose and spoke as follows:—"No prospect of success presents itself for the Formosan railway. I have therefore only to request the Chairman of the Railway Committee, Baron Yasuba, to take resolute steps in the matter. Have we not failed to raise the capital of fifteen million yen? Have we not obtained only ten million yen divided into two hundred thousand shares? Materials have risen in value, wages are nearly double what they were; these things have made it impossible even to enter upon the preliminaries of the work. No company has yet appeared to take up this enterprise. The scheme under the present circumstances is not only disadvantageous to the Formosan administration, but decidedly injurious to it." The rest of the guests were struck with surprise by the remarks of the speaker, but the Baron, rising from his seat replied:—"I beg to pay my respects to the speaker, and will but say that I shall bear his remarks in mind. Nevertheless, the question being of great moment, I ask to be allowed time to consider the question before giving a decisive reply."

The *North China Daily News* learns that the state of the surviving passengers and European crew of the *Aden* when rescued by the *Mayo*, was pitiful. The ladies when rescued had nothing but their night dresses and the men their pyjamas, and after seventeen days' exposure there was very little of anything remaining. The ladies, when they reached *Aden*, had each a sort of combination garment made out of the *Mayo's* blankets, leaving arms and legs bare. The men borrowed clothing of all sorts from the ship's officers. They were all more or less injured and greatly exhausted, and it was considered advisable that they should remain on the *Mayo*, whose captain and officers were most urgent that they should not go, and made them most comfortable until the *India* arrived. The Agent of the P. & O. Company had made arrangements for them to be taken to the Company's bungalow, and did everything possible for them, the doctor and stewardess of the *Ganges*, which was in *Aden* at the time, attending on them during their

stay; but the ladies were very weak, and could not bear much moving, and they felt a natural disinclination to leave their kind-hearted rescuers until the steamer arrived that was to take them home. Through the kindness of the *Aden* community ample clothing was at once sent off for the two ladies and the children, and some for the men, but the latter had to complete their wardrobe by purchasing such ready-made garments as the local stores could provide.

The vagaries of the powers or individuals appointed to look after the making and repairing of roads in Yokohama pass all understanding. As any one will admit, after very cursory inspection, there are plenty of roads and streets that badly want mending. One thoroughfare in particular leading up from Motomachi to the Bluff, and to the Motomachi School has for years been a disgrace to the most important port of Japan. This thoroughfare, known as Shio-Kumi-zaka, resembles the bed of a mountain torrent rather than a street, and constitutes a grand object lesson of how not to do it, to the two or three hundred scholars of the school, who have to pick their way along it daily. But the ridiculous part of the farce is that while some thoroughfares, like the one referred to, appear to be utterly neglected, others appear to monopolise all the fostering care and solicitude of the authorities. As an instance, the portion of Musashicho at the rear of No. 70 and 71, where there is comparatively little traffic. This, up till a few days ago, was one of the very best roads in the Settlement, but is now being picked up and destroyed, to be remade, for some undiscoverable reason. The only explanation, obtained from an intelligent Japanese, is to the effect that whether the road wanted repair or not, a certain amount had to be spent upon it every year and the road must be renewed at stated intervals, whether it be in good or bad condition. Surely such an utterly ridiculous system cannot really exist!

The *Singapore Free Press* gives details of the terrible death of Capt. H. C. Syers, Commissioner of Police of the Federated Malay States, which took place on the 14th July at Ulu Kran, Pahang. The unfortunate man was one of a small shooting party which included a Mr. R. Scott Meikle of Wardieburn, Kuala Lumpur. The party had very good sport up till the time of the fatality, which occurred in the dense jungle. A bull sladang was sighted and both gentlemen fired at it, yet none of the four shots took effect, but for the moment the animal took to flight. After running for a distance of about 300 yards it seems the bull turned aside and waited in the jungle for his pursuers, and as they came up he charged again unexpectedly. Mr. Meikle heard the beast advancing at a terrific pace and stepped quickly aside. Capt. Syers fired his first barrel at about 20 yards, and the second when the animal was about two yards from him. Neither shot turned him, and with his enormous head the sladang, a great thick-bodied brute, caught Capt. Syers full in the back and tossed him high into the air, the unfortunate man, still clutching his rifle, turning no less than three complete somersaults before his head struck the branch of a tree at a height of about 35 feet. Such was the violence of the blow that Capt. Syers came straight down and fell on his back. Till now the horns of the beast had not touched him, but as Capt. Syers came down the bull was waiting for him, having turned round like lightning on his feet as a pivot. Hardly had he touched the ground when the bull had driven his horn right into Capt. Syers' right side below the ribs, again tossing him into the air to a height of about 18 or 20 feet. Mr. Meikle, who was close at hand, fired two shots simultaneously just behind the shoulder of the sladang from a distance of about three yards, and the animal cleared off for a distance of about a chain and fell, lying bellowing and kicking where he dropped. Capt. Syers survived his injuries for 14 hours, dying in great agony.

SOME ODDS AND ENDS.

So Mr. Edward Morphy, the clever, versatile Irish journalist—brimful of Hibernicisms as an egg is full of meat—who possesses in an eminent degree the happy knack of winning warm friends wherever his wandering feet may take him, has moved up to Kobe from Nagasaki and intends editing a weekly paper there that will deal with things in general and local topics in particular in a breezy, humorous vein. We wish the light-hearted Celt the best of luck.

Another move among the tiny band of foreign journalists in Japan, is the approaching departure of Mr. Thos. Cowan from Tokyo to take up the editorship of the *Hongkong Telegraph*. Mr. Cowan, we imagine, will find wider scope for his undoubted abilities on the colonial journal than was given him by the management of the *Japan Times*. In days not so long gone by, when Mr. Fraser Smith was alive and had Mr. Cowan for first lieutenant, the *Hongkong Telegraph*, despite its occasional lapses from the path of "gentle manners, kindly thoughts," and its oft recurrent breaches of good taste, was a veritable power in South China. And it should speedily be so again.

In this far Eastern treaty port one is ever making friends only to bid them farewell. Like the old Roman legionaries our motto is "*Ave atque vale!*" The latest P.P.C. comes from Mr. Laurence S. Lewis, of the P. & O. Company, who has only been with us in Yokohama for a short time. In the service of Britain's premier Steamship Company—her unofficial Navy, as a Colonial journalist puts it—Mr. Lewis has spent much time in Australia, India, Ceylon, China and Japan, and has hosts of friends everywhere. To him much of the artistic success of the P. & O. illumination on Jubilee Day was due.

A correspondent sends us an amusing account of a scene that took place at a recent annual meeting of a certain body of missionaries in Japan. A dignified D.D., was acting as Secretary. Having arisen and made some remarks, he essayed to resume his seat, when, by some mishap the venerable man slid plumb on to the floor. It was a very sudden and altogether unexpected descent, both for himself and for the whole audience. A profound silence reigned for a moment, when, sedately rising, the good man gathered his scattered papers together and demurely remarked, "I rise to a point of order."

The *Fiji* proposes that a tax should be imposed upon dogs, and a very sensible proposal it is. But why should not Japan go a step farther than Western nations in this matter, and also impose a tax on Tabby and Tom, who render most efficient aid to the dogs this hot season in making night hideous. That very soon there would be a grateful diminution in the number of these serenaders, if their owners had to pay a tax of say \$3 a year for them, is certain, and surely no sensible person would object to the payment of a small fee for any pet that they valued.

Queer ideas prevail in America regarding England and English methods. Here is a paragraph that the *New York Tribune* recently printed in all good faith:—In England a new use for the mail has been found. A London workman who could not spare the time to take his three-year-old son to his home, at a considerable distance from his shop, conceived the brilliant idea of sending the child as a postal package. A card was pinned upon his clothes bearing these words:—"Live Animal." The father paid nippence postage and the child reached his mother in safety.

The Emperor of Japan has just presented to Professor Todd, of Amherst College, an "Imperial Saké Cup," in recognition of the Professor's attainments and of his interest in the educational progress of Japan. The cup is bowl-shaped and simple in design. It is of ordinary red lacquer, and has no ornamentation except a gilt impression of the imperial crest, which

is stamped in the bowl. The cup was sent to Professor Todd by the Japanese Minister at Washington, to whom it had been directed by the Imperial Household Department.

Little Miss Gillett, we learn from private sources, came out of the *Aden* disaster the best of all, escaping with only a few bruises. What an awful experience it must have been for one of such tender years. Let us hope that the future has in store nothing but what is bright and glad for her.

We are all grumbling in Japan at the excessive rise in the price of everything and the artful way in which servants' guilds—coaster and fruit guilds, and the hundred and ten other guilds that control the domestic food supply here—force up the price of first one thing and then another, but our woes are nothing as compared with those of a Solomon Islands trader. With him things have come to a dreary pass, or, as he plaintively remarked to his factor—"This here shebang's played out. Years ago I got twenty sandalwood trees for one dog, now one dog only swaps for ten trees!" This is a true yarn, for we heard it from the lips of one of the parties the other evening after dinner, and he is a truthful man.

Lord Salisbury's cynical reply to Earl Mayo regarding the delay in the Delagoa Bay award is characteristic of the man. A literary, bookish man to his finger tips the noble Marquis delights in a stinging sarcasm set in concise phrase. Many are the bad half hours he has given his opponents, and at times his own party, by a chance satirical allusion, charged to the full with biting energy, dropped in the course of a debate.

The dream of the "Federation of the British Empire" is gradually emerging from the land of cloudy ideas into the realm of practical politics. The Diamond Jubilee, thanks to the broad statesmanship of Mr. Joseph Chamberlain, has been turned to good account, and already the fruit of the Colonial Premiers conferences are seen in the denouncing by Great Britain of the Commercial Treaties with continental Powers that were hampering commerce with her colonies. Mr. Kipling truly must have been moved by the Spirit of Prophecy when he wrote, some years ago, that famous colonial "Song of the English," which concludes:—

Look, I have made ye place and opened wide the doors,
That ye may talk together, your Barons and Councillors—
Wards of the Outer March, Lords of the Lower Seas,
Ay, talk to your gray mother that bore you on her knees!—
That ye may talk together, brother to brother's face—
Thus for the good of your peoples—thus for the Pride of the Race.

Also, we will make promise, so long as the Blood endures,
I shall know that your good is mine; ye shall feel that my strength is yours:
In the day of Armageddon, at the last great fight of all,
That Our House stand together and the pillars do not fall.

Draw now the three-fold knot firm on the nine-fold bands,
And the law that ye make shall be law after the rule of your lands.

This for the Waxen Heath, and that for the Wattle-bloom,
This for the Maple-leaf, and that for the Southern Broom.

The law that ye make shall be law and I shall not press my will,
Because ye are sons of The Blood and call me Mother still.

Now ye must speak to your kinsmen and they must speak to you,
After the use of the English in straight-flung words and few.

Stand to your work and be strong, halting not in your ways,
Baulking the end half-won for an instant dole of praise.

Stand to your work and be wise—certain of sword and pen,
Who are neither childer, nor Gods, but men in a world of men.

TRIFLER.

THURSDAY'S EARTHQUAKE.

The earthquake of Thursday morning was of very long duration, but fortunately, owing to its gentleness, no damage was done. Starting at 9h. 11m. 56secs. a.m., the motion continued for 7 minutes and 59 seconds, the vibrations moving from E. to W. Four minor shocks were felt at 9.23, 10, and 11.31 o'clock the same morning.

[SPECIAL DISPATCH TO THE "JAPAN MAIL."]

Hakone, 9 a.m., Aug. 5.

A strong earthquake was felt here this morning at about 9.20 o'clock. It lasted for several minutes, but was quite regular (horizontal) in its movement. The Japanese say that they seldom have such a long or strong earthquake here; and they rushed out of their houses very quickly.

The following telegrams are published this morning:—

Shizuoka, August 5.

A slight earthquake was felt here at 9.20 a.m.

Sendai, August 5.

A strong earthquake occurred here this morning at 9 o'clock.

Mito, August 5.

A strong gale swept over the locality last night, and this morning a sharp earthquake was felt here.

Mayebashi, August 5.

An earthquake occurred here this morning at half-past 9 o'clock.

Uyeda, Shinshu, Aug. 5.

An earthquake was felt here this morning at half-past 9 o'clock.

The earthquake is also reported from:—

Gifu, 7.57 a.m., slight.
Nagasaki, 8.06 a.m., slight.
Kumagaya, 9.07 a.m., strong.
Ishinomaki, 9.10 a.m., strong.
Mito, 9.10 a.m., strong.
Aomori, 9.11 a.m., strong.
Yamagata, 9.11 a.m., strong.
Mayebashi, 9.11 a.m., strong.
Niigata, 9.12 a.m., strong.
Kofu, 9.12 a.m., strong.
Fukushima, 9.10 a.m., feeble.
Nagano, 9.11 a.m., feeble.
Gifu, 9.11 a.m., feeble.
Utsunomiya, 9.12 a.m., feeble.
Tokyo, 9.12 a.m., feeble.
Yokosuka, 9.12 a.m., feeble.
Nagoya, 9.13 a.m., feeble.
Akita, 9.20 a.m., feeble.
Choshi, 9.12 a.m., slight.
Numazu, 9.12 a.m., slight.
Nemuro, 9.12 a.m., slight.
Kushiro, 9.13 a.m., slight.
Hachiki, 9.15 a.m., slight.

"A LITTLE FARTHER ON."

A little farther on the skies are brighter,
And softer breezes blow o'er scented fields;
The distant clouds are fleecier and whiter,
And sweeter music o'er the senses steals,
A little farther on.

A little farther on life is immortal,
Nor pain, nor sorrow ever can molest;
The joys we've missed shall meet us at the portal.
The hands we've loved shall lead us into rest,
A little farther on.

—Guardian.

The *Mainichi* publishes the following returns relating to China's foreign trade during the past six years:—

Year.	Imports. Yael.	Exports. Yael.
1896	202,950,000	131,081,000
1895	171,696,700	142,293,203
1894	161,102,900	128,104,500
1893	151,362,800	116,632,300
1892	135,101,200	102,583,500
1891	34,003,900	100,947,800

The sudden increase in last year's imports is chiefly due to the extension of railways as well as the rapid progress made in Government undertakings.

THE ILLFATED "ADEN."

The tale of suffering endured by the *Aden* survivors in very terrible reading. During the last few days the rations were seven ginger-nuts per head per day! Mrs. Smyth's *amah* has returned to Shanghai and told her experiences. In one part of her story she says:—Mrs. Smyth wanted to take me into the third boat along with her, and I was preparing to lower myself when I was stopped by a lascar who declared that the boat was too full already, and that I could go into the sea if I wished but not into the boat. This prevented me from joining my mistress, and I had to stop on board, but I feel most grateful to Mrs. Pearce and Mrs. Gillett, who treated me most kindly and shared alike with me whatever they had to eat or drink themselves. I honestly believe that I would have starved to death during that terrible time if it had not been for this kindness of Mrs. Pearce and Mrs. Gillett. When daylight broke, we all stopped on the deck of the steamer, it being impossible to go into the cabin. All the first day we ate nothing; no one thought of it. The waves kept dashing over the ship like some tremendous wall, and when they swept over the decks they always managed to wash off some of us. We clung to whatever could give us a purchase to hold on, many being strapped to the mast or rails. The eternal sweeping over of the waves gradually told on us and so exhausted those holding on to the deck railings, that, one by one, sometimes in twos and threes, we saw people swept away into the dark, terrible seas beyond. It was terrible. In this way Mrs. Pearce's Shanghai *amah* was washed into the seas beyond, and their youngest child. Of 270, odd, persons—I think that was the total number all told on board—only about forty were finally rescued by the *Mayo*.

By dusk I was so exhausted that I asked to be allowed to go down into the cabin, but I was dissuaded from doing so and was told that the cabins were full of water and therefore dangerous. Just then another wave broke over us, and it was thought that anything was better than staying on deck to withstand these terrible waves, so when another wave dashed over us there was a general move into the covered passage below decks to get under shelter.

Our food for the first ten days consisted of about thirty "nuts" from tin boxes apiece, and we each drank per day about two bottles of distilled or aerated water. In the afternoon we ate some biscuits and marmalade and sweet ginger, and drank cocoa or chocolate. We had four meals a day. After the first days, when rescue seemed as far off as ever, it was necessary to cut down the rations to one half, the number of meals, four, being still observed. This continued another three or four days, our food for the last two days prior to our rescue by the *Mayo* being two slices of ham and a spoonful of arrowroot each per meal. I wish here to again state my gratitude to Mrs. Pearce and Mrs. Gillett for giving me just what they themselves and all the rest had to eat. All shared equally, when we had plenty on hand and when we had to subsist on short rations.

When at last the *Mayo* was sighted and we were sure of being rescued at last, we were allowed to eat more liberally of what provisions were left. The short rations made us all very thin and weak, while we were all attacked with boils, caused by the sea water. There was not a dry spot on the ship. I saw nothing of what the lascar crew on board were doing, they being in some other part of the ship by themselves. All of us were so weak and afflicted by boils that we could hardly walk, even amongst the gentlemen, although they recovered sooner than the others when we got to Aden. When Mrs. Pearce left Aden for England she was still unable to walk and had to be carried on board the steamer.

In a Kobe contemporary we find that Messrs. M. Samuel & Co. wrote to *The Times* enclosing a verbatim report telegraphed from Perim on the 20th June by the master of the steamer *Volute*:—"The *Volute* reports having seen steamer abandoned in a dangerous position east

coast Socotra, name unknown, fate of those on board not known, no assistance could be rendered on account of bad weather." Messrs. Samuel & Co. added:—"Seeing that our captains have the strictest instructions to render assistance in case of need to any steamers, and that several of them have fortunately been able to do so, we are quite certain that no blame whatever could attach to the captain of the *Volute*, since it is clear that only the terrible weather prevailing prevented his sending a boat to investigate the position of the *Aden*."

Friends of the survivors of the *Aden* will read with special interest the following tribute to British patriotism and courage, taken from the *New York Tribune*, of July 11th:—

Not yet "the age of chivalry is gone." Not yet, nor ever will be while human nature to itself holds true. The splendors of knight errantry are past. The valiant deeds that glorified the age of force are done; happy if not forgotten or discredited. Men wonder if the defence of Londonderry, the charge of Balaklava, the eighty-seven days at Lucknow, were really as heroic as song and story tell them. They ask if Gordon of Khartoum were not more mad than brave. They smile with cynical incredulity when told how the dying crew of the *Trenton* cheered the *Calliope* as she fought her way out of Apia's harbour to safety in the open sea. They doubt the tale of Wilson's troopers in Matabeleland singing "God Save the Queen," when the last cartridges were spent and the assegai points were at their throats, while the black hordes about them paused a-breath in utter awe. Yet each revolving year, defying the dreary drivel of materialism and rebuking the pale plane of Mugwump mediocrity, brings to the fore some new, resplendent scene that shows how slight and puerile are storm and wreck and woe and death before the conquering greatness of the human soul.

For here, not yet three weeks ago, in these commonplace closing days of this commonplace nineteenth century, comes record of a deed that sets the blood a-bounding and the nerves a-thrill as much as ever rush of Lancelot down the shining lists at Camelot. A British ship was stormstruck in the Indian Ocean. For six days she was at the mercy of the hurricane. Then she was hurled upon a reef. Lifeboats were launched, only to go down in the black hell of waters with all on board. Day after day, night after night, the storm raged, unabating. The hapless survivors clung to the straining, breaking wreck, starving, perishing beneath the fury of the elements. One after another was swept off, to drown or to fall a prey to the waiting sharks; and that fate seemed inevitable for them all. Thus thirteen days of horror passed, counted off slowly, with such agony as no words can tell. And then came the day of the Queen's Jubilee, remembered faithfully amid the terrors of the storm and threatening death. For these were English men and women on the wreck. At home, in peace and happiness, brothers and sisters were applauding the pageant of the ages, and making the golden summer air all tremulous with joyous cries and singing of "God Save the Queen!" But was not that death-reef of Socotra likewise British soil? Or were they less British in their hearts than the myriads thronged around St. Paul's? So amid the howlings of the insatiable storm, looking Death squarely in the face with that proud contempt of him which only immortality can feel, they all joined hands, turned hearts and voices England-ward, and with what might be for all and was for some their dying breath, they sang "God Save the Queen!"

There was the climax of the Jubilee, supreme and unapproachable. The many-voiced choir and thundering organ at St. Paul's, the roar of cannon and the louder roar of millions of loyal voices, all may die in silence in the coming stretch of years. But those twosome weak and quavering voices, crying in the watery wilderness of storm-swept Indian seas, will live in deathless echoes while there is an ear to hear or a heart to feel. For there was no impulse of

surrounding multitudes, no inspiration of imposing pageants and the community of joy; there was no military discipline, as on the famous *Birkenhead*, none of the fierce enthusiasm of war, as at Balaklava or on the banks of the Ssangani. They were isolated from all the world and crushed with famine, woe, and threatening death. But they had in their hearts the unquenchable love of country and in their souls the spirit that can "tire torture and time." Such passions live when all else perishes, and such deeds as theirs add to the lengthening chain of time-hung gems which girds humanity about with beauty and proves our human nature is indeed divine. The cheers in Apia's harbour, the anthem rising from Socotra's fatal reef, are paeans of victory of hope over fear, manhood over matter, life over death. Whatever other voices say the age of chivalry is gone, they thunder back their refutation of the libel on humanity. Whatever other noises rise and fall in fitful tumult through the wearied world, their "echoes roll from soul to soul, and grow forever and forever."

TERRIBLE EXPERIENCES OF THE SURVIVORS.

The Superintendent of the P. & O. Company in Hongkong has forwarded to the Colonial papers the following particulars of the loss of the Company's steamer *Aden*, as narrated by the survivors to the Company's agent at Aden:—Messrs T. A. White and Peter Kelt, third and fourth engineers, were on watch in the engine-room when the *Aden* struck the reef at 2 5 a.m. on 9th June. The shock was not a particularly heavy one, but rather as if the ship had been lifted on to the rocks. The ship never moved, but remained where she struck perfectly upright. Within three minutes after striking the water rose to the level of the engine-room, putting fires and lights out. The water appeared to come in from the after end of the ship through the tunnel, and the third and fourth engineers endeavoured to close the tunnel door but were forced back by the water and were then, with the men on watch, ordered on deck. A steam pipe in the stoke hole is supposed to have burst, as there was much steam about, but the water prevented any attempt being made to verify this, nor were two attempts by the engineers to ease the safety valves more successful from the same cause, the water in the engine-room being then at sea level.

On reaching the deck, life-belts were served out to everyone, and attempts were made to clear away the lee lifeboats—the sea at the weather side being too rough. At this time it was so dark that it was impossible to see a yard ahead. The lifeboats having been cleared away and made ready to receive passengers, at dawn attempts, more or less successful, were made to find clothing for the passengers who were in their night dresses. The weather got worse, and a sea suddenly carried away the after life boat on the lee side, with three men in it,—whether natives or Europeans it is not known.

Day broke shortly afterwards, and preparations were made for passing the women and children into the only life-boat left (when the others disappeared no one can say), and the stewardess, 3rd officer, and several quartermasters were in it to pass in the passengers when a sea struck it, carrying the after fall away and leaving the boat hanging to the davit by the forward one. The 4th officer cleared the fall, and the boat floated and righted. All who were in her were thrown into the water, but were picked up, including the stewardess, who was saved by the 4th officer jumping in after her. The boat's gear was recovered, but not the provisions, (whether fresh provisions were put in or not, none of the survivors can tell, but the impression is that none were). The ladies and children then got in, and with them the 3rd and 4th officers, chief and second engineers, surgeon, head steward, 2 stewards, 3 or 4 quartermasters, carpenter and winchman. The boat shoved off and soon drifted away out of sight, and was not seen to reach the land, which was by the time quite clear. Captain Hill was all the time on deck, and gave his orders quietly and collectedly. There was no panic, and, as far as Messrs White and Kelt were able to judge, everyone was fairly cool and self-possessed.

The life-boat washed away from the davits was seen floating near the ship, and the second officer with the gunner, quartermaster, and several lascars were sent off by the Captain in the cutter to try and recover it, but failed, and were never seen again by those on board. The chief officer, with a line and a life buoy round him attempted

to reach it. Whether he did or not is unknown, as the boat drifted away and the chief officer did not return. The Europeans on board were now reduced to the Commander, 3rd and 4th Engineers, and the writer, with those passengers who had not gone in the boat either because the wives would not go without their husbands or because the ship was preferred to the boat. All took shelter on the lee side of the hurricane deck until 11 a.m., when seas commenced to break over from both sides (on the lee side, it was a very heavy backwash, I am told), and about an hour later Capt. Hill was knocked down; his thigh was broken and he washed about on deck, and shortly afterwards was carried overboard and drowned.

No assistance could be afforded him, as the others were in a perilous state themselves, passengers and crew being gradually washed away. About 3 p.m. it was found impossible to remain on deck, so the European survivors went below, where the only place of refuge for them was the bar, the natives meanwhile seeking shelter in the donkey boiler. Before dark, the ship was full of water, the chart room, music saloon, Captain's cabin, bridge, funnel and all woodwork on hurricane deck had gone. Mr. White, during the day, had his left shoulder dislocated, and the writer (Cave) was badly wounded in the leg by a broken iron pipe. Nearly all the passengers, ladies included, were injured in various ways. By next day (everyone is rather uncertain about the exact time anything occurred during the first week, owing to suffering and prostration) it was discovered that the Europeans had the midship section of the ships to themselves, whilst the natives, all that were left, had managed to get aft under the poop, or forward under the fore-castle. Seas were breaking over furiously nearly all the time, and communication was only kept up between the various sections at irregular intervals and at the risk of life.

The passengers found six dozen bottles of soda water in the bar, and this was the only thing in the shape of water they had the whole time, the water tanks being inaccessible. It was served out in wine glasses. Mr. Kelt was nearly killed and drowned trying to get aft for water for the children. The coal trimmer and serang improvised a distilling apparatus, and the lascars were getting fresh water from it at the rate of two gallons a day.

The writer Cave also behaved well, and was also nearly killed and drowned trying to get food for the passengers, who speak most highly of the devotion and attention of these three survivors of the European crew.

The seventeen days on the wreck were passed in attempts to get food from one end or the other, and were more or less successful according to the weather. The natives behaved well, and tried to help as well as they could. Steamers were sighted at various times, but although the reversed ensign was flying and the lascars waved flags from the deck, they were apparently unnoticed, but the survivors never gave up hope.

Mr. White procured some candles, and each night exhibited a light in one of the port holes, and it is due to this that the R.I.M. *Mayo*, lying under the lee of Ras Momi, on the evening of 25th June, with the wreck in sight awaiting for daylight to approach, knew the ship was not abandoned.

At 6 a.m., the *Mayo* proceeded, and anchored about half a mile from the wreck, and sent the cutter in with a volunteer crew under the command of 1st Lieut. H. Dobbin and Sub-Lieut. A. Goldsmith. In two trips and by 9 o'clock, all the survivors of the *Aden* were safe on board the *Mayo*, and none too soon, as Lieut. Dobbin reported that on his second trip, whilst Sub-Lieut. Goldsmith was endeavouring to get aloft and bring away the ensign, the ship's side burst open and the boat was nearly swamped with the water pouring out, and the *Aden* showed such unmistakable signs of her approaching end that Lieut. Goldsmith was recalled and the boat returned to the *Mayo*.

The weather was very bad, and a third trip could not have been made. The *Aden's* back was broken, the deck in the fore well gone and the side burst when the *Mayo* left, so possibly there is little or nothing left of her now.

IMPROVEMENTS OF YOKOHAMA PORT.

In reply to a communication of the Yokohama Chamber of Commerce (Japanese), the following letter on the improvements of Yokohama harbour and other matters has been sent

by W. B. Walter, Chairman of the Yokohama General Chamber of Commerce:—

Yokohama, 28th July, 1897.

HARA ZENZABURO, Esquire, Chairman, Yokohama Chamber of Commerce.

DEAR SIR,—The Committee of this Chamber have duly received your Pamphlet regarding Investigations into the condition of the port of Yokohama, which will be of much value as a means of improving the trade to the mutual benefit of Japanese and foreign residents.

The Committee are of opinion that this Chamber agrees with yours that it will be very desirable to ascertain by what means the facilities of trade at Yokohama can be improved, and suggest the following points for consideration:—

(1) The harbour requires continuous dredging, and the approaches thereto—the creeks—should be deepened and carefully attended to, especially where they enter the harbour, it being mostly there that silt accumulates.

(2) An efficient harbour master should fix the positions in which ships arriving should anchor, and no vessel should be berthed except under his directions.

(3) An additional landing pier for coasting steamers is desirable, extending from the Nippon Hatoba, Benten. This would improve the despatch of coasting steamers and would leave more space available for anchorage generally.

(4) The Customs compound should, if possible, be extended in front of the Ironworks and also absorb the ground now occupied by the Ironworks up to the boundary of the Nippon Yusen Kaisha land; and farther Bonded Warehouses might be erected in place of the Ironworks.

(5) A service of passenger launches to and from vessels in the harbour, started from a stated point and at stated intervals would greatly relieve the pressure at the Eastern Hatoba.

(6) The proposed change of the Railway Station would act very injuriously upon the trade of the port. The present station might be enlarged and connected with the Custom House by means of a tramway for the conveyance of goods.

(7) The town of Yokohama is growing so rapidly in population that in a few years' time there will probably be some 300,000 people living here. The water supply is already very deficient and it is desirable to lay a second main from the intake to Yokohama, and to supply Kitagata, Aizawa, etc.

(8) Kanagawa Ken is not well supplied with broad roads. It would appear desirable to have a good road of ample width from the Japanese town through the Ota valley to join the Tokaido at or near Totsuka and thus facilitate the carriage of goods from the country. The existing carriage road from Yokohama to Tomioka might be continued to Kanazawa and Kamakura.

Should your Committee deem it desirable to have a personal discussion of these or other matters concerning the welfare of Yokohama, it will afford pleasure to the Committee of the Yokohama General Chamber of Commerce to meet any member you may appoint for the purpose at No. 61, Settlement.

I am, dear Sir, yours faithfully,

W. B. WALTER, Chairman.

REGULATIONS FOR THE COMMERCIAL SAMPLES MUSEUM.

NOTIFICATION NO. 26 OF THE DEPARTMENT OF AGRICULTURE AND COMMERCE.

Art. I.—The following samples of merchandise may be exhibited in this institution:—

1.—DOMESTIC PRODUCTS.

1. Staples of Export.
2. Commodities for which there is a prospect of export.
3. Articles capable of competing with those imported.
4. Articles which are likely to serve as materials for manufacture.

2.—FOREIGN PRODUCTS.

1. Articles which are likely to serve as models for Japanese manufacture.
2. Articles which are actually in competition with Japanese exports.
3. Articles for which there is a prospect of competition with those of home production.
4. Articles for which there is a prospect of manufacture in Japan.
5. Principal articles of import into Japan.
6. Articles for future import.
7. Articles available as materials for manufacture.

Art. II.—The Museum shall, besides the commodities mentioned in Article I, be provided

with specimens and patents, registered designs, and trade marks, from the Patent Bureau.

Art. III.—The Museum shall, as far as possible, endeavour to obtain such exhibits or contributions from natives and foreigners as are included in the category of Art. I., and exhibit the same in the Sections devoted to foreign and domestic productions.

N.B.—Rules for the transmission of exhibits will be drawn up.

Art. IV.—Articles of an explosive or combustible nature may be exhibited in packages only.

Art. V.—Articles for exhibition shall be divided into the following six Sections:—Domestic Products, Foreign Products, New Articles; Articles for Sample; Articles for Comparison (*santō-hin*), Patents.

Art. VI.—Catalogues of the articles exhibited in the Museum shall be printed from time to time and presented on application to dealers and others concerned.

Art. VII.—Visitors to the Museum are allowed to request the officials for an explanation of articles exhibited.

Art. VIII.—The Museum shall be put in communication with foreign and domestic museums, commercial and industrial schools, halls provided for the exhibition of national products or of commercial samples, and shall interchange printed matter, or lend, borrow, or transfer articles on exhibition.

Art. IX.—Any person desirous of purchasing exhibits may seek an introduction to the exhibitor.

Note.—The Museum, however, shall in no case be held responsible for complications arising from any transaction.

Art. X.—The Museum shall, as far as possible, take measures for investigating and reporting the market value of exhibits, fees for transport, customs duties, wholesale prices, purchasable quantities, and other particulars, at the request of dealers concerned, provided that the legitimate expenses incurred in obtaining such information are paid, if occasion requires.

Art. XI.—The Museum shall also take measures for ascertaining whether articles newly manufactured are fit for commerce or not, and of making arrangements for a trial sale of the same. In such cases, however, the fees for transport and other expenses, if necessary, must be borne by the applicant.

Art. XII.—The Museum shall publish a report containing foreign and home correspondence and reports and various other commercial items.

Art. XIII.—The report of the Museum may be purchased at the place of publication. In some cases, however, it will be distributed gratis.

Art. XIV.—The Museum shall be provided, for the inspection of the public, with a library wherein will be found reports and statistics relating to commerce and manufactures, maps and charts, books of reference, detailed accounts of patents, and designs, and trade marks, official reports, newspapers, magazines, &c.

Art. XV.—Of the articles exhibited in the Museum some may be prohibited from being copied, at the request of the exhibitor.

Articles on exhibition in the Museum shall be open to inspection free of charge.

Art. XVII.—Visitors are required to strictly observe the regulations and notices of the Museum.

Art. XVIII.—The Museum shall be open to inspection during the following hours daily, except on holidays mentioned in Article XIX:—

Note.—The hours of inspection may be changed or suspended should occasion require it.

From Jan. 8 to the end of Feb. } 10 a.m.—3 p.m.

Nov. 1 to Dec. 24 9 a.m.—3 p.m.

Mar. 1 to Oct. 31 9 a.m.—3 p.m.

Art. XIX.—The Museum shall be closed on Sundays and all National Holidays, and from 1st to 7th of Jan., and from 25th to 31st of Dec.

CORRESPONDENCE.

A STRANGE INTERVIEW.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I wandered through pathless woods far into the mountains, and sat down to rest on a mossy rock by a wild little stream. The birds sang in the trees overhead, the fishes leaped and darted in the water underneath, and my plain-weary eyes were almost intoxicated by nature's naked loveliness. Long I sat, listlessly musing the hot day away, until finally my eyes were attracted by columns of smoke lazily rising from a little dell not far away. "Who can live in this out-of-the-way spot?" I asked myself, "Is that the camp of a summer pleasure-seeker, or the home of some simple peasant?"

Impelled by curiosity, I slowly made my way over the rough stones and through the under-

brush, in the direction of the smoke. When I drew near I saw a little hut, surrounded by a small vegetable garden, and I knew that this lonely spot was *home* to some soul. As I approached closer I saw an old *inkyo-sama* quietly sleeping on the rough mats. He had the long face and oblique eyes of the old *samurai*. The snows of many winters had passed over his head and left something of their whiteness behind. I looked around the hut, but no one else was to be seen. The old man lived alone.

I called out to wake him, and asked the way back to Karuizawa as an excuse for the interruption. The old man sat up, stared blankly at me for awhile, rubbed his sleepy eyes, and then stared again. I repeated my question, and he finally seemed to comprehend the situation. Here was one of those red-haired foreigners that congregate in Karuizawa during the summer, about whom he had occasionally heard strange stories from the simple mountain folk. And this first white man he had ever seen was addressing him in his own tongue. This was an opportunity not to be lost, so he politely asked me into his house and immediately began a series of questions, as follows:—

"Where did you come from?"

"From the Western World, across the big sea," I replied.

"Is your country as large as Dai Nippon?"

"Oh, yes," I said "it is fifty times as large."

A look of utter incredulity spread over his face, but he continued—

"Does your large country bear fruits and grains in abundance, as Japan does?"

"Yes, it is very fertile."

"Then why did you leave it and come to this land?" he asked.

I explained to him that I had come to teach the Japanese people about the true God, and our proper relation to him.

"But we have our own religions, handed down from our ancestors; surely you would not have us give up these?"

I told him in reply that these religions were false, that there is only one true religion, and that it was my work to persuade his people to give up their religions and accept mine.

"You may persuade others, but as for me I will never leave the faith of my fathers," he answered with fine spirit.

Then he asked me if it was true that there were one hundred white people like myself in Karuizawa, and I told him that was about the number.

"Have they all come to my country to teach the new religion, like yourself?" he asked.

"Most of them have."

"How are they supported?"

"They are sent out by religious societies, who pay them a regular salary."

"Why do they all come together in a little village like Karuizawa?"

When told that it was for rest and recreation, he asked,

"Are they sick?"

"No, but they are tired, after their hard year's work."

"How long will they stay here?"

"About two months."

"I suppose they will spend that time studying Japanese, and preparing themselves in other ways for their work."

"No," I replied, "on the contrary, the time is spent in play."

"And are the people who send you out here and pay your salaries willing that you should spend so much time in play?"

I had to acknowledge that some of our supporters did not see the use of this rest, but explained that this was simply because they could not appreciate the situation. Then my old questioner began on another line.

"If so many of you whose sole business it is to make converts to your religion come every year to Karuizawa I suppose you have converted all the people of that town?"

I was in a tight place, but attempted to get out by saying that we preached to the town's people twice per week, although none of them had yet come to think as we do on religious subjects.

"Then is not your mission a failure?" he asked.

"Oh no, we have already gathered a church of about one hundred thousand people in Japan."

"How long have you been at it?"

"About thirty years."

"What has been the increase in population of the country during that time?"

I replied that I did not know exactly, but it would amount to several millions.

Then he asked, with a wicked smile,

"At that rate, how long will it take to make all Japan Christian?"

I do not know how long this old man of the

mountains would have gone on questioning me, but I suddenly remembered that night was drawing near, and I had a long journey through the woods. So I told him I had no time to talk further, and hastily took my departure.

This old man set me thinking, and I haven't stopped yet.

Your obedient servant,

BEN BARTON.

July 29th, 1897.

THE MORAL VALUE OF THE "JAPAN TIMES."

SIR,—Suffer me to point out an example of moral break-down in the *Japan Times'* apparent boast of Japanese readiness to listen to reason and logic when it comes to discussions on Christianity.

On June the 30th the *Japan Times* took up the Rev. Arthur May Knapp's book and in a wholesale way endorsed his religious animadversions. On July 7th was published my reply to the editor, with his own editorial response.

On July 12th I wrote another reply to the editor which he chose to pigeon-hole till the 27th, after I had addressed him a card on the matter. But in the meantime, on the 14th, 15th, and 16th he wrote lengthy editorials on the same subject in answer to the *Japan Mail*, accusing, on one occasion, the editor of dishonesty (!) in the discussion.

Again, upon the publication of my second reply on July 27th, I immediately (the 27th)—wrote a brief concluding response which I give below. This the *Japan Times* editor likewise pigeon-holed till I again wrote him a card requesting it to be returned if he was not going to publish it. He returned it Aug. 1, with regrets that "pressure of matter" prevented its publication. To those who have seen the recent "pressure of matter" in the *Japan Times* the editor's failure to toe the mark in honorable, courteous investigation of truth will be accounted for on vastly different grounds.

Respectfully,

E. SNODGRASS.

14 Tsukiji, Tokyo, Aug. 2, 1897.

"THE SO-CALLED CHRISTIANIZATION OF JAPAN" CONCLUDED.

TO THE EDITOR OF THE "JAPAN TIMES."

SIR,—Since you have, in accordance with your own judgment, but not in accordance with the customary principles of investigations of truth, decided to allow no further discussion in your paper on the main points growing out of our correspondence, I hope to be allowed a few words in closing what I have to say.

In your editorial response to-day you make a vital error in printing my words as saying, "But this changes her politics and polity; and besides, the assimilation is never like the original." My words were, "the assimilation is very like the original." This materially changes the point in discussion.

Those who have followed the discussion will be quite of the impression that from a positive affirmation that Japan will never be Christianized, you have descended to the declaration that there is probability in the matter, and that there are difficulties in the way, but not insurmountable. This is as much as I would say myself; and your answers to these difficulties are not altogether different from what I would answer myself.

But if you fall back on Shintoism as the unconquered faith of the Japanese, it needs first to be discussed whether or not Shintoism is really a religion at all. It is excessive reverence of dead ancestors; but that we should destroy the sacred memory of our departed loved ones the Gospel does not enjoin. But, pray, what part or parcel of the Japanese mind has been conquered by Buddhism that such a vast majority of the people are believers in *Shaka Sama*? Something must have yielded to Buddhism.

Your explanation of the conquest of Christianity in the Roman Empire, of the forces now making the dry bones of Buddhism and Shinto to shake, of the foreign element so radically changing the political foundations of the Empire, will hardly satisfy minds accustomed to reason and logic.

In conclusion, however, since you do not think the *Japan Times* a suitable medium of such questions as have grown out of our correspondence, I wish to say I can provide a suitable medium for the continuance of the discussion (and I think it would be profitable) if you are at all disposed to represent that side.

Very truly,

E. SNODGRASS.

14, Tsukiji, Tokyo, July 27th, 1897.

THE C. D. ACTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I take the liberty of sending you a copy of the *Union Signal* with a marked article relative to the re-introduction of the C. D. Acts in India. I do this because of the article which appeared in your columns some time ago in favour of re-establishing those Acts. In that article the "shrieking sisterhood" were referred to as having more zeal than wisdom. May I say that the "shrieking sisterhood," as referred to, are earnest Christian women who have studied the subject far deeper than those whose main forte is to fling epithets. They believe that all mankind are the children of one Father, whose desire for his children is that they shall live righteously, soberly, justly, and happily. He never made sin a necessity for any human being, nor do they believe He has ever ordained that one half of the human race should be ruined and made miserable, brought to the very gates of hell, simply for the selfishness and gratification of the other half. They believe that it is possible and right for all men to lead pure lives just as much as it is right and ought to be possible for all women to lead pure lives,—that what is right and possible ought to be, for the good of all.

I fail to see how any honourable man who is willing to admit that the good of the human race ought to lead to happiness, cleanness, and righteousness can call earnest, motherly tender-hearted women who are working toward this goal, the "shrieking sisterhood." I call it more honour to be counted in the ranks of the latter than the former. The use of the word "shrieking" quite destroys the force of the argument in that article, the vivid sorrows of Armenia and helpless women in all ages who are hopelessly in the clutches of brutish men, stronger than themselves, vainly "shriekingly" try to escape. Privately I believe, not looking at the moral side of the question at all, that it would be a gain to the English Government, costing less in dollars and cents, if they allowed the English soldiers in India to have their families with them, and in practice would be far safer and wiser and happier than the present unnatural isolation of men. If war and soldiers must be in this age of the world, let the concomitants be as unobjectionable and civilized as possible. Earnestly asking that you will kindly read the literature on this subject which I send,

I remain, Yours respectfully, A LADY.

July 25th, 1897.

RAMBLES IN FORMOSA.

[SPECIALLY WRITTEN FOR THE "JAPAN MAIL."]

ABOUT TAKAU.

The tides on the Formosan coasts are like a boarder with irregular habits: sometimes they put in their appearance in due time and sometimes they don't. It would, anyhow, hardly seem worth their while coming at all, because all they effect is only a difference in the sea level of from 5 to 8 feet. The flood rushes on from the limitless Pacific, but before reaching the east coast of Formosa, it is met and partly driven away by the Kuroshio, and at the western coast of the island the power of the monsoons makes itself much more felt than that of the flood, which gives way to the strength of the sons of Æolus. The same observation may be made at the opposite China coast, where the tide does not rise higher than about 7 feet, whilst in western Korea, where there are no hindrances to the onward march of the flood, it rises to 25 and 28 feet. The want of strong tides is a serious drawback to the development of navigation along the whole of Formosa, but particularly so on the east coast. South of Pilau there is quite a number of broad rivers, which would be navigable to a certain extent and would give good shelter to junks and small steamers, were it not for the insufficient height of the flood prevailing in these parts.

We had procured horses and rode from Pilau southward through what seemed to be the delta of a mighty stream, but was only a series of exceptionally widened beds of creeks and mountain torrents, frequently reaching to a breadth of several hundred yards and strewn with scattered pieces of rocks, huge boulders carried down from the mountain, and showing scarcely any vegetation. It was a huge wilderness, a veritable African desert, no soul alive for tens of miles, with the majesty and suggestive dreaminess of solitude lingering over the landscape. Mayor Kawamura had sent three mounted policemen with us, as the country did not seem quite safe as yet. He had also seriously dissuaded us from crossing the island directly from Pilau, since only the other day some Japanese officers, who had passed there, had had to bear the ill-will of the popu-

lation. Thus I was obliged, much against my will, to travel first south and then cross to the west coast through the Bodan territory, in the southern part of which Saigo's small force operated in 1874. We stopped at night at a native village, Tabar', hidden in a lonely grove of pride-of-India-trees and a planting of betel-nut palms, that are as graceful and admirable as the betel chewing is hideous and abominable. The village, consisting of some 80 houses of diminutive size, is clustered on the fertile slope of a steep promontory. Though dwelling only a few hundred yards from the much-sounding sea, which here seemed deserted and was not enlivened by a single sail, the natives, struggling enough, do not take to the ocean for fishing as they do not eat fish. The chief of the village, which is held by a dozen Japanese policemen, at first strongly objected to my being received into his house, because, he said, I looked entirely unlike a Japanese and it was only with these that they would have any dealings, but at last, at the police's recommendation, he relented. The greedy old rascal would not even then allow me to sleep in the bachelors' house, the best ventilated of all, but took me to his own grimy hut, where his two wives bade me greet him. After having obtained presents, he waxed jolly and proved a very intelligent savage. Out of his numerous offspring he pointed out with evident pride one of his sons, who had been to Shanghai and seen there plenty of Aman-huan—that's the native for westerners—like me. Then he made us admire the tattooing on the hand-knuckles of his suite, decorations of the skin that were of a depressing monotony and by no means artistically done. When I looked for similar adornment on the hand of some young fellow, the chief remarked with contempt, "he's only a *kuli*," thus giving me to understand that tattooing is a sign of distinction. As to the aforesaid bachelors' house, it was explained that it is set aside for the young bloods, not yet married, and nobody else is allowed to take even a temporary abode there. A similar custom is related in the Bible.

Entering the mountainous territory by a steep gorge, the following day, we had all the exercise we wanted. We were, in fact, climbing the whole day, and after having passed the night on straw in a most miserable hut, which actually consisted only of roof, we were confronted with the necessity of ascent once more. Always imagining that the summit of the pass is reached, and always finding out that a still higher peak baffled one's desire, one felt at last like Tantalus and hoped for speedy death. But the reward of our sufferings was great. Towards noon of the second day there burst upon our delighted eyes the magnificent sight of Kueilei (Punch and Judy mountain), that formidable peak to the east of Bam Kim Sin, whose steep precipices and solitary grandeur remind one of the Dolomite giant, surrounded by mighty vassals and intersected by fearful ravines. It was a grandiose picture not easily to be forgotten, and perhaps the more so because all the lower mountains and a large part of the West were hidden from view by hazy vapours arising from the valley, thus making the huge peaks appear as if loosened from the mother-earth and lifted up into aerial heights, a fairy world of its own. I fancy that even in clear weather it would be difficult to descry the ocean on either side.

The soil we trod was almost exclusively made up of grayish schists and slates, but occasionally I saw pieces of red porphyry, lending a fresher colour to the ground. The presence of igneous rocks, such as porphyry, is a standing witness to the volcanic activity of by-gone ages, to which I referred in a former letter, mentioning the Chishan volcano north of Takow and the two (hitherto perhaps unobserved) craters near Lattan. Further traces of the earth-fire's creations have been pointed out in the extreme south by Kleinwachter, author of an excellent essay on south-western Formosa in the journal of the R.A.S. (1882). On the mountains between Sangchiao and the Pacific, he says, bright flames have often been seen jutting out of the hard-baked earth, a phenomenon which Kleinwachter explains by the ignition of either sulphuretted hydrogen or—which would be a very valuable discovery from a commercial view—of the vapours of a petroleum spring, which would point to underlying strata of coal and bituminous shale. It is a well known fact, that similar phenomena and similar deposits occur in several parts of Northern Formosa. Roughly speaking, the highest central mass of the South Formosa chain is of primary age, consisting of crystalline schists, broken through by volcanic rocks; in the Silurian and Devonian periods an abrasion of the mountains followed, sandy sediments were washed out and clayey deposits of slates and shales were accumulated at the base of the central Alps; at the end of the Devonian period the land appears to

have risen again, undergoing a second submersion, thus causing accumulation of new sediments; the primary vegetation, chiefly composed of a low kind of palms, was covered by these sedimentary soils, compressed, altered, mineralized, and at last changed to seams of coal.

Leaving the summit of the pass, which is perhaps 6,000 feet high, and walking on the spur of a mountain on the western slope of the chain, just between two precipices, we saw the first native villages of the west coast at a considerable depth below our feet. The people in the northern valley, called the Lilisha, seemed to belong to another world, so different were they and their abodes from the people of the south, who were divided from them by a distance of only two or three miles. On the north side the houses were roomy, solidly built, quadrangular and formed a series of regular, broad streets, the whole of the respective settlements being fenced in by a low wall. Everything is made here of the ubiquitous slate; the mountains themselves are built up of it. The walls and roof of the houses and granaries—for these are always distinct—are composed of that serviceable material; slate plates are the shutters placed in front of the openings constituting primitive suggestions of doors and windows; blocks of slate serve as seats; on slate again it is that the natives wash the millet. The all-prevailing use of slate recalls a Rhenish mining village. On the southern side of the mountain pass mentioned above there were, strictly speaking, no villages at all, civilization falling beneath even that first station of settled life. Wherever a savage had a fancy to dwell, there he transplanted his penates and his family, constructing an indifferent hut, not larger than a good sized dog's kennel, and made up purely and simply of a thatched roof with plenty of holes for ventilation and refreshing rain. The superior wealth of the northern natives was also illustrated by the quite extended cultivation of the fields as well as by better and far more thorough-going and larger clothes. Likewise, the inhabitants of the midnight-side, with whom the Japanese have not yet succeeded in establishing peaceful relations, seemed better nourished and stronger built than those living towards noon, who are smaller and less warlike and who have been easily subdued. The language, though, appears to be essentially the same on either side and little different, for that matter, from that of the Piliu region. I noticed a striking similarity in some of the words with Japanese terms, but shall give here only a few. *Tamako* means egg in the Bodan dialects, *kako* wife; *bana* flower; *sigan* fish, may be compared both to *sakana*, and to analogous forms such as *ikan*, *igana*, *sga* in other Malayan idioms. Of the mental qualities of the Bodan the most striking is certainly their sturdy sense of independence, contrasting very much with the cowed servility of the Chinese peasant in the plains. They are no respecters of persons and do not stir from their seats if you enter their premises. On the other hand, they are far from hospitable, which the Taiwanese are to a marked extent, and they are as greedy as a high-way robber. Or ants they know next to none. In spite of these drawbacks their temper is rather a social, frolicsome one, and their intelligence of no mean kind. The women seem to enjoy a certain liberty and their work on the fields is shared by the men. The physique of both sexes is well developed and their features are not without charm. I found traces of a rough phallic worship in the shape of uncouth but unmistakable wooden amulets, which the warriors use as appendix to their weapons. The latter chiefly consist of an immense, finely wrought bamboo spear, such as neither Hector nor Achilles need have been ashamed of. I saw a specimen that measured fully four yards.

Emerging from the mountains, we bent our course to the south-west, arriving at the seashore at Pang Piao, which is garrisoned by a company of infantry and a large number of mounted police. I had some conversation with the Japanese officers and gathered that the district is still occasionally infested by robbers. They had brought in a prisoner, charged with robbery, only the day before. Not long ago, I was told, three Japanese gendarmes were attacked by 40 brigands but managed to beat them back. Pang hao can boast of a beautiful beach, covered with soft dark sand, and would be superior as a bathing resort to Ostend and Blankenberghe, save for that inopportune customer, the impossible shark. A youthful specimen of the voracious gentry was captured in our presence. The formation of the coast as well as of "small Linkin," the island of Lambay, which is continually seen on the horizon, is chiefly limestone, whilst the spacious town of Tangkong, which we reached a day after, lies on a curious kind of indurated mudflat, the material of which has been carried down from the slates of

the mountains by the Tang-kong river. The flats are wide and far resplendent with shining salt-crysts, being reminders of the sea-water, but nothing is done to exploit the salt deposits. One of the most attractive problems of the coast-structure is the formation of new land by alluvial soil, continually going on, and leading to a vast system of lagoons, such as is to be met with, though on a much larger scale, on the coast of Northern Germany and the Netherlands, or in Northern Siberia. At the time of the Dutch, little more than two centuries ago, the coast-line of western Formosa lay, as is evidenced by ancient maps, nearly everywhere from three to five miles further to the east than at present. Anping was an island and the war-junks of the Manchu sailed to the very walls of Taiwan-foo. South of Fêng-shan (the phoenix mountain) near Tang-kong there exists a large shallow bay. The roads through the marshy land were laid on artificial dykes. Now-a-days the space intervening between the mainland and the unconnected shoals and flat islands has been covered up and the extension of fertile, arable soil is still proceeding at a rate which is only surpassed by the progress of alluvial accumulation at the mouth of the Schat-el-Arab in the Persian gulf.

The population of Tongkang and neighbourhood is mostly of Fukiense origin. A few $\frac{1}{2}$ north of Tongkong are many flourishing settlements of sturdy Hakka, while to the east, towards Bam-kim-sing, I found numerous villages of half-Chinese half-Pepohuan. All these different elements live in discord with each other, agreeing only in their common hate of the cunning, intrigue-loving Cantonese. At Bam-kim-sing I was in the house of a Spanish missionary, father Colomer, the oldest foreign resident probably of Formosa. He has been nearly 30 years on the island, and is about 70 years of age, but feels still fresh enough to venture into new fields and to undertake the study of the Japanese language. The padre has written in Spanish a history of the fair island, with valuable remarks upon the usages and dialects of the Pepohuan of the South, which he knows like nobody else. Formerly he used to dress à la Chinoise, but now, yielding to the new era, he has cut his queue and altered his dress.

I can not close this sketch without offering a theory upon the aboriginal races and the early settlement of Formosa. The theory is based chiefly on linguistic evidence, but to some extent also on points of anthropology, which cannot be discussed here at length. Formosa was certainly discovered and settled before the beginning of our era. Who were the first discoverers? We hear of a tradition of the northern tribes to the effect that they came from pre-Mongolian China, and we are reminded of the Miaotse of the Flowery Kingdom. We are further informed, that in the central east of Formosa negrillos are to be met with. It is shown with sufficient evidence that the Longjous of Formosa are identical with the Linkinans, and we are asked to believe that small Lin-kin, i.e. Formosa, has been settled by immigrants from the scattered island chain of the north. It would be a herculean task satisfactorily to combine these contradictory statements. I shall leave the pigny problem alone, as being still in abeyance, and anyhow not largely affecting the main question. From whence the ancient Linkinans came and who they were, we have no means, as yet, of ascertaining; this much, however, seems pretty clear, that a part of that race found its way to Formosa. Now, it is conceivable that a migration of these islanders went from north to south, but to my mind at least the opposite direction of such a movement would appear much more plausible. I understand Formosa to be the large Lin-kin of the Chinese chronicles, the original stronghold of the aforesaid race, while the small Lin-kin is simply the still existing Chinese name of Lambay. Proceeding to the Miaotse hypothesis, I can only say that, for aught we know, the ancient Linkinans may, in a prehistoric age, have had seats in the mainland of Asia, may have, in fact, formed a part of the Man or Miao tribes. The only trouble in all this is the utter lack of linguistic proof, the impossibility of tracing Miaotse roots in any of the Formosan languages. The idioms of the aborigines of Hainan are completely different. As matters now stand, we must be content to admit that certain traces point to the presence in Formosa of a Lin-kin element, which may have come from China or may have mingled with a people originating therefrom, but we must add that this element was either confined to narrow limits or superseded by a powerful conquering race, arriving from the south-east. This race, I believe, to have been of Papuan extraction. The language spoken now-a-days in the Formosan Alps from 25°-23° northern latitude, is at least in its vocabulary essentially Papuan. In the course of time, conquered and

conquerors intermingled and formed at last one race, the present mountaineers of the fair island, but originally in all probability spreading over the whole island. Shortly after the beginning of our era, in any case before the sixth century, the *status quo* was again subverted. The buccaners of the Far East, the Malays, pounced upon the shores of Formosa and began to occupy the western plain and the southern hills. Later on, the east-coast was settled by irregular batches of Polynesian adventurers, to whom were occasionally added cast-aways of the Papuan race. From the sixth century onward, the Chinese commenced to encroach upon the west of Formosa, driving back or absorbing all the other races; but their influence was not greatly felt until after the middle of the 17th century. At that epoch, the whole population of the plain still spoke a Malayan dialect, since mostly abolished. As witnesses of all these changes, three groups of languages survive to the present day: the Papuan group in the middle north; the Malayan group, divided into the Polynesian at the east-coast and the Malayan proper in the extreme south and various points of the southwest; and the Taiwanese.

CONSULAR CONVENTION BETWEEN JAPAN AND BELGIUM.

His Majesty the Emperor of Japan and His Majesty the King of the Belgians, being mutually desirous of defining to the fullest extent and clearness the reciprocal rights, privileges and immunities of the respective consular officers, as well as their functions and the obligations to which they are subjected in both countries, have resolved to conclude a Consular Convention and have named as their Plenipotentiaries that is to say:

His Majesty the Emperor of Japan,
Viscount Anki Sinzo, Junii, Grand Cordon of the Imperial Order of the Rising Sun, His Envoy Extraordinary and Minister Plenipotentiary to His Majesty the King of the Belgians;

And His Majesty the King of the Belgians,
Mr. Paul de Favereau, Knight of the Order of Leopold, etc., Member of the House of Representatives, His Minister for Foreign Affairs.

Who, after having communicated to each other their respective full powers, found to be in good and due form, have agreed upon the following articles:—

Art. I.—Each of the High Contracting Parties agree to receive from the other, Consuls-General, Consuls, Vice Consuls and Consular Agents in all its ports, cities and places, except in the localities where it may not be convenient to recognize such officers.

This reservation, however, shall not apply to one of the High Contracting Parties without also applying to every other Power.

Art. II.—The Consuls-General, Consuls, Vice-Consuls and Consular Agents of each of the two High Contracting Parties shall enjoy reciprocally, in the States of the other, all the privileges, exemptions and immunities that are enjoyed by officers of the same rank and quality of the most favoured nation. The said officers, before being admitted to the exercise of their functions and to the enjoyment of the immunities thereto pertaining, shall present their commissions in the forms established by laws in their respective countries. The territorial Government of each of the two High Contracting Parties shall issue to them, free of charge, the exequatur necessary for the exercise of their functions, and, on the exhibition of this instrument, they shall enjoy the rights, prerogatives and immunities granted by the present Convention.

The Government issuing the exequatur shall have the right to withdraw the same on explaining the reasons for which it has deemed expedient to do so.

Art. III.—Consuls-general, Consuls, Vice-Consuls and Consular Agents, subjects of the State by which they have been appointed, shall be exempt from preliminary arrest, except in the case of offences which the local legislation qualifies as crimes and punishes as such; they shall be exempt from military billetings, from all service in the regular army or navy, in the national or civic guard or in the militia; they shall likewise be exempt from all direct taxes, state, provincial or municipal, imposed upon persons in the nature of capitation tax, unless such taxes become due on account of the possession of real estate, or for interest on capital invested in the country where the said officers exercise their functions. The exemption shall not, however, apply to Consuls-general, Consuls, Vice-Consuls or Consular Agents engaged in any profession, industry or commerce; but said officers shall in such case be subject to the payment of the same taxes that would be paid by any other foreigner under the like circumstances.

Art. IV.—When a Court of Justice of one of the two countries shall desire to receive the judicial declaration or deposition of a Consul-general, Consul, Vice-Consul or Consular Agent, who is a subject of the State which appointed him and who is engaged in no commercial business, it shall request him, in writing, to appear before it; and in case of his inability to do so, but in civil suits only, it shall request him to give his testimony in writing, or shall visit his residence or office to obtain it orally.

It shall be the duty of such officer to comply with this request with as little delay as possible.

Art. V.—Consuls-general, Consuls, Vice-Consuls and Consular Agents may place over the outer door of their offices a shield with the arms of their nation and with this inscription:—Consulate-general, Consulate, or Consular Agency of Japan or of Belgium.

They may also raise the flag of their country on their offices, except in the capital of the country when there is a Legation there. They may in like manner, raise the flag of their country over the boat employed by them in the port for the exercise of their functions.

Art. VI.—The offices of the Consular Offices who are subjects of the country by which they have been appointed and who moreover are not engaged in commercial or industrial business or in any other branch of trade, shall at all times be inviolable. The local authorities, except in the case of criminal proceedings, shall not, under any pretext, invade them. In no case shall they examine or seize the papers therein deposited. In no case shall the Consular offices be used as places of asylum. When a consular officer is engaged in other business, the papers relating to the Consulate shall be kept separate and the said papers shall be at all times inviolable.

Art. VII.—In the event of death, incapacity or absence of Consuls-general, Consuls, Vice-Consuls and Consular Agents, their Chancellors or Secretaries, whose official character will have previously been made known to the Minister for Foreign Affairs in Japan or to the Minister for Foreign Affairs in Belgium, shall be entitled to take charge ad interim of the business of the respective Consulates, and while thus acting they shall enjoy all the rights, prerogatives and immunities granted to the incumbents.

Art. VIII.—Consuls-General and Consuls may, so far as the laws of their country allow, with the approbation of their respective Governments, appoint Vice-Consuls and Consular Agents in the cities, ports and places within their Consular district. These agents may be selected from amongst the subjects of Japan or of Belgium or those of other countries. They shall be furnished with a regular commission and shall enjoy the privileges stipulated for Consular officers in this Convention, subject to the exceptions and reservations specified for the said officers.

Art. IX.—Consuls-General, Consuls, Vice-Consuls and Consular Agents shall have the right to address the administrative and judicial authorities, whether of the State, Province or Commune, throughout the whole extent of their Consular district, in order to complain of any infraction of the treaties and conventions existing between Japan and Belgium, and for the purpose of protecting the rights and interests of their countrymen.

If the complaint should not be satisfactorily redressed, the Consular officers aforesaid, in the absence of a diplomatic agent of their country, may apply directly to the Government of the country where they exercise their functions.

Art. X.—Consuls-General, Consuls, Vice-Consuls and Consular Agents of each of the two High Contracting Parties may take at their offices, at their private residence, at the residence of the parties, or on board ships the depositions of the captains and crews of vessels of their own country, of passengers on board of them and of any other subject of their nation. They may also draw up at their offices, conformably to the laws and regulations of their country, the certificates of birth, acknowledgments of illegitimate children, certificates of marriage and of death, concerning the subjects of their nation; but they shall at once notify the registration thereof to the authorities of the country. They may draw up in the like manner all contracts between the subjects of their country and the subjects or other inhabitants of the country where they reside, and even all contracts between the latter, provided they relate to property situated, or to business to be transacted, in the territory of the nation to which the said consular officer may belong.

Such papers and official documents of every kind, whether in the original, in copies or in translation duly authenticated and legalized by the Consuls, Vice-Consuls and Consular Agents, and sealed with their official seal, shall be received as legal documents in the Courts of Justice throughout Japan and Belgium.

Art. XI.—The respective Consuls general, Consuls, Vice-consuls and Consular Agents shall have exclusive charge of the internal order of the merchant vessels of their nation and shall alone take cognizance of all differences which may arise, either at sea or in port, between the captains, officers, and crews, for whatever cause it may be, particularly in reference to the adjustment of wages and the execution of contracts. The local authorities shall not interfere except when the disorder that has arisen is of such a nature as to disturb tranquillity and public order on shore, or in the port, or when a person of the country or not belonging to the crew shall be concerned therein.

In all other cases, except when their countrymen are concerned, the aforesaid authorities shall confine themselves to lending aid to the consular officers, if they are requested by them to do so, in causing to be arrested and kept in prison at their disposal, while the ship remains in port, any person whose name is inscribed on the crew-list, whenever the said officers shall think proper.

It is agreed, however, that this stipulation applies to cases only where such arrest and detention shall be deemed necessary by the local authorities.

The expenses of such arrest and detention shall be borne by the consular officers.

Art. XII.—Consuls-general, Consuls, Vice-Consuls and Consular Agents of each of the High Contracting Parties shall receive from the local authorities of the country where they reside, all assistance that can be granted to them by the law for the arrest of deserters of the ships belonging to their respective countries, except when the deserter is a subject of the country where desertion took place. To this end they shall address the competent local authorities of the respective countries, in writing, and shall make them a written request for the deserters, supporting it by the exhibition of the register of the vessel and list of the crew, or by other official documents, to show that the persons claimed belong to the said ship's company.

Upon such request alone thus supported, the delivery to them of the deserters cannot be refused, unless it should be duly proved that they were subjects of the country where their extradition is demanded at the time of their being inscribed on the crew-list or of their arrival in port. The deserters so arrested shall be detained and kept in the prisons of the country, at the request and expense of the consular officers, until there may be an opportunity for sending them away. If, however, such an opportunity should not present itself within the space of three months, counting from the day of the arrest, the deserters shall be set at liberty, nor shall they be again arrested for the same cause.

If the deserter had committed any misdemeanor, and the court having the right to take cognizance of the offence shall claim and exercise it, the delivery of the deserter shall be deferred until the decision of the Court has been pronounced and executed.

Art. XIII.—In the absence of an agreement to the contrary between the owners, freighters and insurers, all damages suffered at sea by the vessels of the two countries, whether they enter port voluntarily, or are forced by stress of weather, shall be settled by the Consuls-general, Consuls, Vice-Consuls and Consular Agents of the respective countries.

If, however, the consular officer has any interest in the ship or its cargo, or if he is an agent thereof, and if any inhabitant of the country or subject or citizen of a third power, shall be interested in the matter, and the parties cannot agree, the competent local authorities shall decide.

Art. XIV.—In case of the death of any subject of Japan in Belgium or of a subject of Belgium in Japan, the competent local authorities shall give immediate information of the event to the nearest Consul general, Consul, Vice-Consul or Consular Agent of the nation to which the deceased belongs; the said consular officers, on their part, shall give the same information to the local authorities when they shall be informed first of the event.

The competent local authority shall complete the aforesaid information by forwarding a copy in due form and free of charge of the certificate of death.

In case of the incapacity or absence of the heirs or in case of absence of testamentary executors, consular officers shall have the right jointly with the competent local authorities, to execute all deeds necessary for the preservation and administration of the succession, particularly to affix and to remove the seals, to make up the inventory, to administer and wind up the succession, in one word to take all necessary measures to safeguard the interests of the heirs, in case disputes should arise, which should be decided by the competent Courts of the country where the succession is open.

Art. XV.—The present Convention shall enter

into force on the same date as the treaty of commerce and navigation concluded the 22nd day of June 1896 between the two High Contracting Parties.

It shall continue in force for the space of twelve years computed from the day of its being put into execution.

In case neither of the High Contracting Parties give notice twelve months before the expiration of the said period, of its intention to determine the effects of this Convention, the same shall remain in force until the expiration of a year counting from the day on which one of the High Contracting Parties shall have denounced it.

Art. XVI.—The present Convention shall be ratified and the ratifications thereof exchanged at Brussels as soon as possible and not later than six months after its signature.

In faith whereof the Plenipotentiaries have hereunto set their hands and seals.

Done at Brussels, in duplicate, the 22nd December, 1896.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

FRESH OUTBREAK IN CHITRAL.

London, July 28.

A night attack has been made by tribesmen on the camp of the British garrison at Malakand, Chitral. Sharp fighting took place, in which one officer was killed and four wounded on the British side.

The rising in Chitral has assumed serious dimensions.

THE RISING IN CHITRAL.

A fresh attack has been made at Malakand. After severe fighting on Tuesday and Wednesday, the attack was repulsed. The loss on the British side was thirteen killed and forty-three wounded.

Desperate fighting continues at Malakand, the attacks on the British force being renewed nightly. A field force is now under orders to proceed to the relief of the Malakand garrison.

BRITISH NAVAL PROGRAMME.

The Right Hon. G. J. Goschen, M.P., First Lord of the Admiralty, speaking in the House of Commons on the Supplementary Naval Estimates, which provide an additional £500,000, said that it was intended to keep pace with the activity of other nations by accelerating the completion of ships now in course of construction, and by also commencing the building of four very fast cruisers, together with a number of torpedo-destroyers.

THE TRANSVAAL RAID INQUIRY.

The Hon. E. Stanhope, M.P., moved in the House of Commons, "that the House regrets the inconclusive nature of the report of the South African Committee and its failure to recommend any specific step against the Hon. Cecil Rhodes, and demands that Mr. Hawkesley (solicitor for Mr. Rhodes and the Chartered Company at the late Inquiry) be summoned to appear before the Bar of the House." The motion was rejected by 304 to 77.

The Right Hon. J. Chamberlain, Secretary of State for the Colonies, said it was not intended to prosecute Mr. Rhodes nor to remove him from the Privy Council.

The Marquis of Lansdowne, Secretary of State for War, replying to a question put by Lord Carrington in the House of Lords, said he regretted that there was nothing in the report of the South Africa Committee of Inquiry which would justify the restoring of forfeited commissions to Dr. Jameson's officers.

THE CONSTANTINOPLE CONFERENCE.

THE POWERS DISAGREE.

London, July 29.

Russia opposes the proposal drawn up by the German Ambassador as to the war indemnity to be paid by Greece to Turkey. The German Ambassador has consequently referred the matter home for further instructions.

DIFFICULTIES DISAPPEARING.

London, July 30.

The Ambassadors have redrafted the indemnity clause in a manner satisfactory to Germany [which at first stipulated for terms not acceptable to Russia].

It is expected that the conditions of peace will be finally settled on Saturday.

The Ambassadors in conference at Constantinople have completed the drafting of the treaty of peace.

RENEWED FIGHTING IN CRETE.

Frequent fights are taking place between Turks and the Allied Troops at Canea.

THE ALLIED TROOPS IN CRETE.

Orders have been issued to all the troops of the Allied Powers now in Candia, that in the event of their being further insulted they are to use their arms.

Forty-nine men of the 2nd Battalion Royal Welsh Fusiliers have left Malta for Crete.

TURKEY AND THE POWERS.

London, Aug. 3.

The Conference of Ambassadors at Constantinople assembled again on Saturday, when Tewfik Pasha submitted amendments to the draft treaty of peace. These amendments are held to be unacceptable, and consequently fresh difficulties threaten to arise.

Lord Salisbury has stated that Turkey agrees to the proposed frontier as laid down by the Powers, but desires to be also allowed the temporary occupation of strategic points in Thessaly until the indemnity is paid. The Powers have not yet settled this point. The outstanding claims of German bond-holders materially complicate the question how much indemnity Greece will be able to pay. Some form of European control of Greek finance is regarded as inevitable, but the negotiations in connection with the settlement of this point are likely to cause considerable delay. The Powers thought that it was of little use to deal with the Cretan question first.

August 4.

The Greek Minister of Foreign Affairs has stated at Athens that King George is prepared to abdicate in the event of the Greek finances being subjected to the control of the European Powers.

The Sultan has instituted a Naval Commission, to sit at the Yildiz Kiosk, under His Majesty's presidency, with the object of reviving Turkey's naval power.

A Turkish squadron has left the Dardanelles for Crete.

DISAFFECTION IN INDIA.

ARREST OF AGITATORS.

The Hon. Bal-Gangadhar Tilak, Member of the Bombay Council, and three of the leading Brahmins at Poona have been arrested on the charge of exciting disaffection among the people.

EASTERN MAIL CONTRACTS.

The House of Commons has approved the mail contracts to be undertaken by the Peninsular and Oriental S. N. Co. and the Orient line of steamers.

THE KING OF SIAM IN ENGLAND.

The King of Siam has arrived in England and proceeded to Buckingham Palace escorted by the Life Guards.

The King of Siam and Lord Salisbury held a long conference yesterday.

ACCIDENTS TO WORKMEN.

The House of Lords has passed the Workmen's Compensation for Accidents Bill.

ENGLAND AND HER COLONIES.

London, July 31.

Great Britain has formally "denounced" the Commercial Treaty with the German Zollverein, which has been in operation since 1865. The treaty will therefore expire in a year from this date.

THE "BRITISH ZOLLVEREIN" SCHEME.

London, August 2.

Great Britain has formally "denounced" the commercial treaty with Belgium, in the same way as that with the German Zollverein (as already reported) and now proposes to conclude new treaties to take the place of both.

The immediate effect of these treaties expiring will be to facilitate a reciprocal arrangement by which the Canadian tariff will accord preferential treatment to British goods.

These steps have created general satisfaction, and have elicited warm congratulations in Canada.

The German Press comments on the news in calm and dispassionate terms.

BEHRING SEA SEALING CONFERENCE.

Great Britain has agreed to take part in a Behring Sea Sealing Conference, which will be held at Washington in the autumn.

FLOODS IN GERMANY.

Prussian Silesia has been devastated by floods which are described as the most disastrous in this century.

CRICKET.

In the English county cricket tournament, Gloucester has beaten Yorkshire by 140 runs.

(OFFICIAL MESSAGE FROM FORMOSA.)

Received in Tokyo, August 3.

Eight hundred Chinese with no fixed occupation, who have clandestinely landed in Formosa, have been sent back to China.

(SPECIAL TELEGRAMS TO THE "JAPAN MAIL.")

NAVAL NEWS.

Otaru, July 30.

The British squadron on the China station, left here to-day to visit ports in the Gulf of Tartary.

Hakodate, August 2nd.

The Austrian cruiser *Panther* has left for Yokohama; H.M.S. *Peacock* has arrived here and the *Yoshino Kan* has left for Fushiki.

Hakodate, July 31st.

H.M. torpedo-destroyers *Handy* and *Hart* arrived here yesterday.

(FROM SAIGON PAPERS.)

ACCIDENT TO THE KAISER.

Paris, July 12.

The German Emperor, while cruising off the coast of Norway in his yacht, had one of his eyes injured by a piece of falling rigging.

DISASTROUS RAILWAY COLLISION.

Paris, July 12.

A collision between two passenger trains has occurred at Gjentofte, near Copenhagen. Eight carriages were broken up and forty persons killed and sixty more injured.

ATTACK ON A GOVERNMENT STATION
IN NORTH BORNEO.

Labuan, July 12.
The British North Borneo Government Station at Gaya was attacked by sixty rebels under Mat Salleh on Sunday morning. The town and Government Treasury were burnt and looted. One police corporal and two prisoners were killed.

(FROM THE "SHANGHAI MERCURY.")

DEATH OF MR. A. P. HAPPER.

Newchwang, July 28.
(9.37 a.m.).

Mr. A. P. Happer, Commissioner I.M. Customs, died last night. The cause of his death was hydrophobia.

(FROM THE "SINGAPORE FREE PRESS.")

THE RAID IN NORTH BORNEO.

Labuan, July 20

Messrs. Hewette and Wheatley have returned to Labuan from their expedition to Inanam where Mat Salleh had fortified himself. The result of their operation is that they have rescued Mr. Neubronner, the Treasurer of Gaya, who had been carried off as a prisoner. Mat Salleh himself has taken to flight and escaped into the jungle.

CHESS.

All Communications to be addressed to the CHIEF, ROYAL.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following is the solution of Problem 330:—

WHITE. BLACK.
1—Kt to Q 6 1—K takes P (K 7)
2—Q to B 8 2—Any move
3—Q to K 8, mate
1—K takes P (K 5)
2—Q to K 3, ch 2—K takes Kt or
3—P to K 8=Kt, mate [moves]
Correct Solution received from W.H.S.

PROBLEM No. 332.

By J. O. S. THURSBY.

BLACK.

White to play and mate in two moves.

OVER THE CHESS-BOARD.

Singapore and Hongkong are now engaged in a cable-tourney, the cable companies having generously placed their lines at the players' disposal, receiving messages free of charge. The Hongkong Chess Club put the arrangements into the hands of Colonel The O'Gorman (President of the Club) and Mr. W. C. Barlow, Hon. Secretary, and these entrusted the conduct of the games to a Consulting Committee of three Members—Colonel The O'Gorman, Mr. P. de Souza, and Mr. T. H. Reid.

The following were the positions in the match on July 28th:—

GAME I.—RUY LOPEZ.

White—Singapore. Black—Hongkong.
1—P to K 4 P to K 4
2—Kt to K B 3 Kt to Q B 3
3—B to Kt 5 P to Q 3
4—P to Q 4 P takes P
5—Kt takes P B to Q 2

GAME 2.—GIUOCO PIANO.

White—Hongkong. Black—Singapore.
1—P to K 4 P to K 4
2—Kt to K B 3 Kt to Q B 3
3—B to B 4 B to B 4
4—P to Q B 3 Kt to K B 3
5—P to Q Kt 4

Mr. H. E. Pollock, the Chess Champion of Hongkong, is at present in Japan, recruiting his health.

According to the *Manchester Evening News*, the incidental expenses of the late cable team match between the House of Representatives and the House of Commons amounted to no less than \$2,250 (gold) exclusive of the value of the trophy, say \$525. The *New Orleans Times-Democrat* adds:—"Pretty costly sport, all things considered; \$2,775 would make a fine nucleus for an international masters' congress."

The beginning of the great Berlin tournament, in which will be offered for competition a trophy presented by the German Emperor, has been postponed until September.

The woman's chess tourney, inaugurated by a number of English ladies in honour of the Queen's Jubilee and held in London, came to a close on July 6th, and was in all respects a very satisfactory affair. Representatives of nine countries participated in the contest and over \$1,000 was awarded in prizes. The prizes were won as follows:—Miss Ridge took first prize, \$300; Miss Fagan second, \$250; Miss Thorold third, \$200; Mrs. Harriet Worrall, who, like Mrs. Showalter, aspires to the title of chess champion of the United States, was in excellent form and succeeded in securing the fourth prize, \$150, a very praiseworthy feat; Mme. Bonnefion fifth, \$100; and Lady Thomas and Mrs. Berry divided sixth, \$75. The following are the final summaries:—

Players.	Won.	Lost.	Country.
Ridge, Miss.....	17	2	England
Fagan, Miss.....	13½	4½	Italy
Thorold, Miss.....	14	5	England
Worrall, Miss.....	13	6	America
Bonnefion, Mme.....	12½	6½	Belgium
Field, Miss.....	12	7	England
Berry, Mrs.....	11½	7½	Ireland
Thomas, Lady.....	11	8	England
Rux, Miss.....	10½	8½	England
Gonding.....	10½	8½	England
Watson, Miss.....	10½	8½	England
Hooke, Miss.....	10½	8½	England
Sydney, Miss.....	10	9	England
Herzsch, Frau.....	9½	9½	Germany
Eschwege, Miss.....	6	13	England
Müllerharing, Frau.....	5	14	Germany
Forbes-Sharpe, Miss.....	4	15	Scotland
Rinn, Miss.....	3½	15½	Ireland
De Lavigne, Mme.....	3	15	France
Stevenson, Mrs.....	1	18	Canada

The last three named retired from the tournament after a few rounds had been played.

The *American Chess-Magazine*, in its first number, publishes 22 problems, and announces the inauguration of a continuous problem-solving tournament open to yearly subscribers only. A running score will be kept for each competitor, who will be credited for each correct solution as follows: 4 points for 5-movers; 3 points for 4-movers; 2 points for 3-movers; and 1 point for 2-movers. Every competitor who gets a score of 250 points to his credit will be awarded a handsome prize.

The *Newark Call*, in commenting on Steinitz's proposed literary venture, "The Jewish Element in Chess," says:—"Steinitz is himself a Jew, and there are and have been many Jews who were and are eminent in Chess. Zukertort; Rosenthal, the French champion; Max Weiss, Max Judd, Baron Kolisch, Alapin, Lasker, Lowenthal, Winawer, Ehrenstein, Baron Rothschild, and many others are Jews."

The following position actually occurred in a game between J. Metger and Louis Paulsen at the Chess-Congress in Nuremberg in 1884. The game was declared a draw; but Black has a win.

Black—LOUIS PAULSEN—Three Pieces.

White—HERR J. METGER—Two Pieces.
Black to play and win.

In connection with the recent Ladies Chess Tourney in England and the position won by Mrs. Worrall, the following game should prove interesting.

GAME No. 736.

IRREGULAR OPENING.

White—Mrs. Showalter.	Black—Mrs. Worrall.

Pig Iron, per box	5.90 to 6.00
Pig Iron, No. 3	4.10 to 4.20
Hoop Iron (1 1/2 to 1 3/4 inch)	4.80 to 5.00

KIKKOSHIK.

No change has taken place in the market, and very little business is doing.

American	2.00 to 2.06
Russian	2.00 to 2.06
Langkat	—

SUGAR.

Brown continues to arrive, 11,989 piculs from Manila and 9,836 piculs from China having been received. Sales during the week ending the 3rd amount to 54,165 piculs, of which 45,000 piculs were Manila. Prices have risen from 5 to 40 cents per picul, the latter being for Daitong. Formosa kinds have gone up to cents per picul and sales amount to 9,850 piculs. Very little has been done in White refined, at former rates.

Brown Takao	36.5 to 3.75
Brown Manila	43.5 to 5.05
Brown Daitong	2.90 to 3.30
Brown Canton	3.10 to 4.20
White Java and Penang	6.60 to 6.70
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

Filatures have been somewhat neglected, in spite of the apparent willingness of holders to grant some concession in prices as last quoted. Shipments include 300 bales per Verona and 345 bales per Hohenzollern, for Europe, and 646 bales for America per Coptic. Stocks on the 6th amounted to 6,592 native boxes, or half bales, and sales during the week to 2,446 boxes.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, AUGUST 14TH, 1897.

BIRTH.

At Karuizawa, on August 7th, to E. S. and Dr. Nina A. Stevens, a SON, Henry Asbury Stevens.

SUMMARY OF NEWS.

THE Court still remains in Kyoto.

COUNT MUTSU is seriously ill at his villa in Tokyo.

SENOR CANOVAS, the Prime Minister of Spain, has been assassinated.

THE funeral of Count Goto, in Tokyo last Sunday, was a very great affair.

MARQUIS ITO is hastening home, and the political quidnuncs are all on the *qui vive*.

MR. GOWKY, the new U.S. Consul-General to Kanagawa, arrived in Yokohama on Tuesday.

H. I. H. PRINCE ARISUGAWA being expected to arrive in a few days by the *Empress of China*,

some officials of the Imperial Household Department will come to Yokohama to welcome His Highness.

BISHOP BICKERSTETH, of Tokyo, has died at Swindon, England, at the early age of 47 years.

A FORMER Vice-Minister of State is to be the new editor of the *Osaka Mainichi Shimbun*.

MR. LAFFIN'S Yacht *Mary* won the two days' sailing race this week, beating her rivals easily.

THE Aquatic Sports of the Y. A. R. C. took place on Wednesday, but attracted few competitors.

FLOODS and destructive storms are reported from various districts in Japan, as well as from Tamsui, Formosa.

WHEN the new reservoir at Noge is completed the water supply of Yokohama will be increased by 20,000 gallons per twenty-four hours.

AN investigation for the amendment of the Patent Regulations is now in progress at the Department of Agriculture and Commerce.

H. I. H. FIELD MARSHAL PRINCE KOMATSU left Tokyo on the morning of the 10th instant for Sano Province, to escape the heat of the capital.

THE payment of yen 54,000, expenditure incurred by quarantine stations, from the second reserve, was sanctioned by the Government on the 9th inst.

A BOATRACE between men from the U.S.S. *Olympia* and a crew from H.M.S. *Pique* was rowed in Yokohama Bay on Tuesday, and was won by the former.

SOME Russian officers who entered Seoul, on the 28th ultimo, are reported to have been engaged by the Korean Authorities as drill-instructors for the Korean soldiers.

It is proposed to turn the Tokyo Tramway into an Electric Railway; all tramway lines now running through the capital are to be changed to meet the proposed scheme.

THE Foreign Office has received a telegram from Mr. Yamada, Consul in Bombay, to the effect that from 25 to 30 new cases of cholera are now reported daily in Bombay.

H. I. H. THE PRINCE IMPERIAL is slightly indisposed. Dr. Baelz and Dr. Hashimoto are in attendance on the Prince, who is staying at the Palace at Hayama.

THE Ryogoku Bridge, we learn, is to be rebuilt in accordance with the latest amendments of the City Regulations. The work will commence early in November.

LIEUT.-GENERAL KAWAKAMI and suite, who started for Vladivostok on a tour of inspection the other day, were accompanied by a military attaché of the Russian Legation who acts as their guide.

THE Imperial Court has given yen 5,000 to the family of the late Count Goto in recognition of his great services at the time of the Restoration, in which the deceased Count played a most important part.

DYSENTERY is very prevalent in Kanagawa Ken. On the 5th inst. the new cases numbered 75, of which 7 proved fatal. From the outbreak of the disease up to date the total cases number 516, and deaths 55.

A DREADFUL accident attended by loss of life occurred during the *Kawabiraki* festival in Tokyo on Tuesday evening. The railings of the Ryogoku Bridge gave way, precipitating

dozens of people into the water. Some corpses have been recovered.

THE *Yomiuri* hears that when Marquis Ito reached New York en route to England to attend the Jubilee celebrations, the only visit paid to him was by Colonel Grant, son of General Grant, former President of the United States.

MR. STAHLGREN, Danish Consul at Tientsin, was arrested on Monday evening on board the British ship *Columbia*, then aground on Saratoga Spit, on a charge of embezzling \$4,000, etc. Mr. Stahlgren has since been released on bail.

ON the 15th ult., an enquiry into the circumstances attending the collision between the British steamer *Glenfarg* and the Japanese junk *Fukuei Maru* in the Inland Sea was held at the Osaka Marine Office. The court found that Pilot Bishoff had not been as careful as he should have been, but let him off with a caution.

THE conscription regulations for Okinawa Ken and the Ogasawara Islands will go into force from January next year. According to the decision of the War Office, conscription affairs in Okinawa Ken are to be placed under the control of the Commander of the Kagoshima Regimental Section, and those of the Ogasawara group under the control of the Commander of Azabu Regimental Section, Tokyo.

IN the thunderstorm that occurred in Tokyo on the evening of the 7th inst. several places were struck by lightning. The first bolt fell upon the roof of a beef-shop at Moto-machi, Honjo, and one of the servants there was rendered insensible, while some *jinrikishamen* who were on Ryogoku Bridge at the time suffered similarly. Another flash of lightning struck Nos. 1 and 12, Takecho, Shitaya, but happily no persons were injured. A huge tree standing in front of the Hikawa Shrine, Koishikawa, was split in two by the lightning.

If anything were wanted to discourage business during the past week, the floods and earthquakes in many parts of the country and the long in-coming but now excessively hot weather generally, would be amply sufficient. At all events the fact remains that scarcely anything is doing in the Import market. Nobody wants cotton piece goods of any kind and though a few transactions have taken place in woollens, and just enough yarns have been bought to keep the weavers employed, the trade generally is lifeless. Of metals little more can be said, though recent concessions in some of the home rates have led to some inquiries in certain lines. Sugar has stood the trial best of any imports; the Japanese must have their cakes and confections even in the hot weather. There has been a fair demand for brown, though little has been done in white refined. In kerosene there has been a small hand-to-mouth business transacted. In the export market, where foreigners are the buyers and Japanese the sellers, business has been brisker. Purchases of silk have become more general, though one or two of the largest purchasing firms still hold aloof. Demand for re-reels has exceeded the supply, and filatures have also been bought in considerable quantities, prices stiffening all the while. In waste silk nothing has yet been done. In tea, sales are gradually decreasing in quantity, though prices are still maintained. The heavy purchases of first crop teas at fancy rates, with a view to landing them in America before the proposed import tax on tea came into force, must have the effect of slackening the buying now, particularly if holders maintain their prices as they are seem inclined to do. Exchange is still very weak.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The *Nichi Nichi Shimbun* discusses the subject of maritime enterprise in a thoughtful and striking article. During the past few years, the Japanese appear to have been captivated solely by the idea of ocean navigation. They have planned lines to Australia, India, America and Europe. Such undertakings are invariably of a precarious character. To conduct them profitably without State aid in the form of bounties or subsidies seems impossible. Even a country like England, which stands easily at the head of all nations in respect of the qualities needed for this purpose, is obliged to make large annual grants for the maintenance of steam-ship services to distant lands. France, Germany and America adopt the same policy. Yet the dividends received by shareholders in such enterprises are comparatively small. The North German Lloyd Company, for example, which enjoys a munificent measure of State aid, could not pay more than 4 per cent. to its shareholders when it last rendered its accounts, and British companies congratulate themselves if they can pay 5 per cent. These facts conclusively demonstrate the great difficulty of making money by ocean-going steamers. Yet the Japanese, without experience of such and without cheap capital or skilled seamen, rush into competition with foreigners in the most reckless manner. They even compete with one another, though it is to be observed that anything of that kind is carefully avoided by the English, the French, the German and the Americans. The Peninsular and Oriental, the North German Lloyds, the Messageries Maritimes, the Occidental and Oriental—none of these companies is called on to compete with steamers flying the flag of its own nationality. The Japanese allow themselves to be carried away by ambition for empty reputation and lose sight of the dictates of solid gain. While showing this eagerness for Ocean-going lines, they neglect maritime enterprise that lies at their doors. The coast-wise carrying trade is in every way a simpler undertaking than ocean-steamer enterprise. It requires less capital and less experience; an inferior class of vessels may be employed; the risks are smaller and the opportunities of money-making larger. Despite these facts the Japanese have not only failed to secure their own coast-wise carrying trade for themselves, but they have made practically no attempt to get a footing in the China Sea. The last reports of the Imperial Maritime Customs (Chinese) show that, during 1895, the number of ships engaged in the carrying trade in the China Sea was 38,132; with a total tonnage of 29,737,078 tons. Among these 19,579 were British, with a tonnage of 21,125,790 tons; the Germans had 2,634, with a tonnage of 2,441,185 tons, the French 3,766, with a tonnage of 341,345 tons; and the Japanese 103, with a tonnage of 121,691 tons. The Chinese appear upon the list, but their place is so insignificant that they might as well be omitted. They have suffered their coastwise and riverine carrying trade to be entirely absorbed by foreign ships, and there is not the smallest apparent prospect of their recovering, or attempting to recover, the lost ground. Now the China Sea is at Japan's doors. She has many advantages for engaging in maritime competition there. She is close to it; she has coal supplies handy, she uses the same script as the Chinese, and she produces much that they need. Why does she not turn her attention vigorously to such a profitable field lying within easy reach, instead of engaging in distant and precarious undertakings? If she can not succeed in competition with foreigners in the China Sea despite her obvious advantages, what reasonable hope can she have of succeeding in competition with them on the high ocean where, in many respects, they are much better equipped than she is?

The question of official salaries is taken up by the *Fiji Shimpō*. We have seen the House of Representatives clamouring, session after

session, for a reduction of these salaries; we have seen the Cabinet resolutely setting its face against any such measure; we have seen the Emperor order a wise compromise in the form of a temporary subscription of ten per cent. of every official's pay for the purpose of naval shipbuilding; and we have seen the same House of Representatives, in its last session, urge His Majesty to remit the charge. Probably the impression left upon the mind of superficial observers is that officials in Japan do receive emolument disproportionate to the resources of the State, and that the Government refuses to listen to remonstrances on the subject. The *Fiji* approaches the question from the incontrovertible basis of arithmetic. At the end of 1895, the total number of officials in Japan was 46,698, and their total annual pay, 1,140,480 *yen*, being an average of 20.35 *yen* per month, or 67 *sen* daily. At the close of 1896, the number was 50,367, and their total annual pay 1,197,616 *yen*; being an average of 19.81 *yen* monthly, or 54 *sen per diem*. Since 1890, however, the prices of the necessities of life and the wages of labour have nearly doubled. A carpenter or a plasterer gets 70 *sen* a day at present; a mason gets a *yen*; a *jinrikisha* coolie earns 70 or 80 *sen*; a common labourer receives 40 *sen*. It appears, therefore that an educated official is not so well paid as a man that plasters walls, lays bricks, or runs between the shafts of a *jinrikisha*. Our readers can easily conjecture the comments elicited from the *Fiji Shimpō* by these figures. We need not reproduce them.

Mr. Shimada Saburo, writing over his own signature in the *Mainichi Shimbun*—of which he is the proprietor—denounces, in strong terms and at somewhat tedious length, the existence of the Colonization Department. Japan has no need of such an office. Either she does not want a Governor General of Formosa or she does not want a Minister of Colonization. The powers, military and administrative, vested in the former official, are so extensive that he is obviously independent of the latter. Mr. Shimada enters into statistics with reference to the colonial possessions of Spain, Portugal, Holland, England and France, and says that, in their cases, the organization of a Department to take charge of such large interests is necessary. But Japan has only one solitary island on the list of her colonies, and when she undertook to provide herself with a special Department of State on account of that one possession, the natural consequence was that European statesmen attributed the proceeding rather to aggressive designs than to unreflecting luxury of officialdom, and Spain, above all, concluded that her colonial property in Japan's neighbourhood was menaced. As for the origin of the Department, Mr. Shimada attributes it to Marquis Ito's imitative propensity in the first place, and to his political convenience in the second. Some say that the Marquis is a man gifted with the constitution making faculty; others allege that he is merely a skilful imitator. According to these latter—of whom Mr. Shimada is evidently one—the Marquis established a Colonial Department, not because he discovered any real need of it in Japan, but because he found it in the administrative mechanism of European States which served him as constitutional models. And there was another reason. He saw his Cabinet threatened with grave perils on account of the retrocession of Liaotung, and understood that unless he could silence his opponents by taking their leader into the Ministry, there was no hope of the latter's continued existence. But he had no portfolio available at the moment. He therefore created one, and gave it to Lieut.-General Viscount Takashima. Mr. Shimada is very bitter about that manufacture of a useless Department for political purposes. He also dwells upon the signal failure that has attended Japan's administrative effort in Formosa, and seems inclined to attribute it, in part, to a perplexing and needless division of responsibility between the Colonization Department in Tokyo

and the Governor-General's Bureau in Taipeh. The whole nation clamours for reforms in Formosa, and the Government should bravely take the opportunity of abolishing the Colonization Department. The country can not afford such wasteful excrescences. Mr. Shimada does not speak as plainly as the *Fiji Shimpō* on the subject of official emoluments. As a leader of the political party which agitated conspicuously in past years for the reduction of that class of expenditure, it would, perhaps, be difficult for him now to take the opposite line, though changed times might justify him in doing so. But his arguments point unmistakably to the conclusion that administrative pay should be raised, for among the reasons adduced by him in support of the abolition of the Colonization Department, one is that the funds at the disposal of the Communications Department and the Educational Department do not suffice to procure staffs competent to discharge the tasks of instruction and communications. The article is much too long to produce in any detail, but from this epitome our readers can obtain a pretty clear idea of its gist.

The *Hochi Shimbun* has two articles the purpose of which is to denounce the secrecy observed by officialdom in the domain of foreign policy. The Japanese people are very ready to criticise their diplomats, but the truth must be confessed that if the critics were to change places with the criticised, the same faults would be made. The Japanese nation has had virtually no experience in foreign politics. Only within the past forty years has it enjoyed international intercourse, and that it should be unskilled in diplomacy is more or less inevitable. Hence it is that, in the first place, the statesmen charged with the direction of the country's foreign affairs, find it difficult to obtain competent men for diplomatic posts; in the second, the people's ideas of foreign affairs are crude and unintelligent; and, in the third, domestic politics are confused with foreign in a manner that seriously cripples the nation's representatives. It is plain that to educate the people ought to be a prime aim of officialdom, and that, with such a purpose in view, the utmost possible candour should be shown by those charged with the care of international relations. The *Hochi* finds that the Russian Government manages to make every unit of the nation an instrument for promoting its ends. Thus, prior to the war with China, when Russia's policy was to hold the Middle Kingdom in check and push Japan to the front, even the fishermen on the coast of Siberia and the convicts in Saghalien showed a markedly friendly demeanour towards Japan. But since the war St. Petersburg's programme has been reversed; China is now the great Northern Power's *protegé*; Japan its *bleu noir*; and the change is faithfully reflected in the demeanour of even the most insignificant Russian in the Far East. It is the same as between France and Russia. The alliance of those two countries is an alliance of their peoples, not of their statesmen only. The people understand what the Government is doing, render intelligent assistance, and do not permit domestic politics to hamper the attainment of international objects. The spectacle is very different in Japan, and the *Hochi* thinks that one principal cause of the difference is the nation's ignorance of the Ministry's policy.

Discussing the projected international conference on the subject of the preservation of Seals and Sea-otters in the northern seas, the *Yomiuri Shimbun* suggests that Count Okuma ought to represent Japan on that occasion. The United States has entrusted the matter to Mr. Foster, formerly Secretary of State, and Great Britain sent Mr. Joseph Chamberlain to the last conference. It is, therefore, apparent that the delegate from Japan should be one of her ablest statesmen. The *Yomiuri* supports this proposition by pointing out that many incidental ends might be served by Count Okuma's presence in Washington. He would be there just before the meeting of Congress and he might exercise much influence in the direction of dispelling all ap-

prehensions about Japan's attitude towards Hawaii, and of establishing the peaceful motives of her policy in the Pacific. He might also take a part in the arrangements now pending about the Panama Canal, a question of no small importance to Japan. He might, further, inaugurate negotiations for treaty relations with the South American republics that are not yet in touch with Japan; and he might, finally visit Canada, and induce it to become a party to the Revised Treaties. The *Yomiuri* recognises the physical inconvenience that Count Okuma would experience in making such a journey, but thinks that His Excellency is not likely to be deterred by any consideration of that kind.

The want of a strong pro-Government political party, commanding an undoubted majority in the Diet, is regarded by the *Kokumin Shim-bun* as a serious impediment to the successful working of the administrative machine. It considers that measures essential at the present juncture, above all, the increase of taxation by raising the rates of the *Saki* Tax and the Land Tax, can not be adopted because the Cabinet thinks it hopeless to obtain the consent of the Diet. Hence the *Kokumin* would have the Ministry begin forthwith to make such arrangements as shall secure the return of a large phalanx of Cabinet supporters at the general elections next year; which end accomplished, the Cabinet should make up its mind to stand or fall according to the mandate of parliament, and to pay no more attention to the "camera statesmen."

The *Nippon* attacks Counts Matsukata and Okuma with great vehemence. It wants to know what they are about; what they contemplated when they accepted office; what they have accomplished since they came into office. Marquis Ito was supposed to be a skilled administrator but an inept financier; Count Matsukata, an expert financier but an unskilled administrator. On these grounds the latter displaced the former. Count Matsukata told the Diet last session that he had not been at the head of financial affairs long enough to make any material departure from the programme of his predecessors, but he promised to present a thoroughly satisfactory Budget next session. His sole achievement towards regulating the finances seems to have been the adoption of gold monometallism, and now that the country is on the eve of the change, no benefits make themselves apparent. As for the Budget, it is understood that next year's expenditures will be greater than this, and the air is filled with rumours about increased taxation. Where, then, is the Diet to find grounds for the satisfaction that Count Matsukata promised to procure for it, and where is the nation to discover a reason for the substitution of a Matsukata-Okuma Cabinet for an Ito? It is said by some that the change was really a transfer of power from the military to the civil party, and that it was necessary in the interests of public tranquillity. To such a contention the answer is that Count Matsukata has adopted the armament-expansion programme of Marquis Ito in its entirety. The *Nippon* preaches at great length from this text, but says nothing that adds any special force to the above. It must be remembered that the *Nippon*, the chauvinist *Nippon*, has always been in favour of reducing the dimensions of the armament-expansion scheme.

Assuming the truth of the rumour that a certain number of Russian officers and soldiers have entered Korea, about which incident there is no longer any room to be doubtful, says the *Yorodsu Choho*, it is plain that Russia has taken a new step forward in the peninsula. If she has sent in ten men now, without opposition, there is nothing to prevent her sending ten more by and by; and ten more, and ten more, in infinite series, until she is in a position to achieve her purpose of reducing Korea to the position of a semi-dependency of her own. If such things are possible under the Russo-Japanese Convention, the avowed object of which was to preserve

Korean independence, then, the *Yorodsu* thinks, it ought to be torn up. That, in fact, is the tenor of our contemporary's writing. It urges the Cabinet not to be bound by the blunders of its predecessors, but to adopt, as a basis of action, the broad principles of national safety and neighbourly obligation.

THE TARIFF.

We observe that the *Japan Gazette*, referring to the new Tariff, makes a statement which seems to be of a very misleading character. It says:—"So far as we understand it, the case stands as follows:—The publication of the tariffs in the *Official Gazette* some time ago, included the six months' notice to those countries whose treaties had been revised, and that notice will expire in September. Two Treaties of importance, the French and the Austro-Hungarian Treaties, have yet to be ratified. It is just possible that for some concessions the French and the Austrians may agree to waive the six months' notice and consent to the new Tariff coming into force directly ratification is accomplished. Business men, therefore, will be wise if they carefully watch the progress of the negotiations in Paris and Vienna." The publication referred to was that of the General Tariff enacted by the Diet last session. It had nothing to do with the Conventional Tariff appended to the new Anglo-Japanese Treaty. We fail to see why there should be any difficulty in understanding this matter. The Conventional Tariff—that is to say, the Tariff fixed by international negotiation—covers only a certain number of articles. The number determined by the British negotiators has been supplemented by the German, and may, perhaps, be still further increased by the French. But there remain, of course, many articles not included in these lists, and for the rates leviable on such articles the General Tariff provides. The General Tariff has another use, also. Its provisions are applicable in their entirety to countries which have no treaties with Japan but nevertheless trade with her. That point, however has no interest for the British merchant. All that concerns him is that whenever the duty leviable on any import is not determined by the Anglo-Japanese Tariff, or other Conventional Tariff, the rate indicated in the General Tariff must be paid. It goes almost without saying that the publication of the General Tariff in the *Official Gazette* has nothing whatever to do with the date of putting the Conventional Tariff into operation. The two things are wholly independent. The Revised Treaties provide that six months' notice must be given before putting the new Tariffs into operation, and, of course, six months' notice will be given. The idea that a question involving large sums of money and affecting a wide range of commercial transactions should be settled in the hole-and-corner fashion suggested by our contemporary, is not to be entertained for a moment. Merchants of all nationalities may rest assured that they will have ample official warning before any change of rates is made in practice.

THE LATE SEÑOR CANOVAS.

The late Señor Antonio Cánovas del Castillo, who has fallen beneath the assassin's bullet, was born in 1830. He made his début in 1851, under the patronage of Señors Rios, Rosas, and Pacheco, as chief editor of the *Patricia*, in which he defended Conservative ideas. In 1854, he was named deputy for Malaga, and since that year never ceased to occupy a seat in the Cortes. In 1856, he was Chargé d'Affaires in Rome, and drew up the historical memorandum on the relations of Spain with the Holy See, which served as a basis for the Concordat. He was then named successively Governor of Cadiz in 1855, Director General of the Administration from 1858 to 1861, and lastly, in that same year, Under Secretary of State for the Interior. In 1864, the Queen called him to the Ministry, together with Mon; O'Donnell chose him in 1865 as Minister of

Finance and the Colonies; and he had the honour of drawing up the law for the abolition of the traffic in slaves. Lastly, a little before the Revolution of 1868, he was the last to defend with energy in the Cortes the Liberal principle when all the parties which had supported his doctrine had deserted the Parliament. His greatest title to fame is that of having been the first—supported by Señors Elduayen, Bugallal, and two others—to hoist the standard of legitimate and constitutional monarchy, in the full Constituent Assembly of 1868, and in face of the triumphant Revolution. His fidelity and capacity definitely obtained for him the supreme direction of the Alfonsist party; and on the proclamation of Alfonso XIII. as King in Dec., 1874, Señor Cánovas del Castillo became President of the Council and chief of the new Cabinet, and continued to hold the Premiership, with the exception of an interval of a few months, down to 1879, when on the return of Marshal Martinez Campos from Cuba, Señor Cánovas del Castillo retired from the Premiership and Marshal Campos became Prime Minister, accepting as his colleagues the principal associates of Señor Cánovas. The skillful resistance of the latter delayed and defeated the Marshal's free-trade and emancipation projects, so that, on the re-assembling of the Cortes (Dec., 1879), he was compelled to resign. Señor Cánovas del Castillo returned to power in the year 1881. However, his Conservative Cabinet was overthrown, and a coalition between Señor Sagasta and Marshal Martinez Campos came into office. At the crisis of Nov., 1885, on the question of the occupation of the Caroline Islands by Germany, he was compelled to resign, and was elected President of the Chamber the same day as the new Sagasta government came into office, and was chief of the moderate Conservative party till July 1890, when he returned to power. In Nov., 1891, his government went out of office, but was again formed by him on the old lines. Señor Cánovas del Castillo was the author of numerous works in moral and political science, and a "History of the House of Austria," which is in great repute. These publications gained him admission into the Academy of Madrid. In 1875 Señor Cánovas del Castillo received the insignia of the Order of the Red Eagle from the Emperor of Germany, the Grand Cross of the Order of the Tower and Sword from the King of Portugal, and the Golden Fleece from the King of Spain.

These particulars we take from *Men and Women of the Time*. In the *Deutsche Review* there have lately been appearing some articles on Spanish statesmen, from which we take the following paragraph:—"The present premier, Don Antonio Cánovas del Castillo, belongs to the small number of men whose great talents explain and justify the high position they occupy. Even his worst enemies—and Cánovas has as many as Castelar—acknowledge his great ability as a statesman who always extends his hand to aid when his native land is in danger; whose loyal heart gives even his political foes well-meant counsel; whose mighty intellect, under all circumstances, maintains its calm poise. Cánovas showed a preference bordering upon passion for literature, and historical and politico-economical studies. But it cannot be said of him, as of many other politicians, that he merely used literature as a stepping stone to his lofty position, for even later, when his time was occupied by affairs of State, he did not cease to occupy himself with literary work, and wrote articles upon subjects which had no connection with politics. He is entitled to a place among the great Spanish prose-writers of the present day; some of his historical articles—for instance, the description of the battle of Rocroy—are models. Cánovas is also an admirable parliamentary speaker, and a charming conversationalist whose language is characterized by grace, intellect, and wit, terseness of expression and depth of thought. Cánovas, who is now more than sixty years old, has retained the full freshness of his rich mental powers. His head is massive, his face, though the features are not regular, is pleasing and expressive, and the gleam of his thick, silver-white hair lends it special brilliancy."

JAPANESE TOPICS.

It appears that Japan is already beginning to feel the disadvantage of her gold monometallism in the field of exports. Gold having appreciated considerably since she chose her ratio, there is now a difference of five-eighths of a penny between the exchange value of the dollar in sterling and the value assigned to it under the Japanese system. That means that the sum in sterling required to buy a hundred *yen* in Japan will buy 102½ Mexican dollars in China. To that extent Chinese silk is cheaper than Japanese, and it is said that foreign exporters are turning their attention to the former in preference. A saving of seventeen or eighteen dollars in the prime cost of a bale of silk, is not to be despised in these days of narrow margins. It means 153,000 *yen* on an export of nine thousand bales, and the silk merchants of Yokohama and Kobe are not too magnificent to take serious account of such a difference as that in their annual ledgers.

It is counted an occasion of exceptional importance in Japan when the Emperor addresses a message to a Cabinet or administrative official. His Majesty's injunctions to the Governor-General of Formosa has, therefore, excited much interest. As usual, the Emperor does not waste words. He simply says:—

Inasmuch as Formosa and its neighbouring islands have been included in Our dominions only recently, it is possible that some of Our subjects in those regions may still entertain some feeling of uneasiness, and it is consequently essential that they should be treated with clemency and kindness, and that every consideration should be extended to their peculiar ideas and customs. We further charge you to preserve rigid discipline among officials and due order in the conduct of public affairs, to the end that the objects of virtuous administration may be furthered.

There is nothing more to be said. A gentle and conciliatory attitude towards the natives; abstention from any acts offensive to their traditional ideas or customs; discipline and integrity among officials; diligence and regularity in the management of public business—if all these things could be achieved, the Formosan administration would become a credit to Japan, instead of being a disgrace. Meanwhile, it is satisfactory to note that the cleansing of the Augean stable proceeds. Other officials have been arrested on a charge of corrupt practices, and we may presume that before Baron Nogi leaves Tokyo, arrangements will have been made for a sweeping substitution of honest and competent officials for the corrupt and incapable men that were most unwisely appointed at the outset. It will always remain difficult to understand how the last Cabinet so greatly under-estimated the task of governing Formosa as to send thither the riff-raff of officialdom. The best men that the country had were needed, and some of the worst seem to have been employed.

It is interesting to observe that Japan's attitude towards Chinese immigration in Formosa bears a very close resemblance to the much criticised attitude of the United States towards the same problem in America. Japan restricts the landing of Chinese to four places, Kelung, Tamsui, Anping and Takow, and does not allow anyone to remain unless he can show that he has a legitimate means of livelihood. When all is said and done, England remains the only Power in the world that

can afford to be unreservedly liberal. Some sections of Greater Britain still remain exclusive, but whenever England herself exercises administrative control, thither any member of any nationality is free to come and go as he pleases. Japan, however, has a special excuse in Formosa. It is from the unemployed Chinese, the waifs and strays of Amoy and Foochow, that the ranks of the insurgents appear to be chiefly recruited, and she is justified in trying to exclude such an element. Telegraphic intelligence received in Tokyo on the 3rd instant, says that the Authorities having detected many instances of clandestine landing at places other than those specified for the purpose, instituted strict inquiries, with the result that 800 Chinamen who had come over from the continent in contravention of the law, were put on board a steamer, and sent across to be "dumped" at Foochow.

The dimensions of the opium problem in Formosa do not appear to be as formidable as was anticipated. According to the latest returns, the total number of licensed smokers is only 6,796, namely, 2 of the 1st class, 118 of the second, and 6,676 of the third. Six thousand seven hundred and ninety-six is a small fraction of three million inhabitants.

The "Virgin"-cigarettes affair is naturally seized upon by the *Japan Gazette* for the purpose of circulating new apprehensions as to the things that may happen after the revised treaties go into operation. The *Gazette* does not appear to be very accurately posted about the facts of the case. It alleges that 200 *soshi* were hired to wreck the store of Murai Brothers, and it leads its readers to suppose that the police hesitated to act vigorously, not, indeed, because they were "physical cowards," but because they "had not the moral support of the public behind them." Undoubtedly the police had not the moral support of the public in this case, for the crowd seems to have sympathised heartily with the wrecking operations, being persuaded, apparently, that the business of the Murai Brothers deserved to be wiped out. But the unfortunate police did not show any hesitation of the nature attributed to them by the *Gazette*. Two of them—the only two within immediate reach—Morita and Demura, went into the fray with the utmost courage, but instead of finding that they were recognised as having "the whole force of the Japanese Crown behind them," they found their heads promptly broken, and the subsequent proceedings didn't interest them. It may be mentioned, also, *en passant*, that there were not 200 *soshi* but 30. We can not ourselves think that the police acted with proper alacrity. They seem to have under-estimated the dimensions of the affair in a most singular manner, and it is to be hoped that they will be called to adequate account. But as to the *Gazette's* reflections upon civilization and the hiring of parties of roughs, we recommend it to read the stories of some of the elections in our own country a few years ago. The *Soshi* are a pestilential crew, but their significance as an index of barbarism should not be over-estimated.

Concerning the fell prospect that this incident discloses in connexion with the dark days ahead, we want to know some-

thing more about it. We want to know just how it is that Consular Jurisdiction guarantees us against these mishaps. If, at the present moment, a Japanese wanted to hire a score or two of *Soshi* for the purpose of raiding a foreign resident's premises, we are inclined to think that the functions of protection and apprehension would devolve upon the Japanese police, and that the rioters would be cited before a Japanese tribunal, precisely as will be the case on July 20th, 1893. There is the Consular constable, to be sure. He could easily dispose of 30 or 40 *Soshi* no doubt. It might be a good device to petition that a Consular Constable should be permanently stationed in Yokohama for the protection of the British community.

A quaint phase of the "Virgin" affair is that Messrs. Murai Brothers are now supposed to have themselves hired the *Soshi*. It appears that on the following day they would have been obliged to make their first distribution of valuable prizes—a gold watch, ten silver watches, forty clocks, and so forth. But not having articles either in sufficient quantity or of sufficient quality, they hit upon the plan of a smash up. Such is the version put about by idle rumour. 'Tis strange, people say, that the Murai Brothers have refrained from submitting to the police any statement of their losses. We find the suspicion a little too subtle. But as to the *Soshi* having been hired by rival tobaccoists—that, too, we do not believe.

The unexpectedly sudden return of Marquis Ito from Europe suggests many conjectures. It was originally supposed that His Excellency would remain abroad till next spring, and a change of programme shortening his absence by at least six months must have some significance. We presume that if private considerations alone were in question, some measure would have been taken to acquaint the public with the fact, for Marquis Ito is, of course, well aware of the importance attached to his movements, and would be anxious, if possible, to prevent any false construction. But even the *Nichi Nichi Shimbun* professes ignorance, and people are left to draw their own conclusions.

A local contemporary, describing the funeral of the late Count Goto, says:—"Surrounding the bier were the professional mourners—an indispensable feature of an Oriental funeral—who, attired in their flowing garments and wearing upon their heads huge straw hats of a peculiar shape, presented a sufficiently grotesque appearance." This reminds us of the Briton who, returning hastily from his first visit to France, remarked that the French were a dreadful people: all their peasants wore butcher's garb.

It appears that a young man, more zealous than discreet, lent aid to an American blue-jacket on the 8th instant, as he was attempting to escape from the police. The interferer with the majesty of the law unfortunately made the Boat-house the basis of his unwise proceedings, so that his conduct reflects on the Y.A.R.C. as a body. It was very reprehensible no doubt, but, after all, not very serious. A blue-jacket in trouble with the "bobbies" seems to possess special claims upon the sympathies of onlookers every-

where, and so far as we can gather, nothing was done in this case except to give the hunted man a new start. Rumour says that the police are thinking of prosecuting the obstructors. We hope that they will refrain from doing so. The affair did not exceed the dimensions of a "lark," and public opinion so unequivocally condemns the offender that he has been sufficiently punished. The police can afford to be magnanimous. The future discharge of their duties will certainly be facilitated rather than impeded if they show leniency in this instance.

X The persistency of the rumours circulated in Tokyo about Russians frequenting the neighbourhood of Japan's coast defences, or otherwise seeking to obtain military information by surreptitious means, is becoming quite remarkable. We shall be not exaggerating if we say that, during the past five or six months, scarcely a week has passed without the circulation of some story in that sense by the vernacular press. The whole thing may be pure misconception on the part of the Japanese, but we do not quite see how that can be the case. Of course, if Russian experts choose to incur the risk of serving their country's intelligence department in that way, there is nothing to be said except that the Japanese must adopt vigilant measures to protect themselves. All nations deem it fair to probe each other's military secrets. With regard to the last instance reported, however, we fail to appreciate the motive of the alleged Russians. Three of them, accompanied by two Japanese, are said to have been observed, on the 24th ultimo, surveying Miyatsu harbour from a boat. On learning the fact, some policemen hastened from the prefectural office to the place, but the surveyors had taken their departure. The incident was subsequently repeated in all its details. What could be the object of surveying Miyatsu harbour? Charts of it are to be had for the buying, presumably.

We find in the *Nichi Nichi Shimbun* an interesting note which we must assume to be correct. It is to the effect that Mr. Hara Kei, formerly Vice-Minister of State for Foreign Affairs and subsequently Japanese Representative in Korea, has become editor of the *Osaka Mainichi Shimbun*; and that Mr. Saito Shuichiro, at one time Private Secretary to Count Inouye and afterwards Vice-Minister of State for Agriculture and Commerce, has assumed the same position with regard to the *Chuo Shogyo Shimpō*. Japanese journalism is to be congratulated on the accession of two such men to its ranks.

The public is reminded by the vernacular newspapers that when the question of a large Russian *mission militaire* was on the *tapis*, some time ago, and when the Japanese Government took action in the matter, assurances were obtained from St. Petersburg that the affair should remain in abeyance until the new Russian Representative, Baron Rosen, could be consulted in Tokyo. Baron Rosen is expected to reach Japan on the 16th instant, and it is obviously most improbable that, on the very eve of his arrival, the above engagement would be violated by the Russian Government. If, then, the thirteen military men said to have just arrived in Sōul, are really intended to act as instruc-

tors for the Korean troops, their employment must have been arranged without the official consent of their own authorities, and is open to reversal according to the result of the negotiations between Baron Rosen and the Tokyo Foreign Office.

Marquis Ito is to return by way of Vancouver, which place he will leave by the Canadian Pacific mail steamer of the 23rd instant, reaching Japan early in September.

The *Official Gazette* publishes the following list of Japan's national debts at present:—

	Yen.
Consolidated Bonds	174,564,250
War Bonds	121,724,000
Five-per-cent. Pension Bonds	29,509,370
Paper Currency Redemption Bonds	22,000,000
Railway Bonds	10,000,000
Naval Bonds	9,288,600
Old Bonds	5,486,362
Public Undertakings Bonds	3,000,000
Total	375,572,582

This list is irreconcilable with the figures published in the current year's Budget.

The Liberal Club have followed the example of the Liberal Party by presenting to Counts Matsukata and Okuma and Viscount Takashima documents urging them to resign. These acts do not conduce to a belief in the country's fitness for party Cabinets. To render that system of government even tolerably workable, it is not enough that the politicians of the nation should be divided into two great camps, each containing competent statesmen, and each strongly represented in the Diet. It is also necessary that political parties should have a due sense of their public responsibilities, and that is precisely what the Liberals seem to lack, if we may judge from the present procedure. We say the Liberals because their case is immediately before us, but in point of fact the *Shimpō-to*, or the factions of which it is composed, have a worse record in this respect. Foreign politics is the weak point in government by party. Englishmen recognise the defect clearly, and take the utmost care to avert its perils. Whether the Conservatives are in office or whether the Liberals, the foreign policy of the country is practically continuous, and never by any chance does the Opposition perpetrate the irreparable blunder of assailing the Cabinet's procedure while a discussion with a foreign State is pending. But that is exactly what the Liberals are now doing. They have compiled and published documents declaring, in effect, that the Cabinet's treatment of the Hawaiian question has been needlessly peremptory, and that the United States have cause to be alarmed by Japan's attitude. That is setting party interests far above the dictates of patriotism, and until Japanese politicians learn that their country must be first in all their acts, the era of party cabinets will have to be postponed.

Those thirteen Russians that have "entered Sōul" little suspect the intensity of the gaze that Japan fixes upon them. One can hardly open a Tokyo Journal without encountering the words *Rohei niukan*, which four syllables suffice to convey the fact that Russian soldiers have entered Korea. The *Yomiuri Shimbun* has received a long telegram from Sōul on the subject, the gist of which is that the three officers, one non-commissioned officer and nine privates

are the result of an arrangement made by Mr. Waeber; that the arrangement having borne fruit prematurely, so far as concerns the arrival of this *mission*, Mr. Waeber is now considerably embarrassed; that he has consequently struck out the device of connecting the military men with his previous proposal for the leasing of the island of Hang-cha-yol in Yong-keung Bay, and that he has plotted to have Li Wan-yong removed from the Ministry of Foreign Affairs to that of Education, in order to replace him at the former by Keum Keung-yuk, who endorses Russian projects. Mr. Waeber, whatever cards he may really be playing in the Korean capital, certainly gets the credit of holding the master hand. If he is half as strong and resourceful a diplomatist as Japanese reporters represent him to be, we are sceptical about the theory that he has allowed himself to be unexpectedly invaded by 13 untimely *militaire*.

X Among all the journals in Tokyo the *Sekai-no-Nippon* is the one to which we look with most confidence for a statement of the reasons that have induced Marquis Ito to anticipate by six months the originally fixed date for his return to Japan. It is disappointing, therefore, to find that instead of presenting to its readers any views of its own, our contemporary confines itself to reproducing the two views said to be current chiefly in the ranks of the *Shimpō-to*, is to the effect that, during his stay in London and Paris, Marquis Ito saw enough to convince him that Russian affairs are of a nature to inspire much anxiety, and that circumstances do not sanction a leisurely trip on his part round the world. He has, therefore, determined to hasten home, and on his arrival in Tokyo he will lay aside all ancient grudges and form a Cabinet with Count Okuma, Count Inouye also joining the coalition, and Counts Matsukata and Kabayama, as well as Viscount Takashima, leaving the Cabinet. The principal basis of the above hypothesis is that, when the Hawaiian affair came upon the tapis, Marquis Ito despatched a long telegram to Count Okuma, saying that as matters in Europe had assumed an urgent aspect, it would be unwise to plunge too deeply into the complication with Hawaii. That is the first theory.

The second is of a very different nature, and the *Sekai-no-Nippon* does not say anything about the circle in which it is entertained, but, of course, there can be no difficulty in filling up the hiatus. This supposition is that a serious collision is about to occur between Marquis Ito and Count Okuma. The Marquis, during his stay in Europe, is believed to have discovered that Count Okuma's foreign policy has offended several of the Occidental Powers and is injuring Japan's interests. Mr. Kato, the Japanese Representative in London, is alleged to have strongly confirmed that view. Hence Marquis Ito's resolve to return at once. The forecast continues that, on reaching Tokyo, His Excellency will ask the Emperor to convene a meeting of statesmen in the Imperial presence, when the peace that has existed for the past half year between the ex-Premier and Count Okuma will be rudely disturbed. If the Count falls in with Marquis Ito's views, he will remain in the

Cabinet, and the only changes will be the retirement of Count Matsukata and one or two others.

It is quite plain that these explanations are purely conjectural. The *Sekai-no-Nippon* does not know more than anybody else, or, if it knows, is determined not to speak. Undoubtedly Marquis Ito's return lends itself to surmise. No attempt has been made to offer any official or semi-official explanation. In some quarters it is alleged that the precarious condition of the Marquis' old and much valued friend, Count Mutsu, has induced the ex-Premier to hasten home. We fear that the two statesmen can not hope to meet in this world. Had that been the object of the Marquis, he should have commenced his homeward journey sooner.

THE LATE RT. REV. BISHOP EDWARD BICKERSTETH, D.D.

The news of Bishop Bickersteth's death must have caused profound sorrow to a host of friends in Japan. It had been known for some time that his condition inspired uneasiness. Five or six years ago, a climatic malady contracted while serving in India, re-asserted itself, and threatened to prove fatal but was happily arrested, and after a trip to England, the Bishop's health seemed quite restored. But the disease, one of those insidious troubles which, by weakening the constitution, prepare the way for their renewed attacks, made its appearance again last year, and compelled a voyage to England. Unfortunately the virus defied even the invigorating influence of the home climate, and the patient seems to have sunk slowly but surely until death ended his sufferings. Bishop Bickersteth was a man of deep erudition, wide sympathies, and profound religious convictions. Ill health never succeeded in impairing the even geniality of his temper or narrowing the range of his interests. His influence for good owed little to his personality, but he presented to all that knew him a fine symmetry of mind and character, strong without exaggeration, steadfast without intolerance, and the simple, unostentatious and unselfish zeal that he brought to the discharge of every duty as a priest and every obligation as a friend, hallowed the sphere in which he moved and elevated and purified those with whom he came in contact. We deeply mourn his loss, and sympathise keenly with the sorrow of his young widow.

Bishop Bickersteth had served in Japan since 1886. The eldest son of the Bishop of Exeter, he was born in 1850, and in 1892 he married Miss Marion Forsyth, daughter of William Forsyth Esq., Q.C. Educated at Cambridge University, he graduated First Class Theological Tripos and became a Fellow of Pembroke College. He served as curate of Holy Trinity, South Hampstead, from 1873 to 1875, then as Lecturer in Theology at Pembroke College from 1875 to 1877, after which he proceeded to Delhi, as Head of the Cambridge Mission, returning to England in 1884 and becoming Rector of Framlingham, where he served until appointed to the Japan See in 1886. He was author of "The Church in Japan"; "Pre-Anglican Communion in Japan"; "A Basis of Christian Union"; Pastoral Letters, &c.

COUNT GOTO'S FUNERAL.

Count Goto's funeral took place on Sunday afternoon. The cortege left the residence in Minami-machi at 2 o'clock, and reached Aoyama cemetery about two hours later. In accordance with the wish of the deceased, the utmost simplicity was observed, and as an intimation had been expressly conveyed to the public that gifts of flowers would be dispensed with, that usually brilliant feature of Japanese obsequies was absent. On the other hand, a great concourse of distinguished personages attended, including the Minister President of State, all the members of the Cabinet now in Tokyo, representatives of the Emperor and of several Imperial Princes, and a number of noblemen, gentleman and prominent politicians. The carriages that followed the bier are said to have totalled about a hundred and fifty, and the procession was prolonged by nearly as numerous a line of *jinrikisha*. Throughout the whole length of the route, a distance of about four miles, dense crowds lined both sides of the road. Indeed, had the funeral been a state function on the most magnificent scale, it could scarcely have attracted more attention. The catafalque, which appeared to be very heavy, was carried by about twenty bearers, and the frequent reliefs that were found necessary involved considerable delay. There were, of course, no soldiers nor any band, the ceremony being of a private character. At the residence as well as at the ceremony, Baron Iwasaki Yano-suke and Mr. Oye Taku assisted the deceased's son to perform the function of chief mourner, but Mr. Goto alone walked behind the bier *en route* for the graveyard. When Count Goto entered the service of the Government to the establishment of which he had contributed so materially, the Aoyama cemetery did not exist. His grave there is now surrounded by the tombs of many of the men that made the *Meiji* era memorable in Japan's history.

FOREIGNERS AND LOCAL TAXATION.

It is a tolerably sure thing that if any question arises between a foreigner and the Japanese Authorities, Central or Local, some vernacular journal will get hold of a perverted version, and make things look ugly for the unhappy foreigner. Mr. W. Denning of Sendai is the victim now, and the *Miyako Shimbun* is the traducer. It alleges, with fine indifference to truth, that foreigners all over the empire have hitherto paid the local taxes without query, but that Mr. Denning has declined to do so: has denied that he is under any obligation of the kind, and has appealed to his Consul and Minister. The *Miyako Shimbun*, not content with that splendidly imaginative version, goes on to say that all the Foreign Ministers have already admitted the liability of their nationals to pay such taxes, and that instructions have been given to distraint Mr. Denning's property if he continues recalcitrant. We have here five falsehoods. Foreigners have not hitherto paid the local taxes everywhere. Mr. Denning has not declined to do so. He has not denied that he is under any such obligation. The Foreign Ministers have not admitted the liability of their nationals in this respect, and orders have not been issued to distraint

Mr. Denning's property if he persists. The facts are that no such attempt has ever been previously made to levy such a tax; that other foreign residents in Sendai are not asked to pay it; that Mr. Denning has neither denied nor admitted his liability, but has merely sought instructions, and that he is perfectly ready to pay if any semblance of an obligation can be shown. We recommend him to pay anyhow. Life is too short to fight for these principles. Their champion, be he ever so fully justified, is sure to be hurt in the conflict, and equally sure to have a black mark set against his name by slanders like those of the *Miyako Shimbun*.

TERRIBLE ACCIDENT AT THE KAWABIRAKI.

The Kawabiraki festival at Ryogoku on the Sumida River, after the usual postponements on account of the weather, came off on Tuesday evening under a clear moonlit sky, but was marred by a calamitous accident. An immense crowd of people assembled, as they invariably do, upon the Ryogoku bridge, and about twenty minutes past eight o'clock, the down-stream balustrade yielded to the heavy pressure of the sight-seers, who were eagerly watching a particularly brilliant display of fireworks. Some fifty unfortunate people fell into the river with the balustrade, and a scene of indescribable confusion arose. A steam launch, five boats and six cargo boats were on the spot almost immediately, and the police received eager help in the work of rescuing the drowning men, women and children. The exact number of casualties has not been announced at this moment of writing, but five among the forty odd persons taken from the water had sustained serious injuries, and it is feared that about six lives have been lost, though up to eleven o'clock the corpses of two men and a woman and her child, only had been recovered. This sad accident will be another sin to lay at the door of the Municipal Authorities. The immense concourse of people that Ryogoku bridge has to support every year on the night of the Kawabiraki is perfectly well known, and can be anticipated with certainty. With such a prospect, the condition of the bridge should have been carefully examined beforehand. Of course it is very easy to be wise after the event, but the precaution we now speak of is so obvious that we can scarcely be without justification in condemning the failure to take it.

ERUPTION OF MOUNT SHIRANE.

The *Nippon* states that Mount Shirane, which lies between Azuma-gun in Joshu and the boundary of Shinshu, again erupted on the 31st July. At 5 a.m. that day a crater about ten yards in diameter developed itself on the south of the sulphur mine, while another vent appeared at a distance of forty yards east of the mine, emitting lava, stones, and rocks weighing more than 40 *kwamme* (333 lbs.). The rocks rolled down in a north-westerly direction to a place over 500 *ken* distant, and covered the rails used in the transport of sulphur from the mine. It is said that one end of the line, about 37 *ken* in length, was blown up, and portions now lie on a peak to the north. The districts devastated by the lava are estimated to be no less than five square *ri* in circumference. Fortunately no injury was done to neighbouring forests and crops. One of the miners had his left shoulder dislocated in an attempt to escape. The chief Inspector of the Sagano-hara Police Station proceeded to the spot immediately on receipt of information, in order to make investigation.

The sulphur miners on Shirane-san, have abandoned the mines owing to the severity of the present eruption.

THE "MAINICHI" ON THE GOLD STANDARD.

Demand for gold for exchange is likely to increase after October as fast as silver depreciates. The greater the demand, however, the greater the loss to the Japanese Government. We have therefore to consider the problem, the *Mainichi* urges, with all seriousness, as we share with the Government an equal degree of anxiety. A certain financier of eminent ability, perfectly acquainted with the economic condition of the world, has remarked that if the silver presented for exchange aggregates a hundred million yen, inclusive of forty million yen allowed for Singapore and the amount now in circulation in the interior, the loss to the Government will be no less than thirteen or fourteen million yen. The reason for this is very clear. Suppose the market value of silver to be 25½ pence; then the ratio between gold and silver will be 1 to 36.8, that is to say, a hundred yen of gold will be exchangeable for 270 or 280 yen silver. Accordingly, the conversion of the white for the yellow metal to the amount of one hundred million yen involves a loss of 13 million yen. The enforcement of the new system, however, secures a certain advantage to the Government, with respect to minting subsidiary coins. These coins were originally 900 parts fine, but the new standard having set them at 800 parts fine, the difference will constitute a profit to the Government. If subsidiary coins are struck to an amount of fifty million yen in addition to the sum of thirty millions circulating at present, the Government will be enabled to realize a profit of over six million yen. Should this be the case, the losses actually to be borne by the Government will, it is alleged, hardly exceed six or seven million yen. Nevertheless these allegations can only be regarded as theories held by those perfectly acquainted with the nature of the problem. Were the demand for exchange to reach one hundred million yen, the foundation of gold monometallism would be in danger. The profit or loss to the Government will no longer be a subject of debate, but a crisis of great magnitude will arise. We (*Japan Mail*) give these figures as they stand. We do not pretend to follow them.

THE "VIRGIN" CIGARETTE AFFAIR AND OTHER MATTERS.

The police report of the wrecking of Messrs. Murai Bros.' store on the 3rd instant, imparts to the affair a complexion very different from that suggested by the accounts of the *Sekai-no-Nippon*, which journal has made itself particularly conspicuous in connexion with the incident. It now appears that the disturbance had its origin in popular dissatisfaction with the nature of the prizes distributed by the firm. The distribution had been going on for three days, and had concluded at 7 p.m. on the 3rd instant. An hour later, symptoms of discontent and of a disposition to "demonstrate" made themselves apparent in the vicinity of the store. Twenty or thirty ticket-holders assembled and declared that they had not received anything. The people of the store explained that business hours were over, but promised to attend to the question the following day, and the malcontents, being urged by the policeman on duty, dispersed for the moment. But others soon assembled and began to throw stones. The policeman appears to have done everything in his power. He arrested the first man that attempted to break into the store, but was roughly handled, and had to surrender his prisoner and run for assistance with a damaged head. Another policeman found himself equally powerless. He, too, went to summon aid and then hastened back to the scene. Some seven or eight constables appear to have endeavoured, vigorously and courageously, to restrain the roughs, but the latter were too resolute and too numerous for the small force of available police. A second arrest resulted in the disabling of a second

constable, and, to sum up the case, the mob had worked its will before the guardians of the police could exercise any effective restraint. Of course such things ought not to be possible in the capital of the empire, but unfortunately experience shows that they are possible in the capitals of all empires and republics. It seems that the firm have decided to dismiss their Tokyo manager, Mr. Kato, on the ground that he misconstrued, or contravened, their regulations for the distribution of prizes. That looks as if the discontented folk had some reason on their side, even from the firm's point of view.

Very few people, we imagine, will be prepared to endorse the legal fiction that the Murai Brothers' venture is free from any of the demoralizing effects which the anti-lottery law is intended to prevent. It is true that every buyer of a ticket is supposed to receive a prize, by which device the element of chance is, in some degree, eliminated. But that is a mere fiction. If such a principle were admissible, there would be nothing to prevent the organization of lotteries in which each subscriber of a dollar would receive a five-*sen* photograph and would further have the chance of winning a prize of twenty thousand yen. A difference in the intrinsic value of the articles distributed, and recourse to lots for the purpose of determining which subscribers shall receive the more valuable articles—these are the essential features of a lottery, and these are plainly present in the case of the "Virgin" cigarettes. The Murai Brothers, or the firm they represent, say to the public, "put up 4 *sen*, and we undertake to give you for your money a certainty in the form of a packet of cigarettes and a cheap novel, and with the surplus that remains after we have taken our own profit, we promise to distribute twenty or thirty prizes, more or less valuable, for which our thirty or forty thousand customers shall draw lots." If that is not a lottery, what is a lottery, we wonder. There are newspapers and other publications that undertake to give a Webster's dictionary, a bicycle, or a gold watch to every one subscribing for so and so many copies. Such a method differs radically from that of the Murai Brothers. If the proprietor of a newspaper or a magazine calculates that a hundred subscriptions will give him, in addition to a handsome profit, a surplus sufficient to purchase a dictionary or a bicycle for a subscriber, there is no moral reason against conducting his business on those lines. He merely gives so many copies of his publication plus a book or some other article for so much money. The lottery principle does not come in at all. But the "Virgin" cigarette scheme in a pure lottery.

Concerning this Murai incident, we have already noted that it was trotted out as an example of the things that foreigners may expect when they pass under Japanese jurisdictions. How it could be twisted into anything of the kind we were puzzled to conceive, inasmuch as the only apparent difference between "then" and "now" will be that the solitary Consular constable at present retained may be pensioned off. We don't know that he will, and we don't know why he should, but whether he goes or remains, his protective capacities do not appear to be of prime importance. However, the *Yan* *Gazette* now explains that when it predicted sad happenings under the new system, its thoughts were concentrated on the fact of foreigners' being "congregated in the Settlement." "Under Consular Jurisdiction," says our contemporary, "foreigners are congregated in the Settlement, and *soshi*, who might readily enough wreck a solitary shop in an inland town, would think twice before storming a business house in the Settlement." Curious reasoning, surely. Foreigners will be under no sort of obligation to quit the Settlement after the abolition of Consular Jurisdiction. If they think themselves safer when living as a community than they would be did they scatter through the country, there will be nothing on earth to interfere with their choice. And, indeed, there is not the remotest probability that the foreign residents will cease to be gregarious in Japan for the next fifty years. They have their places of business;

they have their Japanese clientèle, and they have their common amusements. Those that go to live in the interior, will take the risks and discomforts with the advantages. Those that consider mutual protection a necessity, can remain congregated in Yokohama, Kobe, or any of the present places of resort. As for the risks, considering that foreigners have been living all over Japan for the past twenty years, that they have been engaged in propagating an alien creed against which the bitterest national prejudice existed up to the late sixties, and does still exist in some quarters, and that their residences have remained absolutely free from outrage of any kind, this talk of the *Japan Gazette's* seems not only grossly unjust but contemptibly pusillanimous. Is it impossible for our contemporaries and its fellow thinkers to dismiss their groundless terror of the Japanese people? Is it impossible for them to take any fair account of things as they have actually been? Nothing could be more mischievous than this continued outcry about the awful things awaiting the foreigner when the Revised Treaties go into force. The effect must be to create a sentiment which will contribute materially to justify such sinister and cowardly predictions.

Another of our local contemporaries takes up the case of the Kobe coolies, and makes it the text of a sermon: How much sincerity there is in such writing we find difficulty in estimating, so conflicting are the utterances of the same journal on the same topic at a brief interval. Here is an example taken from the literature on this very subject:—

Japan Herald, Aug. 7th.

So far as police arrangements go, both persons and properties of foreigners are as well protected as those of the natives, though at the same time we should like to see the police, when foreigners are subject to extortion and abuse, show a greater spirit of alacrity to shield them against being fleeced and abused, than is generally the case.

Japan Herald, Aug. 10th.

Drifting as we unfortunately all are under Japanese jurisdiction, it is not pleasant to think that the security of our lives and property is in great measure to be dependent on a Government which does not appear to be able, anxious, or willing either for its own reputation or for the protection of foreigners committed to its charge, to accomplish what is demanded of it, as a power claiming to be equal to those States, where such conduct as the almost uncheckable license of the coolie class, such as is manifested at Kobe, would be regarded as intolerable, and would be put down without any hesitation whatever.

Thus we are assured, on Saturday, that "the persons and properties of foreigners in Japan are as well protected as those of the natives," and, on the following Tuesday, that "it is not pleasant to think that the security of our lives and property is to be dependent on a Government which does not appear to be able, anxious or willing . . . for the protection of foreigners committed to its charge to do what is demanded of it as a Power claiming equality with Occidental States." It would seem that reason is driven out whenever the blind fear of Japanese jurisdiction steps in. That something is needed at Kobe we, too, are strongly persuaded. But we are not persuaded that the fault is all on the side of the Japanese coolies. The latest case recorded furnishes an illustration. Nearly a whole column of the *Hogo News* is devoted to describing what is called "More Coolie Insolence." Most of the details are ludicrously trivial—so paltry that their publication seems to indicate a morbidly excited mood. The whole affair turns on the refusal of two foreigners to exchange the *kagos* in which they were riding for *kagos* which had come from the travellers' destination and were on the return route. Such exchanges are matters of every-day occurrence. Nobody imbued with ordinary feelings of kindness refuses to lighten the labour of hard worked coolies by a concession so trifling in itself yet of such consequence to the coolies. But in this instance the refusal was peremptory. Thereafter the coolies seem to have demanded payment in a rude and rough manner, not justifiable, indeed, but to some extent excusable under the circumstances. The upshot

of the story is that had the travellers complied with a request which no Japanese, nor any considerate foreigner, would have thought of refusing, the journey would have been performed without trouble. The gentleman described at "the latest victim of coolie blackguardism" is stated to have fired a shot with his revolver, "in the air," when he saw that the coolies "had again taken up their pursuit" of him, but he explains that the men were then out of revolver-range. He had told them to follow him to his destination if they wanted payment; he was walking quietly along the road with his wife, and he saw them beginning to follow at a distance of a hundred yards. Then he fired in the air, and seems to have been surprised that the *kago* bearers were seen no more. It is perfectly evident that there are two sides to many of these tales. We are very far from believing that the Japanese are faultless. They have shown great truculence and criminal violence in many cases at Kobe. The cargo-coolies appear to be special lawless. But it is extravagant to base general verdicts on these isolated instances, when to set against them we have long years of diametrically contrary experiences all over Japan.

SILVER AND IMPORTS.

The *Yomiuri* publishes the following statement alleged to have been made by Mr. Soyeda, Director of the Superintendence Bureau of the Finance Department on the subject of silver depreciation:—"The continued extraordinary depreciation of silver has produced a panic in the economic world. Yet it can be hardly imagined that silver will be safe from still farther depreciation. If that be the case, the gold coins that are to be exchanged for silver in October next will be drained out of the country to the West, and the object the revision of the coinage system will be lost. Such are the views entertained by the public at large. As for me, however, I believe that silver will not fall any more. Present quotations for the white metal are indeed unjustifiable, and can only be regarded as the result of temporary fluctuations. Silver has a limit to its depreciation; it can not be produced at a profit below seventeen pence. Should the current price continue for any length of time, silver-mining enterprises will certainly, to some extent, be suspended. The demand for silver would then increase beyond the limits of the supply and tend gradually to restore its value. Even supposing that silver is liable to further depreciation the condition of the economic world after October can in no way be conjectured to be such as to bring about an out-flow of gold from Japan. Silver, though it has fallen abnormally at present, must be admitted to be growing scarce in foreign countries. Japanese silver is being steadily poured into the markets of India and Shanghai, where there is a very considerable demand for it. The claims for exchange, therefore, may be much less than expected even after October. Even if the demand for exchange for gold is as great as the public anticipate, there will be sufficient preparations to meet the contingency. Schemes may be adopted as occasion requires. Apart from these considerations there is one problem of urgent necessity, which ought to be discussed with great care. That is the excess of imports. It is of course an error to entertain any undue solicitude on this question. If the imports consist of machinery to be used in productive enterprises, there can be no fear whatever, even if the excess reaches several millions of *yen*. Excess in the import of luxuries and articles of daily consumption is alone to be dreaded. The trade returns of our country show that the excess in the import of luxuries from January to June this year amounted to twenty million *yen* in value, the total excess then being, it may be conjectured, not less than forty millions of *yen*. From this anomaly the most deplorable result may arise: the decline of national resources. The public appear to be excessively solicitous at present about personal wants and luxuries and remain indifferent to matters that require their grave attention.

A TEA-PEST IN JAPAN.

Uji and Kohata in Yamashiro, remarks the *Osaka Asahi*, are well-known throughout the empire for the excellent tea there produced. Last year's statistics give some details of the crop:—

	Total output. Kwamme.	Manufacturers. Tons.	Firing furnaces.
Uji	56,804	1,025	9,621
Kuse	74,456	1,200	12,075

The above figures can hardly fail to convince the ordinary reader that tea forms one of the most profitable staples in those districts. Since last year, however, the plantations have been infested by multitudes of noxious grubs, and the plague, far from being checked by the united exertions of both Government and people, is extending. These renowned tea plantations are, to all appearance, in imminent danger of entire destruction. The destructive power of the grub is beyond imagination, and its ravages seem to have spread over seventy *cho* (1 *cho* = $2\frac{1}{2}$ acres), while tea plants covering about thirteen *cho* are reported to have withered and died, causing a loss of 53,100 *kwamme* of leaf. This year the pest appeared one month earlier than last season, and in the beginning of August had taken the shape of a caterpillar, which subsequently turned to a moth. Each moth is known to lay 1,250 eggs on an average, which is sufficient to show the rapidity of its increase. Most of the tea plants in Yamashiro are over three hundred years old, the newest being one hundred years. It is said that the plants do not begin to yield leaves of the peculiar excellence for which these are famed before they are as old as a hundred years. If one is destroyed it is impossible to replace it with a plant of similar value.

The Headman of the District, as well as the special committee appointed last year to secure the extirpation of the pest, have resigned their office on account of having failed to attain satisfactory results. The work of destruction is now being carried on by a committee of three appointed from among the members of the central Government, five hundred coolies being engaged in the work day and night.

ARREST OF A DANISH CONSUL.

The Danish Consul at Tientsin, who was travelling in Japan with his wife, was arrested on Monday evening on board the *Columbia*, as she lay on Futen Spit, by the Acting Consul for Denmark, Mr. V. Gielen, who was accompanied by Mr. C. B. Clausen, as Interpreter, and the Constable of H.M. Consulate.

Mr. Stahlgren is charged with the misappropriation of \$4,000, besides diamonds, and other jewellery. He joined the *Columbia* at Hong-kong and his whereabouts were disclosed by his taking passage under his proper name, though when he absconded from Tientsin he took up a disguised cognomen.

Mr. Stahlgren was committed to the United States Consular Jail, by consent, and examined in private at the Jail on Tuesday afternoon by Mr. V. Gielen, Consul for Denmark, with the result that he was released on bail of 4,000 *yen*.

"COLUMBIA" RUNS AGROUND.

The N. P. steamship *Columbia*—the old *Methven Castle*—while coming up the bay on Monday afternoon, about three o'clock, ran ashore between the forts on Futsu Saki (Saratoga Spit). Help was obtained from Yokohama, and after moving the cargo from the fore part of the ship aft, she was got off about 1 a.m. this morning and proceeded to this port.

We learn that an examination of the N. P. steamer *Columbia*, which grounded between Nos. 1 and 2 Forts at Saratoga Spit showed that the vessel had received no further injury than the scratching of a little paint. She had, however, in getting off to slip her cables. These, and her anchors, were recovered later on and the steamer left for Victoria on Wednesday afternoon with her full equipment aboard.

YOKOHAMA BATHING FATALITY.

Under the high cliff that terminates the eastern Bluff, a short distance beyond "The Niche," some enterprising Japanese *restauranters* have erected a series of mat-sheds, where they let out for hire bathing drawers, towels, etc., and sell ices, *o-cha*, and drinks generally to persons who wish to indulge in natatory diversions. During the present hot weather the place has been patronized by hundreds of Japanese, many proceeding thither in sampans from the Creek. The mat-sheds proprietors recently erected at a short distance from the shore a fairly high diving stage, which, at periods of low tide, is usually crowded with youngsters, many of whom have but the faintest idea of diving. Still they try to dive, though their attempts generally amount to nothing more than a tumble or a "flop." On Wednesday afternoon the usual performance was taking place when a sad fatality occurred. A lad, whose father is said to be in the service of a well-known resident, made a jump into the water from the stage, and never rose to the surface. After a while his companions became scared, and as the water was very low began to grope about for him. He was found, a few feet from the stage, quite dead. It is conjectured that the lad either broke his neck or dislocated his spine in springing into the water, and died immediately. The body was taken ashore, and then the "diving" recommenced as if nothing had happened.

REVISED TREATY OPERATION INVESTIGATION COUNCIL.

The above Council, which came into being under the auspices of Prince Konoye and other personages holding the same opinions, had a meeting on the 30th ultimo and drew up a set of rules. The Council, according to the *Mainichi*, proposes to meet on Thursday the 13th instant, at the official residence of the Chairman of the House of Peers, for the purpose of discussing the following questions:—

1.—Whether the provisions of the revised treaties conflicting with the Laws of the State should be deemed invalid or be enforced, unless such provisions are duly promulgated as Laws?

2.—Whether the Customs Tariff specified by the Treaties can have validity without the consent of the Imperial Diet?

3.—Are Chinese subjects to be granted the same privileges of mixed residence as those of other Treaty Powers after the enforcement of the revised treaty? And if the special system of settlements is to be established for them, what should be the nature of such a system? What steps are to be taken in regard to the places of residence of Koreans and other nationals of countries other than treaty Powers?

4.—Is there any necessity for affording different treatment to foreigners owing to differences in their customs and manners, in case they are detained in Japanese prisons for criminal offences after the enforcement of the revised treaties? If such necessity exists, how is it to be dealt with?

THE NEW KOBE JOURNAL.

The only trouble about the *Kackling Kagmag* is that Kobe is not big enough for it. It is very good reading for the sterner sex—hardly fitted for the fair, however—and if the editor can keep his succeeding numbers up to the level of the first, without drawing more deeply than he has done already—which is quite deep enough—on the broader stream of humour, his weekly appearance will be welcomed. But he will very soon find himself trampling on corns. Already there are indications that he has planted his literary bladders in the vicinity of some tender spots. That is why we say that Kobe is too small for him. It is evidently a good-humoured place with a large stock of tolerance, but there are limits. For the rest, the *Kagmag* might leave the Bible alone. Nobody, however dim the old landmarks may have grown to his callous eyes, cares to see the music of the New Testament set to the jingling of a cap and bells.

SAVE ME FROM MY FRIENDS.

COUNT OKUMA'S political career has undoubtedly suffered from the excessive zeal of his friends. When he took the portfolio of Foreign Affairs in 1888, he was confronted by a problem of the greatest difficulty, and his solution of it should have been received with national acclaim. For although he did not actually achieve Treaty Revision, he brought it within easy reach of achievement and in the process he accomplished something which was of even greater importance to Japan: he broke up the confederacy of Powers by which she had been held helpless in a diplomatic vice for five-and-twenty years. Why was it that, instead of receiving the thanks of his countrymen, he had to lay down his office, and retire into comparatively obscurity with a shattered limb? It was mainly because of the extreme imprudence of his admirers. He had the misfortune to reckon several supporters among the prominent journalists of the time, and they so loudly belauded his acts, so invidiously exalted his doings, that the situation became intolerable to his opponents. Something of the same kind has occurred now. Any one reading the newspapers credited as supporters of the present Cabinet, can not escape the impression that Count OKUMA is a stalwart of stalwarts in the field of foreign policy, and that, so long as he presides at the *Gaimusho*, Japan will never be "put upon" by any State, Occidental or Oriental. Even in the case of a paltry question like the immigration trouble with Hawaii, chauvinist journals, professing to be the Count's admirers and interpreters, have written as though things were to be carried with a high hand, and some of them have gone so far as to hint that even America's support of the little republic need not be seriously considered. Not one of them knew, possibly none of them cared to know, what language the Minister was actually using in his negotiations, or what demands he had really made. They devoted themselves uniquely to creating the impression that a resolute and unflinching policy was the *mot d'ordre* at the Foreign Office, and that the right would be asserted though the firmament fell. It is upon the tone of such papers that the Liberals base the indictment set forth in the document of which we yesterday published a translation. They are absolutely ignorant as to the facts of the immigration discussion, but they have derived from the intemperate section of the pro-Cabinet press an impression that Hawaii has been taken by the throat, and upon that impression they have built their accusation. They are, in fact, flogging Count OKUMA over the shoulders of his journalistic admirers. The Minister of Foreign Affairs may well pray to be saved from his friends.

On the other hand, it is conceivable that

the enthusiastic editors, for their part, may be clapping their hands with delight over the trap into which the Liberals have fallen. For certainly never did responsible politicians publicly arraign a statesman on such unsubstantial grounds. Until the correspondence between Honolulu and Tokyo is published, which can not be for some months, no one is in a position to discuss intelligently the language used by either side. But everybody can appreciate the extreme unreasonableness of the Liberals' argument, that by agreeing to arbitration Count OKUMA has climbed down from his high horse and practically confessed the failure of his policy. From the very outset two things were almost certain; the first, that, having deliberately and in professed accordance with her own laws, taken such an emphatic step as to turn back seven or eight hundred immigrants, Hawaii could not be expected to incontinently bow her head and confess herself in the wrong; the second that, failing such an act of self-abasement on her part, arbitration, or the intervention of a third Power in some friendly capacity, would be the only exit from the dilemma. In truth arbitration was foreseen from the beginning by every one at all familiar with international affairs. It was the natural outcome of the situation. We are not by any means certain that the Liberals desire to know the truth of this matter. If they did, there are avenues of information which, being easily accessible, they might have followed, however cursorily, before framing their charge. For example, they might have consulted the Hawaiian Journals in order to ascertain whether people in Honolulu regarded Count OKUMA's policy as one of intimidation or menace. Evidently they have neglected that very obvious course, and we shall briefly remedy the defect by reproducing a few extracts from the *Hawaiian Gazette*:—

Recent advices to the Legation (in Washington) show that the Japanese Government, as well as the public, is in no way agitated over the Hawaiian situation. The Japanese Government has put a stop to all immigration to Hawaii, thus indicating a purpose not to press for the right to have Japanese subjects admitted. It is said, also, that the dispatch of a Japanese warship to Hawaii was in no sense a menace, but was made with a view to restraining any possible demonstration by the Japanese immigrants. The authorities are desirous only of securing indemnity for those Japanese who have suffered by exclusion. In this connection it is said that an offer by the United States to use its good offices in securing a settlement of the trouble doubtless would be accepted by Japan.*

(* Despatch from Washington, dated May 8th, to the *Hawaiian Gazette*.)

The people of this country will stand by the action of the Government, although they have no desire for a wrangle with Japan. They have no objection to a reasonable number of Japanese immigrants coming to the country, but they dislike the idea of their coming at the rate of two or three thousand in as many months; they believe the immigration companies stepped beyond the bounds of the law and should be checked; they hope for an amicable settlement of the present affair and a better understanding between the Governments on the question of future immigration. If this last cannot be accomplished by the diplomatic agents of Hawaii and Japan, we naturally turn to the United States as a court of last resort.—*Hawaiian Gazette*, May 24th.

The presence of the *Naniwa* has had a quieting

effect, if any was needed, upon the Japanese residents, and the officials of Japan and Hawaii are conducting their business in a proper, quiet, dignified and friendly manner. The people are aware that the two Governments are engaged in settling a matter that will have far reaching effects upon the future of the Hawaiian Islands. No one deprecates the seriousness of the situation. It is felt, however, that the question will be decided on its merits and not by bluff or bluster.—*Hawaiian Gazette*, May 25th.

Reports in the vernacular papers received from Japan by the last steamer suggest the probability of the Hawaiian immigration affair being submitted to the international lawyers of Norway and Sweden for settlement. The United States is regarded as an interested party. This way out of the difficulties is original if nothing more. It is to be hoped, however, that the matter will be settled out of court, that the two contending parties can come to a mutually satisfactory understanding without calling upon European nations for assistance.—*Hawaiian Gazette*, June 1st.

[N.B.—This last extract shows that the idea of arbitration was mooted in Japan, and that the fact was known in Hawaii on June 1st.]

Such extracts might be multiplied, but we presume that the above will suffice to satisfy even the Liberals that whatever their idea may be with reference to Count OKUMA'S method of negotiation, it did not present itself to the people of Hawaii in the light of a menacing method or an intimidating method, but that, from the first to the last, there was complete confidence as to Japan's amicable and just intentions. The extracts further show that the arbitration exit from the complication was considered to be in accord with Japan's wishes by Washington politicians as early as May 8th, and that, by June 1st, the Hawaiians had intelligence of the same idea being entertained in Japan; and they show, finally, that the presence of the *Naniwa*, far from being considered in the light of a "demonstration," was understood to be for the purpose of preserving order among the Japanese population, and was held to have been useful in that sense. It amounts to a farce that, in the face of such information—which they could have collected without any difficulty—the Liberal representatives should have charged Count OKUMA with adopting a policy of intimidation and menace; with putting a weapon into the hands of the annexationists by sending the *Naniwa*, and with turning to arbitration as a back-door from an untenable position.

Concerning the assertion that the line pursued by the Foreign Office precipitated annexation, there are two things to be said: first, that annexation is now well understood to have been suddenly resolved on as the only feasible device for avoiding a deadlock in the U.S. Senate over the sugar schedule of the Tariff Bill; secondly, that never once has any Hawaiian Journal hinted that the Japanese complication was in any way responsible for the step taken by President MCKINLEY. It must be admitted, we presume, that if the dispute with Japan had been counted capable of forcing America's hand, it would have been put forward for all it was worth by the Hawaiian newspapers favourable to annexation. But it was never referred to by one of them in that context. When, on June 15th, a telegram announcing the

signature of the Annexation Treaty reached Honolulu, the *Hawaiian Gazette* found only one explanation of the fact. Here it is:

What few straws appear upon the surface seem to indicate that the discussion over reciprocity went to such lengths and possibly proved such a factor in blocking the tariff measure that the launching of the whole Hawaiian affair was considered the most satisfactory method of settling the matter. It is also well known that many Senators favour annexation but are opposed to the continuation of the Reciprocity Treaty.

Thus we see that the leading Journal of Honolulu itself, a Journal which had been watching the progress of the negotiations with Japan from the very beginning, did not entertain the smallest suspicion that Japan's policy could have promoted the cause of annexation. And knowing the facts of the Annexation Treaty as we now know them, we know that the President turned to it simply and solely as a means of securing the passage of the Tariff, which would otherwise have been blocked by the sugar question. The Liberal representatives have, in fact, launched a *brutum fulmen* of the most farcical character, and we do not think that they will be found to have enhanced their reputation for tactical sagacity or power of discernment.

TAXES THAT WILL AFFECT FOREIGNERS.

WE have conducted investigations for the purpose of laying before our readers an intelligible statement of the local taxes to which foreigners will be liable under the Revised Treaties. Unfortunately we find it impossible to formulate any clear account, owing to the variation of the taxes according to localities, and the necessary absence of hard-and-fast laws. The amounts will not be large, under any circumstances. According to the latest returns published—those for 1894-5—the total sums collected under the four principal heads were:—

	Yen.
Land Rate (<i>Chiso wari</i>)	9,023,499
Business Tax (<i>Yeigyo-sei</i>)	2,912,033
Miscellaneous Taxes (<i>Zasshu-sei</i>),	1,869,274
House Tax (<i>Kosu-wari</i>)	3,342,061

Total..... 17,146,867

From these figures it appears that the local taxes average 40 *sen* per head of population, approximately. Among them the most interesting is the House Tax. The manner of collecting appears very complicated, but will be understood from a table with comments which we publish below. By way of preface, however, it must be explained that although the House Tax appears only once in the above list, the "house unit" enters into all the items of the list except the Land Rate. This last is simply another name for "Land Tax." The Central Government levies a Land Tax amounting nominally to 2½ per cent. of the market value of the land, but in reality a very much smaller impost. By law the communes are allowed to make a further levy upon the same land for

local purposes, provided that the amount of the local levy, or "Land Rate," shall never exceed one half of the Treasury's levy, or "Land Tax." At present, the proceeds of the Land Tax being 39 million *yen*, in round figures, and those of the Land Rate, 9 millions, the ratio is less than one-fourth. Other taxes in localities, are, as we have said, based upon a "house unit," which is determined by dividing all the houses into a number of classes, according to their situation and quality, and determining for each class an index number. The area of any house which it is intended to tax having been found in *tsubo* (one *tsubo*=36 square feet), the area thus expressed is multiplied by the index number of the class to which the house belongs, the product being the number of "taxation units," which is increased by one-half in the case of a house built with brick or stone. The House Tax is 1.84 *sen* per unit; the Business Tax, 1.3 *sen* per unit. We are speaking now of Tokyo only. The rates vary in different cities and prefectures. For the purposes of the House Tax, there are nineteen classes and 181 grades, as shown in the following table:—

CLASSIFICATION OF LAND ACCORDING TO ITS POSITION & C. FOR THE PURPOSES OF THE HOUSE TAX.

CLASS.	From	GRADE.	INDEX No.
1st	1 to 10	1 to 10	5.50
2nd	11 to 20	11 to 20	5.25
3rd	21 to 30	21 to 30	5.00
4th	31 to 40	31 to 40	4.75
5th	41 to 50	41 to 50	4.50
6th	51 to 60	51 to 60	4.25
7th	61 to 70	61 to 70	4.00
8th	71 to 80	71 to 80	3.75
9th	81 to 90	81 to 90	3.50
10th	91 to 100	91 to 100	3.25
11th	101 to 110	101 to 110	3.00
12th	111 to 120	111 to 120	2.75
13th	121 to 130	121 to 130	2.50
14th	131 to 140	131 to 140	2.25
15th	141 to 150	141 to 150	2.00
16th	151 to 160	151 to 160	1.75
17th	161 to 170	161 to 170	1.50
18th	171 to 180	171 to 180	1.25
19th	below 181	below 181	0.75

Suppose, for example, that a house belongs to any one of the ten grades forming the third class, that it is of wood, and that its area is 50 *tsubo*. Then $50 \times 5 = 250$, represents the number of Taxation Units (5 being the Index Number for Class III.), and $250 \times 1.84 \text{ sen}$, or 4 *yen* 60 *sen*, is the House Tax. If the house were of brick or stone, the number of taxation units would be 375, and the tax, 6 *yen* 90 *sen*.

The following provisions are appended to the House Tax Law for Tokyo:—

In the case of private buildings situated on the banks of rivers, or on public land which has no fixed value, the classification is determined in accordance with the rates ruling in neighbouring districts.

The taxes for the first half of the year are collected from the house-owner on the 1st April, and taxes for the 2nd half of the year are collected on the 1st October.

In the case of buildings that have sustained injury owing to natural calamity, or that have been removed in consequence of alterations of municipal divisions; or in the case of land that has been bought for public use, prior to the 31st May, for the first half of the fiscal year, and prior to the 30th November for the second half of the fiscal year, a special return must be made in order to obtain exemption from taxation.

The following buildings are exempted from taxation:—

1. Buildings used as public schools or places of instruction.

2. Buildings exclusively devoted to the purpose of class rooms in private schools.

With regard to the Business Tax—it will of course be understood that we are speaking always of local taxation—the method of finding the number of Taxation Units is the same, but the classification of houses is more elaborate, the number of classes being 27. The index numbers also are higher. The table stands thus:—

CLASS.	From	GRADE.	INDEX No.
1st	1 to 7	1 to 7	14.0
2nd	8 to 14	8 to 14	13.5
3rd	15 to 21	15 to 21	13.0
4th	22 to 28	22 to 28	12.5
5th	29 to 35	29 to 35	12.0
6th	36 to 42	36 to 42	11.5
7th	43 to 49	43 to 49	11.0
8th	50 to 56	50 to 56	10.5
9th	57 to 63	57 to 63	10.0
10th	64 to 70	64 to 70	9.5
11th	71 to 77	71 to 77	9.0
12th	78 to 84	78 to 84	8.5
13th	85 to 91	85 to 91	8.0
14th	92 to 98	92 to 98	7.5
15th	99 to 105	99 to 105	7.0
16th	106 to 112	106 to 112	6.5
17th	113 to 119	113 to 119	6.0
18th	120 to 126	120 to 126	5.5
19th	127 to 133	127 to 133	5.0
20th	134 to 140	134 to 140	4.5
21st	141 to 147	141 to 147	4.0
22nd	148 to 154	148 to 154	3.5
23rd	155 to 161	155 to 161	3.0
24th	162 to 168	162 to 168	2.5
25th	169 to 175	169 to 175	2.0
26th	176 to 182	176 to 182	1.5
27th	183 and downwards ..	183 and downwards ..	1.0

As an example of the working of this system, take the case of a house measuring 40 *tsubo* and belonging to the 9th class. Then 40×10 (the Index No. for the 9th class)=400=the number of Taxation Units, and $400 \times 1.3 \text{ sen}=5 \text{ yen } 20 \text{ sen}$ =the Business Tax.

Chief among the Miscellaneous Taxes is an Income Tax, so-called, which, however, is really another form of house tax or business tax, since it corresponds with these as to the method of finding the Taxation units, and differs from them only in the monetary rate per unit. It may be briefly described as an income tax in levying which the income is determined in accordance with the nature of the house occupied by the taxpayer.

Since the rates of local taxation are liable to variation from year to year according to the expenditures that have to be incurred, as passed by the Local Assemblies, it seems useless to enter into any explanation of them more detailed than the above.

RAILWAY EXTENSION.

Railway enterprises have considerably increased, remarks the *Mainichi*, since the year before last, and their results have now become manifest. Traffic was opened on eleven lines during the first half of this year for a total length of 180 miles. The following are the details:—

Company.	Lines.	Length.	Date of opening.
Kwansei	Uyeno-Tsugebitu	9.8	Jan. 25
Narita	Sakura-Narita	8.0	Jan. 19
Kioto	Kioto-Saga	6.277	Feb. 15
Sanuki	Marugame-Takamatsu	96.55	Feb. 21
Nippon	Mito-Iairu	58.40	Feb. 25
Boso	Otsuna-Ichinomiya	22.37	Apr. 17
Sobu	Sakura-Narita	23.27	Apr. 31
Sanyo	Hiroshima-Ujina	3.46	May 1
Chuyetsu	Kuroda-Fukuro	20.55	May 4
Hokuyetsu	Kasugaahinden-Hachiesaki	24.9	May 22
Sobu	Narita-Choshi	37.13	June 2

According to the *Keizai Zasshi* the four lines of Narita, Kioto, Chuyetsu, and Hokuyetsu are of new creation, while the rest are extensions of old lines.

MISCELLANEOUS TOPICS.

The Tokyo Electric Light Company announces its intention of raising its charges. It serves the public abominably and now has the assurance to exploit them more ruthlessly than ever. People that have the misfortune to rely on the Company for the lighting of their houses, are condemned to the nervous excitement of a perpetual lottery. They never can have a moment's confidence in the continued burning of their lamps, nor ever can be certain, as the "shades of evening" fall, whether they will enjoy the society of the electric spark or be obliged to fall back upon humble composites and malodorous kerosene. To invite friends to dinner is to prepare almost sure complications, for with the perversity of all radically bad servants, the electric lights choose for their paling and waning vagaries precisely the time when their healthy brightness is most desirable. The Company threw itself for a season on popular compassion by pleading that its engines were not sufficiently powerful for the length of the circuit. A most intelligent excuse, truly! A restaurant-keeper might just as ingeniously account for setting raw meat before his guests by saying that really he had not provided any fuel to cook it. If the Company showed any genuine disposition to consider its customers' convenience in matters entirely within its feeble competence, there would be more disposition to condone its accidental shortcomings. But it conceals its conscience effectually. It achieves absolute regularity only in absence of discrimination. At a certain invariable hour each day the machinery is set in motion and the current generated. Wet days and dry days, dark days and bright days, 'tis all the same. Many and many an evening, from a quarter past six to a quarter to seven, the frequenters of the Tokyo Club may be seen twiddling their thumbs under dark electroliers, or loading the obscure atmosphere of the billiard room with tender expressions of feeling, while distracted servants shout through telephones for currents that don't come. Complaint is useless. The Company has its own rules, and it has a monopoly. The public may whistle. Is there no chance of competition? That is what tired folks are now anxiously asking as their backs crack under this last straw of raised prices.

What is the matter in Kobe? There must be some reason for the perpetual rows that are taking place between foreigners and Japanese coolies. Does the fault lie entirely with the coolies? One can understand that this sort of thing might grow. Bad blood once engendered, the ball of retaliation and revenge might be thrown backwards and forwards with increasing frequency. Perhaps one of the recent collisions is to be accounted for in that way. Eleven American sailors had a fracas with coolies—presumably *jinnrikisha*-drawers—the net result being that three of the coolies were cut and two of the sailors. Each party says that the other began the disturbance, and when the case comes up for trial, there will doubtless be a good deal of hard swearing on both sides. It is not difficult to conceive that if the coolies of Kobe have a bad name among foreign sailors—which unfortunately seems to be the case—or if foreign sailors have earned the ill-will of the coolies, a very small matter might precipitate a quarrel. But how did it all begin, and is there no hope of a change for the better? The other day, an American naval officer was summoned by a coolie for assault. According to the defence, the coolie had behaved with insolent truculence. According to the *Hyogo News*, the coolie was well known as a quiet, civil fellow. It appears to us that justice was done in that case, but we are very thoroughly convinced that the methods of the United States Consular Court can not have inspired the Japanese with much confidence in the quality of the justice they were receiving. We mention this because it suggests that a disposition to prejudice the coolie may have been created, and if that be so, or, at any rate, if the disposition be openly indulged, a remedy

will be doubly hard to apply. What is the meaning, for example, of the other story just reported? Two foreigners walk to the scene of a conflagration. An excited coolie comes up, catches hold of them and tells them to go away. They appeal to a policeman, and he absconds at once. Then they take refuge behind a squad of police. The coolie follows, having meanwhile armed himself with a billet of wood. The foreigners invoke the protection of another constable, who enters into conversation with the coolie, and then calmly informs the foreigners that the coolie requires them to go away. They remonstrate, but the constable continues to convey the coolie's order. Then they ask for the coolie's name, but the constable fails to obtain it. Then they ask for the constable's name. "While they are writing it down the coolie 'draws back,'" and "in his absence both succeed in getting quietly and safely away." Is not that a wonderful story? Naturally the coolie figures as a "ruffian assailant" in the columns of the *Kobe Herald*, which journal seems to have come to the conclusion that the Japanese is always in the wrong. Perhaps that conclusion is quite correct, but we find it very difficult to credit. Very few foreign residents will be found to endorse a wholesale accusation of rudeness or truculence against the Japanese coolie. Most of us have known him for many years as a hard-working, cheerful, obliging fellow, and are not prepared to relegate him at a moment's notice to the ranks of the "ruffian." But the condition of things in Kobe is really becoming scandalous. If the coolies are the sole aggressors, if they are really possessed by a demon that drives them to assault the foreigner, they must be under the influence of some evil leader, or leaders. They are not all bad. We venture to say that only a small fraction are bad—supposing that any are. It is to be observed that the *hatoba* coolies are invariably indicated as the most unruly. Why should that be? Are we to infer that contact with foreign sailors has demoralized the coolies? Officialdom is not omnipotent in such matters, but if the *hatoba* coolies are notorious for creating disturbances, might it not be wise to remove them to another stand? That resource is certainly within the power of the local authorities. The foreign residents of Kobe manage their municipal affairs so well that one is surprised by their failure to lay bare the origin of this unsightly epidemic and to stamp it out. By and by there will be mutterings against the Consular body as well as against the Japanese police, for the continuance of such disgraceful incidents deserves the attention of the former nearly as much as it demands the active interference of the latter.

A good many paragraphs appear in the vernacular press with reference to the Hawaiian affair, but as they all relate to the method of arbitration, they possess no special interest. There can not be much doubt as to the course that will be adopted. Both sides will combine to draw out a statement of facts and of issues to be submitted to the arbitrator, who will then have to decide only two things, first the legality or illegality of Hawaii's acts in the given premises, and secondly, the amount of compensation, if any, to be paid to Japan. There appears to be no doubt that the King of the Belgians will be invited to arbitrate, supposing, always, that arbitration is unavoidable. It is not easy to conceive that Hawaii will be so ill-advised as to carry the matter into court. The shiftiness of the pleas she has advanced in defence of her conduct must be perfectly evident to herself, and must teach her how hopeless a case is that does not admit of plain and permanent statement. Perhaps she has become more or less indifferent to the result, believing that if she is cast in the suit, America will have to pay the damages. If that be so, the Cabinet in Washington should convey a strong hint to Honolulu as to the advisability of coming to a settlement without delay.

We read in the *Nichi Nichi Shimbun* that a number of Japanese emigrants who were

about to proceed to the United States in the steamer *Coptic* on the 5th instant, under the auspices of the Kosei-inin Kaisha of Wakayama, were stopped by Consul-General McIvor, on the ground that the entry of contract labourers into the States has been forbidden since the abolition of slavery, and that any vessel carrying such labourers is liable to a fine of \$500 per head.

THE "SHOGYO" ON THE BANK OF JAPAN.

The circulation of money at the end of July, remarks the *Shogyo*, was easier than had been anticipated. The issue of convertible notes by the Bank of Japan beyond the legal limit was also of a greater amount than had been expected, the total issue on July 31st reaching 10,325,195 *yen*. The following tables show the actual amount of convertible notes and the reserve at the end of last week, as compared with the figures for the week before last:—

	July 31. Yen.	July 24. Yen.
Specie Reserve	209,785,698	212,180,202
Reserve Securities	88,917,410	78,878,146
Convertible notes issued	298,738,088	290,558,118
Specie (decrease)	2,399,614	
Balance { Securities (inc-rease) ..		10,069,284
Notes (increase) ..		8,169,670

Thus the specie reserve having decreased by 1,899,614 *yen* and securities by 10,069,284 *yen* the result was an increased issue of convertible notes to the amount of 8,169,670 *yen*. Of this the sum issued beyond the legal limit, as compared with the figure for the week before last, was as follows:—

	July 31. Yen.	July 24. Yen.
Notes issued beyond legal limit...	20,331,195	455,326
Balance		9,869,889

From these figures it will be seen that the convertible notes issued beyond the legal limit during the previous week amounted to 9,869,889 *yen*, which, together with the amount recorded two weeks ago, makes a total of 10,325,195 *yen*. As for the specie reserve, it is impossible to ascertain the exact cause of its decrease except from the Bank's Weekly Report of transactions to be published on the 4th inst. Nevertheless it may be conjectured that the withdrawal by the Government of its deposits from the Bank contributed largely to the decrease in specie. But it may also be conjectured that the increase of over ten million *yen* in convertible notes issued on security is the direct result of a demand for funds for commercial enterprises. In the beginning of this month the Bank may expect to see some capital restored to its vaults, but on the whole the necessity for issuing notes beyond legal limit seems to be natural.

THE NEW U.S. CONSUL-GENERAL.

The newly-appointed Consul-General for the United States at this port, Mr. J. T. Gowey, accompanied by his son, Mr. F. M. Gowey, arrived here somewhat unexpectedly by the N.P. steamer *Victoria* on Tuesday afternoon at 5 o'clock. Mr. John McLean, Vice-Consul General, boarded the steamer on the chance of Mr. Gowey having come by her, and received the new Consul-General, who proceeded at once to the Grand Hotel. Mr. Gowey visited the Consulate-General on Wednesday and on Thursday proceeded to the capital, in company with Mr. Consul-General McIvor, and visited the Foreign Office.

FATAL FIRE AT MITO.

On the afternoon of the 6th inst., shortly before 6 o'clock, fire broke out in the lamp room of the Mito Railway Station and eventually the whole of the station buildings were destroyed. The fire is said to have originated through one of the employes having dropped lighted ashes from his cigar into a tin of lamp oil. The unfortunate man appears to have been cruelly punished for his carelessness, as he is reported to have been burnt to death.

THE INUNDATIONS.

Japan seems to be fated not to pass a year without some loss from inundations or tidal waves. The following records of the recent catastrophes are published by the *Nichi Nichi Shimbun*:-

From the Governor of Miyagi Prefecture.
2.56 p.m.; 6th inst.

A tidal wave has swept in at Okatsumura and inundated 125 houses. Twenty persons are slightly injured.

From the Governor of Niigata Prefecture.
6 p.m.; 6th inst.

Owing to heavy rain since the 4th inst., the Arakawa has risen over 20 feet at Naoyetsu; 1,500 houses have been inundated and 30 people killed or injured. Six hundred people were drawn out of the flood. Twenty boats have been swept away, and serious damage has been done to the railway at Shinyetsu and Hokuetsu. The service of trains is suspended. At Takata 2,000 houses have been inundated, more than 50 being washed away or wrecked. Along the Karigata-gawa five houses have been swept away, five wrecked and more than 400 inundated. Along the Shinano-gawa more than 200 houses have been inundated. Several embankments have also been broken.

Oita, August 6.

Districts along the river Omono are all flooded, and one quarter of Omagari is under water to a depth of 15 feet, the water not beginning to show any signs of subsiding until about 7 p.m. The town of Akita was flooded about 2 p.m. and at 9 o'clock yesterday morning the water had risen to 12 feet. The houses in the southern part of the town are all flooded, though the water began falling at half-past 9 o'clock. The cable lying along the river Omono has escaped damage. In Sakata district, bridges have all been swept away and there are signs of further damage. The embankments of the Omono river were washed away at 3 p.m. yesterday and all the immediate neighbourhood is flooded.

Yamagata, August 6.
Owing to successive rainfall many rivers have overflowed their banks. Districts around Mogami have sustained much damage.

Naoyedzu, August 6.

Last night at eight o'clock the river Arakawa overflowed its banks and the neighbourhood of the Post and Telegraph Office, the Police Station and the Railway Station was flooded to a height of seven or eight feet. One-third of the town is under water. The train due here at 9 a.m. has not yet arrived (10 p.m.) Numerous persons and animals have been drowned or injured.

Naoyedzu, August 6.

In the flood caused by the overflow of the river Arakawa, nine officials of the Hokuyetsu Railway Company were carried into the sea, together with their houses. Happily they were all saved by the *Taiwan Maru*. Two bridges and 15 boats were also washed away.

Sendai, August 6.

The river Kitakami and many other rivers overflowed their banks, breaking all their embankments. Four houses were swept away, while those flooded were numerous. The tidal waves reached the roofs of houses and 15 houses on the beach at Okachi were swept away and 120 houses flooded. Twenty persons are reported to have been injured.

It is reported that over 100 miners in the Hosoku Colliery have been drowned owing to the inflow of water.

Akita, August 6.

In this town over 500 houses were flooded above the floor and over 300 houses below the floor.

Taipei, August 11.

On the 8th and 9th inst., a storm swept over Formosa. At Twaitia, Kelung, Tamsui and other places, great damage was done, all the rivers overflowing their banks.

Kobu, August 12.

Last night a severe thunder-storm occurred here. This morning the weather cleared up. The rice crop has excellent prospects.

Miyatsu, August 12.

Fine hot weather prevails here, the thermometer registering 95 degrees Fah. In the afternoon a thunderstorm occurred.

Tokushima, August 11.

During night's thunderstorm a house was struck by lightning and destroyed.

Marugame, August 12.

Last night a severe thunderstorm occurred here. This morning the sky cleared up and a cool breeze set in. The rice crop is excellent.

Marugame, Aug. 12.

Two houses were struck by lightning and burned down last night.

CHINESE TOPICS.

The rumour that China is negotiating a loan of sixteen millions sterling, is again circulated. It is now stated that the Hongkong and Shanghai and the Deutsche Banks have the matter in hand; that the price of issue will be something under 85; that the interest will be low, and that the security is to be what remains of the customs revenue supplemented by the salt *gabells*.

The death is reported from Peking of Li Hung-shao, Grand Secretary and President of the Board of Civil Appointments. Li was a man of distinguished erudition, and for many years held the post of President of the Board of Rites, but was raised last year to the high office occupied by him at the time of his death.

The rice crop in Szechuan and Western Hupoh has been saved by a spell of sunshine, and hopes of arresting the famine are entertained. But the long-continued rain ended in a cloud-burst which produced a fall of 4 inches in as many hours, and wrought great damage.

Things do not appear to be running very smoothly in the new imperial Chinese post-office. Mails are reported missing and long delays occur in transmission. It is claimed that the organizers of the system acted with precipitation. Before acquiring practical assurance of the success of their arrangements, they shut up the old post-offices, thus depriving themselves of aids in time of need and antagonizing all the former officials.

A vivid idea of the difficulty of communications in the upper waters of the Yangtze is conveyed in a letter from the *N. C. Herald's* Chungking correspondent. It appears that junks bound for Chungking had, in some cases, to lie at Ichang from April to the end of July before trackers could be obtained for continuing the up-stream voyage; and, in others, had to stop half way, their trackers having been impressed into Government service. To resume the journey in July involved battling with the summer floods, so that many of the junks are now waiting helpless until the autumn. Bankruptcy is the fate of not a few junk-masters who undertake the precarious trip. The funds with which he has supplied himself fail after two or three months of delay, and his crew, threatened with starvation, leave the junk to its fate among the celebrated gorges of the river. Steamers are badly wanted.

The Foochow correspondent of the *N. C. Daily News*, writing about this year's tea trade, says:-

The falling off in tea export from China has been insisted upon *ad nauseam* and the figures are very dreary. But the short crop seems at any rate to keep up the prices a bit, and the better quality of the machine-made tea and its increased suitability to the home palate back this up. No fortunes will be made this year, but the general sale shows a moderate balance in favour of the exporter, who at any rate is not paying for the privilege of exporting tea, by increasing the receipts of the Chinese exchequer and enlarging the figures for the Customs Returns. No doubt the still further fall of exchange helps things along a bit, every bit of the difference goes into the pockets of the tea-men, and though people fancy they are doing business in a silver country, to all intents and purposes they are working on a gold basis. Consul Jamieson pointed it out to the home people not so very long ago. In fact in these days of telegraphs, swift and sure carriage, bank, and halcyon days of peace and good credit, no one is allowed to pick up a chance profit through the difference in exchange.

To return once more to tea, this time to the dust therefrom, it is said that much friction exists be-

tween the Russian firms who have a monopoly of the brick tea trade and the native dealers. Rumour says that the ubiquitous comprador "gleans" to the extent of about five per cent between the seller and the foreign *Taipans*. This squeeze, for it is rather too heavy to be called a commission, has been a growth of years. First, there was a bribe to the compradores to weigh accurately, then not to take too large samples, then to cut a moderate amount for bags. Then all this came over again, and so on, as only Chinese know how to carry on the little game. So the tea-men are now clamouring for all sort of rules whereby they may know "where they are." One enterprising Russian has gone in for the local patter. It is not to be expected that he will make much of it at first, but business margins are becoming too narrow to allow the "gleanings of compradores," and men who cannot talk the lingo will be ousted and that before long.

The Hankow correspondent of the same Journal, reporting on the same subject, writes that the export this season, during the first 80 days, was nineteen million lbs., against twenty-two millions and a half for the corresponding period last year. Russia is the great buyer. Exchange last year was 3/14; this year, it is 2/10: thus the exporter gets a premium of 11 per cent. this season, a fact that has bitter significance for export merchants in the new Japan.

The particulars of Mr. Happer's death are thus related by a Newchwang correspondent of the leading Shanghai journal:-

It appears that on the 17th of December last Mr. Happer had two middle fingers very slightly bitten by his black bitch Nellie. At the time he thought nothing of it, but Dr. Daly not feeling sure persuaded him to proceed at once to Saigon. Accompanied by his wife Mr. Happer left on the 20th of December for Port Arthur, the weather being terribly cold and a nasty dust-storm prevailing. After travelling hard for twenty-three days he arrived at Saigon, where he was at once treated. Mr. and Mrs. Happer returned to Newchwang just before the opening of the port—from Shanghai to Chiofou, then to Port Arthur, and then overland to Newchwang. Mr. Happer seemed well pleased with the treatment, the doctors having assured him that if he were all right on his arrival at Shanghai, about the twenty-first day after the treatment, he could rest assured. On Friday, the 23rd inst., he felt unwell, and the next day it was stated that he was suffering from fish poisoning. He attended slightly to his office duties on the Saturday, but on the Sunday the sad news was that he was suffering from the effects of the dog bite, and it is said that he sent for his chief assistant, Mr. T. D. Moonhead, informing him that he knew he would die, and spoke very kindly to all. On Monday he was slightly better, struggling to take food, but yesterday (Tuesday) he was slightly delirious, although he could smoke and enjoy the company of Mr. J. Armour, the Harbour Master. All that was possible was done, and to make sure the Doctor telegraphed to the Institute at Saigon, describing the treatment, and receiving a reply that what was being done was right. However, Mr. Happer passed away at eight o'clock last night. Great sympathy is felt for Mrs. Happer, who has been most courageous all through.

THE SHOOTING CASE AT THE U.S. NAVAL HOSPITAL.

W. H. Martin, the Marine formerly on duty as Orderly at the United States Naval Hospital, who shot himself in the head with a revolver on the 6th instant, after lingering in a paralysed condition for four days, expired early on Tuesday morning. The same day a Naval inquest was held upon the body, resulting in a verdict that the deceased died from a self-inflicted bullet wound in the head.

The funeral of W. S. Martin, the American Marine who died at the U.S. Naval Hospital on Tuesday morning from a self-inflicted bullet wound in the head, took place at the General Cemetery on Wednesday morning. The officers of the flagship *Olympia*, and a firing party, besides a number of marines and blue-jackets from the same vessel, took part in the obsequies, the funeral service being conducted by the Rev. W. T. Austen.

NEWS OF THE WEEK.

Hera Singh, a gunner in the Asiatic Artillery at Hongkong, has been sentenced to three years imprisonment with hard labour, having been found guilty of committing wilful and corrupt perjury.

The steamer *Glenogle*, which left Shanghai on the 3rd instant for Nagasaki, unfortunately stranded on the bar at Woosung. It is expected that she would soon be floated and be able to proceed to her destination.

The employés of the Nagasaki Post Office have presented to Mr. Watanabe, the late Post-master, a gold watch, suitably inscribed, as a mark of their esteem for the many services rendered to them during his tenure of office.

Dr. H. N. Allen, the newly appointed United States Minister to Korea, has received a dispatch from the State Department informing him that the Senate has confirmed his nomination, and he was ordered by the Department to take the oath of office.

While dancing in the Criterion Theatre at Sydney, Miss Elsie Adair (Mrs. Walter Vanderlip), fainted, and the doctor who was called in states that the condition of her heart is such as to preclude her dancing in the future. Much sympathy is expressed with her in Sydney.

In the fire which occurred in the native town, Yokohama, on Friday morning, an old man of 70, who was lying ill in bed, met a cruel death, being burnt in his house, none of his neighbours, apparently, in the confusion, thinking of assisting him to a place of safety.

By Imperial Notification No. 258, the Conscription Law is extended to Okinawa Ken, the regulations coming into force from January 1st of the 31st year of Meiji (1898). Various exemptions are granted to the islanders, to meet the circumstances of living in this remote portion of the Empire.

Fire broke out on Thursday morning, about 1 o'clock, in a row of Japanese houses on the eastern side of the Recreation Ground at Kobe. The Brigades succeeded in mastering the fire after 42 houses had been destroyed. A policeman and fireman were wounded while working at the fire.

Some of the P. and O. wrecks have been the *Bokhara*, lost in the China seas; the *Tasmania*, in April, 1887, on Monachi Rock, Corsica, 23 lives lost; the *Indus*, on the 8th November, 1884, on the coast of Ceylon; *Carnatic* on the 13th Sept., 1869, off Shadwan, Gulf of Suez, 25 lives lost; *Erin*, in June, 1857, on the coast of Ceylon.

A London telegram that appears in the San Francisco *Call* says that Mr. C. P. Huntington, President of the Pacific Mail Steamship Company, through Colonel J. W. Macfarlane, has had the registry of the steamship *China* of the Pacific Mail line transferred from the British to the Hawaiian flag. The *China*, is now coming over from San Francisco.

Yokohama is a wonderful place for "bunders." A slight disturbance at the monthly *maizuri* in Motomachi on Sunday night has been transformed into a mob-riot resulting in murder. As a matter of fact, two sailors, slightly the worse for liquor, were knocked about by a stall-keeper whose goods they had damaged.

Owing to the present scarcity of labourers, says the Nagasaki paper, Mr. Higashijima, owner of the Choja Tanko, has engaged the services of a large number of Koreans for his mines. The N.Y.K. steamer *Higo Maru*, which arrived on the 5th inst., brought 20 men, and 80 more are expected to arrive by the next steamer from Korea.

The funeral of Robert Owen, late able seaman on H.M.S. *Pique*, who died at the Royal Naval Hospital on Sunday last from the effects of injuries received in a fall through the awning

to the deck of the vessel, took place at the General Cemetery, on Tuesday morning and was attended by the Captain and most of the officers of the *Pique*, and a large party of blue-jackets.

The *N. N. L.* learns that the Russian S.N. Co.'s steamer *Vladimir*, Captain Erickson, commander, has gone ashore on a rock near Possiet, about 70 miles from Vladivostock, and will in all probability become a total wreck. Her passengers and crew, however, have been saved, and were brought on here by the Volunteer Fleet's steamer *Saratow*, which arrived at Nagasaki on August 7th.

The first prize and 2 record points in the sailing race for the 12-raters of the Y. Y. Club on Saturday last was won by *Susume Waratah* taking second prize and one record point. The Mosquito Club's race was won by *Mona*, with *Nandaska* second. The corrected times were very close, showing that the handicappers had struck a very nice balance in judging the sailing qualities of the boats.

Gold and silver imported into Japan from January to June, remarks the *Mainichi*, amounted to sixty-five million yen. This having been received mostly by the Government, the portion of the indemnity now held in London must be very insignificant. The latest investigations made by the Finance Department place the actual amount of indemnity in London at five million pounds. This sum is to be appropriated by the Government for outlays on war vessels and various other things.

A three mile race took place on Tuesday afternoon between six-oared boats from the U. S. flagship *Olympia* and H.M.S. *Pique* for stakes said to amount to some 30 yen per oar. The course was from outside the breakwater to a line between the Canadian Pacific and Pacific Mail buoys. The *Olympia* boat took the lead almost from the start, and in spite of a good spurt put on by the *Pique's* crew near the finish, kept her lead and won by forty seconds.

Percy Cavill, of Sydney, won the 1/4-mile amateur swimming championship in the West India Docks on July 3rd, in 16min. 26secs. Nuttall, the English professional champion, has expressed his willingness to swim Percy Cavill for the championship for any stake over distances of 500 and 1,000 yards, the contest to take place in September. Jack Helling, also of Sydney, placed the 100-yards amateur championship of England to his credit, at the same place, by defeating seven others, in 71 seconds.

Kobe is having a lively time with its coolies. During the fire on Thursday one of the fraternity, while in an intoxicated condition, assaulted two foreigners who were merely looking on at the conflagration. On the afternoon of that day one hundred coolies set upon a dozen foreign sailors who happened to be in the vicinity of the Recreation-ground. Sticks and stones were freely used, but the sailors managed to escape without much damage. We do not have these disturbances in Yokohama. Why is it? Are the Yokohama police force more efficient or is the Kobe coolie more truculent than his brother in the north?

A strange story of the sea is related by the *Fiji Shimpo*. A few days ago, a small boat arrived at Okitsu, Kazusa Province, manned by four mariners, who made a report to the Water Police to the following effect. The steamer No. 1 *Tenryu Maru*, trading between Yokohama and the South Seas, to which the waifs who made the report belonged, when among a group of islands on the 30th June, some 900 miles south of Japan, struck a sunken rock and almost immediately foundered. With considerable difficulty all the crew succeeded in effecting a landing on a small island in some of the boats of the steamer, when it was found that the place was uninhabited. After remaining on the desolate shore for a month in vain hope of being rescued by some passing vessel, Mr. Mizutani, the master of the lost steamer, and three

of the crew stocked a boat with provisions and water for about sixty days and started from the island for Japan, leaving behind the remainder of the crew, numbering over ten. From the beginning of July the adventurous little party had been drifting in calms or buffeted by storms without touching land until their arrival at Okitsu a few days ago. It is stated that the *Tenryu Maru* was insured with the Imperial Marine Insurance Co. for 5,000 yen.

A Reuter wire from Antwerp on 1st July, that appears in all the London papers, states:—"This morning the crews of two Japanese trading vessels who had already come into collision with the inhabitants of the port on previous occasions, sacked several public houses, at the same time ill-treating the police, who interfered, and a number of citizens. The disturbances were resumed several times. The police having been reinforced, eight of the Japanese were finally arrested and the two Japanese vessels were removed from the wharves." Japanese sailors, firemen and coolies are making a brilliant reputation for their countrymen at home. News has just reached Yokohama that one of the new Nippon Yusen Kaisha steamers was delayed for four days in the Suez Canal owing to the turbulent action of the firemen.

Some metropolitan journals, remarks the *Sekai-no-Nippon*, have endeavoured to contradict the news that Russian troops have arrived in Korea. Nevertheless reports are continually coming to hand confirming the truth of the incident. The special Seoul correspondent of the *Hochi Shimbun* writes as follows:—"It is here rumoured that a Russian man-of-war from Vladivostock has conveyed to Chemulpo a number of military officers. These officers are now known to belong to the Cossacks; and there were besides about twenty non-commissioned officers on board. They have all proceeded to the capital by the river Han. The entry of Russian troops into Seoul has broken the recent monotony and excited general criticism among the people. There can be no further doubt as to the Russians' arrival in Korea."

The *Hongkong Daily Press* of 27th July says:—"Before the commencement of the case in the Criminal Sessions Court yesterday the Attorney-General applied for Mr. Wei On to be approved, admitted, and enrolled as a solicitor to practice in the Supreme Court of Hongkong. Mr. Wei On was educated at Oxford and was an M.A. of the University. He had been admitted as a solicitor in England. His Lordship, in making the order applied for, said he had the more pleasure in doing so because Mr. Wei On belonged to the same University to which his Lordship had the honour to belong. Mr. Wei On was, he believed, the first Chinese graduate of that University and it was hoped that more Chinese gentlemen would follow his example. His Lordship then wished Mr. Wei On success in his career."

According to a Washington telegram three more U.S. vessels may be sent to Honolulu to take the place of the two now there. Some consideration has been given to the advisability of this, but nothing definite has been decided. The failure of the Senate to ratify the annexation treaty, says the writer, makes it necessary for the United States to preserve unusual precautions during the Congressional recess, and a strong fleet will do more than anything else to warn other nations that the *status quo* of Hawaii must be preserved. The battleship *Oregon* and the gunboat *Bennington* will probably be two of the vessels assigned to the islands, and the fast cruiser *Olympia*, now on the Asiatic station, has been suggested as the third. The *Olympia* would be used as a flagship by Admiral Miller. Neither the *Oregon* nor the *Bennington* are fitted for use as a flagship.

We were in error the other day in stating that Mr. James Troup is acting Danish Consul in this port, and as such caused the arrest of Mr. Stahlgren. Mr. Gielen is Acting Consul during Mr. Jewette's absence. We may here observe

that the affair to which the correction applies takes its place, and by no means an obscure place, among the many curiosities of Consular Jurisdiction in Japan. By what conceivable right did a Danish Consul issue a warrant for the arrest of a Danish subject on board a British vessel within Japanese territorial waters, but not within the limits of any treaty port? By what conceivable right did a British Consul endorse the warrant? And under what conceivable pretext was a British Consular constable lent for the purpose of executing the warrant? The incident is so strange that we can scarcely credit the correctness of the facts as hitherto published.

The good ship *John McDonald* is having a slow passage to Kobe. She left Yokohama in the last week of July and on the 11th of August the "*Matsuyama Maru*" reported at Kobe speaking the American sailing ship *John McDonald* on the 9th inst. at 9.30 a.m., 20 miles N.E. of Oshima. The *John McDonald* wished to be reported." So we should imagine.

According to the *Yomiuri Shimbun* the following laws are to be submitted to the 11th Session of the Diet for discussion:—The remaining portion of the Civil Code; the Commercial Code; Laws for the enforcement of Civil and Commercial Laws; and the Registration Law. It has been decided that the Criminal Code and the revised Codes of Civil and Criminal Procedure will not be submitted to the Diet.

The *Seikai-no-Nippon* reports the following casualties resulting from the recent floods in Niigata Prefecture:—In Naka-Kambara-gun a landslip occurred and a house containing seven persons was buried under it; in Mishima-gun eleven men were also crushed to death by a landslip, while another landslip caused two deaths and severe injury to several men; in Sado-gun several landslips occurred and 18 houses were crushed and 22 damaged, three persons being killed and two wounded. All the rivers in the locality overflowed their banks and three men were drowned in the river Shimazaki.

The Government railway between Kamikawa and Sorachifuto in Hokkaido, which was originally intended to be completed by March next year, has suffered considerably, and is still suffering, from want of labourers as well as the rise in price of commodities. The work extends over a distance of thirty-five miles, but progress is very slow. For a period of seven or eight months, between last Autumn and the Spring of this year, the work was greatly hindered by an unusual fall of snow and rain. The line between Sorachifuto and Takikawa and Fukagawa—a distance of fifteen miles—is expected to be finished by October next. After that time, locomotives may be used for the transport of materials necessary for other sections of the work, and facilities so afforded will, it is alleged by the *Yomiuri*, enable the Government to complete the line by the specified time.

The funeral of the late Ainogo Mura, aged thirty-three, a second-class petty officer belonging to the Japanese battleship *Yashima*, took place at Chatham Cemetery, England, on 1st July according to the burial rites of his country. In the absence of a Japanese priest, says a home paper, the burial service was read in the chapel by the commanding officer. A collection of artificial flowers and natural fruits was grouped on the floor at the head of the coffin before the ceremony commenced. At the conclusion, all the mourners placed twigs of evergreen before the coffin, and bowed to the corpse. The procession then moved slowly towards the grave. Three volleys were fired over the grave, the ship's bugles sounding the "last post" after each volley. Each officer sprinkled earth upon the coffin, and a memorial tablet of wood, inscribed with Japanese characters, was deposited with it. The concluding ceremony consisted of decorating the grave. A bough of weeping willow, intertwined with streaming ribbons, was placed at the head, and at the foot bowls of rice and decanters containing saké. Wooden

vases of artificial flowers of various colours were arranged on either side, and in the centre three beautiful crosses were deposited. The deceased committed suicide by cutting his throat with a knife whilst the *Yashima* was on her passage from the Tyne to the Medway. He left a letter, stating:—"Minority against majority. I don't see any hope of my sincerity being accepted by others, so I give up my life. June 25, 1897." No explanation as to what the deceased meant could be given.

It is reported that the mansion-house of Culloden is about to be dismantled and its contents—Jacobite relics, old curios, and works of art—brought to the hammer. Perhaps the most interesting article of furniture in the historic edifice, which has been for many generations in the Forbes family and is situated near the battlefield on which was sealed the fate of the Stuart dynasty, is the bed on which Prince Charlie slept on the eve of the fight. Tradition in the North assigns more than one locality as the place in which the Young Pretender passed the night before the battle; but it is certain that, while he slept in Thunderton House, Elgin—the residence of a loyal old lady adherent to his cause, who gave orders that the sheets on which her Prince lay should be preserved and used as her shroud—some few nights preceding the disaster of Drumossie Moor, it was in Culloden House he rested the night previous to the fateful day.

It was reported in these columns on Friday last that the N. Y. K. steamer *Iosa Maru*, which was engaged to convey 1,500 or so Japanese emigrants to Brazil, had been taken off that berth and put on the European line. We now learn from the *Mainichi Shimbun* that the reason for stopping the departure of the emigrants for Brazil, is that instructions have been wired from that country to suspend the despatch of labourers, as an economic crisis has arisen there. The Oriental Emigration Company had completed all arrangements for the despatch of 1,500 emigrants on the 15th instant, and the loss incurred by the Company, by the unfinished transaction, will according to our vernacular contemporary quoted above, be about 100,000 yen, though how such an enormous loss can arise in the matter, we fail to see. It is further reported that the Foreign Office and the Brazilian Government are at present engaged in telegraphic correspondence about the matter.

The following table shows the increase and decrease of convertible notes issued beyond legal limits since the 24th ult. up to the 5th inst.:

JULY.		
	Excess. Yen.	Actual issue. Yen.
24th	455,306.....	—
26th	866,335.....	411,530
27th	1,794,064.....	927,228
28th	4,115,088.....	2,321,024
29th	5,583,539.....	1,468,451
30th	7,116,603.....	1,533,064
31st	10,325,195.....	3,208,592
AUGUST.		
	Excess. Yen.	Receipts. Yen.
2nd	8,738,256.....	1,586,939
3rd	7,738,256.....	922,725
4th	7,332,016.....	483,515
5th	7,037,032.....	294,984

The over-issue of convertible notes seems to have been due to the decrease of the specie reserve, caused by the withdrawal of deposits by Government. The increase or decrease of notes, therefore, may be an index in ascertaining the real condition of the economic world. The table above shows the receipts of notes during the first few days at the beginning of this month to have amounted to over three million yen, but as a considerable amount of capital is needed in August the Bank of Japan must expect to undergo some vicissitudes.

It was with feelings of sincere regret that the *Kobe Herald* announced on Tuesday evening the death of Mr. John A. Thomson, whose name will recall to many in Yokohama, Tokyo and Kobe, the days when the National Bible Society of Scotland maintained an Agent at

this port. Mr. Thomson came out in 1879, to assist Mr. Robert Lilley, whom he eventually succeeded, and left in 1884. Since then he has been engaged in various places, mostly in the United States, Scotland, and India. After residing about three years in India, where he was connected with the British and Foreign Bible Society, he resigned and threw himself with characteristic ardour into purely secular pursuits, ultimately finding his way once more to Japan, as representative for the Far East and India of the Yost Type-writer Co. Mr. Thomson died on board the French mail steamer *Saghalien*, about half an hour before entering Kobe harbour. The sad event gave a great shock to his brother, Rev. R. A. Thomson, who had come down from Arima to meet him and welcome him back. It was known that he was not well, advice to that effect having been received some time ago by his wife who, with her three little children, resides in Yokohama, but none of his friends thought there was any ground for anxiety. Much sympathy is felt for the unfortunate wife and brother in their affliction.

It had been anticipated, says the *Mainichi*, that the total issue of convertible notes would reach two hundred million yen, judging from the increase in the issue of paper beyond the legal limit. On enquiring at the Bank of Japan, it was found that the excess of notes on the 7th instant amounted to eleven million yen and on the 9th to twelve millions, the result being that convertible notes had been issued to the amount of twenty millions. At the present time considerable tightness must be felt in the money market; but no ground for complaint seems to exist except that interest is a little higher than it ought to be. In short, the circulation of capital is regular and uninterrupted. Yet it appears that both banks and borrowers are equally inspired with a latent anxiety for the future. The spirit of apprehension has manifested itself in the form of hesitancy to engage in all kinds of transactions. That evidently arises from public inability to discern the result of gold monometallism on the future of trade, the consequences it may produce upon the economic world, and other problems affecting the financial schemes of the Government, which are in fact shrouded in mystery. The banks are taking unusual precautions, and hesitate to issue loans in spite of the funds lying idle in their vaults, and endeavour in this manner to consolidate their reserves. Such a precaution may be necessary or advisable for the Banks as well as for the economic world, but the policy is destined to curtail their profits to an enormous extent.

SOME ODDS AND ENDS.

"What's in a name?" has been a question possessing freshness since the days when Capulet warred with Montague in the narrow streets of mediæval Italian towns. It is as pertinent to-day as it was then; and will always be so, we imagine, so long as the world rolls on. Still we think that the editor of Kobe's new weekly might have chosen something more euphonious than the title he announced last Saturday. Certainly he sought "apt alliteration's artful aid," but the result is far from satisfactory. The name doesn't sound nice at all, and its suggestions to an East Anglian ear are unpleasant, despite Noah Webster.

Captain Wilmot of the British Navy has published a brochure entitled "The British Navy, Past and Present," in which he quotes from a weekly journal an anecdote relating to an incident that only a few residents, we imagine, can now call to mind. The story runs:—"During the revolution in Japan between the Tycoon and the Mikado, Hakodate was about to be bombarded by the Mikado's ships. Boats from H.M.S. *Pearl* were sent to bring off the English and foreign residents. One of the boats was specially told off to bring on board the English consular archives. The midshipman in command of the boat being so long away from the ship, the signal for his recall was hoist-

ed, and on his return to report himself he said, almost with tears in his eyes, 'that he had hunted and asked everywhere for Mr. and Mrs. Archives, and he couldn't get any information about them.' This midshipman is now in command of one of our first-class battle-ships.

The talk of the week has been greatly centred on the dramatic arrest effected on Monday evening far down the Bay. The affair was theatrical in most of its attendant aspects; the waiting steam-launch with its group of expectant officials, then the grounding of the *Columbia* on Saratoga Spit, and next the arrest while the big steamer lay helpless on the mud. Many years have passed since a somewhat similar scene was enacted near Saratoga Spit, but that affair ended in an appalling tragedy. Then as now the ship was flying the Red Ensign, and the principals belonged to another race than that which finds protection beneath the ruddy folds of the Ensign of England.

"Welcome the coming, speed the parting guest." To the infinite regret of everybody in our small community the time has arrived to bid farewell to Mr. Consul-General McIvor in his official capacity. A man of keen intellect, thoroughly grounded in the Law, an official who ever had the business interests and general welfare of his nationals at heart, and above all a gentleman *sans peur et sans reproche*, Mr. McIvor will leave Yokohama accompanied by the good wishes of all who have ever come in contact with him, for a happy continuance of a career already so bright with promise. We use no idle, hyperbolic phrase when expressing the opinion that in Mr. McIvor the United States Government had the best Consul-General ever accredited to Yokohama.

"Printers' errors" are the despair of all newspaper people, but more particularly of the little band of English journalists who are "marking time and writing history" in the Treaty ports of the Far East. To them falls an additional burden of care and worry, for to the outsider the jumble a native compositor can make of the plainest copy is inconceivable. Fortunately the Far Eastern comp. does not take upon himself the task of punctuating the copy given him to set up. In that respect he is most unlike his English brother. Still faulty "stopping" often brings expressions of wrath to the lips of many a "writer for the Press" in the Far East. When the accident happens to some other journalist than yourself, it is really very funny to observe the curious effect a misplaced comma has upon the sense of a paragraph or advertisement: it's not fun for the other fellow though. A London periodical recently offered a prize for the best collection of such unintentionally amusing advertisements. Here is part of one list:—

"Annual sale now going on. Don't go else-where to be cheated—come in here."

"Wanted, a room for two gentlemen about thirty feet long and 320 feet broad."

"A lady wants to sell her piano, as she is going abroad in a strong iron frame."

"Lost, a collie dog by a man on Saturday answering to Jim with a brass collar around his neck and muzzled."

"Wanted, by a respectable girl, her passage to New York, willing to take care of children and a good tailor."

"M. Brown, furrier, begs to announce that he will make up gowns, capes, etc., for ladies out of their own skins."

"A boy wanted who can open oysters with a reference."

"Bulldog for sale, will eat anything, very fond of children."

"Wanted, an organist and a boy to blow the same."

If this can be done at Home, what can out-lander papers not produce?

Eastern Treaty ports boast of the cosmopolitan nature of their communities. Harrow School can now share the boast with equal pride. On Speech Day this year, the evidence of its polygot character was very much to the fore. The Captain of the School was a Mr. Mavrogordato; Mr. Lembcke was prize-winner

for scripture and history; Mr. Wertheimer for Latin prose; and Prince Ibrahim Pasha for geography and modern history. Not a bad selection of names for an English public school!

The hot weather is having its usual effect upon the community. All those that can are away to the hills or the seashore other than Yokohama Bay. Miyashita is full of visitors from Shanghai and China ports, while Ikao has mostly attracted Yokohama folks this year. One fact stands out broadly in this annual migration—in none of the holiday resorts, whether they be in the hills or by the sea, can one find any member of the group of foreign journalists who are eking out a living in Yokohama or Kobe. Everyone else takes a holiday by natural right. It is a privilege never assailed, for custom has solidified it into adamant; but the journalist's work is never done and holidays come not his way. Yet, on the whole, the slaves of the pen, at least in Yokohama, are not looking so very bad on this strict regimen of incessant work. They draw big drafts on the Bank of the Future, let us hope their trust may not be misplaced.

An amusing incident in connection with the late Brecon Fisteddod is noted in the *Musical Times*. A prize for choral singing was offered by the licensed victuallers of that town. Up came a temperance choral society from Newport and won it. This was a case of spoiling the Egyptians with a vengeance!

The last few moonlight nights have been taken advantage of by many of our local riders for bicycle spins in the country. What a variety of wheels one sees on these occasions! Every one seems to patronize a different maker. It reminds us of the story circulated by a Washington paper. Diogenes was on foot, with a bicycle lantern. "Why do you carry that lantern?" inquired the King. "I am looking for the best wheel on the market," quoth Diogenes, "and up to the present each man I have met has recommended a different one."

News from Nikko is to the effect that Mr. Morse's concerts there have been a great success.

The aquatic sports of the Y. A. R. C. on Wednesday did not appear to rouse as much interest among members, to say nothing of visitors, as similar competitions did a few years ago. It seems to us that at least one of the reasons for this lack of enthusiasm might be traced to some remissness on the part of the officers of the Club. No notice of the fixture was, so far as we have seen, authoritatively published in the papers, and several members of the Club who arrived on the bathing barge during the evening for their usual dip, seemed to be entirely in ignorance that sports were on, and others who would have been present declare annoyance at not having been reminded of the event.

The changes that have taken place among the personnel of competitors in these sports during the last few years were very noticeable on Wednesday. Not one of the champions of five years ago took part in the competitions, though some appeared on the Committee, while several of the competitors in the boys' races of that period are now winners of the principal events. In most cases the champions of old were very distinctly a better lot than those of the present day. On referring to the records of the Club's Sports of August 1892, we find that J. Eytan, Jr. won the 100 yards open swimming race in 55½ seconds, while H. Goddard's time on Wednesday was 1 min. 43 sec. The long dive was won in '92 by W. W. Campbell, who was under water 45 secs., and covered 150 feet. The quarter mile swimming race fell to K. F. Crawford, one of the fastest swimmers of his day, with P. S. Bent second, but the time is not reported, while Carst, in the race for boys under 15, covered 75 yards in 40 secs. The boys' races then were spirited affairs, but on Wednesday no lad could be found to start. There is evidently a lack of interest or inducement somewhere. Or is it the state of the harbour?

THE TRIFLER.

COUNT OKUMA AT THE SEMMON GAKKO.

At the fifteenth graduation exercises of the Semmon Gakko, Count Okuma's School, at Waseda, Tokyo, the Minister for Foreign Affairs delivered an address to the students. His Excellency remarked that he was extremely pleased at being able to speak to the pupils, and more especially on such an occasion as their fifteenth anniversary. They had already had the pleasure of hearing a speech from Prince Konoye, and an address by the Head Master, Dr. Hatoyama, so out of consideration for their feelings in such hot weather, he (the speaker) would limit his own remarks as much as possible. The young men, whom I wish more particularly to address, said Count Okuma, are the graduates of to-day, who, after many years of hard work and conscientious diligence, have taken their degree of Bachelor, and now leave the seclusion of the school to mingle with the denizens of the busy work-a-day world outside. Their first appearance in the ranks of those that have to live a practical life will be found, later on, to have resembled the experience of others; their first struggles will be, in most cases, like the first struggles of many men whose heads are now whitening with the snows of age. Human life is a series of intricacies, and at first it is difficult to discover the best path to pursue to enable us to successfully thread its mazes. The graduates that now sit before me, must expect to be confronted by many enemies: they will encounter many ambushes, but I counsel you all ever to keep a bold heart within you. Prince Konoye has justly remarked that the present condition of society, to the casual observer, discloses a lack of social energy and a widespread moral disorganization. These are two formidable enemies that the rising youth of Japan must combat. They have to vanquish those evils if they wish to escape humiliation and defeat in their race of life. If it happens that fortune does not smile upon them at the commencement, they must not lose heart, or suffer the loss of material good-things to damp their ardour. They must still press on, for invaluable experience is to be gathered from failure; experience that will enable them in the end to achieve success.—(Applause.) Now, what can furnish the most satisfactory compass to enable you to steer your course over this intricate sea of life? I can put it into one word. It is, learning. The graduates to whom I am speaking have completed their college course; they have received their certificates, but they have yet to learn the most elementary lessons in the practical school of life that lies outside the schoolroom. The lessons that they have learned at school must now be put to practical use: the knowledge that the past few years have brought them must be put to practical test. As the skilful mariner consults his compass and reads his barometer, so must these graduates consult their minds trained by education and read the book-knowledge their masters have given them into the practical duties of the day. One thing they must never forget: learning never finishes—it goes on as long as life lasts. Never must they relinquish their studies, rather must they ever keep up with them if they wish to make of life a great success.—(Applause.) A man who abandons learning, who wilfully puts aside the fruits of education, is a man who slowly loses influence with his fellows and gradually sink to the low level where lurk ignorance and defeat. This remark I hope will be of use to you in after time.—(Applause.) Count Okuma then turned for a few minutes to a retrospect of the fifteen years' of school-life that the Waseda Semmon Gakko had seen. He said:—Mr. Ichishima has already made a general report upon the school, but I suppose there is still something I can tell you about it. Moreover, as this festivity is attended by such personages as the Minister of Education, Prince Konoye, the Principal of the University, educationists, *literati*, and religionists, who all enjoy a degree of influence in the community at large, and whose meeting in this fashion cannot

be expected to occur frequently, and as the students themselves may be unacquainted with many circumstances that prevailed fifteen years ago, I will try to tell you the ideals that I held when I drew up the organization of this school. I will briefly relate what influence has been exercised by the school upon society; what changes have been wrought in the school standards; what I hope regarding the future. To talk of my ideals, however, before the illustrious philosophers and lawyers who are present to-day, costs me some effort. Yet I firmly believe that it is wrong for any one to shrink from uttering what he feels even in his inmost heart. I am therefore always ready to speak without reserve even before men of great erudition.—(Applause.) Reflection will show that foreign learning came into vogue soon after the arrival of Commodore Perry. Perhaps foreign learning may not have been so extensively propagated then as to warrant the use of the word "vogue," yet it is certain that men then interested in that learning were ardently engaged in acquiring a knowledge of the conditions of the West. I am really one of their number. Forty years have elapsed since that period, and by the time of the Restoration various schools had sprung up, principally devoted to the acquisition of foreign learning. After the Restoration, the Western systems—both military and civil—then in the highest stage of development, were introduced into this country. Everywhere the necessity of foreign learning was recognised, and no study was deemed efficient except that of the West. Thus the education of England, America, France, Germany, and other Occidental countries was adopted, and, as a natural consequence, produced scholars of different types. Such being the case, the thought occurred to me that the learning so pursued by the Japanese must be entirely destitute of foundation. In Japan, I said to myself, learning has no solid basis whatever. Education, however, is of paramount importance. It forms the character as well as lays the foundations of a nation, and yet it is wanting in a firm basis in my land. Indeed, it was a source of apprehension to me that the education of the Japanese had to be conducted by a variety of foreign systems. That would not do. The independence of the country might become endangered. At all events learning must be made independent. A moment's consideration showed me that in Russia, a country which had recently sprung up in Europe, an illustrious sovereign of no common ability, known as Peter the Great, had introduced from the West all the sciences and arts with a view to the adoption of European civilization. Russia therefore, like Japan, had a variety of systems of learning, but yet succeeded in establishing an independent system of education in less than two years. Five or six universities, imperfect as they were, sprang up in Russia. I suppose, there are now seven in all. But of the number of universities in Russia the learned personages who are present may be better informed than I. At any rate, there are a great many, the students aggregating over ten thousand. All the higher branches of science are taught in the Russian language, while the text books are all printed in Russian. I may suppose that those text books were originally written in German, English, and other foreign languages, but they were taught to Russians in Russian. In short, Russians were educated in a Russian University by the use of the Russian tongue. Was that the case with Japan? No. It was therefore necessary for Japan to organise a school where the higher branches of science might be efficiently taught in her own tongue. At that time, however, Japanese was regarded as an imperfect language, and various arguments were advanced as to the desirability of improving it. Drastic views were even expressed urging the advisability of substituting English for the Japanese language. Various associations were formed under the names of *Kana no Kwai*, and *Romaji Kwai*, and a great many others. Japanese literature may indeed be imperfect; Japanese characters may really be inconvenient, as they are but alterations of Chinese ideographs. The public were doubtful whether

they could comprehend or express the noble and intricate sciences of the West with a language so imperfect and so irregular as Japanese. The question of an improvement of the language was therefore discussed everywhere with a certain degree of ardour. As for me, however, I was rather inclined to assert that if the Japanese language were really unfit for expounding high philosophy or physics, or any other science, the country itself would be in danger. But there could be no ground for such reasoning as that, and the assertion might be proved by saying that when such wonderfully high philosophy as the *Daiji* or *Tendai* found its way from India into Japan thirteen centuries ago it was perfectly understood by all, nay, better than by the Chinese, despite the immaturity or imperfection of the language, which I suppose was then freer from the admixture of Chinese characters. Subsequently, eminent founders of religious sects as Dengyo and Kūkai, and founders of systems of law, though not in the present sense of the word—appeared in society. They were worthy of that appellation on account of having converted the Indian Buddhism into the Japanese religion. They were really illustrious. Nor were the people less intelligent in comprehending the noble philosophy of Buddha—which was already in a state of perfect refinement over one thousand years ago—by the aid of the words and ideographs condemned as imperfect by latter-day Japanese. From these facts I was led to the conclusion that there was no learning at present, however high it might be, that could not be interpreted by the aid of words and characters purely Japanese. If learned men would devote their energies to this point, all the text books available for the teaching of Japanese youth could be written and lectured upon in their own tongue. In the course of progress they might be enabled to compile books of their own, or supply the deficiency, if any, by translations. With this in view I boldly spoke up for the independence of learning. At that time, six or seven gentlemen of the University, alluded to by Messrs. Ichishima and Ono Ajika a few moments ago, had not yet graduated. Just before their graduation, they were introduced to me by Mr. Ono, when I spoke to them regarding my opinions. They all approved of them, and thus was undertaken the imparting of high education by the aid of the mother tongue. One may be inclined to ask, "Why, then, is English taught in this school?" To that I make reply, "Because it is necessary to have more or less knowledge of that language, at present as well as in future." As there is a necessity for Europeans to study Greek and Latin, so with us the study of foreign languages is indispensable in so far as the object of learning is concerned. Such necessity arises even when the independence of learning is perfectly established. I added physics to the curriculum of our School with the idea that physics, or natural philosophy, was the groundwork upon which every system of learning stands. In this private school physics, however, has failed to attract the attention of students. That branch of science involves considerable expense. Nor are instructors willing to come forward. I have suffered complete failure on that point. It is an immense regret to me. Not only in that but in engineering, too, have I been unfortunate. The scheme of conducting learning by the aid of the Japanese language alone consisted, at first, in the establishment of a curriculum for politics and law, and physics. No efforts could yet be made towards adopting engineering or any other branch of science. Nevertheless the school was opened on those lines. It acquired considerable influence during the past fifteen years, as the Manager has noted. But in what condition the school was during that period, you may find it worth while to know. The difficulties encountered were extraordinary. Not only a lack of funds, but various enemies, misunderstandings and treachery, as commented upon by Prince Konoye, conspired for a time to crush the school. The difficulties, however, were eventually overcome by the fidelity of school friends and by the uncommon perseverance of teachers such as Messrs. Amano, Ichishima, and Yamada.

A glorious trio! Yet the public misunderstanding in this respect is serious enough to call for an explanation for the benefit of the school. So far as my connection with the school is concerned, it is no small regret to me that my life is affected by these misconceptions. The reason why I established the school was, as I have told you, to secure the independence of education. What other reason could there be? In regard to my life, suffer me now to say a few words. When Perry arrived in Japan I was only fifteen years old, and I must confess that I spent the most important period of my life in carrying on a movement, so to speak, resembling that which is now undertaken by the *soshii*. I, indeed, devoted some time to reading, but sacrificed, though not entirely wasted, most of the valuable period of youth in various public undertakings. From the point of view of present scholarship, I can hardly escape censure for having wasted the period needful for study. No man is perfect. But the imperfections of one are compensated by the gifts of another. For instance, I drink the water of this cup, and the water disappears from it. Yet it is a great error to think that the liquid has really disappeared. The air takes its place. I thought I might get others to study so as to supply the deficiency in my learning. My idea with respect to the independence of education having unexpectedly been approved by such an able and enthusiastic person as Mr. Ono Ajika and many other gentlemen, this school was eventually called into existence. The public, however, seems to have fallen into the misconception that since I have political connections I have a political purpose in connexion with education. There can be no doubt that some persons have been betrayed into such gross misapprehensions. But I am at a loss to understand how others could have been induced, as Prince Konoye intimated before, to make their own misapprehension a means of impairing the honour of the school and descending to deeds of treachery. I was much troubled, but I had no selfish motive in regard to the school. Just consider a moment. I was not even acquainted with any of the faces of the gentlemen actually connected with the school. Had I intended to enter into anything like an intrigue, I should have talked with those gentlemen, or delivered lectures. Nor did I interfere in school matters, as these, I thought, might prove an embarrassment to me. It is true that my vigour and energy were placed under requisition to a considerable extent in the organization of the school, and yet this is the first time that I have visited this lecture hall. I am very simple in my opinions. The reason for my not coming to the hall is that I wanted to keep myself clear from public misapprehension. People seemed to say, "That school belongs to Okuma; he is a shrewd fellow, full of machinations." Such remarks were a source of serious perplexity to me and eventually brought great misfortune upon the school. Some of the graduates of the University who, as Government officials, were required to discharge their functions chiefly in the office to which they belonged, rendered incidental service as lecturers or instructors in this school. Those persons, having a close connection with the Government, withdrew their assistance. They used to say:—"To lecture in the Semmon Gakko may be a matter of serious consequence. We must therefore give up our work under the circumstances, though not without reluctance. Our ardour is not at all relaxed, but things of late present an unfavourable aspect." I was embarrassed for a time by a deficiency of teachers, but the school has been maintained up to the present through the exertions of men distinguished for extreme enthusiasm, ever since its establishment. It seems that the misapprehension to which I have alluded is on the point of dying out. Nevertheless I am a Minister of State at present, though unpopular, and often represented as a man of machinations. I cannot tell whether I am wrong or they that speak thus against me. Prince Konoye's remarks appear to fit me. At any rate, I am willing to leave the whole thing to the impartial judgment of the gentlemen now before me. I may happen to resign my position as a government official, and in that case the trouble

about my personal intentions may revive. I beg, however, to declare before the gentlemen present that I have no such intention as the public accuse me of entertaining. This confession is a matter of great importance to me. I never tell a lie; never in the presence of such respectable gentlemen as you.—(Loud laughter.) From the circumstances I have related, it may now be seen that the school is not to be regarded as the possession of a private individual, but that it virtually belongs to the State, or to society at large. It may be asked why, in that case, the Educational Department did not take the whole enterprise upon itself? Well, here is the Minister of Education. He can not be expected to do everything for the State. The State sometimes falls into a state of lethargy, or has a tendency to concentrate its energies in one direction. There is, therefore, a necessity for a private institution not controlled by authority, but managed in an independent spirit. It is not infrequent that a great statesman, a great legislator, or a great theologian emerges from a private school. An institution purely private is therefore absolutely indispensable. This school cannot be said to belong to me alone, although I have rendered assistance to it to a certain extent up to this present time. The school in some respects may be compared to a sort of temple, and I may call myself its chief priest. In regard to the Semmon Gakko I have been no doubt a zealous priest, yet a priest of an impoverished temple. The University, has the Treasury for its benefactor, and may be quite comfortable about its estimates and about the Diet, as the President who is now here, is well aware.—(Applause.) A poor temple, like this school, ought to secure as far as possible a large number of patrons. It has hitherto been represented as Okuma's temple, but that is not the case. The school, in fact, is not a productive institution; it requires a large amount of money to be spent on it. To increase the number of patrons and the amount of their contributions is therefore the proper course to pursue. I pray you all to bear that in mind. I suppose I have been too unworlily in my hopes, but my desire was simply to see education raised to a state of independence. If anything that might be counted as merit accrues from this notion, we have but to rejoice heartily, in the interests of the country. If, in the course of its progress, this institution, should ever grow and take a similar form to the University—though it might fail to attain full qualifications for such a status,—and if it be possible in future to extend the curriculum to other branches of learning, I shall be profoundly gratified, for then it may secure credit with the public and considerable honour for the students as well as friends of the school. I hope that our efforts will be attended with success. If you, who are about to enter the field of action in society, and those who are to follow you, exert their energies in the way in which I have described, the patrons of the school will certainly increase and its prosperity will be considerably promoted.

THE DIAMOND JUBILEE.

The accounts of the Diamond Jubilee Celebration are now at the British Consulate and open to the inspection of subscribers on application to Mr. Chalmers any time during this month.

After paying all outstanding accounts, a balance remains of \$461.79, which the Committee have decided, in recognition of the valuable services which they received from the undermentioned, to dispose of as follows:

Three challenge cups are to be offered, one to the Reliance Wheelmen, one to the Nippon Bicycle Club, and one to the Yokohama Sailing Club; the sum of \$100 is to be presented to the Y. C. & A. C. pavilion fund, and \$100 to the men's recreation fund on board H. M. S. *Grafton*. Any small balance will be handed to the Ladies' Benevolent Society.

CORRESPONDENCE.

THE FOREIGNER IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

As "a looker on in Venice" for a year, I have been considerably interested, and often amused, at the various phases of the ever-recurring subject of foreigners' treatment by Japanese. The amusing part is wholly confined to where others, not myself, are the target. I have resisted the temptation to rush into print, which seizes every foreigner in Japan sooner or later, as a sort of relief, although knowing it will do no good. The reward of the Japanese is coming back to them rapidly. The tourist, and the money he spends in Japan, is a very pleasant thing for Japan itself, and it is something worth cultivating, for the money thus brought into the country is nearly all pure gain. Comparing the travel to Japan this year with that of previous ones, a marked falling off is noticeable. My New York daily papers I find filled with items about the rude treatment of foreigners here by a certain class of Japanese.

During the last few months, I know of at least five instances, where tourists of wealth, who spent money freely, left Japan in disgust after only a short stay, tired of the constant fight they had to maintain against the efforts to impose upon them on all sides.

These people alone mean a loss to Japan of at least \$10,000. There is no question that travel toward Japan has been very largely reduced by the fact that the Japanese authorities are either unable or unwilling to take this matter in hand seriously, and guarantee foreigners the same rights and protection in Japan as Japanese are afforded in foreign countries. Unless something is done, Japan will find that foreigners will be quite willing that Japanese shall have Japan all to themselves, as they seem to wish, and will spend their money where they can have fair treatment.

Yours,

AMERICUS.

THAT OMINOUS DÉBRIS ON LOT 53.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Permit me to ask through the columns of your valuable paper whether there is any probability of the ominous debris on the burnt lot No. 53. Settlement, being ever removed. Although dangerous collapses occurred on two previous occasions, nothing is done and the ruins are left to the care of time and providence, presumably.

The cracked walls and charred beams as they are left, barring the footpath of the Main Street, constitute a constant danger to the public thoroughfare, and the sooner they are removed, the better.

In my opinion the owners of the lot, or their representatives, have already trespassed too much upon the patience and indulgence of the public in leaving the debris untouched so long.

Thanking you for the insertion of this modest inquiry, I remain,

A LOOKER-ON.

Yokohama, August 10th, 1897.

RAMBLES IN FORMOSA.

[SPECIALLY WRITTEN FOR THE "JAPAN MAIL."]

TAIPEH.

In Takao there are at present very few foreigners. Vosteen, the hearty old German pilot, who stayed nearly 30 years at Takao, has departed for Australia, having sold his spacious house to Mr. Asano. The Anping merchants, who most of them own houses and premises in Takao, do not come over very frequently. Dr. Myers, being now in the employment of the Japanese Government, thinks also of quitting. Thus the foreign element, driven away by a deplorable decrease of commerce, would have died out altogether, were it not for the arrival of a new consul, Señor Enrique Ortiz, representative of the Madrid Government in Formosa. Mr. Ortiz has been before in the Far East, having discharged consular duties for three years in Saigon. Coming by way of Japan and of April, accompanied by a trusty old Chinaman, who had picked up "the lingo" during a long Consuls just now. The French have sent Vicomte de Bondy, and there is rumour of a Russian and a Chinese Consul being appointed in the near future.

Señor Ortiz has to look after five Spanish missionaries, being at present the only subjects of Queen Isabella in the fair island. And he ought to have his hands already full, his duties be-

ginning with a rather serious case of damages, involving considerable loss to the Spanish inland-mission at Taroku (one journey N.E. of Kagi). The case has been pending for two years and has also been taken up by the Spanish Ambassador at Tokyo. During the short lived Formosan republic, Chinese robbers invaded Taroku and destroyed in a vandalic manner the complete Church property of the mission, laying the handsome chapel level with the soil and burning furniture and valuable books. Hence a claim for damages against the Japanese Government. Some months ago, there appeared in certain Japanese papers queer accusations, in fact calumnies, against the padre at Taroku, to the effect that he is now secretly aiding and abetting robbers against the Japanese. The name of the padre, misspelled in those papers in an awful manner, is Giner. I have been myself at Taroku and know by personal knowledge that Father Giner was on the contrary helping the Japanese authorities against outlaws, and I think it is *prima facie* absurd that a man should favour the very people by whom he unjustly lost everything. It is only natural, therefore, that such calumnies should create ill-feeling among the Spaniards and Japanese in Formosa. Japanese reporters should really be a little more chary of inflicting upon credulous readers whatever they happen to pick up in the way of spurious, strange hearsay.

Towards the end of April, Takao also went through the panic of a robbers' invasion. There seems indeed to have been quite an uprising in the neighbourhood of Pitau (Hosan). Japanese officers informed me that as many as 700 brigands made a raid, slaying several Japanese soldiers or coolies (I don't recollect which exactly), and sacking a few villages. Owing to the proverbial exaggeration of the Chinese, the rumour spread wide and afar, that the Chinese force had captured Tangkan (one day's journey to the south from Takao) and four villages, killing the garrisons, and threatened the district capital, Pitau. Wealthy Chinamen tried to spend the night with their treasures on board a ship, and a foreigner even took care to transport himself and a considerable number of Mexican dollars with all speed to Anping. The rumour was no doubt vastly exaggerated, still it must be owned that these affairs are no trifles for well-to-do Chinamen. A few months ago, the richest celestial of Southern Formosa, a resident of Lianglian (2 1/2 from Takao) was superseded in the care of 10,000 dollars by robbers suddenly appearing at night and helping themselves to that desirable asset.

Takao is, in my opinion, by far the most picturesque, the most healthy, and the most agreeable of all Formosan towns. It is just lovely, and were it not for typhoons and a lack of commodious, good streets, it would be a small paradise. There are, of course, people that never are satisfied anywhere, and you may meet fault-finders also in the neighbourhood of Takao. I found, by the by, that in one Formosan dialect Takao means island, and I should judge that term appropriate for the nice little town, because originally Takao was really built on an island, connection with the mainland having been affected by the gradually advancing dam of the lagoon within about a half century or so. I hope that no learned Sinologue will point out to me that the Chinese characters denoting Takao, mean something quite different, for it is a very common fact that Chinamen caricature any name just to suit their own convenience, very much like the Transvaalers, who turned the unfamiliar Englishman Theiger into a "teeniger" (tea-sucker) and Sir Th. Shepstone to something very near a sheep, or the German saga-tellers, who disrespectfully changed the proud Siegfried to a *Sénfrita* (sow-herder).

In a Chinese Hong at Takao I came across a coolie who had been shipwrecked on the southern coast and held prisoner for five years by the savages.

From the Spaniards I learnt that the savages near Bam-kin-chim are known as Kale-huan. It is barely possible that this appellation is connected with the name of another South Formosan tribe, the Gali, in whose language *gali* means black, but I fancy that the word referring to the former tribe rather signifies mountaineers, since in the Malayan realm we frequently hear of the sacred mountain of Kale. There is a high peak, towering up to 10,000 feet, Kale or Kailei, near Bam-kin-chim (due east of Takao), and there is a tradition among the Igorrotes of Northern Luzon, that after the deluge, people who had saved themselves in the hollow of a tree landed at a mountain called Kanlantan. If I remember right, there is also a kind of far eastern Olympus by name of Kalios mentioned in the famous Utopian tale of Euphemerus. The country, where that Euphemic mountain of the spirits lies, is said in the text to be far beyond

India, away down in the South Sea. I wish, by the by, that somebody could find out of which particular country the renowned Greek philosopher thought in dubbing his mysterious land Mangchia, a name which is just pronounced and self-possessed enough to make a closer acquaintance desirable. I could never settle that point to my own satisfaction, but I may offer an hypothesis. It is pretty well ascertained that the ancient authors of the West knew fairly accurately and reproduced the geographical terms of the East as far as Cochinchina. The Kakobae and Kadopae of Ptolemy survive even now in Siam as *Kaku* and *Kadun*. Alexandrine writers may therefore very well have been informed about races dwelling at the very limits of Cochinchina. Now, all the savages of the South during thousands of years, have always been spoken of by the Chinese under the general, comprehensive term of Mant or Mantze, (Miautze), a name, which corresponds to Mangchia as closely as according to the laws of Greek can possibly be expected.

Speaking of geographical nomenclature, which is, of course, as important for the tracing of the migration of savage races as the existence of American, South-African and Australian New-castles, Worcesters, Frankforts and Heidelbergs is for the migration of Englishmen and Germans, I should add, that a great number of Formosan local names can at once be identified with names occurring elsewhere in Australasia. Thus, to mention a few: Talibu of northern Formosa reminds of Dalibubun in northern Luzon, and Taliabu in eastern Celebes; the Dipun (Tipun) of S.E. Formosa may have descended from the Difun in northern Luzon (upper Cagayan river); Kamauri, a village near Tamsui, (in Chinese writing Ka-pau-li) coincides with Kamaray at the Cagayan; Sao in N.E. Formosa with Save near central Djizolo (island near N.W. New Guinea); Tapani near Kagi with Tapanan in Celebes; Panglao in extreme S.W. Formosa (from *pana* river and *liao* sea) with Panglao between Bohol and Mindanao; the frequent town and tribal name of Tarokun with Tarag-tig in K. Luzon; the river Khilai with the river Djelhai in S.W. Borneo.

From Takao I paid a visit to Padre Clemente, the Superior of the Spanish Mission in Formosa, who lives across the lagoon in a stately, half-Mauresque, half-Chinese building. The site is on somewhat marshy ground, but one has a fine view from the windows of the Ape hill at the side and the South-Formosan Alps at the other. Close by is a roomy cathedral, erected some 30 years ago. The mission boasts a library, consisting exclusively of books in Spanish and Latin, the only languages besides Taiwanese which the fathers, as a rule, are acquainted with—whence it actually happens, once in a while, that in the intercourse with North European travellers or consuls, Latin is used as a living tongue in far away Formosa. The library contains many extremely valuable writings in print and manuscript, dealing with Formosa, and I heard that, some time ago, Mr. Murakami, the gifted young historian, who was recently sent by his Government to Manila and Macao to gather material for a complete future history of the fair island, had been at the mission to get a glimpse of the records and books kept there. His offer, though, to buy up the bulk of them, could not be entertained by Father Clemente. There is one thing especially that strikes one on perusing these records, namely, the sad fact that there was never such a thing in the beautiful islands as perfect peace. Why, times were frequent when an invasion by foreign enemies seemed much preferable to the bitter internecine discord that was eating up the very heart of the people. In the late sixties, a padre records the internecine slaughter of 30,000 souls in the neighbourhood of Ban Kim Chim alone; 30,000 men murdered away in times of peace. That is a ghastly commentary, even if somewhat exaggerated, on the wisdom of Chinese Government. The chief element of discord was always, of course, the racial hate between Hakka and Fukienese, on one side, and of both combined against the Pepohuan on the other. Every man's hand was against every man else. And moreover, no year passed by in which serious losses were not inflicted by the savages on both peaceful settlers and turbulent Chinese soldiers. In 1886, writes Padre Aranz, there marched 1,500 soldiers against the wild tribes of Talan near Chungwa, but when two moons had waned, the Chinese had lost 500 men without advancing one inch, and Governor Liu came himself to settle grievances amicably. In 1887, a general and 400 soldiers were slain near Ban-kin-thin, and so on. Then the continual disquiet and excitement caused by the threat or actual outburst of a foreign war. In the early sixties, the Taipings; in 1867, the fear of Prussian occupation; seven years after, Saigo's expedition; in 1877, curiously enough, strong rumour of a war

with Spain; at last the French blockade and the Japanese annexation, embittered by civil war. Not even Cuba or Crete, or Luzon or Madagascar or any other island in this most recent international period of interesting insular war has such an extraordinary record.

It is a noteworthy fact, that most of the Spaniards' converts as well as of the Presbyterian Christians in Formosa belong to the Pepohuan race. The Pepohuan are of an impressive, easy-going and rather generous character, though given somewhat to debauches, whilst as to the Chinese, suffice it to say that during a long time only the roughest adventurers and toughest criminals flocked to Formosa. The success of the Spanish mission is not very considerable. After 36 years of missionary efforts, there are scarcely 1,300 Roman Catholics at present in the whole island. More than half of these are at Bankian-chin and neighbourhood.

THE BASHI ISLANDS

(SPECIALLY WRITTEN FOR THE "JAPAN MAIL.")

By the recent treaty, determining an ideal line of demarcation between the colonial possessions of Japan and Spain, the latter Power may be said to have gained a trifle territorially; for it never held sway over the Bashi Islands, which by virtue of that treaty fall within its sphere of influence, nor had ever tried to get a footing there. As there is absolutely no trade or commerce on these islands and consequently neither steamers nor sailing ships call at their typhoon-ridden shores, next to nothing is known about the country and the people. The only published account of the forlorn isles I know of, appeared in an obscure English periodical in 1862. A recent description is to be met with, however, in the excellently written correspondences of the "Correo Sino-Anamita" (1896), printed for private circulation in the central office of the Mendicant Order at Manila. By the courtesy of one of the Dominican fathers I was able to peruse the pertinent correspondence, and I think, it will not be amiss to give here a short extract of it. The notes alluded to were sent by Padre Idigoro from his mission at Ibanan, the chief port of the Batau Islands. It would appear from this worthy hermit's humorous relations, that even in Manila people had scarcely an idea of the real state of things in their outlying colonies, whose coasts are washed by the Kuroshio. Whilst in reality the Batau group (between Luzon and the Bashi archipelago) can boast of a population, that reads and writes and dresses à l'Européenne, a Manila illustrated magazine had represented them as a batch of nude savages. This, we learn, is true, however, of the Bashi natives, whose mountains are visible from Ibanan. There is complete ignorance, abject squalor, in short, the lowest kind of civilisation, if civilisation can dwell at all in the miserable caves that serve as abodes to the natives, being fitter for brutes than for men.

Even in the best of sea-charts I failed to find all the names of the Bashi Islands. According to our Spaniard, who spells them Vasshi, the five larger ones are, going from the South to the North—Liayan, Mabudis, Tanem, Maysanga, Fami. Even the best of these islands seem to all intents and purposes to be nothing short of purgatory. An abominable climate, causing interminable typhoid and pernicious fever; terrible typhoons, whose course is not, as in Formosa, checked by high mountains, prevailing until the very end of the year; an active volcano, spreading fire and destruction, in the southern region; no food except fish, *ube* (a kind of sweet potato), and goat-meat; no clothes; no distractions, no government, and lastly not even boats good enough to get away on. The Bashians are greatly feared by the Batawese, though without apparent reason but for their hideous appearance, and there is no intercourse between them save by accident. Once, when a party of the northern tribesmen, probably cast adrift by stress of weather, tried to land at the southern shore, near Mayats, the garrison of that place, consisting of an old Spanish invalid and a few native assistants, fired a rusty cannon, on which the savages fled in terror and dismay, and were never seen again. Besides, whilst the Batawese language is different from the Thanay of North-western Luzon, the Bashi idiom is again utterly unintelligible to the Batau people. Now, it ought to be understood that the present Batawese are only immigrants from Florio (Luzon); the old stock of the Tibayaner, who were replaced by immigrants spoke still another dialect, which is partly as yet recorded by old men and is said by them to have resembled the tongue of the Bashi savages. A rather complicated ethnologi-

cal problem, but by no means an impossible one. In the earlier part of the century American whalers used to sail to the Bashi Canal, where four and five of the giant cetaceans may be frequently seen together, but of late years they somehow ceased to come there, preferring the Caroline Islands. In connection with these whaling expeditions the Padre relates at some length the story of a treasure worth several millions, which is still awaiting a lucky Monte Christo. In 1830, a mutiny on board a sailing ship caused those precious millions to be sunk to the bottom of the Pacific near the southern shores of the archipelago. The story ending with the miraculous discovery of the guilty crew, that had quietly dispersed, and the condign punishment of its crime, is full of weird charm, but we must refrain here from undue digression. In 1891, a Spanish cruiser calling at Ibanan, its commander, Velasco, was requested to make a survey of Fami, the most important of the Bashi group, and, if feasible, to occupy it, but he answered to the eager residents that the island in question was outside of His Catholic Majesty's dominions. Having reached Thava, where until recently only once a year a steamer brought merchandise and intelligence from the outer world, so that people did not hear of the beginning of the China-Japanese war till it was finished and gone, this feat was considered mighty enough by the intrepid commander, and so he returned without venturing to penetrate with his war-vessel further to the dark, unknown north.

One good thing which all of these islanders have to offer for foreign interchange, is a great amount of lobsters; another one, which, however, they grudge to all mortals but themselves, is *paler*, of which they manufacture a strong, odd-smelling, alcoholic beverage. The day when the natives gather the *paler* they have a great feast and make a night of it, enjoying in fact, as the romantic father puts in, one of the 1001 nights on these occasions. Another quality of the natives is their unceasing devotion to *dolce far niente* and to women. Even the Christian Batawese, their pastor complains, start from the church services without delay to their debauches.

The Bashians were known to the Chinese in a comparatively early time, at least since the 12th century. This interesting fact has been brought to light by a brilliant discovery of Dr. Florenz of the Imperial University of Tokyo. In a cyclopaedia, written before 1200, there are mentioned the cardinal numbers of a people, whose hieroglyphic character has always been read Pashii and interpreted to mean "Persians." Now, the German scholar, becoming aware that those numerals were anything rather than Persian, and divining them to be Malayan, hit upon another interpretation and declared that the mysterious nation were the Bashi. The discovery is of far greater value than would appear at first sight, because it is the only archaic Malayan we have got hold of as yet, and is therefore as important as that famous tooth of a huge antediluvian, that enabled Cuvier to reconstruct the skeleton of the whole uncouth animal.

AQUATIC SPORTS.

The annual swimming races and diving competitions of the Yokohama Amateur Rowing Club took place on Wednesday evening, the 11th inst. The weather, though the temperature was rather hot, was not unfavourable to nautical sports, and the water was in fairly good condition, though more exhausting to swimmers than if the surface had been tempered with a cool breeze. Whether owing to the fact that the date and time of the sports had been somewhat indifferently notified, or for some other reason, the attendance of members of the Club and visitors was more limited than usual—perhaps to the advantage of those competing—and it was nearer 5 than 4 o'clock, the time set down for the commencement, before the first event came off. The arrangements were superintended and carried out by Messrs. F. J. Hall, Captain of the Club, W. W. Campbell, Dr. Wheeler and Mr. C. K. M. Martin, as Judges of diving; Messrs. Hall and Campbell as Judges of races, Messrs. Campbell and Hayward (Hon. Sec.) as handicappers, and Mr. Hayward as starter. The various events were as follows:—

RUNNING HEADER OFF TOP OF BARGE.

L. Mottu, 1 (50 points) | H. Y. Irvine 2 (47 points)
W. M. Carst, 3 (41 points).

Only three competed, each having three tries, with a possible of 60 points. Mottu's diving was particularly clean in entrance, with quick recovery.

100 YARDS SWIMMING RACE, OPEN.

H. Goddard 1 | L. Mottu 2
H. S. Goddard 3

Only three started, out of eleven entries. The course was against the tide and Herbert Goddard had a little the worst of it from his position on the outside. In spite of this disadvantage, however, very soon after taking water he went to the front, and won by about eight yards from Mottu in 1 min. 43 secs.

RUNNING HEADER OFF SPRING-BOARD.

H. S. Goddard..... 1 | W. M. Carst..... 2
L. Mottu 3

B. Böhlke, A. Kingdon and H. Lee also competed, each diver having three tries. In these Goddard and Carst tied with 45 points out of a possible 60 each, Mottu being three points behind. In setting the tie, with a single dive, Goddard won. Both his and Carst's headers were very clean and neat, Mottu's recovery was also excellent, but he made more splash on entry.

QUARTER-MILE HANDICAP.

H. Y. Irwine (10 sec.)... 1 | H. Lee (25 sec.)..... 2
H. A. Poole (Scratch)..... 3

A. Kingdon, J. M. Scott and Willie Carst also started, making a field of six. The course was from the Barge to a sampan moored 100 yards off, back and round the Barge and again to the sampan and back to the Barge. The six starters got away well together, all using the side stroke. On the first return to the Barge Irwine led by several yards, swimming well within himself. Kingdon, Carst and Scott here gave up, and only Irwine, Lee and Poole were left in the race. On the second round Irwine gradually increased his lead and won a good ten yards or so ahead of Lee, in 9 min. 7 sec., with Poole close up to Lee.

STANDING HEADER OFF TOP OF BARGE.

H. S. Goddard 1
W. M. Carst 1 | L. Mottu 1

H. Y. Irwine and Lee also competed and some very neat headers were made. Goddard's diving was exceptionally good, and easily took first place with 47 points, Carst and Mottu tying for second place with 43 points each.

STEEPLE-CHASE, OPEN.

H. S. Goddard 1 | H. Y. Irwine 2

This event was contested in three heats. The course was from the top of the Barge, into the water, then through life belts with a rope across them, making a tight squeeze, and over a boom to the sampan, 100 yards out; a dive under and a climb back over the sampan, and back over the boom and through the life-belts again to the Barge; altogether, pretty severe exercise. In the first heat H. Goddard won, with W. M. Carst second and J. J. M. Carst third, E. M. Barnby also competing. The second heat was won by A. Kingdon, with H. Y. Irwine second, Lee and Poole also competing; but not finishing. In the final heat Herbert Goddard won easily, Irwine being second and the other two starters, Carst and Kingdon, a long way behind.

100 YARDS—OPEN TO NON-WINNERS.

H. A. Poole..... 1

Only three started for this race: Poole, W. M. Carst and H. Y. Irwine, and the last two gave up before the finish, having had quite enough swimming for one afternoon. Poole covered the distance in 1 min. 47 secs.

LONG DIVE, OPEN.

H. S. Goddard 1

Only three aspirants out of nine entrants essayed this event, namely H. S. Goddard, E. M. Barnby and R. Böhlke. Barnby made the best course, straight out from the Barge, but showed up his head too soon, Böhlke coming up next. Goddard steered a bad course, but kept under water well and made the longest distance, the duration of his dive being 43 seconds.

The final event on the programme, a Boys' race of 100 yards, did not come off, as there were no boys to start, and the sports came to an end at about 6.15 p.m.

The appointment of Miss Louise Butt on the staff of the Governor of Georgia has been followed by that of Miss Nellie Ely, a society belle, on the staff of the Governor of Tennessee. Both rank as Lieut. Colonels. As the functions of such staffs are purely ornamental and social we see no reason why women should not monopolize them, except in cases where the gubernatorial wife is of an alert and suspicious nature. A few summer girls on the staff of Governor Budd, of California, would be ornamental and quite as useful, no doubt, as the male debutantes already there.

HONGKONG AND SHANGHAI BANKING CORPORATION.

The following is the sixty-fourth report of the Court of Directors to the ordinary half-yearly general meeting of shareholders to be held at the City Hall, Hongkong, on Saturday, the 14th August, at noon:—

To the Proprietors of the Hongkong and Shanghai Banking Corporation.

Gentlemen,—The Directors have now to submit to you a general statement of the Bank, and balance sheet for the half-year ending 30th June last.

The net profits for that period, including \$300,323 95, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts, amount to \$1,826,674 22.

The directors recommend the transfer of \$500,000 from the profit and loss account to credit of reserve fund, which fund will then stand at \$7,000,000.

After making this transfer and deducting remuneration to directors there remains for appropriation \$1,311,674 22, out of which the directors recommend a dividend of one pound and five shillings sterling per share, which will absorb \$444,444 44.

The difference in exchange between 4/6, the rate at which the dividend is declared, and 1/11½, the rate of the day, amounts to \$566,081 88.

The balance, \$301,147 90, to be carried to new profit and loss account.

DIRECTORS.

Messrs. D. R. Sassoon, M. D. Ezekiel and A. McConachie having resigned their seats on leaving the Colony, the following gentlemen have been invited to fill the vacancies thus created:—Messrs. David Gubbay, A. J. Raymond and Gerald Stadel. The Directors have likewise invited Mr. G. D. Böning to join the Board.

All these appointments require confirmation at this meeting.

AUDITORS.

The accounts have been audited by Mr. F. Henderson and Mr. C. S. Sharp.

ST. C. MICHAELSEN, Chairman.

Hongkong, 29th July, 1897.

ABSTRACT OF ASSETS AND LIABILITIES, 30th JUNE, 1897.

LIABILITIES.	
Paid-up capital	\$ 10,000,000.00
Reserve fund	6,500,000.00
Marine Insurance account	210,000.00
Notes in circulation	9,319,308.93
Current accounts:—	
Gold	\$46,943,033.84
Silver	\$2,650,271 58.10d. = 30,975,477.79
Fixed deposits:—	
Silver	\$30,641,249 58
Gold	\$2,650,271 58.3d. = 6,376,168.87
Bills payable (including drafts on London bankers and short sight drawings on London office against bills receivable and bullion shipments)	\$7,017,418.39
Profit and loss account	\$2,465,523.15
	1,826,674 22
	\$178,297,486.03

ASSETS.	
Cash	\$4,399,397.30
Bullion in hand and in transit	3,148,609.97
Indian and Colonial securities	4,191,730.15
Investments, viz:—	
\$500,000 at 4 per cent. Consols lodged with the Bank of England as a special London reserve	\$1,500,000.00
\$10 650 Consols and other sterling securities	\$1,160,232 63
Bills discounted, loans and credits	7,060,352.63
Dividends receivable	65,269,007.73
Bank premises	79,061,116.63
Dead stock	966,318.26
	100,000.00
	\$178,297,486.03

GENERAL PROFIT AND LOSS ACCOUNT, 30th JUNE, 1897.

Dr.		
To amounts written off:—		
Remuneration to directors	\$	25,000.00
To dividend account:—		
At 4 1/2 per share on 80,000 shares = \$100,000 at 4 1/2		444,444 44
To dividend adjustment account:—		
Difference in exchange between 4 1/2, the rate at which the dividend is declared, and 1 1/11½, the rate of the day		566,081 88
To transfer to reserve fund		500,000.00
To balance carried forward to next year		301,147 90
		\$ 1,826,674 22

Cr.		
By balance of undivided profits, 31st December, 1896	\$	300,323 95
By amount of net profits for the six months ending 30th June, 1897, after making provision for bad and doubtful debts, deducting all expenses and interest paid and due	1,526,350 27	\$1,826,674 22
		\$1,826,674 22
RESERVE FUND.		
To balance		\$7,000,000.00
By balance, 31st December, 1896		\$6,500,000.00
By transfer from profit and loss account		500,000.00
		\$7,000,000.00

GERMAN NOTES.

On the tenth of June the Association of German Engineers formally opened its new "home," a handsome building on the Charlottenstrasse, Berlin. The Association has 11,700 members.

The German Royal and Scientific Medical Commission, appointed to investigate the question whether vaccination against small-pox produces a disposition to tubercular disease, has reported that there is no proof of such disposition upon the part of vaccinated persons.

Professor Fresenius, the well-known German chemist, has died of an apoplectic stroke. He was born in 1818 at Frankfort-on-the-Main. Fresenius became professor of chemistry at the institute at Wiesbaden in 1845, and founded a laboratory which has resulted in great developments, particularly of an industrial and agricultural nature.

Some astonishment was caused by the Emperor's recent Cabinet order in which he dissolved the national defence commission, an important military body created years ago by his grandfather, and of which Field-Marshal von Moltke was head until his death. Moltke was succeeded by Prince Albrecht of Prussia. It is supposed that the Emperor regarded this body as out of date and therefore rather an obstruction to his plans for the new fortifications.

Since the arrival of Admiral Tirpitz in Berlin, he has been appointed successor of Admiral Hollmann, as Minister of the Navy. The Emperor has again taken up the consideration of his plans for strengthening and increasing the German navy, with renewed earnestness. Kaiser Wilhelm intends to have ten big iron-clad, and sixteen cruisers built by 1900, and Admiral Tirpitz, it is said, is heartily in favour of putting the German navy on an equal footing with the navies of France and Russia. Admiral Tirpitz is regarded as one of the boldest and most energetic men in the navy. He is popularly known as "the naval Moltke," and his ideas and aims respecting the further development and reorganization of the navy are said to be in perfect accord with those of Emperor William, who hopes that Tirpitz will succeed where Hollmann failed. Before entering upon his duties in Berlin, Admiral Tirpitz was in command of the German Asiatic Squadron.

The upper house of the Prussian Diet has at last passed the so-called Association bill, which came from the lower house, but has amended it by the insertion of a clause that, "associations in which there are anarchist or social democratic movements, or movements aiming to overthrow the existing organizations of state or society, or in which movements preparatory to a separation of part of the state from the whole come to light, in a manner dangerous to public security, especially to the security of the State, may be dissolved by the police."

The recent Cabinet crisis has placed Dr. von Miquel, Minister of Finance, practically at the head of the Government. He is now senior member of the Cabinet, vice-president of the Prussian ministry, and vice-chancellor of the empire. For the time being, however, the venerable Prince Hohenlohe will remain Imperial Chancellor, as an "ornamental head" of the whole. Some of the German papers already speak of the "era Miquel," and predict unusual developments in the near future.

In the religious world of Germany, or rather in the domain of theology, a lively discussion has been carried on over the most recent work from the pen of Professor Harnack, entitled "Early Christian Chronology," and another production of a German university professor, the almost equally well known Dr. Fritz Hommel, the Assyriologist of Munich. Dr. Hommel's work is entitled "The old Israelitic Traditions Illustrated by Inscriptions." (Die altisraelitische Ueberlieferung in Inschriftlicher Beleuchtung.) By a singular coincidence both works aim substantially at the same result, namely, to enforce the claims of early traditions in determining the historic reliability of biblical records. This is done in a masterly way by Harnack in reference to the New Testament, and in a still more pronounced manner by Hommel with reference to the Old Testament. These two scholars have long been adherents of the newer critical methods, and both now claim for early tradition a historical reliability that runs counter to many of the conclusions of current biblical critics. Especially is this the case in Hommel's work. Formerly a disciple of Wellhausen, as he

himself states in his new work, he has now become an outspoken opponent of that critic.

The Röntgen rays, says the *Belgian Times*, have just been utilised in Vienna to demonstrate the genuineness of a mummy. It is a well-known fact that scores of people in Egypt make a lucrative living out of the manufacture and sale of sham antiques; among the latter, notably, mummies. Hitherto it has been almost impossible to detect the sham mummy; for to open it in order to see whether it contained a bona-fide skeleton or corpse would, in every case have detracted largely from its value as a mummy. Thus it is here that the Röntgen rays come in. The other day the supposed mummy of a Pharaoh's daughter, said to have lain over 2,000 years in the sepulchral vault of a pyramid, found itself on the way to Vienna, tainted, however, with the foul suspicion of being "faked." She was therefore taken to Dr. Emil Bloch. The examination revealed the presence of the slight skeleton of a girl about the age of 16. Several dark spots between the ribs were declared to be amulets, which the ancient Egyptians used to place upon the bosom of the dead.

German women are determined not to be behind-hand in the march of progress, and, with the perseverance that marks all their efforts, are now busily discussing the dress question and possible reforms in it. An Association for Improvement in Women's Attire has just held a convention in Berlin to advance its object, and has aroused a good deal of notice among the more conservative women of the nation, owing probably to the very moderate nature of the reforms discussed. Some people openly deplore the fact that there are no fashions for stout women. The Germans have gone further than this, for at the Exhibition held in connection with the Convention, prizes are offered for designs suitable for plump ladies. Thus a prize of £5 will reward the designer of the most suitable spring costumes for a portly matron of between thirty and fifty years of age, the second prize being about half that sum. Among the requirements of the garments exhibited is one not permitting whalebone or stiffening of any kind to be introduced. Whether German women will take kindly to such garments remains to be seen. Doubtless she who is independent of her dressmaker will do so; but, judging from human nature, and particularly from feminine human nature, German women will not abandon the corset any more than English women have done. Still, if they will but wear them loose, the dress reformer will have achieved much.

We must not forget, says the *Kreuz Zeitung*, that we cannot desire to see any other Power enter upon the English inheritance, or even any great portion of it. England is the land which is most closely akin to us in civilisation, morality, and religion, and that we are to-day in the position of her opponent in many questions is chiefly due to the fact that we are not yet strong enough. The present opposition will continue until a compromise has been effected against which all the instincts of our English cousins are to-day up in arms. The most improbable solution, and the one which, so long as the present practical policy of England is maintained, would suit our interests worst—an Anglo-German alliance—may become the constellation of the future, as an imperious necessity imposed on both nations by the duty of self-preservation.

Akita, August 18.

A fatal case of cholera was reported at Senhoku gun yesterday.

Saga, August 11.

Several cases of dysentery have broken out here.

Takamatsu, August 11.

Dysentery is very rife in Kagawa Ken. The total cases amount to 212 of which 57 have proved fatal.

TEA.

Kobe, August 12.

Yesterday 71,600 catties of tea were sold here. Prices ranged from yen 23.50 to yen 15.50.

EARTHQUAKES.

Kobe, August 12.

This morning at 5 o'clock an earthquake occurred here. Thermometer registers 45 degrees Fah.

CHESS.

All Communications to be addressed to The Chess Editor.

The Yokohama Chess Club is closed for the season, and reopens on Monday, 4th October.

The Tokio Chess Club is closed for the holiday season, and reopens on Friday, 1st October.

The following is the solution of Problem 331:—

WHITE. BLACK.
1—R to Kt 6 1—B takes R
2—Q to Kt 7 2—K takes Kt
3—Q to K 5, mate if 2—B takes Kt
3—P to K 5, mate if 2—Any other
3—Kt to Kt 7, mate if 1—B to Kt sq
2—B to R 4 2—Anything
3—R takes P (B 6), mate if 1—Kt to B 7 (or moves)
2—P to K 5, ch 2—K takes Kt
3—Q to K 3, or takes Kt, mate if 1—B to Q, q
2—Kt to Kt 7, ch 2—K moves
3—Q takes B, mate

Correct Solution received from W.H.S., and D.D.

PROBLEM No. 333.

By H. MAXWELL PRIDBAUX.

White to play and mate in two moves.

OVER THE CHESS BOARD.

The following hints on problem solution by Dr. Tolosa Carreras, the well known Spanish problemist, are worth perusing:—In the two-move problem the first move is necessarily a threat of mate for following move, which amounts to saying that Black plays only a single move in all the variations. It results from this that the solver possesses a simple means of removing the veil which covers the enigma, and this consists in not concerning himself about White's first move but acting as if Black had the first move. It will then be more easy to see which should be White's first to move thwart the different defence at Black's disposal. In this kind of composition direct moves and checks are not generally used. Moves which have a character of repose or waiting and even of preparation for the combination aimed at are preferred.

Dealing with three-move problems, Dr. Carreras recommends the following analytical system:—

I.—Examine the position of the king to be mated, noting—1, whether it is that of stalemate; 2, in case he has freedom to move, how many squares he has at disposal, and which squares they are; 3, whether he is alone to defend himself from the adversary's attack; 4, whether the other black pieces can assist in repelling the attack; 5, whether he is placed at the corners, side, or centre of the chessboard. When the Black king is placed on a side square of the board it is chiefly with the object of more easily restraining his movements or probably to carry out an idea or a chosen strategic movement.

II.—Analyze the different means which are at the disposal of the defence to ascertain if they are or are not critical; that is, if Black can resist energetically, taking into account the number of moves of the problem. In this way the analyst will be able to deduce the more or less aggressive, passive, or even defensive character of the moves which White must employ.

III.—Try to explain by induction or deduction the relation, the use, and the wherefore of the pieces and pawns which together constitute the arrangement. It is equally of importance to analyze if the place occupied by one or more

pieces or pawns at a distance from the centre of action have for their object to hinder the later movements of the Black king or preventing duals or if they are there merely for the purpose of preventing duals or second solutions.

IV.—Calculate whether there is a proportion or disproportion between the attacking and defending forces, in order to gain an idea of the probabilities of obtaining the announced mate either by passive, indirect, or by active and direct means, or by a combination of both, or by preparatory moves, according to the end in view. We will make the remark that, in problems, it is not the number and the quality of the pieces of the two colours that constitute the proportion or disproportion between the means of attack and defence. It is constituted by the placing, the movements of the White pieces, and the elements of defence left at Black's disposition according to the number of moves in which the mate is to be accomplished. It must not be forgotten that sacrifices may be essentially aggressive.—1, when they threaten mate next move; 2, if they exclude the Black king from some of the squares; 3, when they open an important line of attack to one of the pieces of which the action is distant and which is found out of play; 4, when the sacrifice brings the Black king under the action of White's pieces able to cut off his retreat.

DRAUGHTS AND CHESS.

E. A. Benjamin, who has a reputation in the Northwest as an expert not only in Chess but also in Checkers (Drafts), prints the following in the *Minneapolis Journal* in answer to some Checkers expert who claimed that Checkers was as great as Chess:—'Checkers is a good game, but the great preponderance of drawn games, especially between good players, shows an inherent weakness or shallowness in the game. A game of Checkers is shallow, when compared to a game of Chess, from the fact that it can almost always be drawn. This shows that all the lines of play are known and familiar to both players, and not much chance for originality. And a match between experts is frequently decided by one mistake. Some writer in a recent Checkers publication, in speaking of the fact, said that 'if it is true that we have explored all the labyrinths of Checkers, the sooner we all get to playing Chess the better.'

"The opportunity, for the exercise of originality, brilliancy, and genius exists in Chess very much more than in Checkers. Any one who is in a position to make a comparison of the productions of the greatest player, past and present, of these two games, must admit this fact. For instance, look at the best game of the immortal Paul Morphy, and note the beautiful and problematical combinations by which he administered his crushing defeats to all who lifted his glove. Then turn to the Checkers-match between Wyllie and Barker, the two leading exponents of that game, and note the thirty or forty drawn games, and then make up your mind which is the more complex, intricate, and scientific.

"I think Checkers compares to Chess about like the game of marbles does to billiards. In other words, to be plain, I am of the opinion that when you talk about complex, intricate, and scientific games, Chess beats Checkers about as daylight does a good kerosene lamp."

THE OPPOSITION.

The annexed diagram shows the position of a game played in the last Chess Congress at Leipzig between Herr Walbrock (white) and M. Schlechter (black). The play illustrates a useful method of manipulating a pawn ending. The game in question was drawn, but, according to *La Strategie*, Mr. Blackburn has demonstrated a win for Black.

Black, playing first, wins.

The student will note that Black has a passed pawn which would queen if he had the opposition, therefore, this pawn can do no good to Black unless the black pawn at his R 4 can be freed. To do this White must lose a move and thus make it Black's turn to play in the existing position. Can this be done? Yes, as follows:—

WHITE. BLACK. WHITE. BLACK.
1 K B4 6 K Kt sq. KxP (R3)
2 K Kt sq K Q4 7 K B 2 K Kt5
3 K B sq K Q5 (a) 8 K B-q KxP and
4 K B2 K B5 wins (c)
5 K Bsq(b) K Kt6

NOTES.

(a) Now if anything but 4—K to B 2: K to Q 6 would win at once.

(b) If 5—K to Q sq. K to Q 6 taking up the opposition. Then 6—K to B sq. P to B 7; 7—K moves, K to Q 7. 8—K moves, P to B 8=Q and wins.

(c) By using the Rook's pawn to gain a move when it becomes necessary.

If the white pawn were at Q R 2 instead of at R 3 the position would be an easy draw. An almost identical position is found in Howitz and Kling's Chess Study, No. 16.

THE "JAPAN MAIL" CORRESPONDENCE TOURNAMENT.

The above tournament is now in full swing. Below are the last moves sent to:—

Game	Move	White.	M. v.	Black.
1	3	Kt-B3	2	Kt-KB3
2	3	Kt-QB3	2	Kt-QB3
3	3	B-B4	2	Kt-QB3
4	2	P-KB4	2	PxP
5	3	P-Q3	2	B-B4
6	2	P-QB4	2	P-QK3
7	2	P-Q3	2	K-QB3
8	1	P-K4	1	P-K4
9	2	P-KB4	1	P-K4
10	2	P-Q4	2	PxP

There are five competitors, who sign themselves Pakeha, Olymp, Shepherd, Nemo, and Fardel, and the following 10 games will be played and proceed simultaneously:—

GAME.	WHITE.	BLACK.
No. 1.....	Pakeha	Olymp.
No. 2.....	Shepherd	Pakeha.
No. 3.....	Pakeha	Nemo.
No. 4.....	Fardel	Pakeha.
No. 5.....	Olymp	Shepherd.
No. 6.....	Nemo	Olymp.
No. 7.....	Olymp	Fardel.
No. 8.....	Shepherd	Nemo.
No. 9.....	Fardel	Shepherd.
No. 10.....	Nemo	Fardel.

Pig Iron, No. 3	2.10 to 2.20
Hoop Iron (1 to 1 1/2 inch)	4.80 to 5.00

KEROSENE.

A small daily business has been done at former rates.

American	\$2.00 to 2.06
Russian	2.00 to 2.06
Langkat	—

SUGAR.

A fair business has been done in Brown, quotations remaining firm at last week's rates. White remains steady at former quotations, and few transactions have taken place to any considerable amount.

	PER POUND.
Brown Takao	\$36.5 to 3.75
Brown Manila	43.5 to 5.05
Brown Daitong	2.90 to 3.30
Brown Canton	3.30 to 4.20
White Java and Penang	6.60 to 6.70
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

Business during the week has considerably increased and buying became more general, the demand being mostly for America. Prices have advanced from 2 to 4 per cent. for different sorts. Re-reels are in greatest demand and the supply is quite inadequate, thus forcing up prices; 13/16 Filatures have also been moving freely at rising rates. Kakedas are now the best value in the market. The *Salasia* took 334 bales for France on the 8th instant and the *Columbia* 1,527 bales for America on the 11th. Stocks amounted to 6,779 boxes, or half bales, on the 12th.

QUOTATIONS.

TEA.

Demand has continued fairly brisk during the week, but is now declining, many American houses having over-bought high-priced first crop kinds under the expectation of a duty being imposed upon the import of tea after July. Prices still continue high. Sales for the week amount to about 75,000 catties at Yokohama and 262,000 catties at Kobe. Shipments comprised 8,079 packages from this port and 5,617 from Kobe, per *Columbia* for Victoria, B.C. and Tacoma.

GREY OR FADED HAIR

GEO. COURTICE'S CALIMIANTHIST

Has been thoroughly tested and approved in all parts of the world
for over a quarter of a Century.It is NOT A DYE, but simply the colouring principle of the
Persimmon and Walnut in a concentrated form.Acknowledged by the faculty to be perfectly harmless, and will
permanently restore the colour true to nature in Six Days.

It is a fine Tonic for the Hair and Skin, and has a very refreshing Fragrance.

NOTE.—Thirty years Professor of Hair Specifics to the Honourable Benchers of the Inner Temple.

PRICES: 2s. 6d., 3s. 6d., 5s., 10s. 6d. and £1 1s.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BARN, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and absorbing all inflammations. Mrs. J. T. Courton, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1897.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, AUGUST 21ST, 1897.

DEATHS.

At Kobe on Monday morning, Mr. JOHN G. WALSH after a short illness.

On the 17th inst at the Yokohama General Hospital, FRANCIS RICHARD MAXWELL, aged 47, late H.M. Resident at Sarawak, and Acting Consul for Borneo, youngest son of the late Sir Benson Maxwell, Chief Justice of the Straits Settlements.

At Hamburg, on the 16th July, ALEXANDER ARNEWMANN, formerly of Yokohama.

SUMMARY OF NEWS.

COUNT MUTSU's condition is beyond hope.

BARON ROZEN, the new Russian Minister, has arrived in Tokyo.

THE Crown Prince is rather seriously indisposed at his villa at Hayama.

PRINCE ARISUGAWA, the Imperial Ambassador to the Diamond Jubilee, and special Ambassa-

dor to Spain, arrived home on Monday morning.

MR. LENZ, an old resident of Kobe, has died suddenly in Germany.

THE Emperor intends to return from Kyoto before the end of this month.

A SERIOUS uprising of native tribes on the Afghan frontier of India is reported this week.

THE Acting British Consul in Borneo, Mr. F. Maxwell, died in Yokohama on Tuesday.

DYSENTERY cases in Kanagawa Prefecture up to the 17th totalled 173, of which 105 proved fatal.

MR. JOHN GREER WALSH, one of the oldest residents in Japan, died of enteritis in Kobe early on Monday.

FOUR persons were killed and seven wounded in a railway accident at Otake Station, Hiroshima, on the 18th instant.

BARON ROZEN, the new Russian Minister to Japan will be received by the Emperor on the 24th or 25th inst. in Tokyo.

MR. STHALGREN, the Danish Consul at Tientsin, whose sensational arrest we recorded last week, has been released owing to lack of evidence.

COUNT ITAGAKI and some of the leading members of the Liberal Party left Tokyo last week on a lecturing tour in Fukushima Prefecture.

THE Count of Turin challenged Prince Henri of Orleans to a duel for slandering the Italian officers in Abyssinia, and wounded him rather severely.

A meteorite is reported to have fallen on the Prefectural Hospital at Kumamoto on the 8th inst. and to have considerably damaged the premises.

A PARTY of fourteen Formosan natives are now in Tokyo, and are being fêted, lionised, and "exhibited" by the authorities of the Colonial Department.

THE Choja Colliery in Ni-hi Matsunura gun, Hizen Province, has engaged 100 Koreans to work in its mines, with the consent of the Japanese Authorities.

ABOUT 150,000 Japanese silver yen have, so far, been sent from the Straits Settlements, Hongkong, and Shanghai, to be exchanged for gold in October next.

ACCORDING to information from New York, the stock of Japan tea there now amounts to about 20,000,000 pounds, much to the embarrassment of merchants.

THE negotiations for the amalgamation of the 32nd, 5th, and 136th Banks at Osaka have so far proceeded between their respective deputies that the business will be completed very shortly.

THE Island of Sado, where gold mines have been worked from ancient times, was visited on the 7th inst. by the most disastrous flood ever known in the Island and much damage was done.

A PETITION has been lodged with the authorities by certain speculators in Yokohama, for leave to fill in and reclaim the foreshore at Honmoku. The scheme is said to be opposed by foreigners in Yokohama.

INTELLIGENCE from Taipei, Formosa, under date of the 13th inst., reports that during the recent floods, the steamer *Maisuru Maru* stranded on the coast near Bishito and received

considerable damage. One Chinese vessel foundered and two others were swept away, while a Japanese sailing vessel also met with a similar fate; 134 houses were demolished and 84 damaged, and over 400 people rendered destitute are now being assisted by the authorities.

A BURGLAR broke into the house of a fire-wood dealer in Yokohama on the night of the 17th inst. and wounded the proprietor of the house, his wife, and a man who came to their assistance. He was afterwards arrested.

THE 22nd instant being the birthday of the King of Korea, there will be a celebration at the Korean Legation in Tokyo, and Count Matsukata, Premier, Count Okuma, Foreign Minister, and others will visit the Legation to offer their congratulations.

On the 18th inst., while a company of the Second Regiment of Infantry was engaged in swimming exercises in the river Arakawa, near Kawaguchi, Kita-Doshima-gun, a sub-lieutenant named Kato and a sergeant named Tsuchiko sank and were drowned.

THE finding of the Court of Enquiry into the stranding of the N. Y. K. steamer *Tenshin Maru* in June last was delivered on Thursday. Captain F. J. Brown was found to blame and his certificate suspended for two months, the second officer also being censured.

It is reported that Messrs. Samuel Samuel & Co. of Yokohama have received instructions from some millionaires in Germany to act as their agents for the purchase of Japanese War Bonds to the amount of yen 1,000,000. The price quoted is yen 98 per one hundred yen bond.

THE promoters of the Formosa Railway Company, having failed to receive subscriptions to the 15 million yen required as capital, have reduced the amount to 10 million yen and are trying to induce the Imperial Household Department to take up 30,000 shares at 50 yen each.

YOKOHAMA has seen a very welcome revival in trade this week, enquiries for fancy cottons and woollens leading to good business at unchanged rates. There has also been some enquiry for grey shirtings "to arrive," but little has as yet resulted. Nothing worthy of mention took place in Yarns, though some holders of "gassed" offered goods at prices below present Manchester quotations. In metals, arrivals have been large, particularly in pig iron, but holders are firm and quotations have been maintained. Very little was done in kerosene. Arrivals of brown sugars have been on a large scale and stocks now amount to about 49,600 piculs, mostly Manila. Sales have been good for these sorts, but white refined is barely moving. A large business has been done in the principal staple of export, every lot of fine-sized filatures that appear on the market being snapped up for Europe: America is sending in good orders for re-reels, and altogether buyers are having a lively time. Total settlements from July 1st to 19th instant are 6,700 piculs. Waste silk is still without enquiry. A small, steady business has been done in tea, sales amounting to 243,000 piculs in Yokohama and 141,900 catties in Kobe, principally in better grades. Prices are now ruling very high, being from \$6 to \$7 higher than at the same period in 1896. Silver is still dropping, and exchange follows suit. In regard to local exchange on Hongkong, bank sight is quoted at 11 per cent. discount and private 10 days', 12 per cent. discount.

SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

A point which must have occurred to close observers of the Administration's procedure during the past two years, is that while the programme of naval and military expansion is carried out in its entirety, the schemes for the development of the country's resources, planned simultaneously with that programme, appear to be comparatively neglected. Such, at least, is the impression conveyed by figures published from time to time in connexion with the outlays of the Finance Department. These figures indicate that the sums appropriated by the Diet for purposes of railway and telegraph extension and the encouragement of navigation are only partially spent, and though an explanation is furnished in the fact that experts for directing and superintending the various works are difficult to procure, the public does not seem disposed to accept any such excuses as satisfactory. This subject is taken up by the *Nippon* in two vigorous articles. Our readers have doubtless recognised that the *Nippon* stands more or less in opposition to the large scheme of armaments expansion mapped out by the Ito Cabinet in 1896, and adopted without change by the Matsukata Ministry. Probably they have also been a good deal surprised to find that such a line is taken by a journal eminently chauvinist in its general policy. The *Nippon*, in the articles to which we are referring, explains its position. It disavows any opposition to military and naval expansion as a national requirement, but declares that such expansion is futile unless it is accompanied, *pari passu*, by other developments without which a big army and a powerful navy are practically useless weapons. We need scarcely say that the developments in question are connected with means of communication. Railways in Hokkaido, in Japan proper and in Formosa; telegraphic communication all over the empire, but especially to Formosa; the control, if not the construction of railways and telegraphs in Korea; the development of the mercantile marine, above all, to such an extent that steamship services to Formosa shall cease to be dependent on foreign enterprise—these, to summarize the matter, are the desiderata for which our contemporary clamours. It is exceedingly frank in its interpretation of the national policy. The expansion of the empire's armaments, it says, was undertaken ostensibly for the purpose of maintaining the balance of power in the Orient and preserving peace, but its real object was to develop strength such as would enable the country to reassert itself against Russia's *coup* in the matter of the retrocession of Liao-tung. That is all very well, but what can be achieved by a fleet of 250,000 tons displacement and an army of 560,000 men unless the technical means of utilizing them are provided? Korea is the point of immediate danger in the East, and if trouble occurred to-morrow, Japan's telegraphic communication with Korea could be severed in an instant. She has not even made any marked progress in laying a cable to Formosa, and the railway schemes for the latter appear to have drifted into an *impasse* owing to the timidity or perfunctiveness of a company which, while it bars the way for others, takes no vigorous action itself. A subsidy awaits any persons willing to essay the steam navigation of the Yangtze, but no one comes forward. The industrial enterprises that were to have been commenced in China, remain in *statu quo*. Meanwhile the Siberian railway steadily approaches completion. Such is the general tone of the *Nippon's* complaint. Incidentally it scoffs at the notion that Japan's armaments have any relation to her recent opponent. China, in the *Nippon's* opinion, lies so low in the dust that her resurrection is as hopeless as to strike her lower would be impossible. None the less our contemporary does not appear to regard the partition of the Middle Kingdom as a contingency of immediately practical significance.

It is true that the mercantile marine of Japan

has doubled within the past three years, and that the number of steamers it comprised at the end of last April was 590, with a total tonnage of 375,318 tons. It is also true that the latter total will probably be increased by a hundred thousand tons before another twelve months have elapsed. But the fact remains undeniable that 85 per cent. of Japan's exports are carried in foreign bottoms and only 15 per cent in Japanese. Upon that text the *Nichi Nichi Shimbun* preaches a useful sermon, the gist of which is that official encouragement is practically limited to the field of high-sea navigation, and that navigation in home waters is left to take care of itself. The consequence is that petty companies engage in a competition of rates. Nothing is considered but cheapness. The safety of goods and the celerity and regularity of their transmission become secondary objects. Thus not only is the business of cabotage in a thoroughly unsatisfactory condition, but also the profits reaped by persons engaging in the enterprise are so petty and the necessity of managing everything on the cheapest scale is so imperative, that no idea of providing improved steamers or even of replacing old, unseaworthy vessels with new and sound ones, can be entertained. There is no real development, though there appears to be an arithmetical growth. Along the eastern shores of the empire some semblance of an organized carrying trade exists. But the Western shores can scarcely be said to enjoy better facilities than they did ten years ago, and the same is true of marine enterprise in the northern parts of the Sea of Japan. Our contemporary contents itself with drawing attention to this unsatisfactory state of affairs. It does not indicate any distinct remedy except that official scrutiny and State encouragement ought to be carried more carefully and liberally into the field of the coasting trade.

The *Fiji Shimo* publishes one of those large-minded, placid articles for which its columns are remarkable. It reminds the public that the present Cabinet is, in a certain sense, a makeshift. Last year, when, owing to the lamented illness of Count Mutsu and the self-effacement of Viscount Watarabe, it became necessary to entrust the control of the country's foreign and financial affairs to new hands the nation's eyes naturally turned to Count Okuma and Count Matsukata, statesmen whose eminent ability in those two fields was generally recognised. But, at the same time, there was no idea of a complete break-up of the Ito Cabinet. The project was that Marquis Ito and Count Itagaki should remain in office, and a coalition ministry should be formed, including Counts Okuma, Itagaki and Goto. At the last moment, however, unexpected difficulties presented themselves. Count Itagaki resigned, and Marquis Ito felt constrained to follow him into private life. Then the Matsukata Cabinet represented only a portion of the machinery originally designed for the conduct of State affairs. Nevertheless, having attained the outward shape of a perfect machine, it had to work as such, doing the best it could. Its success has not been signal, and at this moment the fact that it is only a fragmentary Cabinet forces itself once more upon public attention, nor can thoughtful observers escape the conviction that the course best adopted to the nation's interests is to revert to the original scheme, and form a coalition Cabinet including Marquis Ito and Counts Okuma, Matsukata and Itagaki. There can be no question that Marquis Ito and Count Itagaki, ever since they went out of office, have preserved towards the present Ministry an attitude of neutrality. They have shown no unfriendliness. The same can not be said, however, of all their following. Their exit from power necessarily involved the retirement of several junior officials into private life, and the conversion of certain political supporters of the Ito Cabinet into opponents of the Matsukata Ministry. By these ex-officials and politicians a more or less rancorous crusade has been conducted against those in power, and of late there have been indications that the

effects of the crusade are beginning to make themselves felt in the relations of the leaders. There is no real cause for anything the kind, and no consumption could be more unfortunate. The country has need of all the best statesmanship it can command, and Marquis Ito's return from Europe should be taken advantage of to form the coalition contemplated last year, and only prevented at the eleventh hour by unforeseen circumstances.

The old cry for something new in administrative ranks is once more raised in the columns of the *Osaka Asahi*. The *Meiji statesmen*, or the "clan statesmen" as our contemporary calls them, are superannuated, and no longer fit for work. There are no reasons assigned for that conclusion. The *Asahi* is content with its own *ipse dixit* on the subject. It remarks, with conclusive assurance, that Count Matsukata has made two failures as Minister President; Marquis Ito, an equal number; Marquis Yamagata and Count Kuroda, one each; Count Okuma has twice proved himself incompetent to manage the empire's foreign affairs. In short, no one has come up to the *Asahi's* standard of success, and it wants new men. One of the old statesmen may remain at the head of the Cabinet, if that arrangement be considered desirable. But let us have all the other Ministers new men.

An article in the *Mainichi Shimbun*, addressed to Count Kabayama, Minister of State for Home Affairs, leaves us in some doubt whether the writer's intention is to chide the Minister or to ridicule His Excellency's critics. Count Kabayama went himself to Tochigi Prefecture to examine the state of affairs in the vicinity of the Ashio Copper mine, and subsequently to other districts that had suffered from inundations. Such a sympathetic method of administration is highly commendable. But it establishes a precedent to which a Minister can not hope to adhere and, on the other hand, it exposes him to expressions of discontent if he fail to adhere to it. Thus the people of Naoyetou are much dissatisfied because the Minister does not display towards them, in the present season of adversity, the same personal solicitude that he recently displayed towards folks in other districts. The *Mainichi* laughs at the Naoyetou malcontents, but nevertheless pens a kind of homily on the unwisdom of a Minister's attempting to take direct cognizance of affairs which ought to be entrusted to subordinates. It is a vapid and valueless article.

From ancient times it has been the custom in China, says the *Sekai-no-Nippon*, to make grants of money—called *yoren gin*—to officials, over and above their regular salaries, the object of such presents being to promote administrative integrity. The device is of no avail now, but that it produced good results at the time of its inauguration, can not be doubted. The salaries of junior officials have become quite inadequate. A few years ago, a man with 25 *yen* a month could support himself, his wife and a child, and could keep a maid-servant. Today, an official receiving that emolument has to dispense with the maid-servant, and experiences the greatest difficulty in making ends meet. Under the circumstances, men stoop to improper methods of supplementing their salaries, and bribery has received a great impetus. The thing is inevitable. To ask an official to be above all illegal methods of eking out an insufficient income is like expecting displays of well-nourished strength from a half starved individual. The Ministers of State are already in receipt of what may be called *yoren gin*: the Emperor makes to them large annual grants out of the Privy Purse in addition to their salaries. Junior officials stand in far greater need of some such aid. The case of the police is especially unfortunate. They can not possibly live on their salaries, and the spirit of the *Yamato bushi* for which they were once so remarkable, is beginning to grow feeble in the presence of painful indigence. The Govern-

ment should face the situation boldly, and shape the next Budget so as meet this crying want.

The rumours of foreign complications with which the atmosphere of Japan is filled at present are ridiculed by the *Miyako Shimbun*. That Russia contemplates striking a strong blow at Japan before the latter's preparations are complete; that Russian spies are busily seeking information about Japan's fortifications; that an Anglo-Japanese alliance is confronted by a Russo-German; that leading Japanese military experts are visiting various parts of the Asiatic continent; that Russia in Korea is trampling upon her convention with Japan—these and cognate stories the *Miyako* bids its countrymen dismiss from their minds. It observes that, even supposing Russian experts to be visiting Japan, Japanese experts have been doing exactly the same thing in various foreign countries; and, moreover, it is a measure falling within the proper duties of intelligence departments the world over. As to an Anglo-Japanese alliance, there can be nothing of the kind, for the only condition capable of producing such an alliance, namely, the imminence of a great common danger, is absent. There may be an *entente*; but an *entente* mean nothing beyond the cementing of friendly relations. Finally, the scare about Russia's doings in Korea is visionary. A dozen Russians have appeared unexpectedly in Seoul, and their apparition throws the Japanese public into a tumult. "Don't be alarmed, countrymen," says the *Miyako*. "You are making yourselves a little ridiculous."

FOREIGN TRADE OF JAPAN.

According to the investigations of the Finance Department, as published in the *Mainichi Shimbun*, the foreign trade for the first seven months of this year throughout the Empire was as follows:—

	Ex.orts. Yen.	Imports. Yen.
January-June	75,071,484	99,041,224
July	9,085,805	16,073,571
Total	84,157,489	115,114,795

The figures for July refer to Kobe and Yokohama alone.

Thus the exports and imports together amount to 199,272,084 yen in value, showing an excess in imports of 30,957,506 yen. Compared with the figures of former years, the steady growth of trade is really surprising, and the country ought to be congratulated on the whole. As to the future of exports and imports, namely the question whether anything like equality is to be restored in these two departments of commerce, the *Mainichi* alleges that the excess of imports can not be expected to be less than the figures recorded for last year, and that it may presumably exceed fifty million yen.

The exports to America for the first half of this year reached an amount never before known, whereas there is apparently likely to be a great decrease in the second half of the year. The excess in the import of bullion, the *Mainichi* adds, has for the past few years been a singular phenomenon, which developed itself in the economic market contrary to the general course of trade. The anomaly was due to the receipt of the Chinese indemnity. The import of bullion has now begun to decrease considerably, as was to be anticipated. The following figures show the details:—

	Exports yen.	Imports yen.
January-June	4,148,534	69,920,677
July	532,497	122,974
Total	4,681,031	70,043,651

The imports for the seven months show an excess of 65,362,620 yen, but in July the exports exceeded the imports by 409,523 yen. At the end of July, the indemnity held in London amounted to £5,180,000 only, but as the expenditure of that sum has been already determined on, the Government cannot expect to receive any further large amount of bullion from London on account of the indemnity.

GOLD AND SILVER IN JAPAN.

Journalists that predict an embarrassing exchange of silver for gold when the new currency system goes into operation in Japan, do not appear to have performed any careful calculation of the opportunities offering for such an operation. Doubtless the foreign banks in the Settlements might find it worth while to convert into gold at the Japanese ratio any stock of silver yen lying in their vaults, assuming that the coins stand in their books at a lower price than the ratio represents. For every yen that they have been able to buy at 24 pence, say, it might be worth their while to get 24 pence half-penny; a profit of a little over 2 per cent. But even into such a simple speculation as that, there enter a great many obvious considerations, and, under any circumstances, the operation would be insignificant, for the foreign banks do not keep a large stock of silver yen. As for Japanese banks or Japanese merchants, they could not realize any profit by collecting silver yen and taking them to the Treasury for exchange. They do not want gold and could make nothing by transactions of exchange, since from the moment that the new system goes into operation, the silver one-yen piece will be worth an unvarying weight of gold in Japan, whatever may be the sterling price of the white metal in Europe. All that must be obvious to the most cursory reflection. But the great apprehension appears to be that Japanese yen pieces now circulating in China, the Straits Settlements, and other parts of the East, may be collected and carried to Japan for conversion into gold, at the Japanese ratio. Nothing of the kind is possible as the market now stands. The difference between the gold price of silver in Europe and its projected gold price in Japan is only a little over 2 per cent. The outlay involved in collecting silver yen, paying freight and insurance on them to Japan, converting them into gold, shipping the gold away and forfeiting interest on the capital required for the operation, would not be covered by 2 per cent. A much larger margin is needed before any transaction of the kind can be undertaken with a reasonable prospect of success.

ONE OF THE RECENT OUTRAGES.

A story was published a few days ago by Kobe newspapers and reproduced in Yokohama, to the effect that an English lady had been brutally treated in a Japanese silk store, and that she was black and blue from the severe handling she received. The proprietor of the store has sent the following letter to the *Kobe Herald*:—

SIR,—Seeing in your issue of the 13th inst. a report of what is supposed to have taken place in my silk store I beg to inform you that you have been entirely misinformed of the whole transaction. No violence was ever offered to any of our customers, and we can only appeal to the foreign ladies both in the settlement and on the hill as to the universal courtesy with which they are uniformly treated.

The actual facts are as follows:—The foreign lady mentioned called at my shop and wished to have two pieces of stuff embroidered; one piece was a little longer than the other. On her receiving the longer piece finished, she paid for the work \$2.50. On calling again for the shorter piece—though a little short, still embroideries run to both extremities—the same charge was made for the embroidery as the amount of work was the same. She objected to this price and said it was only worth 75 sen and tried to go away without paying any more. An assistant in the store took the embroidery from her hand but without using the slightest force only observing that the price could not be altered. Two shop boys were cleaning the glass cases and had been watching the whole transaction and no assistance was added by them, which naturally shows that the case was not serious as you had been informed. The lady then left, and the next I heard about it was the report in your paper. As this is calculated to mislead the public and injure our business I should be obliged by your inserting my version of the story.

Your obedient Servant, J. MAT-UMOTO,
Kobe, August 16th, 1897. per D.F.

THE DEVONSHIRE HOUSE BALL.

The historic and fancy dress ball given by the Duchess of Devonshire on the 2nd July at Devonshire House, and attended by many members of the Royal Family and their distinguished guests, besides the flower of English aristocracy, was one of unparalleled magnificence and splendour, says the *Daily Mail*. The old world character of the rooms, with their Louis XIV. decorations, afforded a suitable background for the varied and costly costumes, many of which were of a heavy description, ill-suited to the heat of the weather, velvet and fur having necessarily to be largely adopted. Both as regards the number of those invited and the picturesqueness of the dresses it was doubtless the most brilliant function of the kind ever held in London. The Princess of Wales and almost every other Royal personage now in town were present, and the costumes and jewels were not only magnificent in themselves, but had been made historically correct in every detail. As the members of each different Court and group danced together in their special quadrille a series of gorgeous pictures of each past age was produced instead of the bewildering jumbled, if brilliant, effect, usually seen at a fancy ball. Many of the guests wore costumes copied from portraits of ancestors, and others formed groups representing characters in the works of Shakespeare, Dante, or of some well-known painter. There were Courts of almost every British Sovereign, from King Arthur to the Georges, but the line was drawn at 1820, thus excluding all that was common-place and modern, and rendering the ball a gathering only of picturesque and old world figures.

The Duchess was dressed as Zenobia, in gold cloth, gorgeously embroidered in gold, brilliants, and coloured stones, and opening over an under-dress of white *crêpe de Chine*, worked finely in brilliants. The train of light green velvet was lined with blue, and sumptuously embroidered in jewels and gold, the colouring being particularly artistic. With this dress were worn splendid jewels, and a large horn crown, encrusted with diamonds and rubies. The Duchess was attended by a suite of children, trumpeters, and fan-bearers, all picturesquely attired in Assyrian costumes—the whole group being specially designed by M. Cornelli. The Duke of Devonshire represented Charles V., of Germany, in a black velvet and satin dress. The young Duke of Manchester, who helped to receive the guests, wore a Georgian courtier's suit of white satin and gold. The Prince of Wales, as the Grand Master of the Knights Hospitallars of Malta, was in black velvet embroidered in jet and steel slashed with grey silk. A white ruff, the blue ribbon of the Garter, and the Order of St. John of Jerusalem relieved the sombre character of the dress. The Princess of Wales, as Margaret of Valois, wore an exquisite gown of white, embroidered in gold and splendid diamonds. She was attended by the Duchess of York, in pale blue satin, embroidered in silver, pearls, and diamonds; the Duchess of Fife, in ivory satin, embroidered in gold; Princess Victoria of Wales, in yellow and gold; Princess Charles of Denmark, in pink and silver; and Princess Victoria of Schleswig-Holstein, in pale blue brocade, ornamented with pearls and silver. All the Princesses wore a profusion of diamonds. The Duke of York as George Clifford, Earl of Cumberland, had a grey Genoa velvet pourpoint, embroidered in gold and slashed with crimson. In his grey felt hat the Duke wore the white glove given by Queen Elizabeth to the Earl. The Duke of Connaught as a military commander—Elizabethan period—wore an effective dress of grey velvet and satin, with a steel breast plate. The Duchess of Connaught personated Anne of Austria, in a very handsome gown of brocade velvet, the fronts turned back with rose velvet, embroidered in silver. The white satin front was enriched with gold *fleurs de lys*, and there were cuffs and a collar of beautiful lace.

CURRENT TOPICS.

Marquis Ito's return remains the topic of the hour. The conjectures as to its cause are interesting from their mere variety. We are weary of reading them in the vernacular newspapers, and will refrain from wearying our readers by reproducing them here. One rises from their perusal, day after day, with a deepened conviction that for all the brave talk of political parties and the defiant attitude of Diets, the nation still sits at the feet of the *Meiji* statesmen, and watches their movements with breathless anxiety. They are masters of the situation as completely as they were fifteen years ago.

The *Yomiuri Shimbun* has certainly excelled itself in this matter. The quiet humour of the explanation it offers about the return of the Marquis is not to be surpassed. "What on earth have you all put on your puzzling caps?" says our contemporary. "The simple fact is that, when Marquis Ito was setting out, he told the Marchioness to expect him home in September, but told her, also, not to talk about it. She hasn't talked, and so the public is taken by surprise. That's all there is about it."

On Monday, His Imperial Highness Prince Arisugawa, reaching Tokyo on his return from attending the Diamond Jubilee, was met at Shimbashi station by Her Britannic Majesty's *Chargé d'Affaires* and the whole staff of the British Legation in full uniform.

A Royal Edict issued by the King of Korea orders that the name of the era shall be changed to *Kwang-mu*, which appellation is written with ideographs signifying "splendour and military power." If His Majesty could be suspected of perpetrating a joke in connexion with the compilation of the national almanack, the new title would be comprehensible.

A great many people seem to be seriously convinced that a reconstruction of the Cabinet is among the probable eventualities of the approaching few weeks. We can not follow their reasoning. If any difficulties beset the administration, it will doubtless be left to settle them with the Diet next session. Nobody is at all likely to step into the breach just at present. The Matsukata Cabinet would have been better advised if they had waited to take office until after the rising of the last Diet. The Minister of Finance would not then have been obliged to tide over the situation by promises which his opponents may use against him with embarrassing effect.

Mr. Sone, lately Representative of Japan in Paris, has laid before Osaka business men a scheme for starting a bank with a capital of 250 million *yen*, 170 millions to be subscribed by foreigners and the remainder by Japanese. The motive of the plan is to bring foreign capital within reach of his country's enterprise. He thinks that foreign capital is as necessary to Japan as food to a hungry man, but he objects to procuring it either by the sale of bonds abroad, or by individual loans from foreign capitalists, or by partnerships between foreigners and Japanese. The intermediary of a bank seems to him the best and safest device. Possibly such a programme might succeed, but we greatly doubt whether foreign capitalists could be induced to join.

They certainly would stipulate for a dominant voice in the control of a bank to which they had subscribed two *yen* for every one put up by the Japanese shareholders, and they would be deterred by the evident difficulty under which all foreigners must labour in obtaining such a knowledge of Japanese persons and things as is essential to the success of banking business. Indeed, were we asked to name the one enterprise above all others least suited for foreign management in Japan, we should unhesitatingly name banking; for the essence of good banking is to know when credit may be given, and that is precisely what foreigners could not know. They would have to be guided by the Japanese directors, and then comes the question, would they risk their money under such circumstances. We do not think so. Besides, Mr. Sone is reported to object to partnership between foreigners and Japanese as a means of obtaining capital; but surely his proposed bank is a partnership pure and simple.

It is stated that autumn manoeuvres are to take place on a large scale next November, the Emperor himself being present. Two Divisions are to be engaged, the Fifth and Sixth, and the plan of campaign will be an invasion of Kiushu by the former Division *via* the Straits of Shimonoseki, the defence being entrusted to the Sixth Division. The plains of Chikuzen and Buzen will be the scene of the principal fighting, and Field-Marshal Marquis Yamagata is expected to take the command-in-chief.

The present capital of the Japan Joint Stock Railway Company is 40 million *yen*, and it proposes to add 26 millions, making a total of 66 millions. The *Nichi Nichi Shimbun* says that the officials and employees of the Company number 9,007 men.

The returns of dysentery patients throughout the empire from the outbreak of the epidemic up to the 12th instant, are as follow:—

	Patients,	Death,
Tokyo City	1,299	302
Saitama Prefecture.....	1,169	189
Gumma "	923	99
Ibaraki "	478	101
Tochigi "	460	95
Osaka City	73	13

Baron Rosen's return to Tokyo in the capacity of Russian Representative is welcomed by a host of friends of all nationalities. It would scarcely have been possible to win greater popularity than Baron Rosen enjoyed during his period of service in Japan as Secretary of Legation and *Chargé d'Affaires*, several years ago, and though many that enjoyed his friendship then have left the country, his memory is as green as ever, and those that did not know him in the old days have learned by reputation to look forward to the pleasure of meeting him in the new.

We under estimated the fact when we said that the late Mr. J. G. Walsh had been thirty years in Japan. Forty years would be a more correct statement. Mr. Walsh held the position of United States Consul in Nagasaki in 1859. Those were the days of unpaid American Consuls, and Mr. Walsh, while discharging his Consular functions, was also engaged in organizing the firm of Walsh and Company, afterwards the well known Walsh, Hall and Company. During his tenure of office, the United States Government decided to have salaried Consuls in Japan, a change

which meant, of course, that the Consul must not engage in commercial enterprises. But before the news of the change reached Japan and before Mr. Walsh's resignation could be received and acted on, a considerable sum in the form of salary and allowances accrued to his credit. The whole of that money—amounting to some thousands of dollars—he handed over to a charitable purpose, not considering himself entitled to retain it since it had come to him while he was engaged in trade.

The *Nichi Nichi Shimbun* reports a slight improvement in the condition of Count Mutsu. Great anxiety was felt about him recently, but since the 15th, his fever has abated, the temperature being now 37.3°C, and the patient has also recovered his appetite, more or less. If this amelioration of the symptoms continue for a few days longer, the Count may enjoy another spell of comparative convalescence. On the 11th instant Chamberlains carrying presents came from the Emperor and Empress to inquire.

A timely warning is given to Japanese journalists by the *Miyako Shimbun*. For the past few months scarcely a day has passed without the publication of a paragraph by some vernacular newspaper under the heading the *Kinyu hippaku* (tightness of the money market); *Kinri hikiage* (rise in the rate of interest); *Zaisei konnan* (economical difficulties); *Zaisen kinbo* (deficiency of capital); *Figyo ishaku* (decline of industries); *Sangyo furuwazu* (inactivity of production), or some other equally disquieting caption. The result is that foreign capitalists, who have invested money to the extent of 40 millions in Japanese Bonds, and who watch with the utmost keenness everything that goes on in the country, translate all the paragraphs from the papers and transmit all the rumours to England, have become anxious and have conveyed their anxiety to others. Little by little an impression has gone abroad that things are in a shaky condition, and thus the securities which sold originally for £102 per thousand *yen* face value, and which subsequently rose to £104, have now fallen considerably. Indeed, the *Miyako Shimbun* says that they have fallen to £96, but we have no collateral evidence of such a tumble. However, the question of degree does not affect our contemporary's contention, namely, that vernacular newspapers have very little idea of the responsibility devolving on them or of the immense pecuniary loss that may be caused by their reckless and ignorant writing.

No thoughtful person can fail to endorse the above criticism. The tossing about of financial puffballs by the vernacular newspapers is phenomenal. Every youngster appears to think himself equipped for inditing paragraphs about national debts, monetary systems, the distribution of capital, the conflict of the standards, and other topics from the discussion of which even experts shrink in the Occident. The articles that have appeared about the one-*yen* silver piece in the new gold system would fill a wardrobe, but not one of the writers seems to have sat down and calculated whether any real margin of profit presents itself for the operations that they all describe as a Damoclesian sword hanging over the head of the Government. The simple explanation of it all is party politics. Discredit the Cabinet

in the field of finance, discredit it in the field of foreign affairs, discredit it by any means and all means, whatever injury the country's credit and prestige may suffer by the process. 'Tis the strangest kind of *aisoku-shin* conceivable. Somebody said, lately, that passionate patriotism is a prominent feature of modern Japan. Yes, there is patriotism—patriotism that reveres the Throne; that would fight a foreign foe to the bitter end; that would defend the *arae* and *foei* with desperate tenacity, and that shrinks from contact even with an alien creed. But for patriotism that sets the cause of country higher than the interests of party, or that would relinquish the chance of maiming a political rival lest the blow should fall also upon the father-land—for that kind of patriotism we look in vain.

It is interesting to find a party of American Senators coming to this country, as Messrs. Pettigrew, Cannon and Dubois have now done, to investigate the silver question in connexion with the development of modern Japan. Last year we had Mr. Porter, who visited us, not as an impartial inquirer, but as a man determined to prove that the growth of Japanese industries threatened grave injury to American commerce, and that the mischief must be averted by high tariffs. Mr. Porter succeeded. There was plenty of material for building up a plausible case if the question of time were eliminated. The three Senators who reached Yokohama on the 16th in the *Empress of India*, are believers in silver. If we understand aright, they want to discover how much impetus Japan's manufacturing and producing enterprise owe to money which has constantly grown cheaper in terms of the money for which her produce and manufactures were sold; how much her power as a purchaser of imports has been impaired by the operation of the same factor, and how much benefit or injury she may anticipate from the adoption of gold monometallism. It is a fruitful field of research, and we are disposed to think that the Senators can find materials for a most valuable report.

Mr. Eugene Snodgrass has published a little brochure entitled "Civil Government and Roman Catholicism." The writer's object is to show that the declared principles of Roman Catholicism are against submission to any civil authority; that the Pope claims to be supreme in every sphere, and that, in effect, the spread of Roman Catholicism in any country means the alienation of its converts from allegiance to the Government of that country. If Mr. Snodgrass were speaking of the past, if he were writing of mediæval times, it would scarcely be possible to deny that he has proved his point. But the question of the temporal power of the Holy See appears to us to belong to the realm of buried issues, and we are not sure that any useful end can be served by reviving it. From another point of view, the brochure is a curious example of history repeating itself. The Dutch, in the seventeenth century, by advancing arguments very similar to those of Mr. Snodgrass, arguments, however, which had real force two hundred and eighty years ago, were able to create in Japan a conviction which closed the country, first to the Portuguese and Spaniards, afterwards to the English, and made the religion of Rome an object of profound political dread. We are

wrong, perhaps, in using the word "created": "confirmed" would be a more correct term, for Nobunaga, Hideyoshi, and Ieyasu had already conceived the suspicion which the representations of the Dutch strengthened into a working belief. Here then, at the end of the nineteenth century, we have Mr. Snodgrass doing what the Dutch did at the beginning of the seventeenth. *Absit omen.*

It will be remembered that the Budget for this year makes provision for the raising of considerable sums in the form of domestic loans, and it will have been observed, also, that, though nearly five months of the fiscal year have elapsed, no attempt to float any loan has yet been made. The *Nichi Nichi* puts the sum that ought to be raised at 59,280,000 *yen*, but the figure is really much larger, namely:—

	<i>YEN.</i>
Public Undertakings Loan.....	61,329,500
Railway Loan.....	7,502,467
Total.....	68,831,967

Meanwhile, work on the State Railways and other public undertakings has made such progress that the need of funds is beginning to be pressing, and the surplus revenue lying in the Treasury is practically exhausted. In the present state of the money market, however, there can not be any hope of floating a loan successfully. The *Nichi Nichi* thinks, therefore, that the Government will make use of the sum obtained by the recent sale of Bonds in England to meet the exigencies of the moment, and will await a more favourable opportunity for floating a loan.

It is impossible to know the truth yet about next year's Budget. Innumerable contradictory statements have been published by the vernacular press. The *Nichi Nichi Shimbum* now declares, with apparent assurance, that despite all efforts to curtail expenditures, the revenue in sight will prove to be insufficient by 20 million *yen*, but whether the deficit will be made good by extra taxes or by a loan, has not yet been determined.

THE SENDAI TAXATION AFFAIR.

A strong suspicion must often present itself to the observant foreigner in Japan that the ideas he forms of the people and their doings by perusing the columns of the vernacular press are possibly quite erroneous. Very likely the same suspicion, *mutatis mutandis*, visits the observant Japanese on reading the local foreign press. We hope it does, at any rate. 'Tis a case of six of one and half a dozen of the other; for if the writings of a paper like the *Nippon* suggest racial prejudices on the Japanese side, we need not go far afield to discover foreign journals that convey an impression of a cognate kind on the side of their own nationals. But a special feature is observable in the statements of a paper like the *Nippon*: it is their curious deficiency of appreciative sense. We imagine that any Occidental at all solicitous about the reputation of his countrymen would understand the slur cast upon their moral balance when they are represented as getting into a ferment of general excitement and organizing indignation meetings because a solitary stranger living in their midst is uncertain about the legality of a tax which he has been invited to pay. Yet

the *Nippon* is obviously untroubled by any such contingency. It tells us, in effect, that the people of Sendai are a parcel of feather-brained agitators, so little blessed with moral balance and so greatly cursed with a superfluity of idleness, that they magnify a virtually academic problem of taxation into a theme for public tumult. A foreigner is asked to pay a local tax that no foreigner has ever paid. He asks permission to consult his Consul before paying, and the *Nippon* invites us to imagine that his very natural request has provoked a storm of popular indignation. If the Japanese people were the kind of folk that the *Nippon* makes them out to be, prudent foreigners would lose no time in putting the ocean between themselves and these islands.

At the same time, we have nothing to say against the *Nippon's* patriotism as such. It is wholesome and pleasant to see a good, breezy love of country. What we have a right to object to, and what surprises us a little, is that a paper professing and obeying a sentiment so absorbing should fail to appreciate any exhibition of it by other folks. Can not the *Nippon* see that if two Englishmen are suddenly asked to pay a local tax never before levied, they have to consider something more than the mere effect on their own pockets? What would it say of two Japanese who, under similar circumstances, tamely and unhesitatingly paid the required sum, and thus established a precedent more or less binding on all their countrymen who might happen to be serving in England, for example? We imagine that it would find some pungent epithets for the two invertebrates. There are folks that will sacrifice a great many principles on the altar of a quiet life. There are also folks—happily there are—that will suffer some inconvenience and brave some misrepresentation rather than lightly take a step the consequences of which may inconveniently affect others. If the *Nippon* can conceive, and constructively applaud, the vigour and resolution that it attributes to its own countrymen in Sendai on account of a matter of pure principle, is it unable to conceive and applaud a modicum of the same kind of procedure on the part of a foreigner? But in truth the matter is a bagatelle. The educational authorities in Sendai consider that the levying of such a tax is *ultra vires*; the local authorities take a different view; the question has been referred for decision in Tokyo. That is the whole story. Fancy the good people of Sendai getting into a pother and holding indignation meetings about such a trifle! They ought to proceed against the *Nippon* for libel. And, indeed, so ought the Japanese nation, for the notion that its moral estate produces such very small potatoes is distinctly insulting.

That question about bowing to the Emperor's picture has a perennial habit of cropping up. We have sometimes wondered how the very punctilious objectors to the performance would have behaved had they lived in the middle of last century and been numbered among the Hanoverian magnates. It is related that during George the Second's absence in England, a species of court ceremony was held every Saturday at Herrenhausen—"a fine and touching ceremony" Thackeray calls it. The absent King's portrait was placed in the assembly-room on a large

arm-chair, and all the nobles, advancing one by one, bowed to the picture and spoke in hushed voices as though his august Majesty were present. Was that idolatry? Idolatry at the court of "William the Pious," whose sole solace in his blind and semi-demented dotage was listening to psalm-tunes and whose father had sat under Luther at Wittenberg! An article written in the *Japan Mail* in 1869 said that Europeans of that era had a singular tendency to forget their own history when they discussed Japanese happenings. It doesn't seem as if the tendency had died yet, does it?

DEATH OF MR. JOHN WALSH.

On Monday morning at 6 o'clock, after less than 48 hours' illness, Mr. John G. Walsh of Kobe died from acute enteritis. Only a few days ago Mr. Walsh was in Tokyo, looking bright and hale, and when he set out to return to Kobe, his friends in the capital little thought that a fatal illness was so soon to overtake him. He was one of the oldest residents of Japan, having been in this country for nearly thirty years, if we are not mistaken. A fuller measure of love and respect than he possessed could scarcely have fallen to the share of any one. A man of wide knowledge, wonderful sweetness of disposition, profound benevolence, absolute integrity and the largest magnanimity, he lived a life as blameless as it was beautiful, and his death leaves the whole foreign community sensibly poorer. Nothing that we could write would be a worthy tribute to the memory of one so rarely gifted with every noble and lovable quality; and, for the rest, all words are dwarfed by the greatness of the sorrow that the kindly face of a friend so dear will be no more seen among us.

The *Kobe Herald*, in an appreciative notice of the late Mr. J. G. Walsh, gives details which show that Mr. Walsh's last illness was of less than 48 hours' duration. The gastric trouble declared itself on Saturday, and at 6 a.m. on Monday, the end came. Previous attacks of the same nature in recent years had been attended by some symptoms of heart failure, and it may be presumed that the fatal termination of the last was due to that complication.

We take the following from the *Hyogo News*:—The attendance of Japanese mourners and the numbers of stands of flowers and other Japanese tributes of respect at the funeral of the late Mr. J. G. Walsh on Tuesday afternoon have been unprecedented in our experience in Kobe. The deceased was in closest sympathy with the people among whom he had spent so many years of his life and with whom his business relations were also extensive and intimate. They reciprocated his good-will, and they manifested this in the only way that is left to friends of any one who is taken away. This, perhaps, was what must have struck most of those present even more than the large gathering of the foreign community. The official element was strongly represented, the commercial element was present in full force. There were some who had known Mr. Walsh for 20, 25, and 30 years, there were many who had regarded him as an old friend.

The funeral left the house of the deceased just after six o'clock for the Cemetery. All along the route the train was swelled by new arrivals, and at the Cemetery gates many more were found waiting. Employés of the Paper Mill carried the body to the grave, the deceased's son-in-law following as chief mourner, and Messrs. Gill, Groom, Ryle Holme, Gay, Robison, and Shea acting as pall-bearers.

The Rev. J. L. Atkinson took the service at the grave-side, and delivered a short address upon the truth of the hope implanted in every heart of something better to follow after death and upon the duty of living prepared to die.

The ceremony was quickly over, the innumerable wreaths were piled around, and, as they turned to leave the thought was uttered by many: Another one gone, who next?

PRINCE ARISUGAWA'S RETURN.

H.I.H. Prince Arisugawa, the special Ambassador of His Majesty the Emperor at the recent Diamond Jubilee of Queen Victoria,—who travelled incognito as Count Sawa—arrived at Yokohama on Monday morning by the C. P. steamer *Empress of India*. The *Empress* anchored in the harbour a little before 6 a.m., the two Japanese cruisers *Matsushima Kan* and *Tsumi Kan*, which had been despatched to receive His Imperial Highness, having before that hour left their moorings outside the breakwater and anchored inside. At 7 a.m. Prince Arisugawa and his suite quietly landed in a steam launch at the N. Y. K. wharve and proceeded at once, almost unobserved, to the Yoyotei, the Imperial rest-house near the Lighthouse Department offices, where he was met by his son; Count Okuma, Minister for Foreign Affairs; and a number of officials of the Imperial Household Department and others. The officials from Tokyo had expected the Prince to land at the English wharve and went there to receive him, and upon finding out their mistake proceeded at once to the Yoyotei. His Imperial Highness left for Tokyo by a special train at 8.40.

From an interview with one of the gentlemen in the Prince's suite, the following facts have been gathered by the *Pomfret* regarding his trip:—The Prince left Tokyo on the 2nd May and embarked on the French steamer *Ernest Simons*, arriving in Marseilles on the 11th June and proceeding to Paris the following day, where he lodged at the Hotel Bristol. On the 16th of the same month, his Highness had an interview with President Faure, and was treated with the utmost courtesy by the French Government. On the 19th, he left Paris for England, and arrived in London on the evening of the same day, when he and his suite were conveyed in a Court equipage sent by the Queen, to the Hotel Cecil, which was specially provided for his temporary residence. The Prince is said to have been highly pleased at the English Royal Standard being flown above the entrance to the Hotel. On the following day at 11 a.m., His Highness repaired to the Palace and had an audience with Queen Victoria, to whom he delivered the message as well as the presents from the Emperor and Empress. Among these presents were an embroidered screen and a gold lacquered book-case, for which Her Majesty expressed her most cordial thanks. The 22nd being the most important day of the celebration, His Highness, attired in the uniform of a Rear-Admiral of the Navy, accompanied by his suite, also in full uniform, arrived at Buckingham Palace at 8 a.m. and joining the Jubilee party, proceeded to St. Paul's Cathedral, to be present at the service held there. On this day the Queen, dressed in magnificent black velvet robes, drove through the city in a carriage with the Princess of Wales and one of her own daughters. Her Majesty was followed by more than seventy Princes of various nationalities on horse-back and in military or naval uniforms. Prince Arisugawa was also mounted. On the 26th June, he was invited to the naval review at Spit-head, which may justly be regarded as one of the peerless wonders of the world. The men-of-war numbered 165 in all and the vessel in which the Prince of Wales embarked, together with the royal personages from various countries, went through the midst of the fleet. When the inspection began, salutes were fired from all the ships at the same time, and the reverberation was so violent that it was thought that the heavens themselves would have fallen. The sight was, in fact, indiscribably magnificent. The foreign war vessels that joined in the display

numbered fourteen, the Japanese *Fuji* being one of them. Its presence is said to have contributed much to the reputation, of Japan's naval power. Photographs taken of the *Fuji* have been sold in the streets of London. From the 20th to the 28th June, with the single exception of Sunday the 27th, invitations were daily received by the Prince from all quarters for sumptuous entertainments, and His Highness found himself extremely busy accepting them. The hospitality shown to him was undoubtedly the outcome of the Queen's friendly feelings towards Japan. The Prince was highly gratified. His party left London on the 30th and arrived in Spain on the 4th of July. His Highness was received on the frontier by two officers specially despatched for the purpose. On the 5th, he proceeded to the palace at Madrid, and having had audience with the Queen Regent and the young King, presented the latter with the decoration of the Order of the Crysanthemum from the Emperor of Japan. The gift was received with due compliments, and the Prince as well as his retinue were in turn decorated by the Queen Regent. Every courtesy was shown in the treatment of the Prince. His mission having now been completely discharged, his Highness returned to Paris in a private capacity, under the name of Count Sawa; thence he travelled to London and on to New York and Vancouver from which place he returned direct to Japan. He received invitations in several places, but *en route* declined on every occasion on the plea that he was travelling incognito.

BANKS IN JAPAN.

The *Nippon* states that, according to the investigations of the Finance Department, the number of banks in Japan at the end of July totalled 1,487, their capital amounting to 292,885,514 yen. These figures show an increase of 30 banks and 7,111,000 yen in capital, as compared with the end of June. Following are details:—

	Old.	New.
Nippon	Number ... 1	—
	Capital ... 30,000,000	—
Industrial ...	Number ... 1	—
	Capital ... 10,000,000	—
National	Number ... 98	—
	Capital ... 21,520,000	—
Savings	Number ... 192	6
	Capital ... 16,570,000	200,000
Joint stock...	Number ... 974	40
	Capital ... 177,240,920	9,502,000
Joint partner-ship	Number ... 27	—
	Capital ... 5,453,906	—
Joint capital.	Number ... 95	1
	Capital ... 8,340,674	10,000
Private	Number ... 69	2
	Capital ... 4,649,020	85,000
Totals	Number ... 1,457	49
	Capital ... 285,774,514	9,797,000

BANK OF JAPAN'S RATES.

At a meeting held on the 20th instant by the principal officials of the Bank of Japan, it was decided, says the *Hochi*, to raise the rates of interest on loans, and discounts to other banks, by one *rin*. The schedule of interest is now as follows:—

	Daily interest.
Loans on security of goods.....	2.4
Discount of Drafts of the Bank.....	2.1
Discount of Drafts of other Banks	2.4
Temporary overdrafts	2.6
The rate of interest for transactions with private individuals remains the same as before, namely:—	
Loans on security of goods.....	Sen.
Discount of Commercial Bills	2.7
	2.4

There was formerly a difference of four *rin* in the transactions between private individuals and other banks, but it is now reduced to three *rin*. The Bank of Japan had, from the first, perceived the inexpediency of retaining the great disparity of rates between the two classes of business, but the condition of the economic world did not permit it to make a radical change all at once.

VARIOUS TOPICS.

We presume that the release of the Danish Consulat Tientain is the result of an insufficiency of evidence to support the charge, and that it had no connexion with the protest made by the Governor of Kanagawa. It is curious that questions of this nature should so often crop up, and be so often treated as if no such things as precedents existed. We ought to mention here that, so far as our information goes, the British Consular Constable took no part in the arrest, his visit to the ship being merely intended to certify the technical sufficiency of the warrant. It is to be regretted, however, that a British official should have been involved in such a business, however remotely. The British Consular Jail once had the honour of being virtually besieged by Japanese police for a considerable time because, at the dictates of comity, it had been lent for the accommodation of an accused person of another nationality whose arrest had been illegally effected. Considering the absolutely unique trouble Great Britain takes and the expense she incurs to discharge her Treaty obligations in judicial affairs, it is a pity that she can not avoid being apparently associated with the incorrect procedure of other nationalities.

In the *Official Gazette* the total figures relating to the settled accounts of last year are published.

Twenty-ninth Fiscal Year (1896-7).

Income	186,976,374.927
Expenditure	168,224,147.027

Excess of Income over Ex-	
penditure	18,752,227.900

Of the above surplus, a sum of 10,815,186.237 yen was carried forward to the accounts of 1897-8, so that the surplus actually remaining is 7,937,041.663 yen.

The *Official Gazette* further states that, up to the close of July, the amount of revenue collected this year had been 59,278,669 705 yen, and the amount paid out, 71,545,452.491 yen.

Dysentery continues to be tolerably severe in Tokyo. The returns from the 6th to the 10th instant, a period of five days, are:—

Kanda district ...	6 new patients	4 deaths
Kojimachi	5 "	1 "
Nijimbashi	6 "	1 "
Kyobashi	14 "	3 "
Shiba	28 "	6 "
Akasaka	1 "	2 "
Yotsuya	4 "	2 "
Ushigome	1 "	— "
Shitaya	7 "	— "
Hongo	1 "	3 "
Asakusa	2 "	— "
Fukagawa	1 "	— "
Ebara	7 "	2 "
Toyotama	5 "	2 "
Kitatoshima	5 "	1 "
Minami-katsushika	2 "	2 "
Nishi-tama	22 "	10 "
Minami-tama	195 "	35 "
Kita-tama	72 "	12 "
Total	348 "	86 "

In Saitama Prefecture during the same interval, the new cases totalled 367, and the deaths 56.

The statement that Mr. Hara Kei had become editor-in-chief of the Osaka *Mainichi Shimbun* is contradicted. It appears that Mr. Hara was invited to take the post, but declined. His name is now borne on the list of Ministers available for service abroad, and it is said that a post in that capacity has been offered to him by the Minister of State for Foreign Affairs, but that, being in somewhat impaired health, he prefers to remain unemployed for the present. At any rate he is not in a position to attach himself to a newspaper.

The *New York Herald* has been doing some spread-eagleism over the Hawaiian affair. It warns Japan that the key which opened her ports will "serve to lock them up, if she insists on fighting;" asks her whether she has "a swelled head;" whether she "bumpiously ima-

gines that because she gave China a good drubbing, she can lick all creation," whether she "means to claim the Hawaiian islands for Mongolian civilization;" and finally observes that "after settling the little difficulty in Honolulu, Tokyo, Yokohama and Kobe will be in our hands." It would be difficult to be at once more vulgar or more gratuitously offensive. We should like to hear the comments of the chorus of Settlement reviewers if any writing even distantly approaching the *New York Herald's* jingoism appeared in a Japanese journal. What a chorus it would be, to be sure! What hands of horror would be raised; what depths of anti-foreign feeling would be gauged, what solemn rebukes would be penned! But as it's one of the leading journals in the capital of a highly civilized Occidental Power, there's nothing to be said. Circumstances alter cases.

Miyagawa Kozan, the celebrated ceramic expert of Ota, better known to foreigners under the name of Makuzu, has not yet emerged from his troubles in connexion with the alleged infringement of Higuchi Haruzane's "grains-of-rice" porcelain. Presumably most of our readers know what is meant by "grains-of-rice" decoration. The design is cut out of the pâte, and the piece is then dipped in the glazing bath, so that the excised portions being filled with glaze only, show transparent when the specimen emerges from the kiln. Some years ago, when Mr. Higuchi of Hirado applied for and obtained a patent for work of that kind, we pointed out that he could not possibly claim to have invented the method. It was perfectly familiar to Chinese potters two hundred and fifty years ago, and innumerable specimens of the greatest beauty were turned out at the factories on the Poyang Lake. All that could be urged on Mr. Higuchi's behalf was that he introduced the method in Japan, and that he called it *Hotarū-de*, or "fire-fly style." He had no more right to a patent than a Japanese would now have were he to copy a Pelton water-wheel and offer it for sale in Tokyo. That was the view taken by Kakuzo also. He produced some fine examples of the beautiful ware, and boldly exhibited them in the salon of the Japan Fine Arts Society. Mr. Higuchi applied for an injunction and seems to have obtained it, for we learn from the vernacular press that the Ota expert has petitioned the Patents Bureau on the subject.

It need scarcely be said that conjectures about the causes of Marquis Ito's unexpectedly quick return to Japan continue to find a place in the columns of the vernacular press. All alike seem to be without any basis of fact and need not be reproduced here. The *Mainichi's* note, however, appears to deserve attention. It alleges that in answer to a communication from the Foreign Office in Tokyo, Mr. Kato, Japanese Representative in London, sent a telegram of the following purport:—"The Marquis hastens his return because he thinks that, in view of the visits of the Emperor of Germany and the President of the French Republic to Moscow, it would not be advantageous that he go to either Germany or Russia." Commenting on this telegram, the *Mainichi* arrives at the conclusion that Marquis Ito has been influenced by a very simple reflection, namely, that a position more or less embarrassing for him might arise if he went to Moscow just at the present juncture and that he has consequently deemed it wiser to return home. We shall not be surprised to find that the *Mainichi's* explanation is correct.

An answer has been received from the President of Hawaii—according to the *Pomfuri Shimbun*—to the complaint recently addressed to him by the *Saké Merchants' Guild*. The Hawaiian Assembly, some time ago, passed a law imposing an increased duty on imported alcoholic beverages, and the members of the Guild were impelled to protest in view of the effect that the measure must exercise upon Japanese *saké* sent to Hawaii for the use of the immigrants there. The gist of President Dole's reply is that he is powerless to take any special step in the matter, the two Houses having pass-

ed the measure over his veto by a two-thirds majority, but that due attention shall be given to the Guild's petition.

If anything were needed to cap the quaintness of the Liberal Party's recent action towards Count Okuma, the deficiency is supplied by the *Tokyo Shimbun*, which, as our readers probably know, is one of that Party's organs. Our article commenting on the Liberals' letter to the Minister of Foreign Affairs was translated in the columns of the *Mainichi Shimbun*, and the *Tokyo Shimbun* now replies by saying that, however alarmed the Cabinet may have been, it really shows too much perturbation when it entrusts its defence to a foreign newspaper. Such a retort reduces the whole question to the level of empty persiflage, yet is even less amusing than another plea urged by the same journal, namely, that the object of sending the *Naniwa* to Honolulu can not have been to preserve order among the Japanese immigrants there, since, in that case, a body of police or gendarmes would have been despatched. Is not that delightful? When a paper so charmingly ignorant of international usages undertakes to discuss foreign politics, no wonder that it gets off the rails.

Reading local newspapers' notices of cricket matches, athletic, and aquatic sports and so on, one would imagine that Yokohama abounded in professional cricketers and other experts. In England the amateur is invariably distinguished from the professional by having a "Mr." prefixed to his name, but out here no such distinction is made. The effect of this neglect is not attractive.

We observe that another skeleton peg has been found to hang a red rag for the anti-Japanese-jurisdiction bull. This time it is the Sendai taxation affair. "If the whole population in Sendai is disturbed," says the *Japan Gazette*, "because a Mr. Dening has appealed to his Minister against the levying of an income-tax, we know what might be expected if a foreign tobaccoist found himself in the position of Messrs. Murai Bros." It has been authoritatively denied that there is any excitement in Sendai. Mr. Dening, in a letter published by us last Saturday, declared the *Nippon's* statement about excitement in Sendai to be "a fabrication." But that does not make the slightest difference to the *Japan Gazette*. The point is sensational, be it ever so false, and therefore it must be employed to assist in tricking out the scarecrow of Japanese jurisdiction. Well, there's nothing like perseverance and a good leathern conscience. By the time the *dies iræ* arrives, Yokohama will be resonant with the chattering of teeth, if the *Japan Gazette* can so contrive it. There is just one antidote to the epidemic of "shakes." It is that even the least astute folks must appreciate the little game. Having failed to avert Treaty Revision, though they worked hard enough in all conscience, the last resource of the agitators is to educate such a dread of Japanese jurisdiction that its successful exercise will be imperilled. If they can achieve that, their former opposition will be justified by the system. 'Tis a fine, wholesome ambition.

Nothing could well be farther from the old Spartan principle than the practice of Europe to-day in the matter of weakly children. The Spartans held that only a lusty baby, likely to take a useful share in defending the "altars and hearths," or to bear lusty defenders of them, should be suffered to live. But the modern European saves life at all hazards, whatever may be the value of the result. The infant incubator has now been so far perfected as to play an important part in this doubtful scheme of adding to the inferior element of the world's population. "Each incubator consists of a sort of box, partly of metal and partly of glass, mounted on a metal stand. The child lies upon a fine wire hammock, and under this there is a large copper pipe kept full of hot water by means of a small boiler and oil-lamp or gas jet fixed outside the apparatus. The necessary regulation of temperature is effected by means of a metallic thermostat placed within the incubator, which, by a system of levers, controls the amount of

heat that reaches the boiler. On an alternative plan the thermostat is placed in the hot water of the boiler, and by its contraction or expansion with alterations of temperature increases or diminishes the quantity of gas consumed by the burner. The former arrangement, it is claimed, automatically keeps the temperature constant to about a degree, the latter to about a quarter of a degree. When a child first comes under treatment the temperature is maintained at something like blood heat, but it is gradually reduced till it is about equal to that of the room. Air is supplied through a 4-in. pipe and is introduced at the bottom of the box under the hammock in such a way as to prevent draughts and to insure that it is properly warmed. On its way it is filtered and freed from any germs by being passed through absorbent wool moistened with an antiseptic agent, while it is removed through a 3-in. chimney fitted with a small revolving fan. It is stated that in the Continental cities in which it is employed it has been found possible by means of this apparatus, which is constructed on Altmann's patent system, to preserve the lives of about 75 per cent. of prematurely and weakly-born children."

The bonfires lit in the United Kingdom to celebrate the Diamond Jubilee totalled 2,547; of which 1,981 were in England; 305 in Scotland; 162 in Wales and 93 in Ireland. Even little Wales made nearly twice as good a showing as Ireland. Some of the fires cost as much as £100; some, as little as £4. An average of £10, the outlay aggregated £2,547. That will be cited, one of these days, as an example of "sinful waste."

Japan is now conspicuous by her absence from the list of "Foreign Government Securities" quoted in London. Seventeen States are on the catalogue, Turkey heading the array with six groups of loans and Brazil standing second with three. But Japan, by her recently made payment, has succeeded in getting her name wiped off the slate, and apparently she is reluctant to have it replaced there.

It has been alleged that Mr. Sherman's despatch about the Behring Sea affair did not altogether justify the telegram sent by Reuters. We can not agree. Here is the telegram:—

The Hon. John Sherman, United States, Secretary of State, in a dispatch to the American Ambassador in London, under date May 10th, comments with the greatest bitterness on Great Britain's refusal to join a conference of the Powers concerned, with the object of preserving the seals in Behring Sea. He virtually accuses Great Britain of bad faith, and concludes by casting upon her the responsibility for causing embarrassment in the relations between the two countries.

The accusation of bad faith is certainly there, and a most offensive accusation it is. Mr. Sherman charges the British Government with holding back the report of Professor Thompson, the English expert, so that the writer might be able to make it an effective reply to the report of Professor Jordan, the American expert. "It is not pleasant," the Secretary of State says, "to have to state that the impartial character which it has been the custom to attribute to reports of naturalists of high standing has been greatly impaired by the apparent subjection of the report to the political exigencies of the situation." It would be scarcely possible, we think, to pen a more insulting paragraph, and when we remember that it is based upon pure suspicion, that Mr. Sherman can not have had any proof whatever of such double-dealing on the part of the British Government, and that the despatch is intended to secure the friendly co-operation of the mother country, one is bound to confess that President McKinley and his colleagues are scarcely fitted for conducting diplomatic discussions in accordance with the rules of modern courtesy. The despatch ends thus:—"Upon Great Britain must, therefore, rest, in the public conscience of mankind, the responsibility for the embarrassment in the relations of the two nations which must result from such conduct. The President, therefore, still cherishes the hope that at this late day Great Britain will yield to his ever-continued desire for a conference, and will hail with great

satisfaction any indication on the part of her Majesty's Government of a disposition to agree to such conference." Reuters' telegram seems to us a very fair epitome. If Mr. Sherman when he wrote was not too angry to be judicious, he has certainly made it appear that he was.

The gist of this complication may not be clear to all our readers. It is this:—The Paris Arbitration of 1894, while deciding virtually in favour of Great Britain's position, decided also that the regulations then in existence for the control of the far-seal enterprise, were inadequate. The United States Government consequently proposed a conference for the purpose of determining fuller measures, and it was because of Great Britain's tardiness in acquiescing that Mr. Sherman—or, we should rather say, the McKinley Cabinet, for the President has shouldered the responsibility—became indignant. The conference is now to be held, and we may hope that the complication is at an end.

The unsatisfactory ending of the Eton-Harrow match—a draw, for the fourth time in succession—seems likely to end in this annual contest being made a three-day, instead of a two-day, affair. The fact constitutes another proof of the great development that cricket has undergone during recent years. But, indeed, one has only to look at the scores to see that the cricketers of to-day are mighty men. Brown and Tunicliffe, playing for Yorkshire against Sussex at Sheffield on July 13th, scored 378 for the first wicket, when the partnership came to an end, Tunicliffe being caught at mid-on for 147. Brown remained in some time longer, and was finally out for 311, so that the two men's scores totalled 458. Yorkshire declared the innings closed after five wickets were down for 661, Wainwright having then notched 104, not out. Brown's is the highest individual innings this season, and he is the fifth who has achieved the feat of making over 300 in a first-class match, the others being Dr. Grace, who did it thrice (344, 318 and 301); MacLaren (424), the record score; Mr. W. W. Read (338) and Mr. D. L. Murdoch (321). Brown was 64 hours at the wicket, and scored 50 runs per hour, on the average, giving only one sharp chance at extra-slip when his score stood at 170. He hit 45 fours, 19 threes and 11 twos. Much faster scoring, however, was Mr. Jessop's. 67 in 35 minutes for the Gentlemen against the Players at Lords on July 14th. On that occasion the Gentlemen scored the total of their second innings, 273, in less than 2½ hours. Ranjitsinhji seems to have fallen off. He has, it is said, contracted a habit of playing the ball off his legs, and the bowlers have "sized" him so nicely that he has been out l.b.w. several times lately.

Four hundred and fourteen miles in 24 hours is now the "world's record" in cycling. It has been achieved by George Hunt, the Nottingham long-distance rider. The previous best was Holbein's 404 miles.

It may interest the Japanese to know that the Royal National Life Boat Institution of England has an annual income of £98,000, composed of £38,000 from legacies and £60,000 from public subscriptions and investments. Ninety-eight thousand pounds represent nearly a million yen.

People living in the Far East are vividly reminded of the colourless character of their existence when they look at the "Entertainments" columns of *The Times*. Independently of theatres, operas, and permanent public attractions like the Tower, Westminster, the British Museum, &c., there were 59 exhibitions or performances advertised on the 15th July, some of them being of such a nature as to demand several visits. A prominent public man who understood, if anyone did, the art of making much of life, used to say that if he could be warned when the grave was within ten years of him, he would sacrifice everything to spend the *quod restat* in London, for ten years in London were equivalent to twenty anywhere else. If

one of the Yokohama or Tokyo exiles went to the big metropolis after an absence of a decade, with a resolve to "do" the sights thoroughly, and with only three months for the feat, a vast deal would have to be crowded into the time, and how the exile would long to be restored to the quiet of the little settlement before it was all over.

We heard a great many severe comments in connexion with the inefficiency of the police when the store of Messrs. Murai Bros. was wrecked, and the foreign public were as usual invited to tremble at the prospect of submitting to the jurisdiction of a country in the capital of which such things can happen. It may be observed, however, that in Dublin on Jubilee night a party of rioters worked their wild will for an hour and a half, smashing property and breaking windows to the value of £1,500. The police did not succeed in quelling the disturbance very speedily in that capital, or in apprehending any of the ring-leaders, the only arrests made, as the Recorder said, being those of "a few feather-brained boys."

We take this interesting paragraph from *The Times*:—

A statistical correspondent sends us the following table showing very clearly the comparative wages, in pence and decimals of a penny, earned per hour in engineering and shipbuilding establishments in various countries, calculated from the figures given in *The Times* of July 10th:—

Trade	London.	Havre.	Hamburg.	Holland.	Italy.	Trieste.
Fitters	8.00	5.76	4.84	4.95	4.15	3.96
Men working lathes and planing machines of moderate size	8.25	5.64	4.54	4.05	3.50	4.20
Drillers	6.67	4.56	4.24	3.60	3.05	3.48
Men working small machines, such as milling machines	7.50	5.67	3.88	3.60	3.25	3.36
Sectors	8.67	7.30	6.05	5.58	4.37	4.41
Boilermakers	9.44	6.24	5.45	5.84	4.60	3.57
Joiners	8.80	5.61	4.94	4.05	4.15	3.75
Pattern-makers	8.80	6.24	4.03	4.05	4.15	4.80
SHIPBUILDERS CONSTRUCTING VESSELS OF LIGHT SCANTLING.						
Frame-benders	10.00	5.28	5.45	4.05	4.60	8.96
Platers	10.00	4.57	5.45	4.05	4.60	3.36
Riveters	8.00	3.61	4.74	4.05	3.70	8.94
Drillers	6.67	3.33	3.85	4.05	3.05	2.82
Shipwrights	9.33	6.00	—	4.50	4.60	4.00

Here is an incident that would scarcely be credited without conclusive testimony:—

TO THE EDITOR OF "THE TIMES."

SIR,—I do not know whether the following little episode of life in London streets is deserving notice in your columns. At ten minutes to 3 this afternoon, precisely at the corner of Frith-street and Soho-square, as I went on my way to the shop of Mr. Dulon, the French book-seller, a burly vigorous youth of about 20, in dress somewhat like a drag-driver, ran up against me, and before I realized the situation, closed up, tried to wrest my watch from my pocket, and on my resisting the assault, then and there struck me and finally knocked me down. He then ran away, as I then believed, with my watch. As it was he had only succeeded in forcing the swivel of the chain, and wrenching off the ring. The interesting part of the adventure is that it happened not merely in broad daylight, but in the presence of many persons, who, I am bound to say, congregated rapidly as soon as the struggle was over and expressed great interest in the incident they had witnessed. The individual whose absence from the scene I regretted was a policeman. No such guardian of the peace of the metropolis was visible, either at the time of the adventure or during the 10 minutes or so while I was talking to the assembled sympathizers, of whom more than one implied that similar incidents were not unknown in that neighbourhood. Of course I give this last statement for whatever it may be worth.

Yours faithfully,

WILLIAM CORNWALLIS CARTWRIGHT.

Athenæum Club, July 13.

"The Bishop of St. Andrews presided over a well-attended meeting, held in the great hall of the Church House on the afternoon of July 12th, on behalf of the English and American dioceses in Japan. Those present included the Bishops of Exeter and Waiapu, and the Bishops of North Tokyo and Kyoto, Kiushiu, and Osaka, Professor Collins, Mr. T. Fowell Buxton, Mr. E. Stock, and Dr. Cust. A letter was read from the Bishop of South Tokyo regretting his inability to be present in consequence of indisposition and wishing success to the meeting. The

chairman said the mission to Japan was full of interest to every one who was really watching or thinking of the great problems that were being solved in the East. They looked to that part of the mission field with the greatest hope at the present time. The English mission had spread in a marvellous manner. The American Church was linked with it and the two together were working side by side with the most satisfactory results. There was, however, a great need for more mission-workers. The Bishop of North Tokyo and Kyoto said there was a population of 17,000,000 in the missionary jurisdiction of Tokyo. For their evangelization the American Church sent one bishop and 15 priests, and in addition to these they had 16 Japanese clergy—than whom a more devoted and loyal set of men was not to be found in any diocese in the world. A very large number were looking to the mission clergy for help, and there was a great need for missionaries and helpers. The Bishop of Kiushiu said that for the 6,000,000 of people in his district he had at present on the list of workers only five who were in priest's orders, and two Japanese deacons. With two or three more priests and one or two others in reserve for times of emergency, he thought that the diocese of South Japan could be worked effectually. The Bishop of Osaka; the Rev. D. J. S. Hunt, and others addressed the meeting, and alluded to the need which existed for more helpers, and the proceedings concluded with a vote of thanks to chairman.

THE KEROSENE INDUSTRY IN JAPAN.

The import of kerosene last year, the *Mainichi* says, amounted to 6,331,036 *yen* in value. Oil, however, is produced in various parts of this country, and in some instances the quality is supposed to be hardly inferior to that of American oil; in others it surpasses Russian petroleum. Yet the import increases year by year for no other reason than that the petroleum industry in Japan is carried on with an insignificant amount of capital and by most imperfect processes. There are at present about two hundred companies engaged in this branch of industry, but their organization being meagre, only sixty sets of machinery are now employed by them. The kerosene of Sakata in Yechigo is renowned for its superiority to the American production, while that of Sagara in Enshuu is scarcely inferior to the oil imported from Russia. The application of a proper amount of capital, under the management of competent engineers, would not, it is alleged, fail to produce considerable profits, and success in this enterprise would virtually amount to an extraordinary addition to the resources of the State.

CAPTURING A PICKPOCKET.

The *Seikai-no-Nippon* reports the rather sensational capture of a pickpocket at Shimbashi railway station. On the morning of the 16th instant, at about 9.30 o'clock, a police officer in plain clothes arrived by train from Shinagawa, in charge of a prisoner charged with burglary, whom he was taking to the Central Station. At the time Shimbashi station was crowded with officials and others who had assembled to welcome Prince Arisugawa, then due from Yokohama. While passing through the crowd with his prisoner, the constable saw a pickpocket take a purse from the person of a foreigner. Without a moment's hesitation the officer, dragging his prisoner along with his left hand, seized the pickpocket with his right, while the foreigner, who had discovered his loss, went for the thief with his fists. Quite a disturbance ensued among the crowd, but in a few minutes a force of police arrived at the station as guards for Prince Arisugawa. The purse was recovered and restored to the foreigner, who left for the south by the next train. Whether the thief was detained or not is not stated.

DEATH OF MR. F. R. O. MAXWELL.

Mr. Francis Richard Ord Maxwell, late H.M. Resident at Sarawak and Acting Consul for Borneo, died at the General Hospital on Tuesday after an illness of some two months' duration, the deceased having arrived in Japan in June last, very much broken in health, to see what the air of Japan could do for him. He was accompanied by his wife. Though only forty-seven years of age, Mr. Maxwell's health was so much undermined that his recovery proved hopeless. The funeral took place on Wednesday morning at 8 o'clock at the General Cemetery, the Rev. E. Champneys Irwine, the incumbent of Christ Church, Yokohama, officiating. Besides the widow there were present Mr. F. R. G. Forster, representing H.B.M. Consul, Messrs. Whittall, W. B. Walter, T. Thomas, F. S. James, C. D. Moss, Drs. Munro and Mécère, and others. Much sympathy has been expressed for the bereaved widow in her affliction.

DEATH OF MR. LENZ.

It is once again our painful duty to record the death of one very generally known in Kobe and most deeply respected by those who knew him best. A telegram arrived yesterday from Germany announcing the decease of Mr. T. Lenz, in his 54th year. He was a native of Schneplenthal near Gotha, and came to the Far East some thirty years ago. Arriving in Kobe in 1868 he has to all intents and purposes made his home in this port ever since. After a residence in Osaka he joined the firm of Faber and Voigt, and it is as a partner of this house that he is most widely known in business circles. For over a dozen years Mr. Lenz gave faithful service to the community's general welfare as a member of the Municipal Council; his persistence when once his mind was made up enabled him to carry in the end schemes that his intensely practical mind formed and appreciated in advance of most of his fellows. He resigned his seat on leaving for home in the Spring of 1891, and although he returned two years later he could not be induced to renew the position. Mr. Lenz had long suffered from Bright's disease, and it was in the hope of staying its attacks that he finally consented to abandon his interests in this port. He left for home early in May last and appeared to benefit markedly from the voyage. Letters were received from him brighter in tone than any he had written for years. Reunion with his family appeared to work wonders, and those who dreaded lest change of this kind might not be more harmful than beneficial were fast owning themselves wrong. The final collapse, it is believed, must have come suddenly.—*Hogo News*.

SILVER TURNED INTO GOLD.

If Dr. Dupont, who writes in the science column of *La Libre Parole*, is correct in his statements, the dream of the alchemist of old has already been fulfilled, without the aid of the long sought philosopher's stone, and the world is on the verge of a startling revolution in monies and monetary systems which will solve for ever the knotty problem of monometallism or bimetallism. This is no less than the discovery of a successful process for converting silver into gold. According to Dr. Dupont, Dr. Emmens, an eminent chemist of New York, has succeeded in developing this process to the extent of transforming a given weight of silver into one-third of the same weight of the more precious metal, and hopes eventually to be able to make an ounce of gold from an ounce of silver. Dr. Emmens has submitted an ingot of his new metal, which he calls *argentaurum*, to the Assay Office of the United States. This ingot, before being melted, weighed 219.56 grains. Upon melting the assay obtained 65.8 per cent. of pure gold and 26 per cent. of silver. It is added that the Government of the United States now accepts *argentaurum* for coinage, or buys it in common with natural gold.

ARMED BURGLARY IN YOKOHAMA.

On Tuesday morning, about 2 a.m., a burglar broke into the house of Mr. Kashiwabara Kamekichi, a dealer in charcoal and fire-wood, at No. 33, Hinodecho, Yokohama. After getting possession of over 10 *yen* he was about to make his escape when Mr. Kamekichi woke up and attempted to seize him. The burglar instantly drew a dagger and wounded Kamekichi in the neck and back. Meanwhile Kamekichi's wife came to the assistance of her husband and attacked the burglar with a piece of firewood, but was struck and wounded in the shoulder, hands and foot by the desperate man. A fire watchman named Oishi, hearing the disturbance came to the spot with a huge stick and aimed a blow at the burglar, but unfortunately tripped and fell, whereupon the ruffian turned on him and cut him in the face, breast, and other parts of his body. A policeman in the neighbourhood, being called by the neighbours then came upon the scene and with assistance of others succeeded in arresting the burglar. The man is a native of Kofu, Yamanashi-ken, named Nagazuka Nicho aged, 36 years. It is feared that Oishi Taro, the fire-watchman, will succumb to his wounds. Kamekichi and his wife are not dangerously injured.

MURDER ON THE "TENSIN MARU."

A Japanese sailor was fatally stabbed by one of his comrades, on the N. Y. K. steamer *Tenshin Maru* at Shanghai on the 10th inst. A discussion led to a quarrel between the two men, one of whom, drawing his knife, rushed at the other and stabbed him in the abdomen, the breast and the back. The assailant at once made his escape from the ship in a sampan but returned next morning, when he was much surprised to learn that the wounded man was dead. Before he could get away again he was arrested by the Japanese Consular authorities, and will be sent to Japan for trial.

A QUESTION OF THE DAY.

Under this heading, on June 25th, a writer in the *Globe* carolled gently:—

From Laureate and the minstrel of all the minor poets,
Verses with all the fizz and go of ginger-beer and Moët,
In honour of the Jubilee have been profusely tripping;
But what the nation wants to know is: Where the deuce is Kipling?

Well, Mr. Rudyard Kipling was not idle and on the 15th July *The Times* published five stanzas of a "Recessional" which we think will put all the other Jubilee Odes, with their fearfully tin-pot jingles, to shame. The first stanza is as follows:—

God of our fathers, known of old,
Lord of our far-flung battle line,
Beneath whose awful hand we hold
Dominion over palm and pine;
Lord God of hosts, be with us yet,
Lest we forget, lest we forget.

Describing the cessation of the Jubilee festivities, the poem continues:—

Lo, all our pomp of yesterday,
Is one with Nineveh and Tyre;
Judge of the nations, spare us yet,
Lest we forget, lest we forget.

Then, as a warning against idle boasting, the final stanza reads:—

For heathen heart that puts her trust,
In reeking tube and iron band,
All valiant dust that builds on dust,
And guarding calls not Thee to guard;
For frantic boast and foolish word—
Amen.

We await with interest the appearance of the complete Ode.

THE POPULATION OF RUSSIA.

The general results of the Russian census-taking are now known, says the *New York Tribune*. They present no especially startling facts, but some of decided interest. They show Russia to be, as she was of course known to be, by far the most populous country in Europe. Yet she is not so populous as to overbalance all the rest of the continent, nor even a combination of three or four other States. The notion that Russia is so great in population and resources as to menace the remainder of Europe with Cossack rule is seen to be an unsubstantial dream. The population of Russia proper is a trifle over 94,000,000. That is little more than that of Germany and Austria-Hungary, and much less than that of Great Britain, France, and Germany. If we add the 9,400,000 of Poland, the 9,700,000 of Caucasasia, and the 2,500,000 of Finland, the total is still much less than that of Great Britain, France, and Germany, or of the Triple Alliance States. The entire empire, including the 5,700,000 of Siberia and Saghalien, the 3,400,000 of the Steppes, the 4,200,000 of Central Asia, and the few thousands settled in Khiva and Bokhara, foots up a grand total of 129,211,113. That is enormous. But it does not nearly equal the total of the other five great Powers of Europe, or that of any four of them, while if, instead of numbers, quality be considered, the inferiority of Russia is much more marked.

Comparing these figures with those of the not very authentic census of 1851, it is seen that the population of the empire has about doubled within fifty years. The total in 1851 was 65,743,730. Leaving out Central Asia, which has been acquired since 1851, it is to be observed that the population of the Steppes, of Siberia, and of Caucasasia has considerably more than doubled, that of Poland has somewhat less than doubled, and that of European Russia and Finland has much less than doubled. Russia is therefore increasing as an Asiatic more than as a European power. The population is chiefly rural, despite a marked growth of towns and cities in recent years. Thus there is only one city, St. Petersburg, with over 1,000,000 inhabitants; only two others, Moscow and Warsaw, with more than 500,000; only three others with over 250,000, and only thirteen more with over 100,000 each. Those between 100,000 and 50,000 number thirty-five, and between 50,000 and 25,000 sixty-nine. The population is most dense, or least sparse, in Poland, there amounting to more than 30 to the square mile. That is a thin and scattered population compared with other countries. In European Russia proper it is only 8, and in Caucasasia 8.6, to the square mile. Nowhere else in the empire is it as much as 7, and in the empire as a whole it is only 2.5 to the square mile. Women are more numerous than men by nearly 3 per cent. in European Russia and Finland, and men are the more numerous elsewhere. In the empire as a whole the two sexes exactly balance.

THE "TENSIN MARU" INQUIRY.

The finding of the Court of Inquiry held at the Marine Bureau, Tokyo, to enquire into the stranding of the N. Y. K. steamer *Tenshin Maru* in June last, was delivered on Thursday. The Court found Captain Brown to blame in that he misjudged the position of the ship and mistook Amadare Rock for Flat Rock; and that he steered too near the land. Under these circumstances Captain Brown's certificate was suspended for two months. Mr. Neilson, the second officer, was censured and Mr. Rehboldt, third officer, held free from blame.

YOKOHAMA WATER SUPPLY.

The Yokohama Water Works Bureau has announced that the stoppage of the water supply at the hydrants during some eight hours of the night, which was put in force a month or so since, will be withdrawn on and after the 19th inst. This, we believe, is owing to the comple-

tion of the work of enlargement of the main between the source of supply and the reservoir at Noge, by which it is said the supply to the reservoir will be increased by about 20,000 gallons per day.

KOREAN TOPICS.

The number of Japanese residents in Söul, at the end of July, according to the *Independent*, was 953 males and 765 females, a total of 1,718.

In Söul it is a punishable offence to use language without honorifics to a policeman. A youth was guilty of that rudeness the other day, and the policeman promptly ran him in.

The *Independent* says that it has received a number of communications from Shikeung concerning "the cruelty and robbery of the Magistrate." It prints one of them:—
